I do not criticize local boards, for while it is their duty to follow the law, I can readily understand how, in time of war, with orders and directives piling down on them from Lansing and Washington, they become confused and unduly influenced.

The remedy for the trouble to which you call attention lies not here in Washington, but in the office of the Governor; in the offices of Brigadier General Pearson and his subordinates.

The foregoing is most humbly, most respectfully, submitted for your consideration.

Sincerely yours,

CLARE E. HOFFMAN.

Government Manpower Wastage

EXTENSION OF REMARKS

OF

HON. PEHR G. HOLMES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. HOLMES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Times:

GOVERNMENT MANPOWER WASTAGE

With war requirements calling for a heavier draft on the Nation's manpower, the latest figures on the number of civilian employees on Government pay rolls in this country suggest more energetic efforts to prune these pay rolls and release workers for more essential war activities.

According to a recent Census Bureau report nearly 1 person in 20 is on such pay rolls in the United States. As of October 1 they totaled 6,503,000, and more than half of this total, or 3,335,000, were on the Federal pay roll.

Until the spring of 1943, Federal employees for more than a year had been added to the pay rolls at a rate of 100,000 a month. This trend was halted under the fire of Senator BYRD's committee on nonessential expenditures and Representative RAMSPECK's civil-service committee which aimed at a reduction of 400,000 jobs. By the fall of 1943 some 200,000 jobs had been lopped off the June 1943 peak of more than 3,000,000 in the executive branch of the Federal Government. The bulk of that reduction was in the war agencies. In 1944 monthly reports of increases again appeared.

In this war there has been about a 3 to 1 expansion in the number of Federal civilian employees, compared to the 918,000 employees on Federal pay rolls at the end of World War No. 1. But this trend toward a greater army of Government employees did not start with the present war.

The number of Federal employees had been reduced to 500,000 before 1930. When President Roosevelt took office on March 4, 1933, there were 572,091 employees on the Federal pay roll. Before the 1936 election that number had risen to 824,259 and 4 years later, in 1940, it was up to 976,863, or 58,000 more than the total at the close of World War No. 1.

When the New Deal began sprouting its alphabetical agencies there were 30 Federal bureaus and agencies. Now there are around 150.

As Congressional investigations and reports have shown, there is much duplication and overlapping of functions and duties. There has been rivalry in recruiting personnel for wartime expansion and agencies competing with private business which helps pay the taxes that support this massive system of bureaucracy still function although the emergency for which they were created has long passed. Currently there are charges by union leaders and Members of Congress of wastage of manpower in Government war plants.

Before the November election President Roosevelt ordered the Budget Director to make plans for liquidating war agencies and reducing governmental personnel to a peace footing. But the evidence before the public indicates that here at this critical time is where the Government itself could help ease the manpower shortage by starting a real pruning job now.

President Roosevelt has in mind the need of close to 60,000,000 post-war jobs to provide full employment. He recognizes that taxes must not be a brake on post-war demand for goods and on investment in new enterprise. He also stresses that he means productive jobs at good wages—not W. P. A. relief.

Well, he has a chance to kill several birds at one shot right now by ordering the trimming down of Government pay rolls, thus releasing workers for other jobs more essential in the winning of the war. That would be a step toward reducing Government expenditures. It would give business a little practical encouragement as to the post-war tax outlook. And if he went a little further and lessened the threat of Government competition, it could be that private enterprise in the postwar era would bloom to the point where two or three jobs grow in place of one.

Also individual taxpayers who are beginning to get the tax staggers under their tax load might get a break if some of the Government employees were taken off the list.

Lithuania

EXTENSION OF REMARKS

OF

HON. LANSDALE G. SASSCER

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. SASSCER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a resolution unanimously adopted at the twenty-seventh annual banquet in observance of the Republic of Lithuania Day, in Baltimore, on February 16, 1945.

I hope that in the establishment of peace in the construction of the post-war period the autonomy and independence of Lithuania and other small and independent nations will be maintained and their separate identity as a people and nation respected.

Our Government continues to recognize the sovereignty of Lithuania and we have an announced national policy of preserving the independence of small nations.

The Legislature of Maryland approved in 1935 a resolution directing the Governor to proclaim February 16 of each year for the observance and commemoration of the founding of the Republic of Lithuania, and invited the people of the State to observe the day with appropriate ceremonies. I was president of the Maryland Senate at this time and sponsored this resolution through that body, and recall with pleasure the pride that the Americans of Lithuanian descent evidenced at an appropriate ceremony in connection with the signing of the resolution.

The tradition of this little republic, its evidence of ability to carry on self-government, and our expressed national and State policies place an obligation upon those in authority to strive for the post-war restoration of the independence of Lithuania.

The resolution follows:

Whereas the United States Government has declared that it opposes all forms of

aggression and territorial changes made during the war; and

Whereas the United States Government continues to recognize the sovereignty of the Republics of Latvia, Lithuania, and Estonia; and

Whereas the Nazi invaders have been driven from Lithuania and this war-torn nation has been reoccupied by Soviet Russia without a renunciation of her pretensions toward the sovereignty of Lithuania; and

Whereas the elections, which preceded Lithuania's incorporation into the Union of Socialist Soviet Republics, were under pressure and did not express the free will of her people; and

Whereas the oppressed people of Lithuania are unable to voice their grievances, defend their rights, or express their views in protest against the incorporation of Lithuania into the Union of Socialist Soviet Republics while occupied by Russia, and so many of her leading citizens have been deported to foreign countries; and

Whereas we, as citizens of the United States of America, are deeply concerned over the post-war restoration of Lithuania: Now, therefore, be it

Resolved, That the incorporation of Lithuania into the Union of Socialist Soviet Republics would constitute, from religious, national, and cultural points of view, a crime of international magnitude; be it further

Resolved, That we appeal to the United States Government to continue to uphold the independence of the Republic of Lithuania, in accordance with the noble and traditional principles of American policy of self-determination of nations and the sovereign equality of all states, irrespective of their size or strength; be it further

Resolved, That we beseech the United States Government to intervene in behalf of the nationals of Lithuanian, deported to foreign countries, for the purpose of securing their repatriation, through the proper relief agencies; be it further

Resolved, That copies of this resolution be forwarded to the President of the United States of America, His Excellency Franklin D. Roosevelt; to the Secretary of State, Edward R. Stettinius, Jr.; to the Senators and Members of the House of Representatives from the State of Maryland; the Governor of the State of Maryland; and the Lithuanian Legation.

COUNCIL OF LITHUANIAN SOCIETIES OF BALTIMORE,
ANTHONY J. MICEIKA,
President,
VERA MIKUSAUCKAS, *Secretary*.

What Is the Best Approach To Obtain Maximum Milk Production in 1945?

REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 26, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, I understand the Commodity Credit Corporation bill is to be presented soon for congressional consideration. The following facts should assist in effectuating a program which will result in the maximum milk production in 1945:

1944 records

States	Amount of milk produced in 1944	Average price per hundredweight received by farmers in 1944 [1]	Composite rate per month for farm labor in 1944 [2]	Payments made during the 1944 calendar year [3]	Proposed subsidy to begin Apr. 1, 1945, through June 1945, per hundredweight [4]
	Pounds				*Cents*
Alabama	1,360,000,000	$3.75	$42.60	$1,512,528	35, 55
Arizona	249,000,000	3.05	96.50	1,008,806	35
Arkansas	1,445,000,000	3.25	52.30	2,103,764	35
California	5,479,000,000	3.60	145.00	26,920,256	35, 45
Colorado	1,058,000,000	2.95	90.80	2,607,260	35
Connecticut	717,000,000	3.90	98.90	3,687,687	45
Delaware	152,000,000	3.55	83.10	720,226	35
Florida	437,000,000	4.80	60.50	2,141,744	55
Georgia	1,146,000,000	4.00	38.90	1,910,249	55
Idaho	1,405,000,000	2.85	120.00	4,246,318	25, 35
Illinois	5,503,000,000	3.00	83.10	16,281,090	25
Indiana	3,492,000,000	3.25	71.90	11,757,212	25
Iowa	6,726,000,000	2.70	91.80	12,390,818	25
Kansas	3,172,000,000	3.05	83.80	5,811,151	25
Kentucky	2,147,000,000	3.20	55.60	4,225,544	25
Louisiana	696,000,000	3.75	46.30	1,468,096	35
Maine	654,000,000	3.50	105.00	2,013,446	35
Maryland	961,000,000	4.00	72.70	4,281,523	35
Massachusetts	777,000,000	4.00	102.00	4,322,813	45
Michigan	5,375,000,000	3.30	82.90	15,361,213	25
Minnesota	8,502,000,000	2.70	85.40	20,803,764	25
Mississippi	1,410,000,000	3.40	43.50	2,643,206	35
Missouri	4,090,000,000	3.25	60.40	8,622,484	25
Montana	721,000,000	2.75	116.00	1,204,493	25
Nebraska	2,785,000,000	2.85	88.80	4,165,337	25
Nevada	108,000,000	3.10	101.00	254,799	35
New Hampshire	340,000,000	3.60	97.00	1,423,154	35
New Jersey	1,015,000,000	4.00	96.20	5,520,301	45
New Mexico	270,000,000	3.90	75.90	576,714	35
New York	7,722,000,000	3.45	90.80	34,072,213	35
North Carolina	1,540,000,000	4.00	50.90	3,098,529	55
North Dakota	2,183,000,000	2.60	104.00	3,191,696	25
Ohio	5,174,000,000	3.30	68.40	16,219,159	25
Oklahoma	2,695,000,000	3.40	74.70	5,554,155	35
Oregon	1,463,000,000	3.65	138.00	4,408,040	35
Pennsylvania	4,976,000,000	3.55	70.70	19,750,302	35
Rhode Island	129,000,000	3.90	105.00	734,770	45
South Carolina	604,000,000	4.10	36.30	932,364	55
South Dakota	1,710,000,000	2.65	94.60	2,467,857	25
Tennessee	2,232,000,000	3.55	44.60	4,509,287	25, 35
Texas	4,405,000,000	3.60	74.10	8,604,085	35
Utah	709,000,000	2.85	109.00	2,461,345	35
Vermont	1,498,000,000	3.40	91.80	6,465,603	35
Virginia	1,691,000,000	4.05	54.90	3,628,426	35
Washington	2,242,000,000	3.15	149.00	7,079,779	35
West Virginia	824,000,000	3.50	54.00	1,363,944	35
Wisconsin	14,643,000,000	2.70	82.50	49,532,729	25
Wyoming	314,000,000	3.00	100.00	759,846	25
United States total	118,952,000,000	[5] 3.24	78.00	344,620,127	

[1] 1944 figures taken from Jan. 30, 1945, Agricultural Prices, arranged alphabetically.
[2] Weighted average of all classes of payments. Daily rates were multiplied by 26 to obtain approximate monthly rates. From official table found on p. A-871 of the Feb. 23, 1945 record.
[3] Includes payments for 1943 production which were made after Dec. 31, 1943, and payments for 1944 production which were made through Dec. 31, 1944.
[4] From War Food Administration release 1988, U. S. Department of Agriculture, 287-45 for Feb. 15 p. m. release.
[5] All prices without feed subsidy for States and the United States.

Source: Agricultural Adjustment Agency February 1945.

You will note that while Wisconsin received the largest amount as subsidy, $49,000,000, the 14,000,000,000 pounds of Wisconsin milk brought an average of 54 cents per hundredweight, less than the average per hundredweight for the United States, or over $70,000,000 less than it would if it brought the national average price of milk.

In addition to the above, I include the letter of transmittal and the tables showing the ceiling prices on protein feeds and the estimated costs of 100 pounds of dairy concentrate ration for January 1945, as furnished by Mr. Walter C. Berger, director, Feed Management Division of the War Food Administration. The letter and tables are as follows:

WAR FOOD ADMINISTRATION,
AGRICULTURAL ADJUSTMENT AGENCY,
Washington, D. C., February 23, 1945.
Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your telephone request of a few days ago in which you asked for information on ceiling prices of oilmeals and prices of feeds used in dairy rations in different parts of the country.

The enclosed tables show the information which you requested. The first one is entitled "Ceiling Prices for Oilmeals, Bulk, F. O. B. Cities Shown." This gives the price in bulk, f. o. b. the cities named, when the meal is obtained from the processors most likely to supply the market.

The second table, entitled "State Average Estimated Cost Per 100 Pounds Dairy Concentrate Ration for January," shows for a number of dairy States in various parts of the country the estimated cost per 100 pounds of concentrate dairy ration in January for the 1938-40 average and for 1945. These estimates were prepared by the Bureau of Agricultural Economics from data received from dairy correspondents and other sources. Since the ingredients of dairy rations vary according to the supplies of different feeds available and their price relationships, a comparison of the value per 100 pounds of this concentrate ration is usually considered to be more valuable than a comparison of the price of individual ingredients.

Sincerely yours,
WALTER C. BERGER,
Director, Feed Management Division.

Ceiling prices for oilmeals, bulk, f. o. b. cities shown (when obtained from usual sources)

City and State	Soybean meal 41 percent protein	Linseed meal 34 percent protein	Cottonseed meal 41 percent protein [1]
Wisconsin: Milwaukee	$48.91	$44.50	$51.50
Minnesota: St. Paul and Minneapolis	50.77	42.00	53.90
Illinois: Chicago	48.50	44.50	51.30
North Carolina: Raleigh	52.21	51.80	47.50
Georgia: Atlanta	52.21	54.40	46.50
New York: New York	52.93	45.00	54.10
Buffalo	51.70	46.00	54.90
Massachusetts: Boston	53.24	.....	54.70
Tennessee: Nashville	49.94	.....	45.50
California: San Francisco	57.98	46.00	48.00
Los Angeles	58.65	46.00	48.00

[1] Averages computed in my office.

State average estimated cost per 100 pounds dairy concentrate ration for January

State	1938–40 average	1945 [1]	Increase, dollars per hundredweight
Wisconsin	$1.25	$2.48	$1.23
Minnesota	1.00	2.10	1.10
North Carolina	1.57	3.01	1.44
Georgia	1.42	3.06	1.64
Tennessee	1.34	2.93	1.59
New York	1.69	2.99	1.30
Massachusetts	1.88	3.09	1.21
California	1.57	2.93	1.36

[1] Unpublished

I shall not discuss the various factors involved in arriving at a fair approach for maximum milk production. I submit the above for study and consideration with the hope that maximum milk production will be obtained in 1945.

You will, however, note that less than 4,000,000,000 pounds of the national milk production of 118,000,000,000 pounds will receive the 55 cents per hundredweight subsidy. You will readily note that the great bulk of the milk produced, representing from sixty-five to seventy billion pounds of the national production, comes under the 25 cents per hundredweight subsidy plan and that the remainder of the Nation's milk comes under the 35 cents and 45 cents per hundredweight proposed subsidy.

When the Commodity Credit Corporation bill is presented for consideration the above facts should be given the proper attention by the Congress if maximum milk production is to be obtained in 1945.

This Changing World

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Constantine Brown from the Washington Star of February 22, 1945:

THIS CHANGING WORLD

(By Constantine Brown)

The ambassador of the Polish Government in exile at London, Dr. Edouard Raczynski, was informed on Tuesday by Foreign Secretary Anthony Eden that the recognition extended by Great Britain to his government would be withdrawn as soon as the provisional government in Warsaw has been "properly" formed.

Mr. Eden is perhaps somewhat embarrassed in making this communication since Ambassador Raczynski, who has represented Poland at the Court of St. James's since 1935, is the same man who on August 25, 1939, signed the British-Polish treaty of military alliance to offset the Russian-German military agreement signed 2 days earlier.

It was the Earl of Halifax, the present British Ambassador to the United States, who affixed his signature as His Majesty's foreign secretary on that now-discarded treaty. The United States Government has not yet informed the Polish Government as to when it will withdraw its recognition, but it is believed in diplomatic quarters that London and Washington will act simultaneously.

Whether this step will put an end to the Polish problem is still questionable. There seems to be resentment in Britain's political and military circles, even stronger than in this country, over the way the Big Three treated the Poles. The British parliamentarians are in a better position than their American colleagues to demand a full explanation of Prime Minister Churchill's cabinet policies.

In the United States Members of the Senate can talk as long and as loud as they wish about international problems and agreements but they have no way of forcing the Government to come out in the open and explain whys and wherefores of its action.

The situation is quite different in Britain. If the actions of a government are sufficiently distasteful to the House of Commons, the protests of its Members compel the Prime Minister to ask for a vote of confidence. If the result is adverse to the Government, the Prime Minister must resign and all his previous commitments and agreements are of no value unless they are endorsed by his successor.

It is not likely that because of the present world turmoil the British Parliament will deny Mr. Churchill a vote of confidence. Britain, like the United States, is placed in the same dilemma. What can the Parliament members do to avoid an accomplished fact?

Premier Stalin made it very clear at Yalta that the Polish problem must be settled in his own way since Poland already is occupied by a force of hundreds of thousands of Russian soldiers. At Teheran the fate of Poland had been only blueprinted by the Big Three. At Yalta the final settlement was reached on the basis of military realities rather than on the principles of the Atlantic Charter.

But the British Parliament, which recognizes more than ever before how valuable the charter could have been for Great Britain if fully applied to Europe, is likely to needle Mr. Churchill when he discusses the Yalta agreements in a full-dress debate next week. There is a strong feeling, particularly among the military men, that the British and American Governments have not stood up for the Poles, whose soldiers and aviators have behaved so valiantly even when fighting for their country in foreign lands.

The British aviators feel that Britain owes a deep debt of gratitude to the Polish flyers who did a magnificent job in 1940 and 1941 for the defense of London. Censorship has prevented publication of an incident which occurred a few months ago in Scotland when the officers of a British air unit officially called on their Polish colleagues some 20 miles away. The British presented their regrets for the words of the Prime Minister, who had indicated in a speech that Poland would have to be sacrificed.

More recently a significant manifestation occurred on the Bologna front in Italy which is partially held by Polish forces. Gen. George C. Marshall, accompanied by Field Marshal Sir Harold Alexander, Lt. Gen. McNarney, Lieutenant General Clark, and other high-ranking American and British officers, called on the Polish commander, Gen. Wladislaw Anders, to congratulate him on receiving America's Legion of Merit for bravery against the enemy.

The incident took place on February 12, a few hours before the release of the Yalta communique which sounded the death knell of Poland. The group of American and British generals, some of whom had just returned from the Black Sea conference, did not mention politics but went out of their way to be most cordial and complimentary to the Polish commander, who could not quite understand the reason for the unprecedented demonstration. It was only several hours later when the editor of the Polish soldiers' newspaper in Rome informed him of the communique that he realized the reason for the American and British generals' gesture.

But, in spite of the feeling in Britain and to a less extent in this country, and in spite of the protests which will be voiced by many Members of Congress and Commons, the fate of Poland has been settled with a finality which cannot be changed.

Federal Aid for Education

EXTENSION OF REMARKS

OF

HON. THOMAS D'ALESANDRO, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. D'ALESANDRO. Mr. Speaker, attached hereto is a letter and a report which I received from the National Catholic Welfare Conference, and also my reply to same, which I would like to include in the RECORD:

NATIONAL CATHOLIC
WELFARE CONFERENCE,
Washington, D. C., February 22, 1945.

Hon. THOMAS D'ALESANDRO, JR.
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: I enclose for your information copy of a letter addressed to the chairman of the Committee on Education and Labor.

I believe you will be interested in this clear, energetic statement by the very reverend director of the department of education of the National Catholic Welfare Conference and will give it due consideration.

Very sincerely,

WILLIAM F. MONTAVON.

DEPARTMENT OF EDUCATION,
NATIONAL CATHOLIC WELFARE CONFERENCE,
Washington, D. C., February 1, 1945.

The Honorable JAMES E. MURRAY,
Chairman, Committee on Education and Labor, United States Senate,
Washington, D. C.

MY DEAR SENATOR MURRAY: Since the subject of Federal aid to education is again a current one, the Department of Education of the National Catholic Welfare Conference wishes to express its opposition to Senate bill 181, which is entitled "A bill to authorize the appropriation of funds to assist the States and Territories in more adequately financing their system of public education during emer-

gency, and in reducing the inequalities of educational opportunities through public elementary and secondary schools."

In defining the assistance to be extended by Federal funds Senate bill 181 discriminates in the type of school to be aided. In section 5d it provides "that funds paid to a State under this act shall be expended only by public agencies and under public control." Throughout the bill there are other similar references. In effect, this means a prohibition on the part of the Federal Government that would prevent the States, if they so pleased, from using Federal funds for the aid of private schools.

However, at the recent White House conference on rural education, the President, speaking on Government financial aid, said, "It must purely and simply provide the guarantee that this country is big enough to give all of its children the right to a free education." All right-thinking Americans would agree with the President's declaration. But the legislation proposed in Senate bill 181 seems to take issue with the inclusiveness of the President's position, since private schools have been excluded from participating in the proposed distribution of funds. It seems difficult to understand how the proposed legislation should fail to consider general welfare in the most democratic sense of the world.

There are groups of citizens within our country who maintain their own schools because their conscience requires that they bring their children up according to the tenets and in the spirit of the religion that they profess. Their right to maintain schools is protected by the constitutional guaranty of freedom of religion. Freedom of religion involves more than the opportunity to participate in public worship in a church of one's choice. It means, too, that citizens should enjoy the full freedom to live their religion and to enable their children to do likewise. For many of our citizens this means freedom to provide schools and means of education that accord with the dictates of their conscience. It is not enough for government to refrain from legislation that would prohibit the existence of nonpublic schools. If the program of education within the United States is to be aided, then the real spirit of democracy and the true conception of general welfare should direct that this aid be extended to all children in all schools.

Catholic citizens of the United States are maintaining 2,119 secondary schools, 8,017 elementary schools, enrolling 2,399,908 children. They are supporting these schools out of their own resources and at the same time paying their share of the taxes which support public education.

The Department of Education of the National Catholic Welfare Conference maintains that aid given by the Federal Government for education should be distributed according to a law or plan that will bring this aid only to areas in which it is needed and where such need can be demonstrated; moreover, this distribution should be equitable to all children in that area without regard to color, origin, or creed; finally, this distribution should be extended to the children in attendance at any school that meets the requirements of compulsory education.

The department of education holds that, where Federal funds are distributed, they should supplement State, local, or private funds and never supplant them. These State, local, and private funds should be used to the utmost before invoking Federal assistance.

Federal aid should never impose in our country Federal control of education either in law or in practice. The American tradition of local control of education is more responsive to the parent or to the family that has the primary and imprescriptible right in the education of children.

The department of education, National Catholic Welfare Conference, has in the past opposed educational legislation which was undemocratic, discriminatory, and wasteful of public funds. It has opposed measures so worded as to defeat the purpose of equalizing educational opportunity for all children in those areas where such equalization was really needed. It is un-American to offer as an argument for Federal aid to education the poverty and need of many children and at the same time to exclude millions of other children, equally poor and in need, because of religious or racial considerations.

All fair-minded citizens, if not misinformed by propaganda, will oppose any bill advocating Federal aid which is not fair to all American children, regardless of color, origin, or creed.

In stating its official position, the Department of Education is opposed to:

1. Senate bill 181 in its present form.
2. A Federal Department of Education.
3. Federal control of education.
4. Any form of Federal aid which cannot be demonstrated as needed to meet the minimum educational requirements in areas where resources are inadequate.
5. Any distribution of Federal funds which shall not be equitable to all children in the area of need without regard to color, origin or creed, as long as they are in attendance at any school that meets the requirements of compulsory education.

Very sincerely yours,
Very Rev. Msgr. FREDERICK G. HOCHWALT,
Director.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 26, 1945.

Mr. WILLIAM F. MONTAVON,
Director, National Catholic Welfare Conference,
Washington, D. C.

DEAR MR. MONTAVON: I am in receipt of your recent communication, together with a copy of a letter addressed to Senator JAMES E. MURRAY, chairman, Committee on Education and Labor, which I have read with interest.

In order that the Members of Congress may have this valuable information, I am today placing it in the CONGRESSIONAL RECORD, and I am sure every Member will give it his serious consideration.

Sincerely yours,
THOMAS D'ALESANDRO, Jr.,
Member of Congress,
Third District, Maryland.

Story of a Guy From Brooklyn

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 26, 1945

Mr. ROONEY. Mr. Speaker, the New York Times magazine of Sunday, February 25, 1945, contains a story of a guy from Brooklyn by Sgt. Bud Hutton of the Stars and Stripes. It is about a boy from Brooklyn of a kind Noel Coward apparently never met. In pursuit of the German armies withdrawing from the Ardennes, our Ninetieth Infantry Division was one of those which broke through the Siegfried line and, with other divisions of Gen. George S. Patton's Third Army, enveloped the key road center of Pruem. Sergeant Hutton, who rode with the division into Germany, recounts the following realistic story of this typical guy from Brooklyn:

STORY OF A GUY FROM BROOKLYN—D COMPANY DIDN'T KNOW HIM WELL, BUT HE WAS A HERO IN HIS OWN RIGHT—THIS IS WHAT HE DID

(By Sgt. Bud Hutton)

ON THE SIEGFRIED LINE.—The countryside was ragged with ridges and freshet-full gullies. The stone houses were in ruins and the fields pocked where shells had fallen. And it was cold.

What had been done was very important. American infantry, as the saying goes, had advanced 2 miles and was fighting inside the Siegfried line.

But what had been done before this was important, too. For they had to hold what they had taken, before they could go on to the river and into the west wall's outer defenses.

The new guy from Brooklyn, as he settled himself behind the .50-caliber machine gun and watched the German tanks coming toward him in the moonlight, must have known how important it was. He must have known, too, what would happen if he stayed there.

He had come up to D Company in the First Battalion of a Ninetieth Division regiment at Christmastime. They made him an ammunition bearer with the machine guns. He was a private, 19, about 5 feet 7, sort of medium build, and if there was a job to do he did it and didn't say much about it. Because he was the way he was, and there were a lot of other reinforcements who came at the same time, no one in D Company knew him very well, and they got to calling him "the new guy from Brooklyn," and let it go at that.

The outfit moved north in the night, jammed in trucks that creaked across the snow, and jumped off against the south flank of the bulge that the Nazis had driven into the Ardennes. The new guy from Brooklyn did a good job in the rough going that led them past Bastogne and eastward toward Germany, so Capt. John McLean, of Los Angeles, skipper of D Company, made him a gunner. The new guy said that was swell and slipped back into the obscurity of the company.

They moved into the country where the war on the western front is now. Lt. Col. Bill Du Puy, of Sioux Falls, S. Dak., battalion commander, and the new guy from Brooklyn and the ones in between slogged through waist-deep snow and found it like the winter in Sioux Falls and a lot of other American places. They found hemlocks, black and green, against the winter countryside, but placed in symmetrical clumps not at all like what you see in the Adirondacks or the Black Hills; and the birds that flew up from the bare spaces beneath the heavy green boughs were seldom like the north country birds at home.

They found that it was harder to stay alive now because they were in territory that the Germans considered to be German. For it the enemy fought with a fierceness and hard-dying tenacity he had not shown back in France or in Belgium. When he fought for a clump of houses in the gullied land along the Our River he fought for each house, each room, each wall, and smashed what he could not take with him.

In snow and 10-below temperatures, and in wet when the thaws came and sharp slopes began to run with water, war became a fight almost as much for shelter as anything else, because unless the companies and battalions in reserve could get shelter and a chance to dry their clothes and shoes and change their socks—if they could find any dry ones—to eat some hot food—unless they could do those things there would come a time when they could not go on against weather and terrain and the Germans.

So they fought to take towns with names like Hontheim and Sellerich and Herscheid, and to take them so that some of the walls and some of the roofs were left when they got there. About the time their winter footwear and gloves and snow capes got up to

the line—about a week before the thaw set in, that is—they had reached a point in the tiredness, in the dull, unrelenting weariness of fighting, that they had begun to call the enemy simply "he" or "him"—"He's dug in behind the station," First Lt. Bob Smith, of Boston, would say when he called back for artillery fire. And when the shells came and smashed the station, the doughs would go in and they'd report back over the phone, "He's all through here."

If they were attacking or holding the line they lived on K rations, which are dry biscuits and a small can of chopped egg yolk and ham or a small can of cheese and stick of gum and a packet of coffee or lemon powder. By this time they had forgotten even to think about that Senator or somebody back in Washington who said last year that he'd tried K rations for dinner and they'd been very tasty, very tasty indeed.

D Company and the rest fought along the bottoms of narrow gullies, where rocky and hemlocked slopes went almost straight up on each side, with Jerry looking down your throat if you tipped your head back to curse him and his mortars. They fought up the narrow goat track roads to the top of the next sharp ridge, and when they got there they found there was another gully beyond it and another ridge beyond that.

So they came that night to Binsfeld, which was a clump of houses on a crossroads, or maybe a little more, that we had to have before we could sweep down to the Our River and do that piercing of the Siegfried line that they write about. D Company chased the enemy out of town and in bright moonlight hurried to dig in for the inevitable counterattack, which is as German as the Panzer Grenadiers they had captured that day.

There were three houses in a triangle on the far edge of the town and in them Tech. Sgt. Paul Landolt of Aberdeen, Idaho, put his men from the first platoon of B Company. They found on the second floor of the house farthest from the town the new guy from Brooklyn with a D Company machine gun already set up where he could see a dirt road and the fields which stretched out white to the woods where the Germans were.

Sergeant Landolt didn't know the new guy's name, but he had seen him around. He asked the new guy if he was all right and the kid said "Yes," and Landolt said did he know about the bazooka ammunition being all gone, and the kid said "Yes" again. Landolt went back to his men.

Three hundred yards away, out of the black shadows of hemlocks, came two German tanks, their images sharp in the moon's light. They clanked toward the houses and behind them came their infantry.

The new guy from Brooklyn sat up there with the .50 caliber, and he knew that if he could kill the Nazi infantry the tanks would not come in, because they needed their infantry to keep the antitank teams down; and they wouldn't know, he figured, that the antitank teams had run out of bazooka ammunition. The kid had been there long enough to know, too, that you have to hold what you take to be able to go on.

The noise of tanks came across the field and the new guy must have known about a muzzle flash of a .50-caliber at night—how it sputters there all red and orange, and everyone, for a mile around, opens up on it. Of course a gun could jam, or he could run out of ammunition, and the flash wouldn't be there any more to draw the enemy's fire.

Other doughs in the house heard the kid's gun begin to yammer, saw the tracers go out and some of the German infantrymen crumple onto the snow. The tanks clanked on across the field. They came to a point 20 yards from the machine gun and stopped there because there wasn't enough of their infantry with them to go on. The new guy's gun kept firing.

The men who are left in D Company will tell you about what happened later. They will tell you how it was after Binsfeld, how the Our River turned out to be only 6 feet wide, and wasn't that a hell of a come-down for a river? How it seemed that the farther they went the flatter the houses were smashed, until you never got a chance to dry your clothes, and more than ever the horizon of your thoughts and prayers was, "Just let me get through tonight."

Mostly, though, they'll tell you about the new guy from Brooklyn and how he sat there in that window in Binsfeld and kept firing until the infantry was beaten back and the tanks stopped and the tank turrets began to turn toward the orange and red fire at the end of that gun. They'll tell you they could see the reflection of the muzzle blast dancing on the sides of the tanks, and they'll tell you that the new guy must have known what would happen if he stayed there and fired.

The first shell from the tanks smashed the wall next to him, and he kept on firing. The second one passed straight through the spurting orange and red at the end of the gun and exploded.

He had a name all right—Pvt. Paul Kolbert, 1325 East Eighteenth Street, Brooklyn. They found it afterward, of course, on his dog tag. But to most of D Company he was just the new guy from Brooklyn.

Ground for Optimism About Poland

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of February 16, 1945:

GROUND FOR OPTIMISM ABOUT POLAND

(By Joseph C. Harsch)

The Crimea Conference stands out from previous such conferences because of its mood of decision.

The meetings which produced the Atlantic Charter, Casablanca, Teheran, Quebec—all these were dominated, politically, by declarative moods. There were declarations of policy, of aspirations, of intents. But they were not meetings of decision. The meeting at Yalta was plainly dominated by a desire, willingness, and determination to reach solid decisions.

This stood out more pointedly in regard to Poland than any single other issue. The Polish issue is certainly the kind of issue which politicians always, if possible, sidestep by some device. It could, in theory, have been sidestepped at Yalta. But it was not.

That nettle pricks today and will undoubtedly continue to prick for a very long time to come. A completely satisfying Polish settlement is unobtainable. But there is now a settlement which, if supplied in good faith under the terms written at Yalta, has every prospect of being as successful a settlement as the circumstances would permit.

It is already being charged, and will undoubtedly continue to be charged, that it represented a western capitulation to Russia. The charge is not warranted at this time. Poland does not get what its London representatives desire. But neither London nor Washington ever believed that they should have all they desire. There are three main elements in the Polish problem as it arose at Yalta: (a) Frontiers, (b) political self-determination, (c) attitude toward Russia.

On the first point, the agreement in substance on the Curzon line represents a recession from the most extreme Russian position with the door still open to further recession. The Russians originally insisted on the Ribbentrop-Molotov line of 1939. It included the Province of Bialystok in the north, which lies west of the Curzon line. This province remains Polish under the Yalta settlement. The Ribbentrop-Molotov line also took in for Russia all of Galicia which lies south of the Curzon line. (It needs to be remembered that the Curzon line was never drawn south into Galicia.)

Where Galicia goes, under the Yalta settlement, is not indicated definitively in the text. At his press conference, Mr. Byrnes appeared to be under the impression that its disposal remained unsettled; therefore, implying that the door was still open for its retention by Poland.

It can be reported that both London and Washington have long regarded the Curzon line as being the nearest approximation to a true ethnographic frontier between Russia and Poland that could probably be drawn. In accepting the Curzon line they were, therefore, not making a concession to Russia. They were approving what has been regarded ever since 1919 as a valid eastern frontier for Poland.

Particularly if the province of Galicia, with the city of Lwow, is finally given to Poland, Washington will feel that justice has been done.

On the point of political self-determination there was certainly no concession to Russia whatever. The ultimate government is to be chosen through secret elections supervised by a commission in which the British and American Ambassadors in Moscow hold two of the three seats. If the election is truly secret and if the ballots are counted honestly, there can be no question about the fairness of this arrangement. The "if," of course, remains to be tested.

Finally, on the point of attitude toward Russia, there was no concession. London and Washington have long accepted the doctrine that a Poland oriented in its foreign affairs to Moscow is as necessary to stability in eastern Europe as a Mexico oriented to Washington in its foreign affairs is essential to stability in Central America.

Thus, if the Crimean settlement is implemented in honest elections, the results will come short of many Polish desires, but will not in fact represent western capitulation to Russia. Galicia would be a concession, at least in official Washington eyes. But the Curzon line is not capitulation because its substantial fairness is not officially or even privately questioned. American diplomacy obtained, on paper, what it regarded as the essential elements of a sound settlement of the Polish question.

Manpower Problem

REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. VURSELL. Mr. Speaker, I have received from a prominent citizen of my district a letter crying out against the giving of greater power to the executive

departments down here in Washington, setting out a number of abuses of power that have already been exercised against a number of people in my district. I desire to include this letter for whatever benefit it my be to the Members of the House. Now that we are considering manpower legislation, which is a very live subject over in the other body, I think it behooves the Members of the House to continuously watch this legislation as it develops, and to see to it that there is no greater grab of power and centralization of government given to those here in Washington, and to see to it that a program is worked out in legislation between the two bodies, that will solve the manpower problem.

The letter referred to is as follows:

OLNEY, ILL., *February 24, 1945.*

Hon. CHARLES N. VURSELL,

House Office Building, Washington, D. C.

DEAR MR. VURSELL: Into this town has been sent an individual representing, I suppose, the War Labor Board, who I assume is following orders.

When the First National Bank of this town receives a letter that it cannot hire and fire its own employees, but must go through this Government agency, and where the Baker Oil Tools Co. is given like instructions, it looks like there is something wrong with the freedoms that our boys are fighting for.

When a man operating a restaurant advertises for help and is ordered to take his ad out of the paper, and another man reopening his burned restaurant with over 200 applicants for jobs is told that he can only work 6 days a week, it looks like we are not running our own businesses.

I can cite you another example of an oil-drilling company that through weather conditions was forced to suspend drilling operations at a certain point and another company wanted to use the drilling crews during the interim but were told that this was against the rules and regulations, so several crews, or towers as we call them in the oil field, were idle until the weather conditions made it possible to go back and resume drilling.

This is only a fair example of what is happening in these United States, and if you gentlemen pass any more legislation giving additional powers and authorities to boards, commissions, and bureaus, it would appear that our boys who are giving their lives overseas for our form of government have been wasting their lives in vain.

It may be a matter of interest to know that the shipyards in Evansville, Ind., which employs several thousand people, is closing down. There is not the manpower shortage that we are told there is. It is being manufactured to place more power in the hands of bureaucrats in Washington, and I hope you gentleman have the guts to stand up and fight against that sort of thing.

Very truly yours,

DONOVAN D. MCCARTY.

Proof of the Pudding

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. GAMBLE. Mr. Speaker, under leave granted me by the House on February 23 to insert in the CONGRESSIONAL RECORD several newspaper articles and editorials, I submit an article entitled "The Proof of the Pudding" which appeared in the Larchmont (N. Y.) Times on February 1, 1945:

PROOF OF THE PUDDING

Prior to the national election last year there were frequent outbursts from left of center by New Deal propagandists who were certain that Thomas E. Dewey and the horrible Republicans were attempting to steal the election by depriving the Nation's fighting men of the ballot. They paid little or no attention to the honest efforts of the Albany administration and our energetic boards of elections in getting the State ballots into the hands of the men and women in armed service.

Instead, they rather resented such efforts, terming them mere "alibis" and "a disguise for the real purpose of keeping the vote small" so that thereby Mr. Dewey's chances would be bettered. As a matter of fact, the resentment probably was based on the actual realizat.on that every State ballot which reached a soldier meant one less Federal ballot, the method of franchise favored by these propagandists.

Now, with the heat of election well past and no possibility that anyone can be suspected of grinding personal or partisan axes, it is interesting to note from a member of President Roosevelt's own Cabinet, the Secretary of War, that soldiers serving overseas preferred the State ballot over the Federal bobtail ballot. Only "insignificant use" of the short-form Federal ballot resulted, said Secretary Stimson, and its administration was "excessively complex."

In fact, said Mr. Stimson, the distribution and collection of the Federal ballots represented "burdens which appear disproportionate to any resulting utility," which is a diplomatic way of saying that the results did not justify the expenditure of time and labor.

There was no shortage of Federal ballots at any time, or at any place, reported Mr. Stimson, and yet in 10 States which approved the Federal ballot and reported to the Army, only 28,136 or 2.2 percent of the eligible persons used the Federal ballot while 446,974 or 34.6 percent used the State ballots. And in the merchant marine, where 400,000 Federal ballots had been made available to the War Shipping Administration, only 200 Federal ballots were cast. And in the entire 20 States approving the Federal ballots, only 5.3 percent of those eligible, about 1 out of 20, exercised this type of franchise.

The principle reason why State ballots were favored, as we pointed out at the time, was that they carried the names of candidates, while the Federal ballots did not. Further, the State ballots permitted voting for all candidates on the ticket; the Federal did not. "Most servicemen who desired to vote were able to obtain, then vote and return their State absentee ballots, leaving relatively few who needed to (or legally could) use Federal ballots," was Mr. Stimson's conclusion.

Use of Animals in Research at the Naval Medical Research Institute

REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, there has been much misinformation given to the public regarding vivisection. Criticism has been directed at the Naval Medical Research Institute and the new facilities at the Naval Medical Center, at Bethesda, Md. Criticism of these activities, I believe, springs from a lack of information as to what they are and how such activities are pursued by those interested in saving human life.

It seems to me, Mr. Speaker, it is high time that the facts, and all the facts, are laid before the House and the country. In my hand, I hold a report on this question, which I recently received from Rear Admiral W. J. C. Agnew, Acting Chief of the Bureau of Medicine and Surgery, Navy Department. It is most comprehensive. It is entirely complete, and, inasmuch as the House is being urged to pass a bill which has for its purpose putting an end to this activity, I ask unanimous consent that I be permitted to include with these remarks this report.

I have submitted the report to the Government Printing Office and I have a statement to the effect that it is estimated it will make two and three-fifths pages of the CONGRESSIONAL RECORD at a cost of $135.20. I ask to extend my remarks in the manner indicated notwithstanding this cost.

The SPEAKER pro tempore. Without objection, the cost to the contrary notwithstanding, the extension will be made.

There was no objection.

DEPARTMENT OF THE NAVY,
BUREAU OF MEDICINE AND SURGERY,
Washington, D. C., February 10, 1945.

To: Representative ROY O. WOODRUFF, House Office Building, Washington, D. C.

Subject: The use of animals in research at the Naval Medical Research Institute, information on, and miscellaneous antivivisection rebuttal material.

Reference: (a) Phone call by Representative WOODRUFF to Admiral H. W. Smith, February 6, 1945, re request for subject materials.

Enclosures: 1. Treatise on antivivisection rebuttal information. 2. Information on new structure to house animals for research at National Naval Medical Center. 3. Copy of letter used by Surgeon General of the Navy in reply to antivivisection letters addressed to him.

1. In response to reference (a) I am forwarding to you the material requested regarding the defense of animal experimentation at the Naval Medical Research Institute.

2. The purpose of the animal laboratories is to provide housing quarters and treatment rooms for all animals used in the wide variety of medical problems under investigation at the Institute. Almost three-quarters of the members of the officer staff have devoted a greater or less part of their time to problems directly involving animal experimentation.

3. Examples of medical research problems, details of which may or may not be disclosed publicly, but which depend almost exclusively upon tests with animals, are:

A. Successful treatment of peritonitis with penicillin; experimental work carried out on dogs.

B. Study of malaria and antimalarial drugs; experimental work prior to clinical trials carried out on monkeys, dogs, rats, and chickens.

C. Study of filariasis and antifilarial drugs; experimental work carried out on dogs.

D. Study of burn treatment methods; experimental work carried out on rabbits.

E. Study of shock therapy; experimental work carried out on rabbits.

In addition to these sample experiments, it may be added that certain of the studies have led to advances so revolutionary as to be classified as "secret" by military intelligence.

4. The record for the month of December 1944 is given as a sample of the kinds and numbers of animals used at the N. M. R. I. (including those also issued to the staff of the hospital): Monkeys, 11; dogs, 28; cats, 12; rabbits, 29; guinea pigs, 188; mice, 3,585.

5. An insectarium provides the special environment essential for the propagation and study of insects in relation to the prevention of insect-borne diseases.

6. Dogs are used only in experimental studies for which lower animal species are unsuited for one reason or another.

7. In compliance with the explicit orders of N. M. R. I. Order No. 16, "Laboratory animals," animals are anesthetized for all experiments which involve discomfort to the animal greater than that attending anesthetization. At the end of an experiment the animal is killed painlessly. Exceptions to this rule are made only when continuance of the animal's life is necessary for the observation of results.

Local anesthetics and the spinal-block type are almost never used in animal experiments (the undersigned know of no instances of its use at the N. M. R. I.). Anesthesia is most generally induced by an injection of veterinary nembutal, or, more rarely, by ether inhalation, both of which induce and sustain sleep during the full course of the experiment.

8. Although the results sought from animal experiments at the N. M. R. I. will generally benefit all people in the end, the immediate purpose in initiating these studies is to conserve the health of the members of the armed services.

9. Excerpts of references: Animal Experimentation, Its Importance and Value to Scientific Medicine. Published by Board of Regents, American College of Surgeons, Chicago. Health Benefits from Animal Experimentation. Prepared by Bowman C. Crowell, M. D. Issued by American College of Surgeons, Chicago. The Seven Wonders of Medical Science. Published by Illinois Society for the Protection of Medical Research. Some contributions by Animals to Human Health, by A. C. Ivy, M. D., California and Western Medicine, 1934. Published by California Medical Association, 450 Sutter Street, San Francisco, Calif. Modern Medical Miracles, by A. C. Ivy, M. D., California and Western Medicine, 1934, are submitted herewith.

They consist of a few of the many statements that have been made from time to time by eminent medical authorities, who are periodically obliged to defend animal experimentation in the face of threatened antivivisection legislation which would definitely impede medical scientific progress. Furthermore, no recognized medical authority has ever gone on record as opposing animal experimentation (this statement might well be verified through Dr. A. C. Ivy).

Similarly, and particularly in view of the recent antivivisection campaign in Chicago, in which he was involved, it is suggested that the help of Dr. Ivy would be of considerable value in the present connection.

It is further suggested that it may be of assistance to you to have a scientist from the institute, such as Dr. C. C. Pfeiffer, to elucidate with technical points.

10. Trusting that the above will supply the information requested, I remain,

Sincerely yours,

W. J. C. AGNEW,
Rear Admiral (M. C.), U. S. N.
Acting Chief of Bureau.

---

1. Animal Experimentation, Its Importance and Value to Scientific Medicine. Published by board of regents, American College of Surgeons, Chicago. Page 4: "In the words of that eminent citizen, Charles W. Eliot, president emeritus of Harvard University:

"The number of animals used for the benefits of the human race in making possible the recent advances of surgery and medicine is insignificant, indeed infinitesimal, compared with the number used for human food and human service; but the benefits to mankind which result from animal experimentation are immeasurable in quantity, and very precious in quality. The benefits of the discoveries go on, generation after generation, multiplying as they go."

"Animal experimentation has conferred immense benefits upon mankind, and doctors themselves have volunteered as subjects when animals have not afforded suitable media for experimental research." (Franklin H. Martin, M. D., Director General.)

2. Health Benefits From Animal Experimentation. Prepared by Bowmann C. Crowell, M. D.; issued by American College of Surgeons, Chicago. Pages 5–7:

"Over at the veterinary station we will find all sorts of animals benefiting from the experimental work. Animals are subject to many of the same diseases as are humans, and their methods of prevention and treatment are similar. Moreover, the control of diseases that are peculiar to animals is as great an accomplishment as has occurred with human diseases. In serving others they have served themselves. In dogs distemper can be prevented, and rabies can be reduced. In cattle tuberculosis easily can be detected and eliminated. Parasites can be removed. Anthrax, tetanus, and hog cholera can be prevented. All of these diseases have caused untold suffering and economic loss, which research has made needless, as, for example, in hog cholera which in 1914 killed 12 percent of the swine in the United States, and against which it is now possible to obtain nearly 100 percent protection.

"What is worse than a rabid dog? What gives greater fear than the bite of a mad dog? Through the Pasteur treatment the dangers of hydrophobia have been reduced enormously, and the number of persons now annually treated for this disease mounts to the almost unbelievable number of hundreds of thousands. How many would hesitate thus to protect themselves after being bitten by a rabid dog even with the knowledge that their individual case will entail the sacrifice of several animals?

"Having witnessed these evidences of progress, and knowing of much else that cannot be included in detail in a limited space—the great reduction in infant mortality and the control of infectious diseases, the purification of our water, milk, and food, which we all take for granted, and by reason of which we continue to exist, the progress in the control of cancer, and the increase in the life span from 45 to 59 years within the past 35 years, with the prediction that it will be increased still further—let us pause a moment to consider some of the factors that have served to bring all this about.

"If this preservation of health and increased longevity are to be continued then the use of animals must be allowed. Physicians have not hesitated to sacrifice themselves in experiments for the progress of science or to prove their theories. Very recently we have the example of Dr. Park of New York and his associates allowing themselves to be injected with the killed virus of infantile paralysis in order that their bodies might produce substances that would protect others against the disease. James Carroll of the Walter Reed Yellow Fever Commission submitted himself to the bite of a mosquito infected with the yellow fever virus and came successfully through an attack of yellow fever. Not so fortunate was his fellow member on the Commission, Jesse W. Lazear, who was accidentally bitten by an infected mosquito during their experiment and died from the disease. Noguchi is another notable example of a martyr to science. Daniel Carrion, Dutton, Ricketts, and McClintic all lost their lives in investigating the diseases with which their names are associated.

"Sir Frederick G. Banting proved his theory and developed insulin at the sacrifice of approximately 30 dogs. Today the lives of a million people have benefited from its use. John B. Murphy, in perfecting his method of sealing together the torn or cut ends of the intestine by an ingenious button, used 15 or 20 dogs, and as a result countless human lives have been saved.

"Such examples could be multiplied almost ad infinitum. We know that the medical scientists unselfishly have made possible all the progress of which we have spoken. We discern the unreasonableness and inconsistency of those who would hamper it when they daily eat fish, flesh, or fowl. We know the human and humane character of our medical fraternity who will sit up night after night with you when you need them, and we also know the conditions under which they practice animal experimentation.

"Let me refer to only a few of them with reference especially to dogs. Only derelict or condemned dogs from the pounds are so used, and not the pets of ourselves or our friends or even of our enemies. In order to be allowed to obtain dogs for experimental purposes an institution first must submit to thorough investigation before approval is given.

"Laboratory workers have drawn up sets of rules for the care of the dogs and these are adhered to rigidly. The dogs really live lives of luxury compared to ordinary street life. Cages and runways are kept clean and airy and are sterilized at regular intervals. Food is especially prepared for them in diet kitchens, from which recently has come much of our knowledge of the all essential vitamin contents of our foods. Before most operations they are anaesthetized and if to be sacrificed are killed painlessly. After operations their care is as important in the result of the work as is the operation itself. The affection that develops between a dog that has been experimented on and his surgeon is sufficient evidence of the lack of cruelty."

3. The Seven Wonders of Medical Science, published by Illinois Society for the Protection of Medical Research. Discoveries resulting solely or chiefly from experiments on dogs.

"1. Insulin which controls diabetes in man and dog. There are 1,000,000 people living in the United States today, who now have or will later develop diabetes and who will have their lives prolonged and enriched by the use of insulin. This discovery was made solely on dogs.

"2. Liver extract for pernicious anemia. Liver extract causes the blood to return to normal in patients afflicted with this disease. Liver was found to be a good food for anemic dogs. This was applied to patients with miraculous results.

"3. Treatment of parathyroid tetany. Prior to 1925 practically all patients afflicted with this dreadful disease died. Today no patient need die of this disease.

"4. Ethylene anesthesia. The discovery of many and our knowledge of the action of all anesthetics and sleep-producing drugs have come chiefly from experiments on dogs.

"5. Ether, which has been called the greatest gift of medicine to mankind, was first tried out by Dr. W. T. G. Morton in a series of experiments on his own dog. His success in the dog led to a trial in man.

"6. Rabies treatment. The use of the Pasteur treatment for rabies (mad-dog bite) has reduced the mortality from 16 to less than 1 percent. There is a preventative treatment for dogs which protects them to a great extent against this disease.

"7. Hookworm cure. The hookworm infests both man and dog. One hundred million people in our own and in tropical countries are infested with this parasite.

Most all we know about this parasite resulted from studies on the dog. Carbon tetrachloride was found to rid the body of hookworm. Then, tetrachlorethylene was found to be as effective but less toxic to the patients. More than 15,000,000 treatments have been given to dogs and human beings.

"8. Treatement of Addison's disease. Addison's disease is caused by disease of the adrenal glands. These patients die slowly. Recently it has been discovered by experiments on dogs and cats that this disease can be controlled by the administration of appropriate extracts of the adrenal glands.

"9. In regard to Chemical Warfare Service:

"(a) A statisfactory treatment for phosphorus burns.

"(b) A satisfactory treatment for burns and other effects caused by poisonous gases.

"(c) An improved method for treatment for lung irritants like phosgene.

"(d) Effects of gas (automobile exhaust, cooking gas) poisoning and process of recovery.

"(e) Facts bearing on shell shock.

"(f) Facts bearing on treatment of traumatic shock, or shock following severe injury.

"10. Methods of Resuscitation: In drowning, coal-gas poisoning, and electrocution, cyanide poisoning.

"11. Almost all we know about the stomach, intestine, and liver.

"12. Much that we know about heart action and the effects of drugs on it.

"13. Much that we know about dropsy and kidney disease.

"14. The accuracy of the indirect method of measuring blood pressure in man. When the physician takes the blood pressure, he and his patient should remember the debt owed to the dog.

"15. Development of new operations:

"(a) On the heart and its valves.

"(b) On the lungs.

"(c) On the blood vessels.

"(d) On the brain.

"(e) On the stomach and intestines.

"(f) On the blood transfusion.

"(g) On the ovaries and womb.

"16. Rickets, a common disease that affects children and young animals. The first experiments bearing on the cause and cure of this disease were performed on puppies. Now this disease can be prevented and cured.

"17. Antidotes to veronal and luminal (sleeping drugs) poisoning.

"18. The action of a number of medicines: Epinephrine, which is used to check hemorrhage and to abolish distress in asthma is tested on dogs by United States Government requirement. Pituitrine, a drug used in childbirth is tested on guinea pigs and dogs. Wood alcohol was first shown to be harmful by experiments on dogs and the cause of "ginger jake paralysis" was found by studies on the dog.

"The dog's contribution to our knowledge of the function of the organs of the body would fill a volume. Scientists, who know their business and duty to society just as the lawyer, banker, engineer, and architect know their business and duty, hold that the dog is necessary for experimental purposes. Detailed reasons cannot be pointed out to lay persons, because they do not know enough anatomy and physiology. But the following general statements can be made: Dogs are necessary because (1) they can live a healthy life in relative confinement. (2) They are large and their structures can be easily operated. (3) Like man they eat all kinds of foods. (4) They have diseases in common with man. (5) Structurally and functionally they are very similar to man. (6) They are so numerous that in large cities thousands are picked up and killed yearly. Of these, a small number are drafted for humane experiments, the results of which serve dog and man alike.

"When a dog is operated on it is put to sleep or a powerful pain-killing drug is used.

"What science has done for the dog:

"1. We can now prevent and cure rabies in the dog.

"2. We can now kill the hookworm which infests dogs as well as man and which makes it difficult for dog fanciers to raise dogs.

"3. We can now prevent and cure blacktongue in the dog.

"4. We can do much to prevent and control distemper. The treatment is not perfect and further experiments must be done on the dog for the good of the dog.

"5. We are now working to find a medicine that will kill the cruel heartworm in the dog.

"6. We know how to operate on the dog and cure certain diseases of the thyroid gland and intestines.

"7. We are learning about 'puppy birth' in the dog which is important to dog fanciers.

"8. We can prevent diseases in the dog due to improper food. Dogs need vitamins just as other animals do.

"What have the opponents of animal experimentation done for either man or dog?

"Nothing! The opponents of animal experimentation, known also as antivivisectionists, would prevent experiments on dogs for the sake of dogkind. Antivivisection would make it impossible for veterinary science to experiment on one dog for the sake of dogs as a group.

"Also, the opponents of animal experimentation themselves profit daily from the benefits of animal experimentation. They do not sense the fact that city life could not exist as we now know it if animal experimentation had not been practiced in the past. Without the knowledge which has come from animal experimentation, the grim specters of plague, typhus, yellow fever, malaria, and typhoid would still be rampant amongst us. Diphtheria would still take its toll of children's lives. Surgery would be primitive and anesthesia inadequate and unduly dangerous. Our knowledge of the function of the organs of the body and of life processes upon which the progress of medicine and the diagnosis of disease depends, would not have been gained, unless cats, dogs, guinea pigs, and other laboratory animals had been used. Scientific knowledge and the discoveries of medical science do not fall from the heavens like the manna upon which the children of Israel fed, but must be obtained through the arduous and persevering use of the scientific or experimental method. This method is the only known and proven method by which the warfare on disease may be conducted adequately and effectively. The opponents of biologic and medical progress would abolish this method, the use of which has been and still promises to be of such tremendous value to mankind.

"It should not be forgotten that when crops are threatened with parasites, when farm animals and the human family are threatened by an epidemic disease, the legislators and citizens turn to the biologist and medical scientists for aid, and that the work of public-health agencies are carried on either by, or under the direction of, men and women trained in the medical sciences. The public has and must continue to manifest confidence in the moral and intellectual integrity, the sincerity of purpose and the humaneness of its biologists and medical scientists. The public must support them in their work, if in the future the public shall expect to benefit to a maximum extent, as it has in the past by expert advice, because expert advice is based on scientific facts which come from experimentation."

4. Some Contributions by Animals to Human Health. By A. C. Ivy, M. D. California and Western Medicine, 1934. Page 13:

"Dog: Echinococcus disease: Taenia echinococcus, a small tapeworm which sometimes inhabits the intestines of dogs, gives rise in man to cysts that may be the cause of death.

"Hydrophobia: The dog is the animal chiefly responsible for the perpetuation of this disease, so fatal to both man and dog.

"Tapeworm: A tapeworm, diphyllidium caninum, may be acquired by man (especially children) from the dog.

"Mange: Of the three types of mange from which dogs suffer, one is transmissible to man.

"Ringworm: The dog is subject to four types of ringworm which it may occasionally transmit to man.

"Scarlet fever: Dogs are susceptible to the scarlet-fever germ. Close association of a dog with a child suffering from this disease may endanger other children."

5. Modern Medical Miracles. By A. C. Ivy, M. D., California and Western Medicine, 1934. Pages 20–25. To summarize:

"The dog's contribution to our knowledge of the function of the organs of the body would fill a volume. Scientists, who know their business and duty to society, just as the lawyer, banker, engineer, and architect, know their business and duty, hold that the dog is necessary for experimental purposes. Detailed reasons cannot be pointed out to lay persons, because they do not know enough anatomy and physiology. But the following general statements can be made: Dogs are necessary because—

"1. They can live a healthy life in relative confinement.

"2. They are large and their structures can be easily operated.

"3. Like man, they eat all kinds of foods.

"4. They have diseases in common with man.

"5. Structurally and functionally they are very similar to man.

"6. They are so numerous that in large cities thousands are picked up and killed yearly. Of these, a small number are drafted for humane experiments, the results of which serve dog and man alike.

"When a dog is operated on, it is put to sleep or a powerful pain-killing drug is used.

"What science has done for the dog:

"1. We can now prevent and cure rabies in the dog.

"2. We can now kill the hookworm, which infests dogs as well as man, and which makes it difficult for dog fanciers to raise dogs.

"3. We can now prevent and cure blacktongue in the dog.

"4. We can do much to prevent and control distemper. The treatment is not perfect and further experiments must be done on the dog for the good of the dog.

"5. We are now working to find a medicine that will kill the cruel heartworm in the dog.

"6. We know how to operate on the dog and cure certain disease of the thyroid gland and intestines.

"7. We are learning about puppy birth in the dog which is important to dog fanciers.

"8. We can prevent diseases in the dog due to improper food. Dogs need vitamins just as other animals do.

"What have the opponents of animal experimentation done for either man or dog?

"Nothing! The opponents of animal experimentation, known also as antivivisectionists, would prevent experiments on dogs for the sake of dogkind. Antivivisection would make it impossible for veterinary science to experiment on one dog for the sake of dogs as a group.

"Also, the opponents of animal experimentation themselves profit daily from the benefits of animal experimentation. They do not sense the fact that city life could not exist as we now know it if animal experimentation had not been practiced in the past. Without the knowledge which has come from animal experimentation, the grim specters of plague, typhus, yellow fever, malaria, and typhoid would still be rampant among us. Diphtheria

would still take its toll of children's lives. Surgery would be primitive and anesthesia inadequate and unduly dangerous. Our knowledge of the function of the organs of the body and of life process upon which the progress of medicine and the diagnosis of disease depends, would not have been gained, unless cats, dogs, guinea-pigs and other laboratory animals had been used. Scientific knowledge and the discoveries of medical science do not fall from the heavens like the manna upon which the children of Israel fed, but must be obtained through the arduous and persevering use of the scientific or experimental method. This method is the only known and proven method by which the warfare on disease may be conducted adequately and effectively. The opponents of biologic and medical progress would abolish this method, the use of which has been and still promises to be of such tremendous value to mankind.

"It should not be forgotten that when crops are threatened with parasites, when farm animals and the human family are threatened by an epidemic disease, the legislators and citizens turn to the biologist and medical scientist for aid, and that the work of public-health agencies are carried on either by, or under the direction of, men and women trained in the medical sciences. The public has and must continue to manifest confidence in the moral and intellectual integrity, the sincerity of purpose, and the humaneness of its biologists and medical scientists. The public must support them in their work, if in the future the public shall expect to benefit to a maximum extent, as it has in the past by expert advice, because expert advice is based on scientific facts which come from experimentation.

"TRUSTS OPPOSING ANIMAL EXPERIMENTATION NOT CHARITABLE

"Animal experimentation as a means of promoting human and animal welfare has recently received the sanction of two tribunals of great importance, one in the United States and the other in England.

"In the American case, the United States Board of Tax Appeals (25 B. T. A., *Penn. Co. Insurance on Lives and Annuities, Executive Estate of A. S. Logan, Deceased, petitioner* v. *Comm. Int. Rev., respondent*) held that a bequest to a society organized for 'the total abolition of all vivisectional experiments on animals and other experiments of a painful nature' was not a bequest to a corporation organized and operated exclusively for the prevention of cruelty to animals, and that the amount of such a bequest could not be deducted in computing the Federal estate tax.

"In the English case the court of appeal (The Law Journal, 71: 329, 1931) raised the question whether 'in the light of later knowledge in regard to the benefits accruing to mankind from vivisection' bequests designed to hinder and prevent vivisection would today be regarded as charitable bequests. On appeal, the House of Lords forbade the use for antivivisection propaganda of any part of the legacy concerning which the question was raised.

"Probably these two decisions represent the general trend of mature and cultured thought on the subject of animal experimentation, when uninfluenced by lurid appeals to the imagination. Both decisions were based on the orderly presentation of legal evidence, not on such clamorous, virulent, emotional speech-making as commonly fills the air when animal experimentation is discussed by antivivisectionists before legislative committees." (Northwestern University, 303 East Chicago Avenue.)

SOME OPINIONS ON ANIMAL EXPERIMENTATION

Jane Addams, Hull House, Chicago: "Dr. A. J. Carlson, a distinguished professor of the University of Chicago, during the World War made a most valuable study of the piteous children who were suffering from starvation, and for months worked on their behalf in southeastern Europe. Immediately after the war I accompanied a scientific friend, whose discoveries in industrial disease have necessitated research with living animals, in a survey of the war children throughout one country after another.

"It is impossible to associate either Dr. Carlson or Dr. Alice Hamilton with inhumanity or lack of tender care for helpless creatures; to charge them, or their scientific colleagues, with cruelty is utterly to misapprehend them of their motives."

Charles W. Eliot, LL. D., president emeritus, Harvard University: "We owe to scientific experimentation on animals the means of saving hundreds of thousands of children within the past 50 years, and untold millions of children in the coming years. But it is not human beings alone that owe an immense debt to modern animal experimentation. Animals also owe to vivisection great deliverance from disease and death. All the agricultural industries in the United States are deeply indebted to animal experimentation."

Harry Pratt Judson, until recently president of the University of Chicago: "Men of real scientific attainments must not be prevented from pursuing their investigations for the benefit of humanity by idle sentimentality."

His Eminence Denis Cardinal Dougherty, archbishop of Philadelphia, Pa.: "To forbid vivisection would be to hamper science, do a mischief to the human race, and foster misplaced sympathy."

Rt. Rev. C. H. Brent, bishop of western New York: "I sincerely hope that the efforts made by the antivivisectionists to eliminate this mode of scientific investigation will not meet with success."

Rev. John Haynes Holmes, minister of the Community Church, New York: "As regards the surgeons who are engaged in this business of vivisection, I have to state that I do not believe for a single moment the charges that are so wantonly brought against them. I know some of these men. I have met the most distinguished of them, who has been for years under most virulent attack. I have gone through his laboratories. I have witnessed his performance of a vivisection experiment, which was of the character of most severe major operations. To accept the charges of cruelty against scientists of this type—this is a thing impossible to me."

Ernest Thompson Seton: "I learn now from your reply to the Baynes article that you (the opponents of medical science, called antivivisectionists) are opposed to all experiments on living animals, and that you utterly condemn the work of the Pasteur Institute, the Rockefeller Institute, and allied laboratories. I have to thank the studies of such institutions for the fact that my wife is alive today. Kindly accept my resignation from the Vivisection Investigation League, to take effect immediately."

Col. David S. White, Chief Veterinarian of the American Expeditionary Forces: "Anyone who is familiar with what vivisection has done for mankind and animal kind must realize its value to the world."

William J. Mayo, M. D., the Mayo Clinic, Rochester, Minn.: "My brother and I are strongly in favor of vivisection. In the clinic there are large laboratories in which a number of physicians are constantly at work on investigations which depend on animal experimentation."

President Angell, of Yale University: "We find no obstacle to the practice of animal experimentation in any intuitive moral convictions, nor in the traditional morality of our race."

6. Animal Experimentation, Its Importance and Value to Scientific Medicine. Page 6:

"The claim that animal experimentations, even though beneficial is morally wrong, is in opposition to the ethics of our civilization. We kill calves and take their mothers' milk; we slaughter annually hundreds of thousands of cattle, sheep, and hogs; we castrate male creatures without anesthesia, merely to make them more tractable or to please our palates; we hunt and trap with every possibility of inflicting pain. In the face of these habits, there is no reason why the use of animals in laboratories, with care to avoid causing unnecessary discomfort and with the object of increasing knowledge and lessening human misery, should be regarded as specially immoral. Indeed the fact that animal experimentation has vastly reduced the suffering of mankind and that, if persisted in, it will continue to do so, renders the work of medical investigation highly moral—even a moral duty."

WALTER B. CANNON,
George Higginson Professor of Physiology, Harvard University Medical School, Boston.

INFORMATION ON NEW STRUCTURE TO HOUSE ANIMALS FOR RESEARCH AT NATIONAL NAVAL MEDICAL CENTER

The present animal house is quite inadequate and does not permit the healthful living conditions which we desire for our animals. The new animal house will have ample indoor space, runways, and other facilities for taking the best care of the animals.

As to the use of animals in investigations of the many problems of prevention and treatment of disease and injuries, it should be considered that the whole structure of modern medicine and the measures now being employed which are so successful in saving the lives of hundreds of thousands of our soldiers and sailors are rooted in observations made possible only by utilization of lower animals.

Our staff members are humane persons both in character and in works; and not even the simplest procedure involving animals is undertaken without the defined purpose of prolonging or saving human life, or is conducting without the utmost consideration.

The Naval Medical Research Institute order governing the use of animals contains the following provisions:

"Animals shall receive every consideration for their bodily comfort; they shall be kindly treated, properly fed, and their surroundings kept in the best possible sanitary condition.

"No operations on animals shall be made except with the sanction of the research executive who will hold himself responsible for the importance of the problem studied and for the propriety of the procedures used in the solution of these problems.

"In any operation likely to cause greater discomfort than that attending anesthetization, the animal shall first be rendered incapable of perceiving pain and shall be maintained in that condition until the operation is ended.

"Exceptions to this rule will be made by the research executive alone and then only when anesthesia would defeat the object of the experiment. In such cases an anesthetic shall be used so far as possible and may be discontinued only so long as is absolutely essential for the necessary observations.

"At the conclusion of the experiment the animal shall be killed painlessly.

"Exceptions to this rule will be made only when continuance of the animal's life is necessary to determine the result of the experiment. In that case, the same asceptic precautions shall be observed duirng the operation and so far as possible the same care shall be taken to minimize discomforts during the convalescence as in a hospital for human beings."

FEBRUARY 8, 1945.

DEAR MR. —: I have your letter of ———, expressing concern over the proposed extension of laboratory facilities at the National Naval Medical Center, Bethesda, Md.; which

was referred by the President to me as the one most directly concerned.

You are, evidently, misinformed regarding the purposes to which new construction is to be devoted. Most of it is designed to house physical, chemical, bacteriological, pathological, and similar laboratories, a diving tank, and facilities for studies on the effects of environment in which human volunteers are used to gain data as to their efficiency and general well-being under conditions of service.

Quarters are included in the plans, but only for the purpose of improving the housing of animals by providing them with more healthful living conditions: for example, a tropical environment essential for the propagation and study of disease-bearing insects.

That animals should not be used in medical research, developments, testing, or standardization is apparently the grounds for your letter of protest. It will suffice here if I state that the whole structure of modern medicine and the measures now being employed which are so successful in saving lives of hundreds of thousands of our soldiers and sailors are rooted in observations made possible only by utilization of lower animals. I consider that statement irrefutable.

In charging our officers with mutilation and torture you are quite mistaken. In no case are there practices which could possibly be described as torturing or even pain producing. I can assure you that our staff members are humane persons both in character and in works. Even the simplest procedure involving animals is undertaken with the definite purpose of saving human life, and is conducted with the utmost consideration.

Trusting that this assurance will suffice to allay your distress, I am,

Sincerely yours,

ROSS T MCINTYRE,
Vice Admiral (MC), Surgeon General, United States Navy.

Send Mr. Pell Back to London

EXTENSION OF REMARKS
OF
HON. ALBERT B. CHANDLER
OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1945

Mr. CHANDLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Send Mr. Pell Back to London," written by Edgar Ansel Mowrer and published in the York (Pa.) Gazette and Daily of February 6, 1945.

The author of the article stands firmly behind Mr. Pell's contention that although the perpetrators of the atrocities committed against the Hebrew peoples of Europe are not considered to be United Nations nationals, they should be punished as war criminals. I believe that Mr. Mowrer's remarks on the subject are very worth while.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEND MR. PELL BACK TO LONDON

(By Edgar Ansel Mowrer)

Acting Secretary of State Joseph Grew has, at long last, announced that the State Department wants to see the Germans punished for all their crimes, within the Reich as well as in the victim countries. If so the sooner the Department ships Herbert Claiborne Pell, American representative on the United Nations War Crimes Commission, back to his job in London, the better for all concerned. For in the eyes of the entire Allied world, Mr. Pell represents those Americans who want Allied justice to do a clean job, as against those Americans who want something less.

Failure of the State Department to return Mr. Pell to the position to which the President appointed him and from which nobody but the President has the right to remove him, will convince a lot of people, including this writer, that the State Department, following an ancient habit, is double-tonguing to the American people.

On paper, the Department's position is clear and shining. In the New York Times (February 2) you may read:

"It was stated today in high quarters that the decision for Mr. Pell not to return was based exclusively in the failure of Congress to make an appropriation for him and in no other consideration. The failure to appropriate was said to have been due to a misunderstanding in Congress with the result that the State Department has requested a special appropriation for the purpose."

"High quarters" like these must be right, and yet—

And yet Members of Congress have personally stated that they are willing to restore the appropriation for the American representative on the United Nations War Crimes Commission any time the State Department asks for it and that they would have done so earlier had its importance been made clear to them.

This being the case, certain questions are pertinent. For instance:

Why—since only lack of funds prevented it from sending Mr. Pell back to London—did not the State Department put in its new request for funds earlier?

How—in the absence of an appropriation, has the Department been keeping up the office in London with its four employes? Mr. Pell's second, Lt. Col. Joseph Hodgson, is paid by the War Department. But of the $30,000 needed, Mr. Pell would normally receive only $6,500. The rest goes for rent, other employees, and incidental expenses, all of which have been regularly paid. Where has the money been coming from?

Why—since nothing but Congress' failure to appropriate money stood in the way of Mr. Pell's return—was he informed that the refusal to send him back to London was tantamount to a dismissal by the Secretary of State?

Finally, since funds are now going to be made available, why has not Mr. Pell—as of February 4—been asked to prepare to return to his old job?

In the absence of clear and convincing answers to these questions some people, and among them this writer, will perhaps be pardoned if they stick to the conclusion that the State Department does not wish Mr. Pell to return. Conceivably these people do not really desire to see the United States represented by a man who stands out so sturdily for the full punishment of all war criminals. Conceivably they would prefer a weaker sister, more amenable to "hints" from the Department.

At London Mr. Pell took the lead in demanding that while national courts handle crimes by specific Germans, the Nazi big shots responsible for the war and for the murder of millions be brought before an international court or courts. Mr. Pell asked that an international United Nations court take the lead in extraditing Nazis from neutral countries. And he took the lead in demanding that the Germans at home be punished for their crimes against German Jews, pacifists, and other objects of their sadism.

The Department has followed Mr. Pell all too slowly. But he has persisted in his demands for full justice. Back here in the United States, although informed that he would not be sent back to London, he has taken his case to the American people. He has been so successful that now Acting Secretary Grew has admitted that the American people want all the guilty punished. "The Department of State and the Government," Mr. Grew stated, "share that inexorable determination."

Splendid, splendid, Mr. Grew. We the people ask nothing more. Better late than never. But since the Department of State, its legal adviser Green Hackworth and others, have not always held this sane view, it would be useful if the Department would begin to demonstrate its conviction not only in words but in deeds. The first of these should be the announcement that Mr. Herbert Pell is returning to his old job with the full support of the American administration.

Short of this, we shall wonder how far our State Department really wants the punishment of all guilty Germans.

Why Compulsory Military Training Now?

EXTENSION OF REMARKS
OF
HON. ROBERT A. GRANT
OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. GRANT of Indiana. Mr. Speaker, under leave to extend my remarks, I submit herewith an article from The Ave Maria, written by the Reverend J. Hugh O'Donnel, C. S. C., president of the University of Notre Dame, on the subject of compulsory military training.

WHY COMPULSORY MILITARY TRAINING NOW?

(By J. Hugh O'Donnell, C. S. C.)

In order to appreciate the full implications of the demand for compulsory military training one must realize at the outset that it is a peacetime, and not a wartime, proposal. It cannot be classified under the head of what we have come to call emergency legislation. It has no connection with the Selective Service Act, nor has it any bearing on the policing of defeated Axis countries after the war. Basically, it proposes a complete and permanent reversal of the traditional American military policy and principle. Compulsory military training would bring about a fundamental change in the lives of millions of young Americans for generations to come.

Two bills providing for compulsory peacetime military training have been introduced in Congress and are now before the House Committee on Military Affairs. One is the Gurney-Wadsworth bill (H. R. 1806) and the other is the May bill (H. R. 3947). Both propose a full year of compulsory military training for all able-bodied male citizens residing in the United States. Both provide that after the year of training the trainees shall be enrolled as reservists in the Army or Navy for a period of 4 or 8 years, and that they shall take such refreshing courses as may from time to time be prescribed by law. The Gurney-Wadsworth bill puts the age of training at "18 years, or within 3 years thereafter," while the May bill puts the age at "17 years, or immediately upon the successful completion of the full course of an accredited high school or preparatory school, whichever first comes."

The real issues involved here have been obscured for a number of reasons. Not the least important cause of confused thinking is that we are being asked to consider, and

to take action upon, this radical departure at a time when we are well into our fourth year of World War No. 2, when we have been well indoctrinated with wartime psychology and therefore perhaps too much inclined to translate the problems of a very long tomorrow into terms of an instant and momentous today.

At first, to the sincere patriot who is concerned only with national security, and who has not taken time to think the matter through, opposition to compulsory military training in time of peace seems a tentative invitation to World War No. 3, if it does not actually smack of treason. But as Albert G. Parker, Jr., president of Hanover College, has well said: "Opposition to taking a year from every boy's life for military training does not imply one to be a pacifist, an isolationist, or opposed to a strong military defense of our country, and a defense of the principles of right and justice throughout the world. An honest, thoughtful, patriotic man can believe in a strong support of right and justice and still be opposed to any plan of compulsory military training."

Those who favor compulsory military training in time of peace argue that such a system will assure the United States sufficient military strength whenever needed. Of course, in the light of history such an assumption is difficult, if not impossible, to prove. Compulsory military training failed Germany, its foremost exponent, in World War No. 1, just as it later failed France and Belgium in World War No. 2. In the latter countries it actually contributed to their downfall because it lulled them into a sense of false security. But this is beside the point. Even if the assumption were tenable, the advocates of compulsory military training would still be guilty of the fallacy of ignoring alternatives. A compulsory system is not the only way of assuring the United States sufficient military strength in time of need, and assuredly it is not the best way. In fact, of all ways, it is the least American. It is the way that leads to the totalitarian regimentation which we are now fighting against in all quarters of the globe.

No sensible person can deny that henceforth we must be a military nation. We will maintain a larger army and navy than ever before. We must not become a militaristic nation, which is a vastly different thing. That is, we do not want to adopt the European system, which would weaken our schools and undermine our family life. (Both institutions are already suffering from the impact of pernicious influences inimical to the Christian, and hence American, tradition.) We do not want to form a military caste. Far less do we want to become the victims of the pragmatic ideology characteristic of such a caste. Furthermore, we must be careful to protect the parent's right to determine the education of his child.

Above all, we must protect the rights of approximately 1,200,000 boys who become 18 years of age each year in the United States, and who under the new order, by legislative fiat, would be compelled to spend one of the most formative years of their lives in a boot camp. And, as Father Edward V. Stanford, former president of Villanova College, writes in his able analysis, The Case Against Peacetime Conscription: "It only beclouds the issue to link up with peacetime conscription such matters as improving physical fitness, developing habits of character and discipline, indoctrinating in the democratic way of life, removing illiteracy, etc. * * * It does violence to the meaning of words, whether in war or in peace, to call military conscription—the favorite tool of dictators for more than a hundred years—the more democratic method of raising armed forces."

Let us make haste slowly. Why all the commotion now in regard to a matter that is so open to debate when we should be strongly united in the winning of the war? There is no need for headlong speed in enacting legislation that is so far-reaching in its effects, so permanent, and so completely at odds with the way we Americans have been doing things—and doing them pretty successfully—for the past 169 years. Common sense dictates that we explore other courses of action. It also demands that we wait until the war is over before we make our final decision. Our perspective will be better then. And also, after the war we can ask the opinion of the 10,000,000 men now in the armed forces. In justice they, of all Americans, have a right to be heard on a question that so vitally affects the future of their country and their children. The problem is difficult, but we should be able to work out a solution in the true American way that will best serve our country's interests.

As a means to the end we want, I suggest the encouragement of voluntary enlistments, a more intensive use of universities, colleges, and high schools as a training ground for the Army and Navy, and also a revival of the National Guard, strengthened and adapted to the mechanism of modern warfare so that it will literally be a guard of the Nation.

My proposal presumes a peacetime nation. It presumes what Father Stanford has referred to as "the forging of a just peace and the building of an international organization to protect it." If we are merely to have another armistice—that is, a breathing spell that exhausted belligerents will use to get ready for another conflict—if the United States must prepare for another war, which God forbid, the complexion of the problem is entirely changed. Then, I suppose, the only course to follow is to apply the principles of the Selective Service Act, but with this reservation, namely, that some serious thought be given to the Nation's future leadership. The reason is that if we continue the present policy it will not be long until we will have lost most of our men who are capable of leadership in all branches of human endeavor. The fact is that we have already lost one complete college generation, and we are on the way to lose another. And the real tragedy is that the United States is practically the only nation in the world that has permitted higher education to be sacrificed on the altar of global war.

It has yet to be proved that an adequate standing army, even as large an army as we shall have after the war, cannot be raised on a voluntary basis. In the past, volunteers have been turned away because the enlisted personnel had reached the maximum fixed by law. In the future, large numbers of young men will enlist, provided there are reasonable incentives to do so, because some men are attracted to the army life just as others are drawn to a variety of other pursuits. Let the Army offer a pay scale comparable to that in other occupations, let it teach technical skills that will be useful in civil life, and the volunteers will not be long in taking advantage of their opportunities.

I referred to a revival of the National Guard. "Revival" is not too strong a word, because this historic branch of the service has been permitted to lose something of its character and much of its identity. It should be restored to its proper place, and then effectively implemented and supported by public opinion. A strong National Guard with an accelerated program would be an asset of inestimable value. There is some reason to believe that basic training such as the National Guard could give—and give in the guardsman's home town under experienced officers—could be the equal of that given in time of war. The Army, for example, has found that men can be trained for replacements in the battle line in from 4 to 6 months, and the Navy is sending recruits into the fleet after only 12 weeks in boot camp.

I realize that the president of a university may be suspected of special pleading when he suggests a more intensive use of colleges, universities, and high schools as a training ground for the Army and Navy. The suspicion, however, is unwarranted. As a matter of record, the Army and Navy, in World War No. 1 and in World War No. 2, turned to the colleges and universities as the institutions whose physical facilities were best suited to a training program for potential officer personnel. At the same time the V-12 program has demonstrated the Navy's realization of the need of higher education as part of officer training, and that program has been administered well. Hence, it is reasonable to suppose that the programs which the schools have been able to carry on successfully in time of war could be satisfactorily adapted to times of peace.

Finally, it seems to me that in their haste to stress the "how" of military training, a great many persons are in danger of losing sight of the all-important "why" of military training. American colleges and universities have long since proved that they have the "know-how." For generations they have been increasing specialized scientific knowledge and disseminating it where it is most useful. They have the research laboratories that the technics of modern warfare find essential.

What else have they to offer? The colleges and universities that have remained faithful to the American—and Christian—tradition of education, and perhaps they alone, have the "know-why" as well, and they do not confuse the means to an end with the end itself. They know, for example, the danger of defining national security too narrowly. They know that phrase to be little more than a semantic cipher if it does not denote constant vigilance against enemies from within who would destroy the substance of American democracy while advocating armed preparedness against enemies from without.

Therefore, let us attack the problem of military training intelligently, sympathetically, but slowly. Let all Americans reflect on the implications involved before permitting Congress to rush through legislation that means such a radical departure from our traditional way of life. We may need some form of military training in the postwar world, but we do not need compulsory military training now.

International Fund or Bank

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. REED of New York. Mr. Speaker, those who have visited some of the European museums may have examined the Roman coin collections which fully illustrate the difference in character of the respective rulers under whom the coins were issued.

The coins issued under Augustus were pure silver. Marcus Aurelius debased the coins he issued by using 25 percent of alloy. This debasement of the coin of the realm went on until there was only 5 percent of silver in a government coin. Even a denarius, a coin valued at nearly 20 cents under Augustus, was, a century later, worth only half a cent. There may

have been extenuating circumstances for this debasement of the Roman money in that the gold and silver mines of that period had been somewhat depleted.

A shortage of gold and silver, however, cannot be given as an excuse for the debasement of our own currency which began in 1933. The devaluation, by which the people of the United States were deliberately deprived of gold valued at $2,806,000,000 by the Roosevelt administration, has proved to be an invitation to the rest of the world to set up an international fund or bank as a means to further plunder the American people. An international fund or bank largely financed by the United States and operated by the foreign borrowers, especially now that the debt limit of our country is to be fixed at $300,000,000,000 with the expectation that this debt limit will have to be increased from time to time, ought to be cheerful news for the American taxpayers and bond holders.

Under leave to extend, I am inserting as a part of my remarks, the statement of Dr. Ivan Wright, professor of economics, Brooklyn College:

RESTORING STABLE MONEYS AND FOREIGN EXCHANGE—ECONOMIST STRESSES NEED OF CONFIDENCE IN A GOVERNMENT'S STABILITY TO MAINTAIN MONETARY STABILITY AND ASSERTS MERE LEGAL AND POLITICAL ENACTMENTS AND PROMISES WILL NOT ESTABLISH SOUND AND DEPENDABLE CURRENCIES—HOLDS THAT GOVERNMENT REGULATIONS, SUCH AS TARIFFS, QUOTAS, TWO-PRICE SYSTEMS, AND THE LIKE, MUST BE CORRECTED BEFORE STABLE CURRENCIES CAN PERFORM THEIR FUNCTIONS IN INTERNATIONAL TRADE AND THAT ANY ATTEMPT TO SUPERIMPOSE NEW AND CONTROLLED MONEY UPON THE PRESENT CHAOTIC CURRENCY CONDITIONS THROUGHOUT THE WORLD WILL NOT SUCCEED—ADVOCATES A SOUND CONVERTIBLE CURRENCY WITH INTERNATIONAL BALANCES PAYABLE IN GOLD OR ITS EQUIVALENT

(By Ivan Wright, professor of economics, Brooklyn College)

It is the duty of the government of each country to provide an honest and dependable currency. Without a stable currency in which people can have confidence all credit transactions are restrained, and production and trade are subdued to a hand-to-mouth basis. When the value of money cannot be counted on indefinitely, trade between countries is reduced to a cash or barter basis, and trade regulations are set up to protect the economies of the stable currency countries against the cheap money and cheap goods of the countries with unstable currencies.

Mere legal and political enactments and promises will not establish sound and dependable currencies. Efforts to legislate or decree monetary values by governments have a complete record of failure. The entire records of coin clipping and stamping coins and paper moneys with values which they did not represent fails to reveal a single case of either legal or economic success.

Functions of government in restoring stable moneys seem to be that of first establishing a government in which both the governed and foreign peoples have confidence in its integrity. Such a government can then proceed with the cooperation of the people to set up dependable standards. One of these standards will have to be money. A money must have a unit measure of some well known and universally accepted value such as so many grains of fine gold. The number of grains of gold in the money unit should be adopted to custom and convenience. For foreign exchange purposes the size of the unit is of no importance. In free markets two moneys will exchange for each other in the same ratio as their physical contents, varying only to the amount of the costs of other means of delivering cash payments. The laws of the countries of the respective governments can fix the size of the money units and help create the confidence whereby the currencies of the countries will maintain the value of the standards into which they are convertible. But the laws of any country can never maintain the value of a currency once the people either at home or abroad have lost confidence in its conversion value. While it is the function of law and government to do what it can to maintain the economic and social conditions in which sound money can live, at times these conditions may be outside of the powers of the best informed economic management. Wars, foreign crises, domestic revolutions, famines, and foreign trade barriers may upset the currency stabilization of any country. Restoring stable moneys under these conditions may have to be delayed until these conditions are righted. In fact what people mean when they speak of the gold standard or the foreign exchanges breaking down in 1914, or in 1930 or 1939 is that the world economic conditions were in such undependable relations that the gold standard and the established foreign exchange systems could not function. This of course resulted from war upsetting contract performances, and overextended debtor obligations which could not be met under the economic and political conditions of the times. Instead of the exchanges breaking down, law, order, integrity, and governments had broken down. Once order, integrity and simple honesty have been restored in governments and social institutions the establishment of sound and dependable moneys can easily follow as a matter of routine and square dealing.

There are, of course, other matters of legal and Government regulations which must be corrected before stable currencies can perform their functions in international trade. To establish sound or convertible currencies will not restore free markets between countries unless the other major barriers are removed. Here are conditions which are mainly the work of misguided law and Government and only the correction of these unfortunate laws and directives can restore the conditions in which the international exchanges can function smoothly. Among these unfortunate laws are such as extraordinary and unnecessary tariffs, both Government and private cartels, two-currency systems, dual-price systems, quotas, bilateral trade quotas, and a host of other legalized practices far more damaging than tariffs. Most people seem not to know about other ways of restricting trade in addition to the tariffs. A devaluation of the currency has the same effect as a proportionate tariff against all foreign goods. A two-price or two-currency system may discriminate only against such countries as allow these arts to be practiced upon them. But the restoration of sound moneys, stable exchanges, and free markets which will provoke increased production and trade all over the world cannot take place until many other legal and Government barriers are removed. Some of the conditions necessary within the domestic economy of each country for restoring sound currency and exchange conditions are balanced budgets, the eradication of inflated currencies and credits, free markets, eliminating of deficit financing, debts refunded into the hands of investors, and out of the currency and credit collateral use now being made of Government debts, and free interest rates governed only by the conditions of free money markets and the demand and supply of capital. Any attempt to superimpose new and controlled money upon the present chaotic currency conditions in the money markets throughout the world will only result in another demonstration of the power of Gresham's Law, an economic law, over any legal or political rule or regulation—that bad money drives out the good money.

AN INTERNATIONAL MONEY

The many suggestions and legal and international documents propounding ways and means of setting up an international currency or a scheme of international currencies which can be juggled at will all seem to lose sight of the fact that the world has had an international money that has worked rather well so long that history is not able to establish the date of its origin. We have very good records of the use of gold for both domestic and international exchange purposes in ancient Egypt, Assyria, Greece, Babylon, and other countries. The use of gold and silver as money is found throughout the Old Testament, and as early as 550 B. C. records of coining gold and silver into money are well established. Nothing else seems to have functioned successfully as a means of international payments or measure of values. This appears to be because there are few if any other metals or commodities of such universal acceptability, and available in supply needed with such large value in small bulk and other characteristics adaptable for money use. Paper money, government credits and promises have a notorious record of failure in general acceptability for any very long period of time. Until governments and their legal systems establish a reputation for dependability, and until their credits and their bonds become as dependable as gold, it seems that gold will continue to be in demand for international exchange purposes. It would seem from the present state of government paper moneys and debts that gold will hold the preferred place in international money values for some generations to come.

In 1869 Walter Bagehot urged in numerous articles an international or universal money. He assembled some of these articles in a book called A Practical Plan for Assimilating the English and American Money as a Step Toward Universal Money. He saw the advantage of a currency or coin that would have universal circulation in addition to the uniformity brought about by the universal acceptability of gold in settling exchange balances. But in Bagehot's recommendations of a universal coin or international money he had in mind strictly sound money in the accepted sense. Bagehot's ideas of money had an integrity that would not fit into modern currency juggling or the proposed international schemes of reconstructing the currencies of the world. This paragraph seems to sum up his ideas of money:

"Money seems to do what nothing else will do. Those who have it need nothing else, for it will buy everything else; those who are destitute of it are eager to get it, for without it they may on occasion be unable to obtain what they most want. Money is the universal procurer, the one thing by which you are sure of everything, and without which you are sure of nothing. It seems proof against time, too; other things are less valuable today, though you only bought them yesterday; but money is never second-hand. You may hoard it for years and be sure it will be as good when you extract it as it ever was at first. Government is the only maker of this magic and consequently the prerogative of making it seems half magical, too. As an impressive and penetrating advertisement of royal power the image and superscription had, and even has, a curious efficacy."

LEGAL RULES AND GOVERNMENT PROMISES CANNOT ESTABLISH EXCHANGE RELATIONS OR PROVOKE TRADE, BUT THEY CAN DESTROY BOTH

International exchange is governed by very definite economic laws or rules of value. Some of these economic rules may be mentioned here: (1) Exchange between two countries with currencies convertible into gold and with free markets, the price of the two currencies, one to the other cannot vary more than the costs of shipping gold. (2) The exchange between a gold-standard country and a silver-standard country varies with the changing relative prices of gold and

silver. (3) The exchange between the gold or silver standard and a managed paper-currency standard varies with the changing price of the metal in terms of the paper money. This instability of paper money results from the fact that the money in itself has no value, but fluctuates with its buying power and every economic and political threat that occurs. It is provocative of instability, and foreign commitments in a country with an inconvertible currency will be limited to the speculative and large-profit opportunities. Nothing could be more destructive of international trade. International trade depends on credit, and long-term credit is not practical with uncertain values of money. (4) Exchange between two inconvertible currencies in free markets will be limited for the most part to cash barter trades and speculation in transactions with large enough profits to tempt extreme risks.

It seems quite possible that a country with sound economic conditions could manage its currencies within relatively stable limits of fluctuations and build up a measure of trade relations with the necessary credit terms. But a country with a sound economy suitable for these conditions will find it unnecessary to maintain an inconvertible paper currency. The trade advantages of a convertible currency or paying international balances in gold or its equivalent will be found so great that any country economically capable of meeting these conditions will cling to the international gold standard because of its commercial advantages. Laws and governments can be of great help in bringing about the economic freedom in which trade can flourish and sound money exchanges based upon gold can be maintained against all except the extraordinary crises. But to legislate or decree money values and at the same time maintain unstable domestic financial conditions and controlled trade, price, and currency relations with other countries will reduce foreign trade to the minimum on a cash-and-carry basis.

Conference on Urgent Problems of War and Peace

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, February 19, 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Time Is Now, Mr. Roosevelt," written by Morris H. Rubin, and published in the Progressive of February 5, 1945.

I am informed by the Public Printer that it will cost $124.80 to print the article.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE TIME IS NOW, MR. ROOSEVELT

(By Morris H. Rubin, editor of the Progressive)

President Roosevelt is about to confer with Prime Minister Churchill and Marshal Stalin on urgent problems of the war and the peace.

Mr. Roosevelt carries with him the hopes of all America, and yes, of all humanity, as he confers at the appointed place. The eyes of the whole world, of all men everywhere who yearn and dream and plan for peace and freedom, will be riveted on that conference as on no other in our time. For even though they have been kept in the dark about so much that affects their lives and their futures, the plain people sense instinctively that this conference is critically important, that on its outcome and its decisions ride so many of our hopes for a better tomorrow.

The Progressive wants to offer encouragement, in all sincerity, and counsel, in all humility, to President Roosevelt as he prepares to launch into fateful negotiations at the conference. Speaking as one who has disagreed frequently and basically with many of the President's policies in the field of foreign affairs, I want to emphasize my conviction that the whole country is prepared to turn a fresh page with him at this critical moment—a page on which is recorded our mutual longing for enduring peace based on the attainable principles of the four freedoms and the Atlantic Charter.

Two concrete needs are critically important:

1. Subject to the genuine requirements of military security, open the conference to the people by permitting the press to get day-to-day developments and by providing adequate facilities for prompt dispatch of news to the people.

2. Let nothing, literally nothing, stand in the way of President Roosevelt's employing to the fullest the moral support of the plain people of the world, his enormous bargaining power as the spokesman for America, and his great gifts of persuasion to win his colleagues at the conference to democratic, anti-imperialistic policies which will strike at the very causes of war and fascism.

The need for the fullest publicity consistent with the clear-cut requirements of military security, must be abundantly clear. The secret conferences of the past few years have been responsible, in large measure, for much of the present inter-Allied strife, and for much of the present disillusionment among the people.

Secret diplomacy, of course, is the method of imperialism, and suppression of the press is the method of totalitarianism. But we have tried these methods at conferences at Teheran, and Casablanca, and Cairo, and Quebec, with results that have cost us dearly in unity, in morale, and, most of all, in the pursuit of a democratic peace settlement.

Isn't it time we tried the American way—the democratic way? Isn't it time we reminded our allies, politely but firmly, that we are determined to fight for principles which must and can stand up under the white light of publicity, and that we are not pouring our men, money, and materials into the quest for political deals which can survive only in the hothouse climate of a Persian castle in Teheran?

I come now to a brief statement on the second of my two appeals to Mr. Roosevelt—to let nothing, literally nothing, stand in the way of his employing to the fullest the moral support of the plain people of the world, his enormous bargaining power as the spokesman for America, and his great gifts of persuasion to win his colleagues at the conferences to democratic, anti-imperialistic policies which will strike at the very causes of war and fascism.

Here, it seems to me, is the very heart of the problem which confronts mankind today and challenges the leaders of the United Nations. The new conference offers Allied leaders their great opportunity to make a fresh start in the field of their greatest failure—the political conduct of the war and planning for the peace.

It is clear that we of America must raise our banner of freedom now, and make it a standard of hope around which the peoples of all lands can rally—the people of enemy as well as Allied and neutral nations—and thus make common cause for democratic principles.

The great and simple theme of American foreign policy can be stated in the same two words which express our deepest aspirations at home—freedom and equality. In the field of foreign policy all our actions and all our negotiations must be rooted in the principles of freedom and equality—freedom of all peoples to live and speak and write and worship as they please, and equality of economic opportunity—for individuals—to earn a decent, secure living, and equality of economic opportunity—for nations—to share in the great natural resources and raw materials of this bountiful earth.

Freedom and equality must be our watchwords, our goal, our standard. Freedom and equality must be the foundation stones of our foreign policy. Freedom and equality must be the basic principles to guide Mr. Roosevelt at this conference.

Specifically and for the immediate future, the United States must take the lead at the forthcoming conference in seeking Allied agreement on the following basic propositions:

1. We must abandon the sterile demand for unconditional surrender and substitute a more meaningful and workable doctrine.

It is the rankest sort of distortion and falsification to allege, as have some in high places, that the demand for an abandonment of the doctrine of unconditional surrender is motivated by any desire to conclude a negotiated peace with the diabolical Hitler and his diabolical Nazis.

The simple fact is, that the very first condition of any peace terms offered the people of Germany—once we have discarded unconditional surrender—must be the destruction of Nazism and all its works.

It has become painfully clear that our present insistence on unconditional surrender is accomplishing the very opposite of what is desired. It is strengthening the grip of the Nazis in Germany, prolonging the war, and endangering the peace.

The evidence is overwhelming that our continued reliance on the slogan of unconditional surrender has played into the hands of Hitler, Goebbels, and company. They have taken that slogan and all the loose and irresponsible schemes for destroying and dismembering Germany that go with it, and have used them as a powerful weapon to rally lagging German morale for a costly continuation of the war. It is eternally true that preservation is the first law of human nature. Told that unconditional surrender means destruction, the Germans naturally go on fighting in the absence of any more hopeful alternative.

To err is human, to admit error and start afresh is courageous. I hope President Roosevelt, who, we are now told, persuaded Mr. Churchill at Casablanca to accept the doctrine of unconditional surrender against the Prime Minister's better judgment, will admit his error and make a new start. As a substitute for the Hitler-helping doctrine of unconditional surrender, the Allied leaders must proclaim a program of attainable objectives, terms of peace, and conditions for an armistice which will strengthen the grip of anti-Nazis and place a premium on surrender rather than on fanatical resistance, as is the case now. This brings me to my second basic proposition:

2. For our own good and for the peace of the next generation we must reject all plans for a peace settlement based on revenge and dismemberment.

When hateful nazi-ism is destroyed and Nazi leaders and their contemptible stooges are banished from power the victorious Allies will face a supreme test of statesmanship.

One road leads toward a program of vengeance, destruction, dismemberment, and enslavement—a program which will satisfy a lust for vengeance on the part of some of our generation but create a spirit of brooding antagonism and permanent plotting which

can only explode in another world-wide conflagration a generation hence.

No one, not even the most violent of the professional haters, can deny that nazi-ism is rooted in the treacherous soil of the last peace settlement—a settlement which saddled a beaten Germany with impossible reparations, appropriated large portions of her natural resources, deprived her of the means with which to rehabilitate herself, and denied her the right to enter into trade agreements with her natural economic neighbors, thus creating fertile soil for the growth of Hitlerism.

The moral rehabilitation and political reconstruction of Germany along democratic lines will be no easy task; far from it. There are bound to be many heartaches and headaches. Progress is certain to be slow at first, and I know the faint-hearted will join the professional haters in arguing that the task should not be undertaken. But men and women of courage, men and women of vision who know that enduring peace is not attained by passing resolutions or by indulging in hate sprees, are not afraid of the slow, uphill, painful, and often discouraging task that lies ahead if we are to meet the supreme challenge of our time.

Nazi Germany must bear a frightful share of the blame for the present world-wide cataclysm. But we are confronted here, as one prominent journalist put it, not with the question of what Germany deserves but what we of the rest of the world can afford. It seems to me painfully clear that we cannot afford to wreck the Germany economy, dismember German territory, and thus embitter a whole new generation of Germans.

There are no dividends in dismemberment, no rewards in revenge. The other road—the road on which President Roosevelt must lead us—is the road of tolerance and understanding and help—not for the Nazi gangsters but for the German people once they are freed from brutalitarianism. This is the road of the martyred Lincoln—"with malice toward none and charity for all."

The next basic proposition for which President Roosevelt must contend at the conference is:

3. The unification of Europe, the area which has been the spawning ground of most of the wars and misery of modern times.

I can conceive of nothing which will do more to end the age-old rivalries, the perpetual bickering, and the endless strife of the Old World, which in our time have twice erupted into global wars, than its unification into a United States of Europe. Much useful work has already been done in studying and planning the possibilities for such a unification, and I believe we have come to the point where bold and imaginative leadership can translate those plans and dreams into living reality.

It is a curious fact that some of those who shrink from the difficulties of unifying Europe—and there are difficulties aplenty—talk blithely of unifying the whole world into a single federation. I hope we can strive in time toward a genuine world federation, but the goal will never be reached if we continue to run away from the challenge of intermediary steps in the evolutionary process.

Here is America a vast variety of racial, religious, cultural, and ethnic groups have found it possible to live and thrive together. Europe is actually more homogeneous economically than is the United States of America. The Slavs, the Teutons, the Scandinavians, the Latins, and the Anglo-Saxons have learned to live and let live in America. Is it fantastic to hope that through instruments of political and economic unification and cultural and local autonomy, the peoples of Europe could not learn to act in concert for the greater good of all?

Perhaps a better example of what can be done is to be found in the very heart of the madcap continent of Europe. I refer to the Swiss Confederation which is made up of 22 small states, although its total area is only 15,944 square miles. The tersely factual Encyclopedia Britannica sums it all up in a sentence:

"The Swiss Confederation is made up of 22 small states, differing from each other in nearly every point—religious, political, social, industrial, physical, and linguistic; yet it forms a nation the patriotism of whose members is universally acknowledged."

Here, then, is the model for Europe, with her score of states, large and small. Here is the pattern of democratic unification which, by wiping out the multitude of artificial economic barriers that have so long plagued that unhappy continent, would permit economic integration into a unified whole and thus go far toward striking at the causes of social and economic maladjustments which lie at the roots of conflict in Europe.

Another of the basic propositions which should guide Mr. Roosevelt when he confers with the leaders of our principal allies.

4. There must be no territorial aggrandizement for any nation arising out the present war.

This premise need not detain us long. It was written into the Atlantic Charter by President Roosevelt and Prime Minister Churchill, and it was subscribed to by Marshal Stalin when the Soviet Union became a part of the United Nations.

What needs to be impressed on President Roosevelt, however, is the fact that the people of the United States, and, I think, the people of the world, took him and his associates at their word when they proclaimed this principle, and if I understand the temper of the people, they are in no mood to accept any doctoring of the clear meaning of that promise, nor are they in a mood to enjoy any attempt to slough off that commitment with light-hearted remarks one day about the informality of shipboard scribbling, and solemn preachments on another day, that the ideal is unattainable in our time.

It must be a cardinal principle of American foreign policy that no people shall be placed under alien political rule, except as they themselves may consent.

Mr. Roosevelt must resist, with the full backing of the American people, any and every attempt by one nation or another to annex territory which did not belong to it when the guns went off. I realize that there are many conflicting claims and a multitude of perplexing, long-standing boundary disputes, but in a genuinely American and democratic foreign policy, there can be only one method of settling those disputes: a free, fair, and honest referendum of the people concerned, held under international auspices.

I grant that there will be an enormous amount of difficulty in solving some of the problems and resolving some of the disputes, but again, we shall never come even close to achieving enduring peace if we run away from our difficulties and resign ourselves to underwriting injustices.

The fifth basic proposition which I commend to Mr. Roosevelt is closely alined with number four.

5. We must strive for the earliest possible liquidation of imperialism by the Great Powers of the world.

Here, I know, Mr. Roosevelt would find the going difficult if he were prepared to accept this proposition, but few principles seem more important. The domination and exploitation of other peoples by the Western Powers is morally indefensible on every ground, and we cannot much longer talk of a war for freedom and liberation unless we are prepared to make a real fight for the liberation of peoples now held in bondage by the Allies as well as the Axis.

But quite apart from the deep-going moral considerations, it must be clear to all who read history and ponder the current world scene that imperialism has been the source of jealousies, rivalries, and frictions among the major western powers, and will become, in the near future, the cause of violent revolution on the part of the native populations of the colonies and dependencies who are determined to wrest their freedom from their white overlords.

I am well aware that some of the areas now held in bondage may not be quite ready for complete independence. But it must be a basic tenet of American policy to contend for as large a measure of self-rule as is presently feasible, and pending the time when complete independence can be granted, there should be established a system of international administration whose single purpose would be to aid the natives in every way possible to prepare for eventual complete independence.

6. Development of a program of progressive world-wide disarmament to strike at a major source of world conflict.

The basis of such a program must be the universal abolition of military conscription and forced labor. Nothing could be more tragic than to have America contribute so much to the smashing of the Axis Powers, only to find ourselves saddled with the worst features of European and Japanese militarism. Americans, I am sure, are convinced that it must be America's role to win the acceptance of the other nations to the democratic system of the smallest possible armaments and a volunteer peacetime army, rather than have the reverse occur and the United States be betrayed into adopting the old world devices—devices which have kept nations impoverished for centuries and have played such a decisive role in preventing the development of freedom and democracy.

Along with the struggle for universal abolition of peacetime conscription must go the fight for progressive reduction of armaments. Total disarmament cannot be achieved over night, of course, and we shall want to be watchful of worldwide developments. But if Germany and Japan will disarm to start with, and if we maintain our determination to keep them disarmed, we can move safely then for progressive disarmament throughout the world and thus remove one of the greatest curses of modern man—militarism.

7. The formulation of a just, democratic, anti-imperialistic peace cannot be separated from the planning for a world organization to preserve the peace settlement.

That the United States must cooperate closely with all the nations of the world when the war ends seems to me to be an elementary truism and is so recognized by almost all Americans in public and private life—despite the attempt of certain mischievous partisans to divide the Nation into two warring factions, isolationists and internationalists.

There is a division of sentiment in the Nation, as there is in Congress, but on the proposition that international cooperation is one of the essentials of lasting peace, there is no real dispute that I know about. The controversy, rather, is between those who insist that security through some form of organization is our paramount need and those who contend that a just and democratic peace is our most urgent and most vital need.

Progressives want to be able to give their support to American participation in a democratically conceived world organization, but they are not prepared to agree in advance to police and enforce whatever peace settlement may ultimately emerge from the back rooms of secret diplomacy, especially after some of the samples we have seen thus far.

They are profoundly convinced that the very aims and ideals which would help bring into being this world organization would be thwarted and betrayed if that organization were created to sit on the lid, to preserve an intolerable status quo, and to enforce partitions of nations, subjugation of colonial peoples, vengeance-minded dismemberment, perpetuation of militarism, and the enthronement of power politics. Such a development, with the accompanying disillusionment and reversion to extreme nationalism, would only deal a paralyzing blow to the

whole concept of world organization and international cooperation and hand it a setback from which recovery would not be easy.

I want to urge on Mr. Roosevelt the imperative necessity of making a supreme effort to wring democratic, anti-imperialistic concession from our allies before we commit ourselves to enforce the settlement and while we still retain some semblance of bargaining power. The history of our role in the tragic peacemaking of the last World War period is grim confirmation of this position. To refresh our memories on that ill-fated episode in our history:

On September 3, 1918, Col. Edward House, President Wilson's personal representative at all the peacemaking negotiations and conferences, took almost precisely the same position I urge now. He wrote to Mr. Wilson:

"As the Allies succeed, your influence will diminish. This is inevitable. By the time of the peace conference you will be nearing the end of your second term" (regarded as automatic retirement in those ancient days), "and this, too, will be something of a challenge to those, both at home and abroad, who have the will to oppose you. Therefore I believe that you should commit the Allies now to as much of your program as possible."

But the tragic fact is that President Wilson did not exert himself to commit the Allies, but rather engrossed himself in the idea of a League of Nations, on the theory that a just peace would be easier to arrive at if only the League were established first. What are the facts?

The war came to an end without clear-cut commitments from our allies. Wilson won acceptance of his proposal for a League of Nations—and then spent the rest of the period of negotiations compromising away the principles which might have made for a lasting peace.

In his book, the Time for Decision, former Under Secretary of State Sumner Welles recalls:

"One of the chief reasons for the compromises which President Wilson felt himself obliged to accept at Paris was the fact that the United States had made no effort to reach any prior understanding with its Allies on political and territorial problems."

And what of House himself—the man who spent 8 fateful months in Paris carrying the ball for Wilson? Writing in his diary as he left France for America, Colonel House noted:

"It is now evident that the peace will not be such a peace as I had hoped, or one which this terrible upheaval should have brought about * * * I dislike to sit and have forced upon us [such] a peace as we are facing."

Colonel House recognized, in the wave of disillusionment that followed the Paris conference, that to have made a greater fight for justice, for democratic principles, and for a settlement founded on freedom would have been an enormously more difficult job than the one accomplished. But looking back with more than just a trace of sadness, he wished he had taken the road which still lies open to us today. Writing from the richness of his vast experience in peacemaking, he might almost have been recording his final judgment to guide us when he confided to his diary:

"And yet I wish we had taken the other road, even if it were less smooth, both now and afterward, than the one we took. We would at least have gone in the right direction and if those who follow us had made it impossible to go the full length of the journey planned, the responsibility would have rested with them and not with us."

These words are vibrant with meaning for us today and especially for President Roosevelt as he launches his fateful conference with the leaders of the other great powers.

We cannot longer compromise away our principles. We must stand and stand firmly for the attainable principles of the Atlantic Charter and the "four freedoms" for the basic propositions which have been sketched in this article. Expediency is the easy road to quick settlements, but it will betray us on the long haul.

The American people are in a position to lead the warweary world to a democratic peace because we are the one great Nation which seeks no conquest, no domination over other peoples, no spoils of war.

The American people believe that a free world, a world of free people, will be a world at peace, a world determined to bind up its wounds and work through democratic instruments of international cooperation for the greater good of all.

President Roosevelt must give this faith a voice that can be heard throughout the world so that, as BOB LA FOLLETTE has said, the deadly wartime destructive power of American arms may be matched by the healing, constructive power of American principles.

On What Standard United States Money?

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. WHITE. Mr. Speaker, in the present status of the money of this country there is some uncertainty as to the exact standard on which our money is based. In answer to the inquiry of a teacher in my district I have endeavored to define the present status of the national currency. The letter with my answer is inserted herewith in the RECORD:

PRIEST RIVER INDEPENDENT
SCHOOL DISTRICT NO. 13,
Priest River, Idaho, February 12, 1945.

Mr. COMPTON I. WHITE,
Idaho State Representative,
Washington, D. C.

DEAR MR. WHITE: The question of our monetary system has been raised in my class. When and why did the United States go off the gold standard? Are we now on the silver standard? What is back of our paper money? How and where does the gold which we have in the United States enter the picture?

I have been unable to find any material that answers these questions satisfactorily.

Any information you can supply will be greatly appreciated.

Respectfully,

Mrs. KATHERINE THOMPSON.

HOUSE OF REPRESENTATIVES,
COMMITTEE ON COINAGE, WEIGHTS,
AND MEASURES,
Washington, D. C., February 24, 1945.

Mrs. KATHERINE THOMPSON,
Priest River, Idaho.

DEAR MRS. THOMPSON: In response to your letter of February 12, I have requested my secretary to secure and mail you a compilation of the Federal Reserve Act of 1913, which contains the Thomas amendment to the Federal Reserve law on page 51, the Gold Reserve Act of 1934, on page 205, the Silver Purchase Act of 1934, on page 227, and the Domestic Silver Purchase Act of 1939, on page 309.

In answer to your question, you will find that the gold convertibility or redemption was suspended by the Gold Reserve Act of 1934. All Federal Reserve notes were, by this act, made payable in lawful money, as appears printed on the face of this paper money, which comprises most of the common 5-, 10-, and 20-dollar bills and those of larger denomination found in everyday circulation.

Answering your question "* * * did the United States go off the gold standard?" While the national currency issued by the banks is, as stated by some economist, "anchored to gold" by the provision of law (see p. 17) which provides, "Every Federal Reserve bank shall maintain reserves in gold * * * of not less than 40 percent against its Federal reserve notes in actual circulation," the law that provided for gold redemption of Federal Reserve notes has been repealed. The amended law provides that all the gold in this country shall become the property of the Federal Government which has taken possession of the gold and issued gold certificates to the banks in exchange for the gold received into the Treasury. Most of these gold certificates that have been received from the Treasury in exchange for gold are held by the Federal Reserve bank as security under the 40-percent provision of the law for the security of the Federal Reserve notes in circulation.

As to why our Government went off the gold standard, it may be that the answer to this question is found in a statement appearing in the report of the United States Monetary Commission of 1878, which states:

"No country, Mr. President, can keep more than its distributive share of what may be called international money. You might issue bonds until doomsday, and even if you got with them hundreds of millions of gold for your treasury, yet if you do not lock up that gold and keep it under guard it would not remain. The vacuum created in the money volume abroad would lead to a fall of prices abroad, while the increase of the money volume here by the inflow of the gold would create a rise here, and the moment you unlocked your treasury it would flow out again. It would be as futile to keep gold under such circumstances as to attempt to pump water out of the harbor of Liverpool into the harbor of New York and expect to maintain two separate levels of the ocean by the operation. It would be utterly impossible."

We do know that speculation in and the movement of gold in this country and abroad in the depression years disturbed and reduced the circulation of money and secondly impaired business credit which may be a reason for abandoning gold convertibility by our Government.

The law now provides, with respect to Federal Reserve notes (see p. 205) "they shall be redeemed in lawful money on demand" which means that for the most part, the credit of the Government with a 40 percent gold coverage is back of the Federal Reserve notes which constitute the bulk of the money now in circulation. You will note from the Monthly Circulation Statement which I have asked the Treasury to send you, that there is approximately $1,900,000,000 in silver certificates (mostly dollar bills) outstanding. This paper money is fully covered and redeemable in silver dollars.

By referring to the seigniorage table found on one of the last pages of the Monthly Treasury Bulletin, also requested to be sent you, you will note the Government has made a substantial profit in the form of silver seigniorage by buying silver bullion and converting it into silver money (see p. 72, first column, entitled "Minor Coin," which shows a seignorage of $362,300,000 which is the profit the Government has made in buying silver and coining dimes, quarters, and half dollars.)

Looking at the seventh column, you will find the seigniorage on silver dollars since 1934 totaled $820,700,000. The next and last column shows a potential seigniorage of $717,300,000, which indicates that if all the silver bought by the Treasury had been revalued and used for money, the Government

would have made this additional profit in the form of seigniorage.

In reviewing the record of the Treasury's purchase of silver, we find about half of all the silver bought by the Treasury was purchased at an average price of 50 cents per ounce and revalued after it was bought, with the price fixed at its monetary value of $1.29 1/2 per ounce. This revalued silver has been placed in circulation in the form of silver dollars and silver certificates (mostly $1 bills). The other half of the silver purchased has been stored in the Treasury and carried on the books at its purchase price, as you will note from the silver item under "General Fund" as shown on the Daily Statement. This silver, stored in the Treasury, was later loaned to the Defense Plant Corporation for industrial uses and lease-lend in connection with the war effort.

In making response to your inquiry, it is apparent our money system is not on a gold standard as far as redemption is concerned but is anchored to the value of gold which has been fixed by Presidential proclamation. About $2,000,000,000 of the national currency is in silver dollars or silver certificates redeemable in silver dollars. The value of all the money of the United States is supported by section 314 of the United States statute which provides:

"Standard unit of value: The dollar consisting of twenty-five and eight-tenths grains of gold nine-tenths fine shall be the standard unit of value, and all forms of money issued or coined by the United States shall be maintained at a parity of value with this standard, and it shall be the duty of the Secretary of the Treasury to maintain such parity."

This law has been amended to give the President authority to fix the gold content of the dollar which is now fixed at fifteen and five twenty-firsts of gold nine-tenths fine, and the value of all United States money is maintained under the provisions of this statute at this value.

Trusting I have given you the information you requested, I am,

Sincerely yours,

COMPTON I. WHITE,
Member of Congress.

Air Crash Scandal

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. O'KONSKI. Mr. Speaker, an amazing accumulation of evidence, proving that only Congress can correct the startling scandal that exists behind untold thousands of depressing and heartbreaking service air crashes, has been inserted in the CONGRESSIONAL RECORD.

As a Member of this Congress I emphatically urge a congressional investigation of this outrageous scandal. I demand that this great American tragedy be corrected, and that the persons responsible for this situation be prosecuted.

Today I wish to discuss particularly the history of a jury inquest of a Consolidated-Vultee bomber crash at San Diego, Calif.

This case appears to have been whitewashed by some very clever legal manipulations.

On January 6, 1945, a San Diego coroner's jury announced:

> We, the jury, find that any criminal negligence would rest with the Consolidated-Vultee Aircraft Corporation due to gross negligence and lax and haphazard methods of inspection.

That statement is as definite and as clear as anything could be.

In this tragedy six civilian fliers were killed in a crash, attributed by inquest witnesses to the absence of almost 100 bolts from the outer wing panel, which sheered away during the take-off and caused the plane to plunge out of control.

There is something ominous about this case.

At first the San Diego district attorney let it be known publicly that he would take action regardless of what the grand jury decided to do.

Suddenly and before the grand jury even deliberated the matter the district attorney changed his mind and was quoted in the San Diego Union of January 12, 1945, as refusing to indicate what his actions would be if no indictments were recommended by the grand jury.

Here is the startling story behind this incident.

On November 28, 1944, Joseph Leib, Washington researcher, noticed in the press, a dispatch from San Diego, Calif., captioned: "Four plane workers fired after crash killing six."

Interested in air crashes, Leib forwarded the clipping to Governor Warren of California urging an investigation of the matter.

Governor Warren in turn took the matter up with the San Diego district attorney. On December 14, the district attorney's office undertook an investigation of the crash.

However, from the evidence available the district attorney appeared interested only in prosecuting the workers but steadfastly refused to consider or take proper action against the corporation.

Remember, as previously mentioned, the coroner's jury held the corporation responsible for the accident—not the workers.

A telegram from Governor Warren's office says:

> San Diego grand jury refused to issue indictments recommended by the district attorney.

In a letter to Governor Warren dated January 22, 1945, the San Diego district attorney wrote:

> Following failure of the Navy and the F. B. I. to take any action, my office and the coroner's office made a very complete investigation and presented the evidence to the coroner's jury. The coroner's jury returned a verdict which seemed to place the responsibility for the crash on the method used by Consolidated-Vultee in the construction of their planes. In view of the fact that this seemed to be against the evidence which we had gathered, and in view of the fact that we felt that at least three individuals were responsible for negligence in the construction of the plane, we presented the entire evidence to our 1944 grand jury, which body after considerable deliberation, wrangling, and rancor, arrived at the conclusion that the crash was unavoidable.
>
> Some members of the grand jury were in favor of indicting the individuals whose duty it was to inspect the bolts. Other members of the grand jury took an opposite view, and the result seemed to be one of compromise. Our office sought the indictments and even had them prepared, but following the action of the grand jury, destroyed them.
>
> Of course, we could file criminal complaints against the individuals whom we believe to have been responsible for the crash, but if two juries, one a coroner's jury, another a grand jury, have more or less exonerated the individuals, it seems like it would be a waste of money, time, and effort to proceed directly against the individuals. As far as we are concerned the matter is a closed incident, and unless the attorney general of the State wishes to take the matter up directly, which he is at liberty to do, there will be no criminal prosecution.

Nowhere in this amazing letter does the district attorney say anything about indicting the Corporation which I repeat again the coroner's jury charged was responsible for the crash.

To prove that the district attorney was solely interested in indicating the workers and not the corporation regardless of what the circumstances proved to be I desire to quote from an earlier letter than the district attorney addressed to Governor Warren. It is dated December 8, 1944:

> An inquest will be held during the coming week after a representative of the coroner's office, my office and the local police have thoroughly analyzed the facts, and it is my opinion that following the inquest my office will instigate a prosecution for involuntary manslaughter against the four individuals whose duty it was to check this plane before it passed inspection.

I also call attention to his explanation of what transpired behind the closed doors of the jury room.

Listen to this:

> After considerable deliberation, wrangling and rancor, arrived at the conclusion that the crash was unavoidable.

I ask, Was this commotion stirred up because the district attorney refused to present evidence to prosecute the aircraft company?

Ponder, too, that the district attorney also stated that the result was a compromise.

I say, there is no compromise when the lives of our fighting men are at stake. I say, that it is the solemn duty of Congress to see that our boys are furnished with the best and safest planes that this country can produce.

According to the San Diego Union of January 18, 1945, the district attorney is quoted as saying:

> Investigators from my office will continue to probe the matter. If evidence not hitherto disclosed is found which will justify prosecution, I will issue complaints and cause the arrest on charges of manslaughter of those responsible.

But in his letter to the Governor of California on January 22, 1945—7 days later—the district attorney again changed his mind and said:

> As far as we are concerned the matter is a closed incident; and unless the attorney general of the State wishes to take the matter up directly, which he is at liberty to do, there will be no criminal prosecution.

In that same interview he went on to explain that the grand jury after a 2-day session held that the plane collapse was due to "uncontrollable circumstances."

I appeal to the intelligence of the House.

How can any sane man say that such a tragedy was "uncontrollable" when evidence proves that almost 100 bolts were missing when the wing was attached to the plane.

Imagine almost 100 empty bolt holes and the district attorney says that it was "uncontrollable circumstances."

Now, if the district attorney wants further evidence I will read for him a letter I have from an official of the Consolidated-Vultee Corporation in San Diego who believed in America enough to risk his job by furnishing us with this information. It is the most startling letter that has ever come to my attention.

Here it is:

JANUARY 21, 1945.

I desire to provide you with pertinent information regarding the aircraft manufactured by Consolidated-Vultee Corporation, and unless measures are taken to correct certain existing conditions aircraft accidents will continue to occur at the same rate, if not greater than in the past.

Since the fatal accident of last November caused by a wing breaking loose on a Navy PB4Y-2 bomber on its first flight, I would especially like to mention facts pertaining to other airplanes.

On one of the 4Y-3 type airplanes (a transport version of the PB4Y-2) lend-leased to the British, recently put into operation by the Royal Air Force Ferrying Command, the following was noted on January 11, 1945.

Before installing additional fuel cells for overseas operation after all original test flights had been made, the internal wing splice bolts (same as those missing in the wing of airplane that crashed) were inspected for proper installation.

Approximately one-half of them were found to be loose, not only in one but both wings. Those bolts were loose enough that they could be turned just by the weight of a wrench. This indicates that when the original installation was made someone had only tightened or torqued part of them and forgot to tighten the nuts on the others. Also, the inspector had not checked all of them and was not performing his duty in this case. I think it is easy to realize how serious this may have been had the necessity arisen for any violent maneuvers during the test flights of this airplane. The bolts which were properly tightened carried all of the load; if they had broken, it is quite likely the others would have broken, too, when receiving the shock.

(At this point this official gave the British serial number of this plane.)

As you know, our company is building the B-32 bombers, and an assembly line is being set up for that purpose. Several of these planes were built some time ago in the experimental department of the San Diego division, and our plant at Fort Worth has recently completed a number of the latest model, one of which was flown to San Diego a few weeks ago. Through a reliable source I have received information that this airplane was very poorly assembled, requiring practically an overhaul before airworthy.

Many rivets throughout the airplane were improperly installed, and large numbers of them were omitted entirely. In some places where holes had been drilled for rivets the fasteners were still in them. (These fasteners are only for the purpose of holding the material together while assembling and must be removed to install the rivets, as they have no strength value.)

The exhaust system on one of the engines had not been correctly installed and the area around it not properly protected, part of which had burned through and may have caused a serious fire while in flight.

Altogether, I have been told there were about 2,000 discrepancies found on this airplane by the inspection department. With this information it isn't difficult to determine the elements responsible for this deplorable condition.

In my opinion, I believe the management is responsible for the existing situation. Apparently not enough emphasis is made to influence the employees to do a good, thorough job. Instead, they are encouraged to do just enough to get by inspection. Cases arise when an inspectors judgment is overruled by the management of the production department.

In other words, the inspection department does not have the authority they should and are controlled by the production department which is responsible for the lowering of the general aircraft standards. Both Army and Navy inspectors seem to be restricted in many respects which is detrimental, also.

This condition can be remedied by requiring management to encourage the employees to improve their workmanship. Of course, management will say this will slow down production, because they seem more interested in getting out the planes than improving the quality of them.

However, I know that this improved method would result in increased production in a very short time because there would be very little rework required, as has been necessary in the past.

For example, the air lines require their personnel exercise care and diligence in the performance of their duties and there is no reason why this method could not be just as successful in the aircraft industries.

Another unfavorable situation exists in the flight department. Not only is the quality of workmanship low, but there is a great deal of waste of both material and manpower.

Listen to this.

Employees are encouraged to work overtime, when it is not necessary. I have seen men idle half of their regular hours and still be asked to work overtime.

Being that many like to receive time and one-half pay for hours worked overtime, they gladly accept this request.

In my opinion, orders should be given the company at once to cut out this needless expense to the Government.

I believe this information is sufficient for the present time to enable you to take steps to rectify this deplorable situation.

Mr. Speaker, here is an official begging us to rectify this deplorable situation. Mind you, a situation that has caused the deaths of many of our fighting men.

I ask, Mr. Speaker, that a congressional committee be appointed to investigate this matter.

I ask that Governor Warren be requested to instruct his attorney general to investigate these facts.

A copy of my resolution follows:

House Resolution 124

Resolved, That the Speaker of the House of Representatives appoint a committee of five Members of the House of Representatives to make a full and complete investigation of all crashes of United States airplanes which have occurred within the continental United States since Pearl Harbor or which may hereafter occur therein during the present war, with a particular view to determining the causes of such crashes and whether any of them was attributable to the activities of enemy agents or fifth columnists or due to gross negligence by aircraft workers or caused by lax and haphazard inspection by aircraft company, Army, or Navy inspectors. The committee shall report to the House of Representatives, from time to time, the results of its investigation, together with its recommendations, if any, for necessary legislation.

For the purpose of this resolution, the committee is authorized to hold such hearings, to sit and act at such times and places during the sessions, recesses, and adjourned periods of the Seventy-ninth and succeeding Congresses, to employ such clerical and other assistants, to require by subpena, or otherwise, the attendance, books, papers, and documents, to administer such oaths, to take such testimony, and to make such expenditures as it deems advisable; and be it further

Resolved, That the necessary funds to conduct this investigation be appropriated.

Deferment of Farm Workers

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Ohio State Grange and a letter written by me with reference thereto:

OHIO STATE GRANGE,
February 24, 1945.

Hon. J. HARRY MCGREGOR,
House of Representatives,
Washington, D. C.

MY DEAR MR. MCGREGOR: The following resolution was adopted by the executive committee of the Ohio State Grange February 21, 1945:

"Due to the uncertainty of interpretation of the Tydings amendment to the selective-service law; Be it

"*Resolved*, That the amendment be clarified to all draft boards, by legislation if necessary, so that uniformity of action might prevail; be it further

"*Resolved*, That young men engaged in efficient and essential farm production be deferred for the current agricultural season in order that much-needed farm food commodities may not become a serious problem in the war effort."

Sincerely,

JOSEPH W. FICHTER,
Master, Ohio State Grange.

FEBRUARY 26, 1945.

Mr. JOSEPH W. FICHTER,
Master, Ohio State Grange,
Columbus, Ohio.

DEAR MR. FICHTER: I am today in receipt of yours of the 24th relative to a resolution adopted by your executive committee in regard to the Tydings amendment. Please be assured I will favor any reasonable legislation that will prevent our true farm boys from being taken into the service as I am one who firmly believes that farming is an essential industry and food is absolutely necessary to the winning of the war and of the peace.

It seems somewhat ridiculous to me that we have to have any other legislation than the Tydings amendment. This amendment is very clear and to the point, and it is regretted that we have an administration which refuses to administer the law. Our Nation is in a deplorable condition, Mr. Fichter, when Congress has to pass a resolution calling upon those who are in power to enforce laws which have been passed by the legislative body.

Assuring you I am always glad to have your comments and with kindest regards, I am,

Respectfully yours,

J. HARRY MCGREGOR,
Member of Congress.

Two-thirds Rule Repeal

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of February 26, 1945:

TWO-THIRDS RULE REPEAL

At last it appears a showndown is approaching on repeal of the two-thirds rule for approval of treaties. House leaders have given their blessing to the Sumners resolution proposing a constitutional amendment abolishing the two-thirds rule and giving the House a share in the treaty-making process. The House Judiciary Committee has approved it unanimously. With a rule on the measure expected this week, it will be carried to the House where it doubtless will be passed by an overwhelming vote.

That resolution will put the Senate on the spot. It will reflect the wishes of the people as well as the House for abolition of the undemocratic arrangement under which one-third plus one of the Senate, or one-sixteenth of the entire Congress can defeat a treaty. The Senate will be left in the position of obstructing the reasonable operations of democratic government. It will have no satisfactory answer to the charge that it is clinging to power against the national interest. The Senate cannot long stand in the way of this essential reform during an era of active international cooperation without gravely detracting from its own prestige.

We think the Senate is incredibly shortsighted to let the House take the leadership in this movement. Its Members had an opportunity for statesmanship of a high order. A strong senatorial movement for abolition of the two-thirds rule within the body that has so flagrantly abused that device would have lifted the country up to new faith in democracy. It would have given the leaders of such a movement claim to a place in history that can be won in no other way. To be sure, a number of Senators have interested themselves in the problem, and a good many will vote for abolition of the two-thirds rule when that issue is forced to a vote. As to giving leadership to the movement, however, the Senate has fizzled.

In the circumstances, the House has a duty to go ahead with its own proposed amendment. Denna Frank Fleming, professor of political science at Vanderbilt University, points out in a useful little book entitled "The United States and the World Court" that the Senate was "finally compelled to permit the direct election of Senators against its will, and enough popular presure would relax its grip on our treaties." "We can have normal popular control of our foreign affairs," he goes on to say, "whenever we become aroused enough to demand it. But it would be far better for the Senate itself to recognize that it cannot defend much longer an indefensible prerogative."

By its standpat attitude the Senate has invited the House and the people to force its hand. Because of the magnitude of the national interest that is at stake the House and the people should now lose no time in pressing their demands. The blunt fact is that in the long run the peace system to which the Nation is committing itself will be unworkable if one sixteenth of the Congress can block a treaty with our allies. Every Senator must know in his heart that such an obstacle to international cooperation cannot stand in the post-war setting contemplated by the Dumbarton Oaks plan. The present task is to make that fact so plain that even the power-loving minority will bow to the inevitable.

Memorial of the Legislature of the State of Washington

EXTENSION OF REMARKS
OF
HON. CHARLES SAVAGE
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. SAVAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

House Joint Memorial 6

To the Honorable Franklin D. Roosevelt, President of the United States, and to the Senate and House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the Senate and House of Representatives of the State of Washington, in legislative session assembled, most respectfully represent and petition as follows:

Whereas President Roosevelt and the heads of our military forces have been unstinted in their praise of the heroic services performed by our merchant marine, of which more than five thousand sailors, volunteers in the battle zones of the sea, engaged in transporting men and munitions to the fronts, have been killed by submarines and aircraft; and

Whereas Rear Admiral Emory S. Land, in recognition of the valiant services of the men in the merchant marine, has proposed a series of minimum measures similar to those accorded to these in the armed forces, which measures have been submitted to Congress, namely, hospitalization, care for the wounded; economic rehabilitation by creating educational and placement privileges (including civil-service preference); together with financial assistance to enter into farming or commercial pursuits; more adequate provisions for the dependents of those killed on ships, and those who have been rendered partially, as well as permanently, disabled by the enemy; and the use of the National flag at burials of seamen, with the privilege of burial in the national cemeteries: Now, therefore, be it

Resolved by the Senate and the House of Representatives of the State of Washington, in legislative session assembled, That we urge the President and the Congress of the United States to approve and pass the minimum measures for the benefit of the merchant marine as submittted by Rear Admiral Emory S. Land; and be it further

Resolved, That copies of this memorial be immediatcly transmitted to the Honorable President, Franklin D. Roosevelt, and to all Members of the Senate and House of Representatives of the United States from the State of Washington.

Passed the house February 9, 1945.
GEORGE F. YANTIZ,
Speaker of the House.
Passed the senate February 13, 1945.
VICTOR A. MEYERS,
President of the Senate.
HOUSE OF REPRESENTATIVES,
Olympia, Wash., February 15, 1945.

I hereby certify this to be a true and correct copy of House Joint Memorial No. 6.
S. R. HOLCOMB, *Chief Clerk.*

Petrillo Versus U. S. A.

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Minneapolis Star-Journal of February 17, 1945:

For the first time in 10 months, "live" music today emanated from KSTP's Minneapolis studios as result of settlement of the strike of the A. F. of L. Minneapolis Musicians association.

During the strike, all such broadcasts originated in St. Paul studios of the station. KSTP officials said many of the programs now will be transferred back to Minneapolis.

The new contract is for 2 years and calls for hiring of 8 musicians at not less than $52 a week, the leader to get $75. The station also has agreed to employ only union musicians.

Stanley Hubbard, KSTP president, issued the following statement:

"For nearly 11 months we have been fighting Petrillo and defending the American principle of freedom. We have sought justice through the proper legal and administrative channels afforded us—the State labor conciliator, the Federal labor conciliator, the Regional War Labor Board and the National War Labor Board.

"We have had unqualified decisions from every one of these agencies, but to no avail, because Petrillo has demonstrated to the world that he has more power than all of them.

"He has circumvented our courts and defied the Regional and National War Labor Boards. He has successfully and daringly defied the President of the United States. Now he is successfully defying and outwitting Congress by his recent action barring high school children from the air.

"The American public and the working men and women of America, as well as the majority of the unions, have told us they are with us in this fight, but in these 11 months the Government has done nothing to force Petrillo to change his demands and methods.

"While our boys are overseas fighting for freedom, we at home are losing our independence. Individualism is gone.

"We have fought for a fundamental American principle, but after all these months it has been made quite clear to us that the Government is unable to assist us. As long as matters are as they are at present, we had no alternative but to accept, at least temporarily, the situation.

"We, therefore, have capitulated and accepted Petrillo's terms, and have signed a contract with his union acceding to his demands that we employ men under contract regardless of whether or not we need them.

"If the Petrillo system of forcing an employer to contract for men he does not need, and to pay royalties directly to the union because union members are employed in the manufacture of his commodity, is adopted by other unions, it means the finish of American business.

"We fully recognize the reasonable rights of labor, and by the same token labor should recognize the problems and rights of management. The difficulty which exists today in our country is that labor and management cannot deal on a parity. The remedy to this situation lies in the hands of the legislative branch of our Government, and that is where immediate relief should be worked out."

The Unanimous and Energetic Voice of the American Serbs—An Appeal for the Salvation of Democracy and the Heroic Serbian People in Yugoslavia

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. O'KONSKI. Mr. Speaker, the Serbian Nation showed to the entire world its undying devotion to freedom when it defied the Nazi-Fascist dictators at the pinnacle of their power. Eight months before Pearl Harbor, when the Nazi conquerors stood at the threshold of Great Britain, when even the great and mighty Soviet Union still maintaned its friendship with Germany, the small but heroic Serbian Nation, faithful to its traditions, went to the aid of the hard-pressed democracies at the risk of its own life. At that time the civilized world hailed the action of the Serbian people of Yugoslavia who, alone, among the smaller nations, resisted Hitler's new order.

Although these events already belong to history, the indisputable fact is that the Serbian people never submitted to the enemy even though nearly all Croats, Mohammedans, and other minorities in Yugoslavia offered their collaboration to the invaders. This led to the defeat of the regular Yugoslav Army.

The massacres of hundreds of thousands of innocent Serbian women, children, and helpless old men; the forgotten promises of military aid on the part of the United States and Great Britain, and, finally, the campaign of vituperative propaganda conducted by leftists and collaborationist elements against the Serbian people under the leadership of Gen. Drazha Mihailovich have been the reward of the Serbian people for their unique sacrifices in defense of genuine democracy.

Verified reports recently received concerning the situation of the Serbian people in Yugoslavia offer further proof that the Serbian people have been abandoned by their allies and their friends at the moment when they should have rightfully enjoyed the fruits of their war efforts.

If urgent aid is not given by the United States and Great Britain, the Serbian people, abandoned by the Royal Yugoslav Government, which had been created under pressure, are in danger of complete annihilation by those same enemies against whom they have been fighting for 3½ years in defense of democracy.

Here are the proofs:

First. Gen. Drazha Mihailovich as Minister of War, Navy, and the Air Forces of the Kingdom of Yugoslavia, in accordance with the instructions given him by his Government and the Supreme Allied Command in the Mediterranean, prepared everything and waited only for orders for the final decisive blow against the enemy forces in Yugoslavia.

Second. Besides carrying out the above-mentioned instructions and orders—also given by the Allies to other enslaved nations—General Mihailovich's constant actions of smaller dimensions, namely, the destruction of enemy objectives, and communications and attack on smaller garrisons in order to get war material because he was left to himself and deprived of Allied aid. The Allies in the meantime aided the forces of "Marshal" Tito with war material, although these forces were engaged in a political crusade alien to the national interests of the Serbian people and the Army of General Mihailovich. Such Allied action encouraged and spread the civil war, introduced by Tito's forces, in the entire country.

Third. By systematic propaganda the Allies made it possible for all kinds of bandits, Ustashi terrorists, and former Nazis to join the ranks of the so-called Army of National Liberation and thereby enabled them to carry on terrorism and massacres against the unprotected Serbian population in Yugoslavia. In this manner, many notorious war criminals, such as Suleiman Filipovich, who in 1942 had been condemned in London, escaped well-deserved punishment for their actions which were contrary to all principles of humaneness, justice, and democracy.

Fourth. On September 1, 1944, when the Red Army was approaching Yugoslavia through Rumania and Bulgaria, General Mihailovich proclaimed a general mobilization of all national forces. Four hundred thousand men from Serbia, Bosnia, and Herzegovina, Montenegro, Voivodina, and other Serbian regions enthusiastically responded to this proclamation. These mobilized units awaited orders for the beginning of major operations. In the meantime successful operations against smaller enemy garrisons were already in progress.

Fifth. A special mission was sent to Turnu-Severin to establish contact with the Red Army so that the action of the Yugoslavs and Red Army might be coordinated. The Soviet command refused to negotiate, and the mission was forced to return. All repeated attempts to establish contact and coordination with the Soviet Army remained without success.

Sixth. In the meantime the Allies gave their support to Partisan units, which were numerically much weaker and which had earned the marked hostility of the common people. This encouraged masses of Ustashi, Albanians, Hungarians, and even German minorities to join the Partisans. Through propaganda and aid in war material, the Partisans continued to terrorize the Serbian people who refused to subject themselves to their arbitrary rule.

Seventh. In spite of the aid, Tito was unable to penetrate into Serbia with his units and establish contact with the Red Army, which had waited for him a whole month at the Yugoslav border. Therefore, two Bulgarian armies stationed in Serbia and south Serbia as forces of occupation were ordered to join the Partisans and facilitate their action in Serbia. It was no secret that the Partisan units also included, aside from the above-mentioned elements, a handful of Serbian Communists, who represent only an insignificant number of the Serbian people.

Eighth. At the beginning of October of this year, the Russians entered Yugoslavia after previously obtaining "permission" from "Marshal" Tito, who, despite all the efforts of his Partisan units, had been unable to do so himself.

Ninth. The Red Army, in occupying parts of eastern Serbia, met only units of General Mihailovich which it began immediately to disarm. A large number of active pro-Ally Serbian officers who had fought under the command of General Mihailovich were shot. Many other officers and soldiers of the Regular Army who had fought the Nazis were imprisoned in concentration camps in the towns of Mladenovac and Paracin by the Red invaders.

Tenth. In the Zapadna Morava Valley, the Red Army accepted the aid of the Yugoslav troops—the guerrilla corps of Colonel Keserovich. In combined action, they took the cities of Kregujevac and Krusevac—centers of Yugoslav war industry before the war. After the liberation of these places, Red troops, suddenly during the night, disarmed this corps and arrested even the United States military mission attached to the staff of this guerrilla group.

Eleventh. Placed in a very difficult and delicate position by the refusal of cooperation on the part of the Soviet Command, General Mihailovich, in order to prevent probable conflicts which could only hinder operations against the common enemy, ordered the following:

(a) That under death penalty, no gun be fired against the Russian forces.

(b) That his mobilization proclamation be voided and that each individual was free to decide either to return home or to join the retreat to the west of units of the Yugoslav Army.

Twelfth. Today in the high mountains of Eastern Bosnia there are with General Mihailovitch about 70,000 officers and men of his army and over 30,000 members of the free professions who joined him to escape the massacres being carried out by Partisans in all parts of Serbia under the eyes of the Red Army.

Thirteenth. After General Mihailovitch ordered demobilization and withdrawal of his units from Serbia proper the Partisans began the systematic extermination of Serbian intellectuals and of other prominent citizens in order to force the Serbian people by this terrorism to accept Communist rule.

Tito's Communists launched a reign of terror in the liberated parts of Serbia proper. They are exterminating all the followers of General Mihailovich and "potential enemies" of the newly established Soviet regime in the country. In the already devastated cities and towns of Serbia, taken over by the Partisans, hundreds and hundreds of the most prominent democrats and intellectuals have been executed. In Belgrade alone some 400 were shot; in Kraguyevats, where the Germans killed even highschools boys to avenge German soldiers who fell under attacks by the Chetniks, 200; in Kralyevo over 200; in Gorny Milanovats 100; in Shabats over 200; in the

districts of Machva, populated by prosperous peasants, over 200. No one is sure of his life. Before being taken out to the executions the victims are subjected to medieval torture. The officers and men of General Mihailovich's army are killed the very moment they surrender to the Partisans.

Fourteenth. Following the liberation of Belgrade Partisan authorities, in the presence of the Red Army, introduced an 8 o'clock curfew. After that hour they searched Serbian homes, arresting followers of General Mihailovich as well as officers of the Yugoslav Army, who in March 1941 were the leaders of the movement that overthrew the pro-Nazi government in Belgrade. Such prisoners were immediately led to concentration camps or shot during the night.

Tito's press in Belgrade openly attacks the ideas of democracy, advocating and praising the already introduced Soviet systems of justice, economy, and education. All the former functionaries of the State, including those of the lower grades, are automatically discharged from Government service and deprived of their means of livelihood.

Fifteenth. A certain number of imprisoned intellectuals and members of the Yugoslav Army, known for their patriotic deeds, are being deported from concentration camps to unknown places under the pretext that they have collaborated with the enemy. All this is done without hearing or any proof of their guilt.

Sixteenth. Since the liberation of Belgrade, Dictator Tito has imposed a news blackout on the country under his regime. He has barred representatives of the American press, seven of whom have been waiting for a long time in Italy for permission to enter Yugoslavia. Finally permission was given to a few selected Allied correspondents, among whom was Mrs. Eleanor Packard of the United Press. She was expelled from Belgrade by Tito's regime after her first report in which she dared to tell the truth, namely, that 40,000 Serbs had been arrested in Belgrade only because they were followers of General Mihailovich, that the Serbian people were unhappy, and that Belgrade citizens were forced to decorate the city exclusively with pictures of Marshal Stalin and Dictator Tito without displaying even a picture of President Roosevelt or Premier Churchill.

Seventeenth. Dictator Tito and the Premier of the Yugoslav Government in London, Dr. Subasich, agreed on the establishment of a regency in Yugoslavia. This regency was supposed to exercise royal power pending the outcome of a plebiscite on the return of King Peter II. All of this is only an obvious device for the purpose of concealing from the democratic world the real intentions of Tito's regime.

Eighteenth. Dictator Tito ordered all to join his liberation movement, including government employees as well as officers and soldiers both in the country and abroad—in Italy and Egypt—under the threat of losing their rights and livelihood. This tyrannical and undemocratic ukase is contrary to all fundamental civil rights and liberties.

Nineteenth. One of the aims of the numerous arrests in Belgrade, over 40,000, and Serbia is to force officers and other persons in German concentration camps and abroad to recognize Tito's regime, if they care about the fate of their families in the country.

Twentieth. Tito has mobilized all male and female population from 16 to 40 years of age. Thousands of young girls were forcibly taken into the Partisan camps where unspeakable immorality prevails. This has added to the terror and despair of the Serbian people. Tito is sending off to Russia over 20,000 young boys, despite their parents' protests, for compulsory "ideological education." In order to accelerate the Bolshevization of the country, many universities for ideological education have been opened in the occupied areas.

Twenty-first. The seizure of over 30,000 small farms for the purpose of collectivization is a shameful plunder of the impoverished Serbian farmers. The Soviet system of collectivization, however it may work in Russia, is completely unworkable in Serbia where every peasant is a small freeholder.

Twenty-second. Dictator Tito recently ordered the convocation of an assembly of so-called People's Representatives from the already decreed federation of the "new" Yugoslavia, where he established a one-party system. The only party permitted is his own. This is contrary to the constitution of Yugoslavia and a negation of all principles of self-government, as well as the Atlantic Charter.

Twenty-third. General Mihailovich with his army, despite the difficult situation in which he finds himself, continues in a state of war against German forces in Yugoslavia. He is determined to remain there to share the fate of the Serbian people whose motto is: "Liberty or death."

The following is an appeal for the salvation of democracy and the heroic Serbian people in Yugoslavia:

We, the officially elected representatives of American citizens of Serbian ancestry, upon verification of the facts above mentioned and conscious of all the hardships of our brethren in the Old Country, united in thought and purpose, consider it our duty:

To appeal to the President of the United States of America, the Honorable Franklin D. Roosevelt, the United States Government, and all the members of the United Nations, to the American press, known for its fairness and objectivity, and to all our American fellow citizens to raise their voices in protest against the terror which is now being perpetrated against our ally, the Serbian people of Yugoslavia.

We beseech that aid be urgently extended to the Serbian people.

We request that the Regular Army under the command of General Mihailovich be permitted to join the Allied armies of Gen. Dwight Eisenhower in order that it may be able to participate in the final battles for the liberation of Europe.

We request that to the Serbian officers of the Yugoslav Army abroad, who do not wish to submit to the dictatorial regime of "Marshal" Tito, be sent most urgent aid and that they be freed from the concentration camps in which they are now held; that these officers and soldiers be immediately inducted into Allied military units.

We wish to call to the attention of the public the fate of 130,000 Serbian prisoners of war and 300,000 Serbs doing forced labor in Germany. These 130,000 prisoners in Germany include no Croats and Slovenes; they are all Serbs.

We request that the Serbian people who comprise more than half of the entire population of Yugoslavia be given the right of self-determination like other nations, the right to choose their own form of government, and that they be assured freedom of speech, press, and worship.

We protest the treatment meted out to the Allied Serbian people in this war. The Serbian people have been made the subjects of experiments in Soviet ideology by Tito in spite of all that the Serbs have given in defense of democracy and the common Allied cause. Since Tito has allowed various enemies of the Serbian Nation to join his units and, under the guise of liberation, to occupy Serbian regions and massacre Serbian people, we most energetically request that all these elements be withdrawn from Serbian territory.

We beg and demand that an Anglo-American mission be sent to Yugoslavia in the shortest possible time to protect the Serbian Nation and other democratic citizens from the tyrannical methods of Tito's regime. Today our sons are not dying on the battlefields of the world for a new despotism.

The Serbian people in Yugoslavia sincerely and solemnly believed in the promise of their allies that their liberty would be restored to them. For the fulfillment of this promise, the Serbian people hold the United States of America, Great Britain, and the Soviet Union answerable to God and humanity.

The martyred Serbian people ask for justice and for the application of the Atlantic Charter.

Words of a Patriot

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Star Journal of February 21, 1945:

WORDS OF A PATRIOT

If proof were needed that Harold Stassen is no calculating small-bore political opportunist, the former governor's interview with newspapermen in Washington yesterday provides it.

Reminded of predictions by professional politicians that acceptance of the appointment as a delegate to the San Francisco conference may prove to be a "kiss of death" for his aspirations for the Republican Presidential nomination in 1948, Commander Stassen said:

"You cannot weigh a matter as important and as serious as building world peace in ordinary political scales. I have accepted the appointment without the least hesitation and with the conviction it is as much my duty to work for a successful peace as it is to win the war."

Those are the words of a far-sighted patriot, and Minnesotans read them with pride. So will millions of Stassen's comrades in the armed forces who don't want their children to have to undergo the ordeals of

battle which they themselves must undergo because previous attempts to create a warless world came to naught. So will millions of relatives and friends of men and women serving in the armed forces.

Stassen's friends know that he would take the course he is taking even if it meant political suicide. With so many millions of his countrymen sympathetically following Stassen's efforts to help create a stable world organization, however, his presence at San Francisco seems more likely to prove a political asset than a political liability.

Leading Pacific Northwest Newspaper Speaks of Polish Freedom

EXTENSION OF REMARKS

OF

HON. HUGH DE LACY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. DE LACY. Mr. Speaker, under leave granted me to extend my remarks, I would like to call attention of the Members of Congress to an editorial, published February 16 by the Seattle Times, one of the leading conservative newspapers of this country and an outstanding journal on the Pacific coast. I believe this editorial makes a distinct contribution to our thinking on the Big Three agreements reached at Yalta and to the settlement of the question involving the Polish people and their Government. Its sane and reasoned approach to the problem is worthy of deep consideration. The editorial reads:

THAT SQUAWK FROM LONDON NOT THE VOICE OF POLAND

First member of the American party to come flying home from the Big Three conference, James F. Byrnes, our War Mobilizer, says more news of what went on at Yalta than was given in the joint statement of Messrs. Churchill, Roosevelt, and Stalin, soon will be made public.

A world for many weeks on tiptoe of expectancy will eagerly await whatever else the Big Three or any of them may permit to be told. But the members of Poland's government-in-exile already seem to have heard enough—far more than they cared to hear, and none of it to their liking.

The Polish government-in-exile is up in arms; refusing to accept any of the Big Three decisions with respect to Poland. Premier-in-Exile Arciszewski says that before this latest conference was held, Britain and the United States had been handed a memorandum warning against any decisions affecting Poland unless duly authorized by the refugee government. Neither that government, says its premier, nor the Polish people, will be bound by the decisions announced in the Big Three statement.

Premier Arciszewski insists that his government is the "sole legal and generally recognized government of Poland." No need to dispute that claim. The Polish refugee group in London has carried on as well as any other government-in-exile, and much better than some of them.

But at the beginning it was self-constituted, and in no direct line of survival from or succession to the government that was overthrown and routed out of Poland by the Nazis in the autumn of 1939. The powers it assumed and has exercised were not by grant of the people of Poland, who have had no chance to express themselves.

The refugee government, in this height of resentment against the Big Three plan, reiterates the assertion that it has always been ready to cooperate in the creation of a government of Poland "truly representative of the will of the Polish people."

To secure an expression of the will of the Polish people is a practical, rather than a sentimental undertaking. Hitherto the London group has been quite uncompromising as to terms, both in the matter of Poland's boundaries and the kind of government it thinks would be best for Poland.

It must be remembered, too, that during the last stretch of assured Polish independence, from 1919 to 1939, the will of the Polish people was poorly expressed—if permitted any expression—in as inefficient and feeble government as any country could have been given. Of course the Polish people want good government; all people do; but throughout those 20 years of opportunity they made no move toward getting what they wanted.

The Big Three agreement on Poland is obviously a compromise. Roosevelt and Churchill were moved to take cognizance of the impossibility of reconciliation between Stalin and the London Polish group. Stalin yielded in consent to a reorganized provisional government for Poland, to replace the puppet creation established first at Lublin and now in Warsaw. The will of the Polish people is to be given expression at the earliest possible moment.

The patriotism and sincerity of the refugee government in London is not in question, but its desire for popular government of Poland is somewhat shaded by over-hasty denunciation of the Big Three plan. In refusing to accept that plan and declaring itself out, the refugee government evinces little confidence in the ultimate judgment of the Polish people.

Literally the Water of Life for Arkansas

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. TRIMBLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I wish to include the following editorial from the Arkansas Gazette of February 22:

LITERALLY THE WATER OF LIFE FOR ARKANSAS

You never miss the water until the well runs dry. And you don't appreciate such downpours of water as fell on Arkansas yesterday. But whether rain is scanty or superabundant, it is fundamental that water is one of Arkansas' great assets. This is a well-watered State. The question is one of bringing water under control and putting it to the best use.

Without water you cannot have agriculture or cities or industries. To get it, Los Angeles reached out across the Mojave Desert to the eastern slope of the Sierras and at a cost of $25,000,000 built a 233-mile aqueduct, the world's longest. On the other side of the continent, New York has gone 100 miles north into the Catskills for a source, and for a distribution system has bored a 15-foot tunnel through solid rock at depths ranging from 200 to 750 feet below street level. And consumption has so nearly caught up to available supply that several years ago a program was started to draw additional water from the Delaware River on the far side of New Jersey.

Water mills have been employed as a direct source of power immemorially. In modern times hydroelectric installations have made it possible to distribute water-generated power over wide areas. And aside from power, some industries use literal rivers of water for cooling and other manufacturing purposes.

The march of progress in Arkansas has been largely a story of increasing control of water. At first the rivers that seam the State were free and uncontrolled. Men and their farms and towns accommodated themselves as best they could to untrammeled nature. Then levees were built for protection against floods—protection that did not always prove wholly effective. Finally, there was launched the comprehensive program of impounding reservoirs which was interrupted by the war but will doubtless be resumed and completed when normal conditions return. And Arkansans today are also practicing water control in detail on their farms and in their woodlands by measures to check erosion and retain soil moisture for the thirsty roots of crops and trees.

America's War and Peace Aims

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio program entitled "What Should Be America's War and Peace Aims?", nationally broadcast by the Town Meeting of the Air, in which the Senator from New Hampshire [Mr. TOBEY], the Senator from New Mexico [Mr. CHAVEZ], and the Senator from Louisiana [Mr. ELLENDER], and I participated.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

WHAT SHOULD BE AMERICA'S WAR AND PEACE AIMS?

ANNOUNCER. The editors of the Reader's Digest, America's most widely read magazine, invite you to hear noted authorities discuss one of the most momentous questions ever presented on America's Town Meeting. For over 3 years we've been at war with Germany and Japan. We know what we're fighting against, but do we know exactly what we're fighting for? The object of these discussions on Town Meeting and of the many informative articles in the Reader's Digest is to give you facts, to keep you well informed on national and world topics.

Now here's the man who each week urges you to hear both sides—the president of Town Hall, founder and moderator of America's Town Meeting, Mr. George V. Denny, Jr. Mr. Denny. [Applause.]

Moderator DENNY. Good evening, neighbors. First, you'll be interested in your own opinions on last week's question, "Is communism a threat to the American way of life?" Of the more than 3,000 Town Meeting listeners who responded to this program after hearing both sides, 79 percent believe that communism is a threat to the American way of life; 15 percent believe it is not a threat; and 6 percent did not express themselves either way. Please remember that this is no poll, but an expression of opinion by Town Meeting listeners representing 43 different States in the Union.

This evening we're presenting what may prove to be the most important program we've put on in more than 10 years. Twenty-five years ago we fought a war to make the world safe for democracy and we got a world bristling with dictatorships. We fought a war to end all wars and in less than 25 years we began the most gigantic war in all human history.

Millions of men are fighting tonight in the blizzards of northern Europe, on the icy seas of the North Atlantic, and in the loathsome jungles of the tropics with faith in their hearts that the world can be made safe for democracy and decency and that somehow a way can be found to rid the world of this scourge of war and that we can build an enduring peace.

Never before, my friends, has so much responsibility rested upon us—each one of us, the free people of America—to find the right answers. Now with the generous cooperation of the Blue Network and our sponsors, the Reader's Digest, we've brought you many discussions of vital importance bearing on tonight's question. But tonight we ask you to think as you've never thought before about this question: "What should be America's war and peace aims?"

We are on the eve of a momentous meeting between the President of the United States, Mr. Churchill, and Marshal Stalin. Decisions made at that conference will undoubtedly determine the length of the war and will profoundly affect the peace to come. The influence of President Roosevelt at this conference will depend in large measure upon the extent to which the American people give support to his position and his position will be determined in no small measure by the opinion of the American people, themselves, and their respresentatives in the United States Senate.

It is our privilege this evening to present four distinguished Members of the Senate who have often been in sharp disagreement on this subject. At the close of the program in order to encourage you to put your own thoughts in writing, we'll tell you how you may win from $25 to $250 in cash prizes for writing a 500-word letter on this topic.

Our speakers this evening are widely representative of the Nation. From the State of New Hampshire we have Senator CHARLES W. TOBEY; from Florida, Senator CLAUDE PEPPER; from New Mexico, Senator DENNIS CHAVEZ; from Louisiana, Senator ALLEN J. ELLENDER. [Applause.]

Gentlemen, our subject is What Should Be America's War and Peace Aims? So that we may thoroughly understand what this discussion is about, let's see at the outset on what major points we're in agreement and then we can discuss more clearly the areas of disagreement. Now first, gentlemen, do I understand that all of you are in agreement as to our primary war aim that we must fight until we have unconditional surrender?

SPEAKERS. Yes!

Moderator DENNY. All of you say "Yes" to that question. It's been stated in some quarters that we should have a Council of United Nations right now to deal with the urgent problems concerning the Allied Nations. Do you agree to this, Senator PEPPER?

Senator PEPPER. Decidedly so. As soon as our leaders get together in the next conference and reestablish unity among the United Nations, we should preserve that unity through some sort of council or agency until the permanent Dumbarton Oaks organization is established. [Applause.]

Moderator DENNY. Thank you. Senator ELLENDER?

Senator ELLENDER. I see no necessity of creating a council of that kind. I believe that what we need is to give vitality and life to the Teheran Conference. At Teheran it was agreed that no nation would take independent action without consulting other nations. That course has been adopted. Let us adhere to it. [Applause.]

Moderator DENNY. Senator CHAVEZ?

Senator CHAVEZ. I agree with Senator ELLENDER. If Churchill and Stalin and Roosevelt cannot reestablish unity and maintain it, the problem is beyond redemption.

Moderator DENNY. Senator TOBEY?

Senator TOBEY. I do not think we need a council, for today Mr. Stettinius received a message from Anthony Eden asking for periodic Anglo-American-Russian conferences to tighten cooperation with the Allies. I think that's sufficient.

Moderator DENNY. Well, gentlemen, you seem to agree in principle if not as to method. Now, about the principal peace aims. Are you all agreed that some kind of world organization after victory is essential to maintain world peace?

Senator ELLENDER. I am. Senator ELLENDER talking.

Mr. DENNY. Yes.

Senator CHAVEZ. I can answer that quickly. If the agreement is based on the concepts of the Atlantic Charter, I would be in favor of the strongest organization possible and the Atlantic Charter.

Moderator DENNY. Senator CHAVEZ, you jumped the gun on me there. I wanted to ask you next about the nature of this organization. Should it be a strong or a loose world organization? Should it be organized along the pattern of the old League of Nations, where the member nations had the right of withdrawal if they did not approve of decisions of that organization, or should it be strong enough to enforce its own decisions against member nations?

Senator CHAVEZ As I stated heretofore, if the agreement is based upon the concepts of the Atlantic Charter, I would be in favor of the strongest organization possible to enforce that peace.

Moderator DENNY. Thank you, Senator CHAVEZ. Senator TOBEY?

Senator TOBEY. But I question the virility and the values of any association of nations when any one participant can negative action for the whole if in his judgment it affects his country's interests adversely. [Applause.]

Moderator DENNY. Senator PEPPER?

Senator PEPPER. Obviously, the organization would have to be strong enough to meet the challenge of war and to keep the peace of the world. [Applause.]

Moderator DENNY. Thank you. Senator ELLENDER?

Senator ELLENDER. In order to accomplish that end, that is, to enforce its own decisions, the organization must not act merely in an advisory capacity, but it must be clothed with the power to act quickly and decisively if the occasion arises.

Moderator DENNY. Thank you, Senator ELLENDER. Now, Senator CHAVEZ, we come to the Atlantic Charter, which, although originating with Mr. Roosevelt and Mr. Churchill in August of 1941, was also included in the United Nations' declaration of January 1942, which was signed by representatives of each of the United Nations, including Russia. Do you all accept the principles of the Atlantic Charter as one of our principal peace aims? Senator CHAVEZ, first.

Senator CHAVEZ. There can't be any real peace aims or a lasting and just peace unless the principles of the Atlantic Charter are carried out and agreed to.

Moderator DENNY. Thank you, Senator CHAVEZ. Mr. TOBEY?

Senator TOBEY. And I believe that the final results of the Dumbarton Oaks Conference when enacted by the various nations must square with the principles of the Atlantic Charter. [Applause.]

Moderator DENNY. Thank you. Senator PEPPER?

Senator PEPPER. This country has never deviated from the Atlantic Charter. It's been reaffirmed many times by Prime Minister Churchill and by President Roosevelt—by each of them, incidentally, in this present month of January.

Moderator DENNY. Thank you. Senator ELLENDER?

Senator ELLENDER. I agree with Senator CHAVEZ. The principles incorporated in the Charter must be brought into being through the security organization.

Moderator DENNY. Thank you. Now, gentlemen, we have in the past depended for our security upon our own Army and Navy, our strategic position, and alliances. If we're to have this world organization—which you all agree we must have—will it also be necessary to have a large military force of our own as well? Senator ELLENDER?

Senator ELLENDER. My answer is decidedly; yes. We should maintain sizable forces until such a time that the organization has demonstrated its ability to maintain peace.

Moderator DENNY. Senator CHAVEZ?

Senator CHAVEZ. That is my position, too.

Moderator DENNY. Senator PEPPER?

Senator PEPPER. Of course, the organization must have sufficient force to enable it to carry out its objectives, and we must furnish our part of that force. But all of us will be disillusioned and disappointed if, as confidence in the organization grows, and it establishes a good record, it's not possible for all nations, relatively, to reduce their armies. [Applause.]

Moderator DENNY. Here's Senator TOBEY.

Senator TOBEY. I concur with Senator PEPPER'S statement on the thesis of the diminishing scale of military force in accordance with the growing strength of such a world organization But we must not overlook article 8 of the Atlantic Charter.

Moderator DENNY. Thank you. There's one more important question, gentlemen. Will the regional alliances, such as Russia and England have been making recently, help or hinder the effectiveness of such a world organization? Senator CHAVEZ?

Senator CHAVEZ. It will hinder a world organization, in my opinion, for people will lose faith in that kind of a treaty that they desire.

Moderator DENNY. Thank you. Senator ELLENDER?

Senator ELLENDER. I am against the formation of any of the agreements to which you have referred, Mr. Denny, because it will, no doubt, have a tendency to weaken the world organization that we are supporting and which we are saying should be the instrument by which and through which peace should be established and maintained. My hope is that every nation that becomes a party to this world organization will look to it for relief and not be compelled to seek help from stronger nations. Every nation should be compelled to sign a pledge that it has made no secret agreements of any kind with any other nation. [Applause.]

Moderator DENNY. Thank you, Senator ELLENDER. Senator TOBEY?

Senator TOBEY. I feel strongly that such agreements should be only on a temporary basis and subject to review by the conference of nations at Dumbarton Oaks.

Moderator DENNY. Thank you, Senator TOBEY. Senator PEPPER?

Senator PEPPER. I agree with Senator TOBEY on that. It's only natural that nations will make private agreements for their security until we make available to them the machinery through which they may get assured collective security. [Applause.]

Moderator DENNY. Thank you, gentlemen. I think a great many of your colleagues, in the country at large, will be surprised to find four United States Senators agreeing on so many things. [Laughter.] You seem to be in agreement on a great many very important principles, but the application of these principles is another story. We've not yet touched upon such vital questions as international control of armaments, reeducation of enemy nations, tariffs, trade agreements, a world court, a world police force, and the highly perplexing question of the extent to

which national sovereignty should permit a nation to select a form of government which would enable that nation to make war against the peace-loving nations of the world.

This is a big subject but I'm sure you'll do justice by it within the limits of time available. Now may we hear first from the distinguished Senator from Florida, Democratic Senator CLAUDE PEPPER. Senator PEPPER. [Applause.]

Senator PEPPER. Mr. Chairman and friends. Surely, when we are entering upon this, the fourth year of this awful war, it is fitting that we should reclarify and rededicate ourselves to the things for which we are fighting.

We are determined to crush those international gangsters who attacked us, or who declared war upon us, and who are striving to conquer the world. That means unconditional surrender.

It means what it meant when we started the war. But we are fighting for something even more than our independence and security. We are fighting to establish law and order among the nations as among men.

We're not merely fighting the nations who have warred upon us. We are fighting war itself and are determined to slay and crush that monster, too. When we have finished the job and torn the fangs of war out of the enemy, then we are going to forge the chains of peace so strongly and so surely that we shall not again allow war to break out and curse mankind.

The German offensive of December shocked us into the realization that we had not yet won the war upon the battlefronts. Events which have been happening in various parts of Europe have been shocking us, also. Individual decisions about crucial matters by individual nations, when many of us thought they should have been made by at least the Big Three and all together, have been made.

In the press of Russia and Britain and this country charges and countercharges have been hurled at other United Nations. Good faith even has been questioned. We were almost frightened when the stark realization that the United Nations might fall apart dawned upon us.

Now we know that disagreements must be repaired and that we must reforge the bonds of unity and purpose which hold us together. We are about to see in the near future a meeting of Prime Minister Churchill, Marshal Stalin, and our President. I know we can feel with confidence that they are going to resolve and settle, in the best way possible, all the conflicts that have grown up among us in the last few months when they were not able to keep closely together.

I know we all can expect that they will prepare the way for a final conference among the United Nations for the drafting of the final agreement begun at Dumbarton Oaks. It is to be hoped that not later than this summer the completed charter for an international organization can be submitted to the United States Senate and to all the United Nations.

We have also been troubled by certain public opinion and by certain sentiment in the United States Senate. There are dangers in both, but it has been deeply heartening to me, and I'm sure it has been to you, to see the way the people of the United States have shown their determination to stand behind the Atlantic Charter and its everliving principles, and to make this Nation not only take a part but assume the leadership in establishing the sort of international organization which shall give us both a safer and a better world.

There are disturbing voices, it must be admitted, in the United States Senate, yet I believe that we four Senators here tonight speak for the overwhelming majority of that body when we declare that the Senate this time will measure up to its great part in building a just and a lasting peace. [Applause.]

We might as well realize that we have almost frightening problems in this great task of saving future generations from war. We shall have to abandon many of our old ideals and concepts. We shall have to march out upon the world stage and play our part in full view of mankind.

We shall have to make commitments we have never dreamed of making. We shall have to have a part in the making of decisions in what we have always thought of as strange and remote parts of the world. We shall have to have force ready to be thrown against an aggressor who would start wars.

Yes, we shall have to take many risks to stop war, yet we know that twice in our own time war has come to scourge us because we were not willing to take risks to hold it back.

It must be a function of the United Nations not only to curb aggression but to right wrongs out of which wars come. We must assuredly, chastened as we are by the sacrifices of this war, be willing, nation with nation as the Bible tells us, "to do justly, and to love mercy and to walk humbly * * * with God."

This organization will also be the medium through which we shall stimulate commerce and trade, disseminate science and culture and in a thousand ways be the clearinghouse of this busy world. It is not too much to hope that we may even foster a world language.

Bravely, therefore, and boldly let us strive to do our part and to do right. America has a rendezvous with destiny, and, God helping us, we must and shall at last keep it. [Applause.]

Moderator DENNY. Thank you, Senator PEPPER.

Now, may we hear from Senator ALLEN J. ELLENDER, of Louisiana. Senator ELLENDER. [Applause.]

Senator ELLENDER. Ladies and gentlemen, in less than 25 years America has engaged in two global wars. In the first, we won the conflict but we lost the peace. In the second World War, we must profit by that experience and our first aim must be to dedicate ourselves to the proposition that there shall never be a World War No. 3.

We must focus our sights for a long and lasting peace. We must exert every ounce of energy to bring about a lasting peace.

We must take the leadership in the formation of an international organization whose aim and whose purpose shall be to maintain peace and security among the peoples of the world. The organization should not merely advise and recommend such a course, but it should be clothed with absolute power to take effective collective measures to prevent war and to bring about by peaceful means the settlement of international disputes.

Membership in the organization must be open to all peace-loving nations. These nations must have a voice in its deliberations in one form or another. The organization must not be looked upon with suspicion. It must not be thought of as a make-believe organization.

This organization should be regarded as an organization which every nation, be it large or small, strong or weak, can depend upon it as the instrumentality through which and by which peace will be maintained.

We must not permit the formation of secret treaties, or private international understandings. It is my firm belief that the formation or existence of any bloc or regional group of nations is inconsistent with international peace and security. These regional blocs jeopardize world peace unless they exist with the approval of the international security organization.

We must use all the force at our command to destroy every vestige of military power in Germany and Japan so that the warlords of those countries shall never again be able to make war. Although I believe it has been our purpose all along to accomplish that task, we should let the world know that all of our resources are dedicated to that end.

In August 1941 the Atlantic Charter came into being. It was hailed as a new world Magna Carta. In January 1942 the United Nations, including ourselves, subscribed to the common program of purposes and principles embodied in the Charter. We must assist in carrying out its pledges, else the world may remain in turmoil and a lasting peace may become but a dim hope.

All nations should have free access to the seas. The Panama Canal, the Suez Canal, the Dardanelles, and similar channels should be opened to traffic of all nations. The charges for their use should be limited to an amount sufficient to pay existing obligations which may have been expended for their construction and to cover the cost of their maintenance and operation.

Senator PEPPER. America has spent hundreds of millions of dollars in building airports and harbors throughout the world for waging this war. I believe that those that have been built on the far-flung possessions of sovereign nations, and that may be necessary for us in order to assist in maintaining peace, should be retained by us in trust. As to those that have been built on the home lands of sovereign nations, an agreement should be entered into for their use should they become necessary in maintaining the peace of the world.

America has been dissipating her God-given natural resources unstintingly in her efforts to help win the war and she should make every effort to acquire, in kind, from certain of her Allies some of their resources as replacements.

We should never agree to disarm unless and until a world organization has been firmly established and has proven its ability to maintain peace and then only progressively. We should maintain a substantial Navy, a sizeable air force, and a fairly large mechanized Army—not so much for our own protection but to assist in maintaining world peace. We have shown the world in the past that we are not reaching out for more territory for our own aggrandizement. The peoples of the earth should know by now that our purpose is to maintain our way of life and accord the same right to them. My hope is that the security organization will become such a potent factor in the lives of the peoples of all nations that through it orderly and progressive disarmament can become an accomplished fact. [Applause.]

Moderator DENNY. Thank you, Senator ELLENDER, and congratulations for covering so much territory in 5 minutes. Next, we hear from Senator CHARLES W. TOBEY, Republican, of New Hampshire. Senator TOBEY. [Applause.]

Senator TOBEY. What are America's war and peace aims? A trite answer is: "To win the war and establish a just and enduring peace." We shall not win the war, however, until we compel Germany and Japan to disarm; prohibit their rearmament and construction of planes, and cause to be removed from power the warmongers of those nations.

That we shall win the war eventually is certain. That we shall have a just and enduring peace is not so certain. As Hamlet said, "Aye! There's the rub."

Let us turn to Patrick Henry's guide, "The light from the lamp of experience." Twenty-five years ago, a so-called peace was made. It proved to be a farce. Let us ask ourselves whether we have learned anything from the bitter experiences of that war. One recalls the ironic comment of Briand who said, "The only lesson we learn from experience is that we learn nothing from experience."

A few years ago, Mr. Churchill and our President gave to the world a statement of aims and purposes called the Atlantic Charter. It was endorsed by every Allied Nation. Millions of plain people the world over took courage and new hope—let them not be

swayed from its principles by any statement that it never was formally executed and that it cannot be carried out.

The pronouncements in that charter are graven in the hearts and aspirations of millions here and abroad, and the principles it expressed stimulated the deepest emotion of all: "The yearning for freedom by the people." It is for that ideal we thought we were waging this war.

Soon another vital conference is to be held. The prayers and hopes of the Nation will be with our President. Nothing would unite public opinion more than a statement by our President reaffirming the principles of the Atlantic Charter and promising to use his great influence to making it a living reality in the provisions of the Dumbarton Oaks agreement. Such a statement now would result in the united public approval which would constitute a vis a tergo, or strength at the back of the Executive, as he proceeds to the conference.

My colleague, Senator VANDENBERG, has shown the way to an interim treaty pledging our resources to our allies against Nazi and Nipponese aggression. For such assurance, we should ask that our allies pledge their allegiance to the principles of the Atlantic Charter, which each has accepted.

That great liberal, the late Justice Brandeis, said: "If we would guide in the light of reason, we must let our minds be bold." I believe the present situation calls for bold, constructive action on the part of the Executive, and the Nation will be behind him if he will practice it.

There are precedents. In 1899, at the time of the Boxer Rebellion in China, the great powers decided to dismember China. Then in stepped America boldly, through John Hay, Secretary of State, and served an ultimatum, "The integrity of China must be preserved," and there was no dismemberment. That was America in bold action.

As one who supported and worked for the League of Nations 25 years ago, I strongly favored our participation in an association of nations, with power to put down aggression when it shows its head. I favor a world court, an international bill of rights, and a code of fundamental principles of international law.

If free people are bound together in an association of nations which can enforce international morality upon any aggressor nation, I believe there is hope for lasting peace. And the time to make such commitments is now, while the Allies are dependent upon each other, for, if we wait until the shooting stops, it will be a case again of everyone to his own way.

Coming events will prove whether or not the world is ready for real peace. There are obstacles in the pathway. Some of the strongest nations are approaching the matter with reservations and from the standpoint of self-interest. We need to learn the great lesson of interdependence. Each of the Allied Nations must be willing to surrender some of its prerogatives for the common good or else we shall fail. As an able editor in my own State wrote: "Here in this country we organize the great Nation by surrender of some of the sovereignty of the several States to the Central Government. That unity which obtains among the States of our Nation is essential in the world if world peace is to come. [Applause.]

Moderator DENNY. Thank you, Senator TOBEY. Our last speaker is the distinguished United States Senator, Democrat from the State of New Mexico, Senator DENNIS CHAVEZ. Senator CHAVEZ. [Applause.]

Senator CHAVEZ. Mr. Chairman and fellow Americans. Not even by straining at the toughest sinews of the imagination is it possible to conceive of a problem more solicitous of solution than that which embraces the establishment of a just and lasting peace when the present military issues have come to their bloody conclusion.

Under the pressure of military necessity, the so-called practical genius of man has invented weapons of such devastating character that the better nature of men cries to the higher heavens for some form of a miracle which might guide the minds and the hearts of humankind into channels of more humane, more rational, and more Christian currents.

If someone does not start a little dreaming along the lines of universal application of the American Bill of Rights, the American Constitution, the Atlantic Charter, the Dumbarton Oaks Conference, the affairs of man will one day assume the functions of the apocalyptic horsemen.

The purposes and principles of the proposed charter of the United Nations are indeed adequate—all destined to harmonize the actions of nations in the achievement of the common ends outlined in the proposals. These proposals must, perforce, be the center of our attention this evening in discussing the general topic What Should Be America's War and Peace Aims? We should, in order to avoid any possible departures from the basic facts and issues, adhere as closely as possible to the question stated.

The uneasiness of some of our allies is predicated mainly upon the uncertainty of the American ideas regarding a post-war foreign policy. The American citizen is equally in a state of uncertainty. The adoption of the Fulbright resolution, which would commit the United States to a responsible international security organization, would serve as a unique purpose in clearing the world atmosphere regarding our position. It would set at ease the confused minds of all freedom-loving men as to the American position.

Again, all maneuvers on the part of our State Department should be undertaken with the full counsel and advice of the United States Senate, and in this way steer clear of a repetition of President Wilson's failure in 1919 to negotiate the necessary two-thirds approval by that body in order to render effective any international commitment for American participation in a world organization.

However, any agreement by the association of nations based upon the above comments and consistent with the Constitution of the United States should be enforced by the Congress through the powers conferred upon it by the Constitution.

It is my studied opinion that any organization for the maintenance of a just and lasting peace must, by all manner of means, be predicated on the absolute sovereignty of nations, large and small. Every nation should be welcomed to affiliate with this world organization, and should be given not only assurance but guaranty that no decision will issue from the capacity of the larger and more powerful nations to impose their wishes on the small and the weak just because historical circumstances have given the larger nations a more potent economic and, consequently, military fist with which to enforce any aggressive or selfish plans.

If the dignity of all sovereign states is not recognized and respected, I see no possibility whatsoever of maintaining a just and lasting peace. In this case, it would be a peace depending upon force, and as history teaches us, in a well-established example, any peace depending upon might cannot possibly endure. This is a core of my position.

It is the core of those tenets purported to be part and parcel of the Atlantic Charter, and whether this charter be in the form of a verbal understanding or that of a written document, I am for it simply because the all-embracing principle of the equality of nations before the universal law must be the cornerstone of any edifice of international good will, cooperation, and peace.

We must proceed on moral and rational grounds. The doctrine that might makes right will eventually lead to world anarchy, and any policy of intervention in the internal affairs of other nations runs contrary to the most elementary standards of international justice and morality.

A momentous issue has indeed arisen in international affairs. My own ideas centering upon the happy guidance of this issue are unqualifiedly based upon the establishment of a world organization and the adoption by this organization of standards of international conduct which will assure to every nation, great and small, the same right to pursue an honorable course and to play its own role in the world community, and this with a complete absence of interference on the part of other nations within the limit fixed by the international organization. Thank you. [Applause.]

Moderator DENNY. Thank you, Senator CHAVEZ. Now while we prepare to let the audience in on this discussion, let's pause briefly for station identification.

QUESTIONS, PLEASE

Mr. DENNY. Now we are ready to hear questions from this audience of 1,500 representative Americans here in Town Hall, 90 percent of whom have indicated that they have never been here before, on the topic, "What Should Be America's War and Peace Aims?" Our speakers, Senator CLAUDE PEPPER, of Florida, ALLEN J. ELLENDER, of Louisiana, CHARLES W. TOBEY, of New Hampshire, Senator DENNIS CHAVEZ, of New Mexico, will take your questions, if you will limit them to 25 words. Questions, please.

MAN. Senator TOBEY, would you be willing to abandon the demand for unconditional surrender if good peace aims can be obtained by negotiation?

Senator TOBEY. I think it imperative that we stick to unconditional surrender. [Applause.] There's sequel to that answer. Here it is. I go back to Appomattox when Lee surrendered to Grant. It was unconditional surrender. That does not mean that we can't give humane, just, and decent treatment after surrender.

Mr. DENNY. Thank you. The lady in the balcony.

LADY. Senator PEPPER, is it possible to apply the principles of our Securities and Exchange Commission to supervision of international commerce under a Commission of United Nations council?

Senator PEPPER. Well, I think that's quite a way in the future. It's naturally to be expected that this international organization will not only keep the peace but promote the welfare of the nations and the people of the world, according to my concept of it. But naturally we are not prepared, yet, to enter into detailed international regulation of commercial affairs. We can reduce tariffs and help credit to be disseminated and all that sort of thing.

Mr. DENNY. Thank you. The lady in the back.

LADY. Senator ELLENDER, up to now our economic structure has depended upon competitive rearmament. If this is true, how can we avoid World War No. 3?

Mr. DENNY. Senator ELLENDER.

Senator ELLENDER. Well, as I tried to state in my opening remarks, it strikes me that if we have an organization that we can create and that all nations can belong to, and let that organization be the instrument through which we can stop war as soon as that organization gets to working, I believe that it will mean peace and there won't be any more need for any armament.

Mr. DENNY. Thank you. The gentleman right here.

MAN. Senator TOBEY, this question is predicated on the fact that the American people have proven they can take it and are willing to deliver. I would like to ask you, please, if you will name the most constructive services that can be rendered by the citizenry to

support and permanently sustain our future peace aims?

Senator TOBEY. Yes. What I am going to mention though is fundamental. It is ultra-idealistic. You may be cynical and may scoff at it. But we can have charters and we can have conferences and we can go through all these maneuvers and theories but only one thing will do it, gentlemen, successfully, and there is no solution save in the rule of Christ alone. Religion is the only thing that will do it. The love of man for man. [Applause.]

Mr. DENNY. The young lady in the back row of the balcony.

LADY. Senator CHAVEZ, just exactly what are the aims of this country set forth in the Atlantic Charter?

Mr. DENNY. Well, we will have to give her a copy of the Atlantic Charter. We cannot read that now. [Laughter.]

Senator CHAVEZ. Well, in short, it means letting every nation handle its own affairs without any interference whatsoever—live and let live. [Applause.]

Mr. DENNY. Your teacher is not going to be proud of you, not knowing about the Atlantic Charter. [Laughter.] Just a minute, the man back there. Will you speak in the direction of the microphone, please.

MAN. Senator ELLENDER, the post-war organization you suggest is to be open to all peace-loving nations. Who is to be judge? Will the barometer be past actions or lip service?

Mr. DENNY. Senator ELLENDER, the $64 question. [Laughter.]

Senator ELLENDER. Well, it is to be hoped that when the organization is finally put into effect that we will be at peace. It strikes me that every nation that wants peace, that is determined to have peace, should belong to it. I have no doubt that if the peoples of all nations make up their minds that we want peace, I believe we can have it.

Mr. DENNY. Thank you. The gentleman away over on the side.

MAN. My question is for Senator CHAVEZ. Senator CHAVEZ, what strength can a United Nations organization have if sovereign rights of individual nations are placed above collective rights of all nations?

Senator CHAVEZ. It can't have any authority or strength whatsoever. But that is not the purpose of the organization that I have in mind. The organization that I have in mind is that the interest of all the peoples everywhere in any nation be taken care of first in the way of peace, because they're the ones who do the suffering and the dying in wartime.

Mr. DENNY. Thank you. Next question.

MAN. Senator PEPPER, please. Should we first secure a demonstration of positive good faith in Russia and England before we submit our fate to a world police organization?

Senator PEPPER. Well, you know, this matter of good faith is reciprocal. I think if you'll go back over the history of the last 25 years—I don't have to be an apologist for Russia, but I think the cold pages of history will show that Russia's record for internationalism and collective security is about as good as that of any of us. [Applause.]

Mr. DENNY. The other soldier. I'm glad to see so many men in uniform here tonight. Yes?

MAN. Senator ELLENDER, please. Since you disapprove of regional associations and world organizations, do you suggest we forget the Good Neighbor policy and disallow the Monroe Doctrine?

Mr. DENNY. Wow! What is that Monroe Doctrine we've been hearing about?

Senator ELLENDER. The Monroe Doctrine does not involve treaties or secret alliances. It was a declaration of policy made by President Monroe more than 150 years ago. So far all nations have respected it and I hope they will continue to do so. I hope, too, that the Good Neighbor policy will be extended to other nations. However, if that policy conflicts with the world organization, the world organization should take precedence.

Mr. DENNY. Thank you. Now the young lady in the third row, balcony.

LADY. Senator TOBEY, do you think England will tolerate a world organization interfering with its colonial policy? [Applause.]

Mr. DENNY. Wow!

Senator TOBEY. I'm afraid I must say I refuse to answer without advice of counsel on that. [Shouts and laughter.]

Mr. DENNY. I think you ought to be excused from that too. I may say to the young lady that that is another Town Meeting topic, on which even United States Senators disagree. The young lady way back in the balcony in the lovely red jacket.

LADY. Senator PEPPER, how can the Atlantic Charter be of use if Roosevelt and Churchill affirm it while Stalin keeps only those agreements which are definitely beneficial to him? [Applause.]

Senator PEPPER. Well now, in the first place, the Atlantic Charter was agreed to specifically by Marshal Stalin in a written declaration. In the second place, it raises the whole question of the issues that are involved in central Europe and in the Polish boundary question, before you decide that matter. I think you are justified in saying that in respect to both Russia and Britain, individual decisions have been made which ought not to have been made without the concurrence of all—at least the three leading powers—and I hope that matter can be straightened out in the next conference and hereafter no decisions will be taken in which all do not take part. [Applause.]

Mr. DENNY. Next question.

MAN. Senator CHAVEZ, do you think it's possible to have a strong world organization without sacrificing our national sovereignty?

Senator CHAVEZ. I believe that it is possible to have a strong world organization. Peaceful men give up many of their so-called rights in order to get along with their fellow man. If you can get along with your neighbor in St. Louis, there's no reason why we couldn't get along with the neighbors throughout the world provided we act in good faith. [Applause.]

Mr. DENNY. Thank you.

MAN. Senator ELLENDER, even if the war lords of the Axis countries are abolished, how do you expect to change the minds of the young who will be the future leaders of the country?

Senator ELLENDER. Well, I think in dealing with the youth of Germany and Japan that we can provide some kind of system—an education for them—or direct them so that they'll forever forget nazi-ism and any kind of isms. [Applause.]

Mr. DENNY. All right. Well, that was also a Town Hall meeting topic. All right, the gentleman there.

MAN. Senator CHAVEZ, what will our Government do to make it possible for people like the Spanish people to overthrow their oppressive government and have free elections in accordance with the principles of the Atlantic Charter? [Applause.]

Senator CHAVEZ. That is a $64 question. [Laughter.] In the first place, I believe that this Government, while it should take a definite strong stand with reference to any collaboration by Spain with the Axis, at the same time, when it comes to the matter of deciding what kind of government Spain should have, I believe that's Spain's business [applause] as long as it does not interfere with the rights of other peoples elsewhere. [Applause.]

Mr. DENNY. Thank you. The next question over here

MAN. Senator PEPPER, isn't it true that if we are to protect the small nations and to carry out the Atlantic Charter, that we must do so by force? What is your plan to enforce the Atlantic Charter?

Senator PEPPER. Well, we have generally thought, of course, of the Atlantic Charter as negative—that is, thou shalt not do this, that, and the other—and you quite properly emphasized the affirmative part of it which holds out hopes to little nations and little people everywhere to have a better opportunity than they've ever had. Naturally, we can't be consistent with the Atlantic Charter and go cram a lot of these things by force down individual nations' throats and not violate their own right to have their government and their affairs inside their country. But we certainly can, by cooperation, by working one with another, and by good faith, and, of course, by restraining those who would use force for wrong, we can, as a whole success, do better than has ever been done by little nations and men, women, and children as well. [Applause.]

Mr. DENNY. Thank you. The lady in the balcony.

LADY. Senator TOBEY, how can we avoid the Big Three becoming a thinly disguised old-fashioned military alliance, such as have always pursued imperialistic aims and produced wars rather than peace?

Mr. DENNY. Senator TOBEY, that teacher asked a pretty lively question.

Senator TOBEY. That's a matter, of course, of good faith based upon the utterances and principles of the organization that brings the three together in an alliance. We've got to take that on faith, but I believe that the alternative of this whole thing is chaos and that under this great sense of responsibility, the Big Three would measure up to their opportunities and privilege of service. [Applause.]

Mr. DENNY. Thank you. The gentleman in the back row there.

MAN. Senator CHAVEZ, don't you think we need a Pacific Charter? How can the Atlantic Charter be applied to such countries as India? [Applause.]

Mr. DENNY. How can the Atlantic Charter be applied to such countries as India?

Senator CHAVEZ. It's a fair question and I'll give a fair answer. I believe that the principles of the Atlantic Charter should apply all over the world. [Applause.]

Mr. DENNY. Where's the man in uniform I saw a moment ago. Here he is right here. The sailor, yes.

MAN. (Question indistinguishable.)

Mr. DENNY. I don't think we got that.

Senator PEPPER. Did I understand you to say, Captain, that do I think it right that Greece should have restored to her certain islands like the Dodecanese Islands and others? And not only do I think so but I have a resolution to that effect pending in the Foreign Relations Committee now. [Applause.]

Mr. DENNY. That was the right question for the Senator. All right, the gentleman there on the aisle.

MAN. Senator TOBEY, you say that religion is the answer. I agree with you, but how do you account for the fact that great centers of religion have been neutral against the war of fascism?

Mr. DENNY. How do you account for the fact that great centers of religion have been neutral against the war on fascism?

Senator TOBEY. Well, I don't want to criticize great centers of religion. But let me read this to you, if I may. It's from the Jewish group—not only the liberals but the reformists and all—and it came out tonight in the New York Times. It is a criticism by Rabbi Landman, "The Dumbarton Oaks document provides the machinery for the possible prevention of future wars, not for the establishing of universal peace; proposals for the suppression of international violence after these occur, not for their prevention; a mechanism calculated to rectify and adjudicate international strife, not an instrument to eliminate the bases of strife and violence and war." So we've got to implement the Dum-

barton Oaks Conference agreement with the broad humanitarian Christian principles of the Atlantic Charter. That's my judgment in the way to handle this thing. [Applause.]

Mr. DENNY. Thank you. The gentleman on the aisle here.

MAN. Senator PEPPER, should not the Department of State pay more attention to labor's desire for 60,000,000 jobs here and for world prosperity and freer trade?

Mr. DENNY. All wrapped up in one package.

Senator PEPPER. Well, as to the first part of it—about the 60,000,000 jobs—as you realize, that's more of a domestic matter and comes in the scope of the departments of the Government which deals with domestic matters and in the scope of the Department of State. The Department of State, however, for the last 12 years has certainly been working hard and diligently upon the question of stimulating world trade by reciprocal trade agreements which lowered tariff wars.

Mr. DENNY. Thank you. Now, before we give you this important announcement that I told you about at the opening of the program and next week's subject, Mr. Cole has an important announcement to make to you showing how you may help save not one, but hundreds, of wounded fighting men.

ANNOUNCER. Today, many wounded men are returning from overseas, returning home. An article in a recent Reader's Digest tells how these men feel as they ride in an American train headed for further treatment in Army hospitals near their own home towns. As the trains roar along, even the most seriously wounded are happy. They find strength in knowing they are home. One soldier looking out of the window says, "I got to keep looking—I keep thinking maybe it will fade out like a movie." As the train whizzes through a town another remarks, "Gee, even the dump piles look swell."

Yes; these men are glad to be home and one reason they can be home is because Army nurses are devoting their strength and knowledge to men in need on battle fronts all over the world. Wherever American men are fighting, Army nurses are helping to save lives. In hospitals here at home, Army nurses carry on the job to restore health and hope, but more and more nurses are needed.

Today, the Army Nurse Corps must have 10,000 registered nurses immediately. If you know a registered nurse, tell her how urgently she is needed in the Army Nurse Corps. If you are a registered nurse, make your application today. Write to the Surgeon General, United States Army, Washington, D. C., or get in touch with your local Red Cross. The Army Nurse Corps needs you now. The Reader's Digest returns you to Mr. Denny.

Mr. DENNY. I want to thank Senators PEPPER, ELLENDER, TOBEY, and CHAVEZ for their magnificent contributions to tonight's program. I must say that they surprised many of us in the extent of their agreement—agreeing upon such principles as the Atlantic Charter, a strong world organization, progressive disarmament after the world organization proves itself to be strong enough to maintain peace and other such questions.

Byrnes' Curfew

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Los Angeles Times of Wednesday, February 21, 1945:

BYRNES' CURFEW

In adopting a midnight curfew for the United States, War Mobilization Director Byrnes, as he usually does, appears to have ignored the special conditions in the West, and particularly in California, which call for special treatment.

It is well enough to close the bars and the night clubs here in accordance with the military curfew. But closing motion-picture shows and other places of entertainment will in this vicinity save no coal and a negligible amount of fuel and manpower, and what, if anything, is to be gained by it is far from apparent. In San Diego they have been trying to keep the U. S. O.'s and other innocent amusement places open on a 24-hour basis to provide for servicemen. And the swing-shift workers have a right to amusement, too.

Washington indignantly denies every time it puts out one of these sweeping orders that it is trying to penalize the West to make its sufferings equal to those of the East, but some aspects of this curfew order lack any other explanation.

Need Expansion But Not Monopoly

EXTENSION OF REMARKS

OF

HON. LINDLEY BECKWORTH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. BECKWORTH. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD an article which was sent to me by one who has been very actively interested in the small independent businessman for many years. I commend the reading of the article to the membership of the House:

NEED EXPANSION BUT NOT MONOPOLY

Price Administrator Bowles says he is going to assist returning service veterans to enter the mercantile business and will provide them with an opportunity to get rationed goods. That is fine and shows the proper spirit. Many of these men have been in business and were forced to dispose of it when drafted while others worked in stores and want to advance themselves on their return.

This illustrates the thinking that is going around to small business, with especial reference to the servicemen because of what they have sacrificed for the cause of lasting peace. There is a sincere desire to recognize small business but care must be exercised to see that this tendency is not scuttled. A lot of people are expressing sympathy who are sincere but there are others who are hiding their real feelings. If small business is encouraged and helped to become the real backbone of the nation in fact there are others who are only giving lip service.

Big business is not going to take this support of small business lying down if it affects its progress. It wants to become bigger and if that is permitted it will have to be at the expense of small business. The latter has suffered enough through this encroachment but if plans are carried out to expand operations small business will indeed be subjected to a test for existence that will call for earnest assistance from the Government to ward off elimination.

The thing that must be guarded against is more complete domination of production and distribution by the very large corporations operating in these fields. They have it definitely in mind that they are going forward when this war closes and free to operate without restraint. They are in a position to carry out a program which small business cannot counteract irrespective of efficiency. It must therefore be appreciated that only Government can intervene to prevent such a calamity in the interest of general public welfare and to safeguard servicemen who enter business on their own account.

Big business has depended largely on subsidies of one type or another at the expense of small business. Where this is practiced it must be stopped for the common good of the country. We need expansion of business but on behalf of small rather than large business if we are to have the utmost of employment and prevent even greater monopoly.

Southern States Cooperative Annual Report

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. VOORHIS of California. Mr. Speaker, under unanimous consent, I place in the RECORD herewith a portion of the annual report of Mr. W. G. Wysor, general manager of the Southern States Cooperative, with headquarters at Richmond, Va., for the fiscal year 1944.

This portion of Mr. Wysor's report deals with the attack now being made on the farm cooperatives throughout the country and led by the so-called National Tax Equality Association. Mr. Wysor explains so clearly the injustice and utterly false basis for this attack that I hope every Member will take the trouble to read his statement.

PORTION OF REPORT OF W. G. WYSOR, MANAGER OF SOUTHERN STATES COOPERATIVE

I have reported to you rather briefly on the affairs of Southern States Cooperative. As previously indicated, I hope this shortcoming will be compensated by the complete printed report which will reach you in due time. On the part of the directors and management in Southern States there is not, and never has been, the slightest desire to cover up or withhold information either from the membership or from the public. The fixed policy is to put the cards—all of them—face up on the table; to present the facts, be they good or bad.

The facts to report are this year nearly all so good that I would like, even more than usual, to elaborate on them. I have tried to be brief in order to have time to present to you a matter of the most vital significance to the farm cooperative movement and, therefore, to farm people.

I refer to the Nation-wide attack, now well under way, on farmer-owned and controlled cooperatives. About a year ago, misguided business interests, largely in the feed, grain, fertilizer, seed, and petroleum industries, organized what they chose to call the National Tax Equality Association.

It is now quite clear that these gentry, under this high-sounding but phony name, have one and only one objective. It is the destruction by legalistic means of farm cooperatives and of the fundamental right of the

farmer to perform services for himself through the mechanism of the cooperative association.

The business interests back of this movement are rich, powerful, and determined. They are raising millions of dollars to carry out their nefarious scheme. They are right now busily engaged in propagandizing the country—through direct mail, trade publications, the public press, meetings, and any other means they can employ to mislead and misinform the public in order that they may jam through Congress legislation to destroy farm cooperatives.

In fairness to American business and industry, I would like to say here that by no means all business is a party to this unseemly attack. As a matter of fact, leaders of the really big business institutions are definitely on the farmers' side of the fence, and to my own personal knowledge, have made heroic efforts to restrain and stop the antifarmer blitz. They recognize the farmer's right in a free country to go in business for himself. They know also that a last-ditch fight over this issue will result in ill will between agriculture and business for the next generation.

The propaganda of the National Tax Equality Association in brief is that farm cooperatives pay no taxes, whereas private business is heavily taxed and that in consequence of this alleged discrimination private business is being destroyed by the competition of farmer owned and controlled cooperatives.

Actually their attack is not against farm cooperatives as such. They are attacking the American farmer. Although they loudly proclaim they are for free enterprise, they are challenging the farmer's right to free enterprise. They challenge the farmer's right to go into business for himself, and to perform for himself services that are vital to the successful operation of his farm as a means of livelihood.

These exploiters in the business world want to take care of the farmer in their own special way and are, therefore, unalterably opposed to his taking care of himself. They seek to throw the farmer back into economic bondage, from which he is making some progress in escaping by employment of self-help cooperation. Let us examine calmly and dispassionately, if we can, the facts underlying this attack, which seeks to strike straight home to three out of every five farmers in this country.

They would strike at the 60 percent of American farmers doing some of their business cooperatively by denying to them the right to use their producer-owned and producer-controlled cooperatives on a cost-of-doing-business basis.

Farmers set up these cooperatives because they needed them. They use them to provide services they need to carry on their farming operations, services which it would rarely be practical for the individual farmer to provide for himself.

Farming is a small business. Most of our agricultural production in this country is on family-sized farms. Farming is not only a small business, it is a highly competitive business. Even with the progress farmers have made in organization during the recent years, the farmer is far less effectively organized than is either labor or industry. Every fair-minded person, on or off the farm, recognizes the need for farmers to organize. The farmer in his individual capacity is perfectly helpless to protect his economic interests in his relations with highly organized and powerful business and industry.

Yet the would-be destroyers of farmer cooperatives, operating behind the false front of alleged tax discrimination, would take from farmers the right to join with their neighbors to provide themselves on a sound basis with the services they need.

Such an attack threatens our free enterprise system in America right at a time when two opposing and contradictory philosophies are under test in this country. The newer of these philosophies looks to the National Government to solve our problems, meet the emergencies, and to regulate the economic life of the individual.

The older and traditional American philosophy calls for the individual to be strong and self-reliant through the exercise of his own initiative and the application of his own courage and resourcefulness.

In American agriculture, the producer-owned and producer-controlled cooperative has been developed as a vitally important means by which the farmer, working with his neighbors, preserves and exercises his right of free enterprise. Without cooperatives as a means of mobilizing their economic strength, farmers will either become the serf of other interests or the ward of the Government.

If the farmer lands in either position, free enterprise in the United States of America will be dealt a death blow. The very foundation of our economic life in this country rests on the ownership of land, and its production employment by the maximum number of freeholders.

To enable the individual family farm operator to cope with the advantages in capital, factilities and trained personnel of the other great industries of the country, the Federal Government and the legislatures of every one of the States in the Union have authorized the organization and operation of producer-owned and producer-controlled cooperative associations by farmers. At the same time the legislative bodies, both Federal and State, have imposed certain conditions and requirements which effectively safeguard both farmers and the general public from misuse of cooperatives. There are many such safeguards. Among the most important are:

1. The restriction of participation to bona fide agricultural producers. Only farmers may be members.

2. The vesting of control in membership rather than in money. Cooperatives are organizations of individuals; not of money. In a true cooperative, it is the individual who counts and votes, each individual having one and only one vote. Prvate business corporations are organizations of money and it is the invested money which counts and votes.

3. The limitation of the interest or dividends which may be paid on invested capital. The Federal Statutes impose a maximum of 8 percent. The Virginia statutes under which Southern States operates impose a maximum of 6 percent per annum.

4. The treatment of all users alike, whether members or nonmembers There may be no discrimination.

5. The requirement that cooperatives shall do business at cost—shall be nonprofit institutions. Any overcharges for services performed must be returned to the patrons in proportion to the use they made of those services. A cooperative can have no profit for its own account. No stockholder can, in the event of liquidation or under any other circumstances, receive in his capacity as a stockholder more than the par value of the securities he owns plus interest not to exceed the maximum fixed by law.

Now, let us examine the tax discrimination claims of the opponents of farm cooperatives. Despite clever propaganda to the contrary, farmer cooperatives are not exempt from taxation. Generally speaking, they pay taxes the same as other business.

They pay State and local property taxes. They pay license and capital taxes. They pay excise taxes. They pay transportation taxes. They pay stamp taxes, use taxes, import taxes, and various other taxes just as are paid by other business. Southern States paid $159,735.36 in taxes last year.

A true cooperative pays no income tax for the very simple and very good reason there is no income to tax. You can't tax a nonexistent income.

Cooperatives operate on a basis of taking margins for services rendered sufficient to recover estimated costs plus a provision for contingencies and for safety. What is left after actual costs are covered belongs to the member or patron and is systematically returned to him. Even margins set aside for contingency reserves, if unused for the purposes for which reserved, are so returned. Overcharges are in no sense a profit to the cooperative association. They belong to the patron and the patronage refunds returned by cooperatives are taxable income in the hands of the farmer whether paid in cash or stock.

Any other corporation operating on a nonprofit basis would also pay no income tax for the simple reason there would be no income to tax.

The relationship between a cooperative and the farmer member is that of agent and principal. To tax the cooperative for overcharges refunded to the farmer would be taxing an agent for income belonging to the principal, which obviously is absurd.

May I illustrate this point. If a farmer (the principal) gave his hired man (his agent) $10 with which to buy 3 bushels of timothy seed on his trip to town, and the hired man was able to get the seed for $9 and returned the $1 not needed for the purpose to the farmer, nobody would maintain that the hired man made a dollar profit and should pay income tax on it. Yet the application of the income tax to patronage refunds paid by cooperative associations would be nothing more than taxing the hired man on the money returned to his employer or principal.

The seekers of monopoly in private business financing this attack on the American farmer are demanding a Federal statute which would say to those of you who have set up Southern States Cooperative to perform services for yourselves that the $2,000,000 overcharge now being refunded to patrons is a taxable profit in the hands of your nonprofit association. They would tax your association for a nonexistent income. They would tax the refunded overcharge even though the refunds you receive are subject to income tax payments by you as individuals.

Well, I agree with you. This sounds, and is, preposterous. It is difficult to conceive of the Congress of the United States of America adopting such a policy. It is very doubtful, I am told by lawyers of high ability, that the legislation sought would be constitutional.

Yet the would-be destroyers of farmer cooperatives believe they can perpetrate this gross injustice. They are determined. They are powerful. They are putting up millions to carry out their scheme. Many members of Congress have no knowledge of farm cooperatives or the principles on which they operate. Not a few in Congress are indifferent to the welfare of the man on the land and are not too concerned over injustice to the farmer if it means votes from city constituents.

I want to say to you with all the earnestness I can command that we on the farm cannot and must not take this issue lightly. The future of American agriculture is at stake. I know you will fight and fight hard. We will win, too—because our cause is just. It is the cause of economic Christianity.

Address at Memorial Service for Donald Andrew Stokes, United States Army

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address recently delivered by me at the memorial service for Donald Andrew Stokes, United States Army, Taylors Baptist Church, Sunday, February 25, 1945, Taylors, S. C.:

Mr. and Mrs. Stokes, family, relatives, and friends of Donald Andrew Stokes, who was killed in action somewhere in France August 14, 1944.

Soon after assuming my duties as a Member of the United States Congress in Washington, I found need for a worthy, ambitious, young man.

On one occasion in conversation with our mutual friend the late Thomas F. McAfee, Sr., I requested him to choose for me some young man trustworthy, ambitious and capable. In a short while Mr. McAfee sent me the name of Donald Stokes. After talking with young Stokes I realized that he was just the type boy I would like to have associated with me and, as a result, he went to Washington where he was employed until his induction into the armed forces.

Donald's first work was of the humblest sort but by reason of his devotion to the task assigned him and his faithful discharge thereof, he was soon advanced and finally was employed by the Federal Bureau of Investigation. This outstanding agency of the Government accepts only the top boys and girls both in ability and character. No greater compliment can come to a young person than to be employed by the now world-famed Federal Bureau of Investigation.

At night and other times when not actually on his work Donald was studying either privately or at some institution in Washington. Always keeping alive his church activities.

Washington, as you know, is probably the most crowded city in the world by reason of its strategic importance during these war days. In spite of the many distractions and temptations young Stokes retained those fine qualities instilled into him by his godly parents and good teachers at whose feet he had been privileged to sit.

"He was just in the bloom of life's morning,
He was happy and free and fair,
A glance in his bright eyes would tell you
Of nothing but innocence there."

Occasionally there would be a moment in which Donald and I would talk together because the path over which he had traveled was comparable to my own early days.

The last word I had with Donald was after he had finished his basic training and was under alert orders, when in observing how handsome he was and how well he carried himself in his country's uniform, I admonished him to come home as clean as he went away.

We wrote to each other from time to time and on July 26, 1944, he wrote me a cheerful V-mail letter from somewhere in France, which I hold in my hand. I promptly replied but after several months of delay my letter, which I now hold in my hand, was returned marked "deceased." Thus came to an end a beautiful, useful, Christian life gladly sacrificed upon the altar of his country so that we and others who live after us may enjoy the priceless heritage of a free Government.

No greater sacrifice can be made than that which has been made by young Donald Stokes. In eulogizing this fine boy, I would not forget others who likewise have made the supreme sacrifice. Since it is impossible for me to memorialize each mother's son, will you please accept what I now say for others who, too, have given their all for our country's cause?

Our country never stood in greater danger that it did when it entered this World War. The Allied forces were being gradually hammered to pieces. It was only a question of time when they must fall before the sledge-hammer blows of well-drilled military nations, and when that time would come, we dreaded to think of the result.

While full honors should be shown to those who go to the front, there are many others who should be given a share in the glories of a successful war. A modern conflict of arms requires not alone the soldiers who do the actual fighting but it requires a far more numerous army at home to supply the equipment for our fighting men. We are apt to laud the soldiers as deserving as they are and overlook the others who also make heroic sacrifices for the cause, in the civil walks of life.

We should honor the farmer and his wife and family, who work from sun to sun to provide the necessary things to eat for our boys and our starving Allies across the water. Had it not been for them, the war would be lost and civilization would be lost and supplanted by a military despotism.

We honor those who refuse to use the usual supply of food but willingly consent to a restricted diet, that those who need it could have our bread and meat. We honor the men and especially the women, who gladly give up the comforts of home and go into the machine shops and factories and there toil throughout the heat of summer and the cold of winter, to furnish the means of blasting the enemies.

We honor those who joined the Red Cross organization and either went to the front as nurses or work at home making bandages and clothing fit for sick or wounded soldiers.

We honor those brave mothers who gave their sons for the war and held back the tears that welled up from aching hearts as they bade good-bye to their boys.

We seem to be standing today in a liquid world and the streams of human lava are flowing hither and thither. If these streams can be guided by wise minds into proper channels, then civilization will go forward with a bound; but if they are guided by the irresponsible demagogs, then the hands of the clock of progress will be turned backward for hundreds of years.

Whatever we see on all sides of us reminds us of the lapse of time and the flux of life. The day and the night succeed each other. The sun rises, attains the meridian, declines, and sets. And the moon every night changes its form. The day has been considered the image of the year and the year is the representation of life.

The morning answers to spring, and spring to young childhood, with its happy and carefree abandonment to all the joys and pleasures which make that period of life such a glorious one.

The summer answers to young manhood and brings to life all of the joy that characterized his youthful hopes. With clear vision and far-seeing penetration, he maps out his course. But he is inexperienced, and there are rocks upon which his frail bark may crack and all his hopes may sink without a struggle. The evening is an emblem of autumn, and autumn of declining life.

The night with its shadows and darkness speaks of winter, when all the flowers and vegetation are gone. And winter speaks of that time when life shall cease.

Throughout all the ages men have argued over this question of death. They have reverenced it, they have fought it, they have flaunted it, and have mocked it by turns. Yet each and every one no matter what his station in life inevitably comes face to face with the question of death.

Instead of considering death as the end of all hopes and achievements we think of it as the beginning of a new life in another sphere. Instead of thinking of death as the end of life, we look upon it as the means of a new beginning, from which the soul rises refreshed as from a night of slumber, ready to enter joyfully upon the labors and pleasures of a new world. These narrow beds wherein we laid our friends one by one as they fell asleep are not tombs of the dead but merely pillars showing with pilgrims fared this way and where they rested at the close of the day, seeking refreshment for the bright tomorrow, and where, as the poet Beattie says: "Beauty immortal was wakened from the tomb."

The soul of man is the child of God sent on a long journey from the Father's house. Out of His house, but not out of His kingdom we wander until His voice shall call us home. And that call is not a summons of doom, but an invitation home to the joys of the Father's house and bounty of His table, and the royal welcome that awaits beloved children returning from a far journey. So, if we weep for those who have gone, our sorrow is not for them but for ourselves that we see them no more, that we no longer feel the touch of their hands nor hear the sound of their voices. And knowing we shall one day join them, we should learn to look forward to the event as to a pleasant journey back to the fair land we left long ago, back to the arms of friends and loved ones.

Christ demonstrated before the eys of men the eternal nature of the human soul, in that He rose from the grave on the third day, showing that death is not a reality in the sense of being an end of life. It is merely the end of one short chapter, in life which is eternal.

These are days of memories. With bowed head and reverential mien we pause at the threshhold of the future and involuntarily turn in retrospection, not to find material for regrets, but to dwell upon those things which are beautiful, and to recall virtues that we may emulate.

My friends, we are all sailing on the great river of life together and we should feel toward each other as officers and crew of a great ship.

A poet once wrote:

"Life is like a mighty river
Rolling on from day to day,
Men and women launched upon it
Sometimes wrecked and cast away.
"Then do your best for one another
Making life a pleasant dream;
Help a worn and weary brother
Pulling hard against the stream."

So, my friends, while we mourn for those who are gone, we should rejoice for the many good things with which we are blessed in life and make the most of our surroundings as we go along. We are living in the most glorious country and in the most glorious age that this world has even known.

If those whom we call dead, if those companions could speak to us today—if the sound of their voice could come back to us from the silent shore, what words would they speak into our listening ears? Would they speak aught of the great political and economic questions which vex us? Would their

words concern the grasping schemes of nations and the petty ambitions of men? Would they speak to us of party, or business, or commerce?

Nay, out of their richer and holier experiences they would speak to us in the old familiar way of the simple things of life—the things nearest and dearest to the human heart.

If the boys who have made the supreme sacrifice could speak to us today, I think, first of all they would tell us that we should face the future with faith, hope, and courage; that we should not fear death, for at eventide there is light. They would tell us that there is a life beyond this life, and that in that life there is work to do and tasks to accomplish. They would tell us that there are sweet and unchanging friendships in the spirit land—that it is a beautiful home where there are many happy reunions, but no sad parting—a glory land where no sorrows shall gnaw the heart nor even a tender tie be broken.

They would remind us, too, of the nobility of sacrifice and of the duty to minister unto others. They would tell us that the world remembers only for a while those who have been its masters, but that it never forgets those who have been its servants.

They would have us remember the spirit of American patriotism. They would tell us that the noblest thing anyone can do is to live for their country—live to make it a purer, nobler, and finer nation.

Fathers and mothers, wives and sweethearts, brothers and sisters, you do not give your boys in vain, for their works will come back to you in the glorious golden age which all countries will finally enter upon.

Collins, the English poet, expresses our sentiments in his Ode to the Soldier Dead:

"How sleep the brave who sink to rest,
By all their country's wishes Blest!
When Spring with dewy fingers cold,
Returns to deck their hallowed mold
She there shall find a sweeter sod
Than Fancy's feet have ever trod!

"By forms unseen their dirge is sung,
By hands unseen their knell is rung.
Here Honor comes a Pilgrim grey,
To bless the turf that wraps their clay.
And Freedom shall awhile repair,
And dwell a weeping Hermit there!"

The Connecticut Reemployment Program

EXTENSION OF REMARKS

OF

HON. JOSEPH E. TALBOT

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. TALBOT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Carl A. Gray, chairman of the Connecticut Reemployment Commission, concerning their reemployment program:

THE CONNECTICUTT REEMPLOYMENT PROGRAM

(By Carl A. Gray, chairman, Connecticut Reemployment Commission)

When Governor Baldwin created the Connecticut Reemployment Commission a year and a half ago he set in motion the machinery which will give every war veteran and displaced war worker of this State the best possible chance of getting happily reestablished in civilian life after the war.

And, what is more important, the program of the reemployment commission will give these veterans and displaced war workers an opportunity for adjustment in their own home towns where they are known and where they are familiar with existing and potential jobs.

In its general concept the program of Governor Baldwin's commission is being built around the fundamental conviction that the future welfare and happiness of all the people of Connecticut depends upon the extent to which its working population is suitably employed after the war, with emphasis on the compatability of the worker and his job.

Consequently, the reemployment commission is directing its attention to the ultimate goal of every worker on a job for which he is best adapted and which will give him the greatest assurance of happiness and economic security.

To some, no doubt, this goal may sound idealistic. In fact, it is simply a realization that the welfare of each individual worker in the state is affected by the welfare of all the others, no matter how remote one may seem from another.

In other words, every worker who is unemployed must be supported by those who are employed, and ultimately this has an adverse affect on the economy of the state as a whole.

On the other hand, every worker who is happily employed makes a substantial contribution to the over-all economic welfare of the state and adds to the happiness and contentment of the people in general.

The thing that has been overlooked too much in the past is the idea that any job is good enough. We know now, that this is not so. After the last World War we saw thousands of veterans shoved into the first job which came along, regardless of aptitude, interest, or qualification, with the result that they were unhappy and remained on a job only a short time. Many of these, by chance, ultimately found themselves on jobs to their liking and in keeping with their ability. But far too many never did find satisfactory jobs and drifted from one job to another until, after a period of years, they found themselves well along in life and still without any special work skill and less and less desirable as employees.

We don't want this to happen after this war. There are four times as many men serving in this war as served in the last one. Millions of them are now serving on battle fronts all over the globe. They are fighting for freedom. And to them, freedom means an opportunity to come back to their native land, get into the kind of work they like, and settle down and raise a family.

Many of these men today are huddled in cold and wet fox holes on the war-torn battle fronts of Europe while shells scream overhead and explode nearby. Countless numbers are cutting their way through heavy jungle to ferret out ratlike Japs on islands in the Pacific, never knowing at what moment the bullet of an enemy sniper will end their lives. Flying over dangerous and hostile land and water on bombing and fighter missions every day are thousands more who know that every second they are in the air their lives are in the laps of the Gods.

Moving majestically, but always with the risk of a torpedo in their sides or bombs from above, are ships of our Navy and Coast Guard and their crews. And even under the sea, in submarines, our men are risking sudden and violent death hourly as this titantic struggle with our enemies is pressed to victory.

For these men, who are daily risking their lives for their country, life is reduced to fundamentals. They are not afraid of the enemy. They are faithful and loyal. They will die bravely if need be. And they will give their lives to save their comrades.

But they do have one fear. A fear of the future. We have this straight from hundreds who have been through this hell.

When they come back they want job opportunities. If they happened to have been physically handicapped in the war they still want an opportunity to earn their own living. They do not want to be pampered or catered to. They want to make their own way. That is what they are fighting for. If they are denied this opportunity they will feel they have fought in vain.

We at home should realize that they are asking very little. And we should make certain that they get the little they ask for in every city and town in the State and Nation.

Actually, it isn't going to be any great task to give these returning veterans what they want, right in their home communities.

First of all, they will need one place they can go to for information, advice, counseling, and service. To meet this need the Connecticut Reemployment Commission has organized reemployment and veterans advisory committees in 145 of our 169 towns and charged these committees with the responsibility of designating one central place where veterans may go for information and assistance. This central point of contact may be the office of an established agency such as the United States Employment Service, Selective Service, the Red Cross, or Veterans' Administration. In smaller communities it is more apt to be an office in the town hall or the post office. But wherever it is, each community will know, and veterans of that community will not have to go from one individual or agency to another and get the run-around which veterans of World War No. 1 remember so well.

These local committees, on which about 2,500 public-spirited citizens are now serving, are made up of representatives of all the agencies, groups, and organizations in each community which can contribute toward the ultimate adjustment and reemployment of veterans and displaced war workers. They were picked as representatives of these organizations so that they can coordinate the efforts of all agencies and facilities in the community.

At least one member of the committee is a specialist in education and training and through him or such a committee the educational and job training facilities and opportunities available are made known to the veteran. Another member, or a subcommittee, is especially informed in regard to employment opportunities. Another group is well versed in how claims for disability compensation and other service-connected correspondence can best be expedited. And there are one or more persons who are prepared to aid a veteran in any domestic problems he may have.

Above and beyond these mechanics of human engineering, the reemployment commission is endeavoring to develop a better understanding of the changes which have taken place in veterans and how we can aid in their readjustment.

This is being accomplished through community personnel training courses, talks before organized groups, foreman training courses, through our educational facilities and by members of the clergy.

Our program is a comparatively simple one, dealing in human values. Our aim is to give every veteran and displaced war worker a fair opportunity to reestablish themselves in peaceful pursuits on jobs for which they are best fitted and which will bring them a maximum of contentment. To provide this opportunity we are endeavoring to see that every possible assistance in the way of information, counseling, training, education, and mental and physical aid is made available to them in their own home towns.

We can do no less.

The Coast Guard Does Another Great Job

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include therein the following article, entitled "The Coast Guard Does Another Great Job":

THE COAST GUARD DOES ANOTHER GREAT JOB

Both in Europe and in the Pacific our armies and those of our allies are on the offensive. Great battles have been won and more victories are in the offing. Millions of our men are now hurling themselves upon our enemies. In their hands are the finest weapons which our factories and our working men and women can produce. And backing them up are the millions of tons of supplies needed by a modern army. Compare today's situation with that of 3 years ago, when our enemies were on the march and our primary objective was to hold on until our war machine could be shifted into high gear.

This change in our war fortunes has resulted from prodigious efforts made by both our fighting men and by our citizens from all parts of the country. We have produced war equipment in volumes far beyond even our own optimistic predictions. Our fighting armies have been rapidly and well trained and have demonstrated their superiority in all theaters. While their fighting record and the record fo our war output are well known, comparatively little public notice has been given to one most important phase of the remarkable job that has been done in transporting these men and their war material from the United States to the far-flung battlefields of the world where they are being used so well. That is the magnificent work that has been done by the Coast Guard in protecting the port facilities required to load our ships and in protecting our vessels while in port.

Almost all war equipment must be carried overseas by ships and all ships must be loaded over our port facilities. Of the huge amount of war material we can produce, our armies abroad can only utilize that amount which our ships can carry to them. Thus the bottleneck of our entire war effort is our ability to ship, and this, in turn, depends upon the capacity of our port facilities to load. Any damage to our vessels, or to the waterfront facilities used to load these vessels, which hinders their maximum use would thus result in a proportionate reduction in the battle power of our armed forces.

That fact, and the necessity to protect our ports and vessels in ports, was early recognized by the President and the Navy. Just 3 years ago the President delegated responsibility for the safeguarding of our ports and vessels in port to the Secretary of the Navy, and the Secretary designated the commandant of the Coast Guard to perform these duties. Under the leadership of Admiral Waesche, a remarkable job has been done.

Starting from scratch, the Coast Guard has built up an organization of trained experts in all phases of port protection. To protect against fire, that greatest of menaces to maritime safety, the largest fleet of fireboats in the world has been created. Over 250 Coast Guard fireboats are now in operation, the smallest having a pumping capacity of 2,000 gallons per minute, and all carrying the latest fire-fighting equipment. To prevent access to our vessels and water-front facilities by undesirables, all persons seeking admittance to them are first required to obtain Coast Guard identification cards. To control the movement of vessels in our local waters, a system of Coast Guard licenses and harbor patrols was instituted. And to protect our harbors and vessels and the civil population living in port areas from dangers incident to the loading of war explosives, a comprehensive precautionary program has been developed to insure that all loadings are properly supervised and stowed.

The success of the Coast Guard port security program is demonstrated by the fact that no disaster or serious loss impeding our war effort has occurred upon any vessel or facility for which the Coast Guard has been responsible. That has not been the result of luck, but of hard work and effort. During the past 3 years this port protection job has been steadily increasing with the increase in the volume of ships and cargo using our ports. Despite the need for Coast Guard manpower at sea, their port security program has never faltered, but has successfully kept pace despite substantial personnel reductions. To the officers and men of the Coast Guard who have made this port security record possible and who have done so important a job to get the equipment of war to our men abroad, we all owe our gratitude. To them we say, "Well done."

The F. E. P. C.

EXTENSION OF REMARKS

OF

HON. ED GOSSETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. GOSSETT. Mr. Speaker, under unanimous consent, I insert in the CONGRESSIONAL RECORD the following editorial appearing in the Vernon Daily Record of February 20, 1945:

THE HIGH COST OF POLITICAL OBLIGATIONS

The Fair Employment Practice Committee, known to the public as F. E. P. C., is a Government agency created by Executive order to prevent discrimination against Negroes in defense industries. That this was an essential move to prevent trouble which would have hampered the war effort is generally agreed. Hence there was no complaint against the original purpose of the order.

But the Committee appointed by the President to prevent unfair practices in defense industries very soon decided to extend its authority to all business. It began telling private employers who had no connection with contracts for producing war materials that they must employ Negroes according to certain arbitrary ratios fixed by the Committee. Newspapers were told that they must not carry advertisements that either whites or Negroes were wanted for certain kinds of work.

Naturally that created a stir in Washington and the F. E. P. C. was compelled to back up on some of its more presumptuous policies. Congress was about to abolish the whole thing and then came the Presidential election. Both major parties took up the discredited F. E. P. C. and promised to make it a permanent agency of Government with full legal status. A bill is now before the House of Representatives to make good on the campaign promises made for the specific purpose of attracting Negro votes.

If this measure becomes law a new carpetbag movement will be in full swing. It will eventually fail as all such ideas do, unless the authors of a new order for the United States succeed in their plans to introduce a system of State socialism.

This is an excellent editorial, with which most intelligent citizens will largely agree. However, I do not fully agree with the first paragraph. In my opinion, the F. E. P. C., even as an executive agency and even during wartime, has been more detrimental than beneficial. Such an organization belies its name. To perpetuate such an organization as a permanent, peacetime agency of government is wholly inconsistent with all principles of Americanism and democracy.

If political shysters, together with sincere proponents, are able to hang this millstone about the necks of the American people, then we certainly have cause to despair of the future. Within such legislation lie the seeds of another Ku Klux Klan, as well as the germs of other pernicious social and political diseases.

The Polish Situation

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the Schenectady (N. Y.) Gazette of February 19, 1945, relative to the Polish situation:

THE POLISH SITUATION

As expected, many Poles in this country are furious over what they term the "sellout" of Poland to Russia by Roosevelt and Churchill at the Yalta Conference of the Big Three. Polish-Americans are not the only ones who are incensed. Senator WALSH, of Massachusetts, said the proposals concerning Poland are "shocking."

There is some basis for the charge. As WALSH said, the provisions concerning Poland are "wholly at variance with the Atlantic Charter pledge." But that is merely another example, if such were still needed, of the futility of such pronouncements, pacts, and codes as the Atlantic Charter, Dumbarton Oaks, Bretton Woods, and the like (and even solemn treaties), which are all based on a superficial, artificial, and thoroughly ephemeral agreement on principles by a number of individuals. Such charters and agreements always have been and always will be meaningless becaus they are backed by no compelling forces that make for permanent compliance. They are merely statements of supposed intention. Tomorrow's intentions may be, and usually are, different from today's.

Time is wasted, therefore, if the Poles call for adherence to the Atlantic Charter, since there is no more reason to rely on that charter today than there was when it was promulgated. It was as dead as the dodo the moment it was uttered. It could not possibly carry any more weight than the numerous promises made by Hitler of no more territorial designs.

The reason the Poles can expect nothing from such documents as the Atlantic Charter is that when the influential leaders among the big powers get down to brass tacks and leave off their high-sounding phrases the actions they take are along defensive lines for the purpose of protecting their own countries' positions, their own economic or political systems, their own trade empires, their own way of life. Those men could come forth with a hundred Atlantic Charters if they so desired, but when it reaches the point of taking action they approach the problem of Poland on the same basis it has been met by conquerors throughout history. They bargain among themselves, slice up Poland if such is necessary, agree on new spheres of influence and on disposition of wealth and manpower, and take any other steps they think needed to insure the security of their own governments in coming years. Poland obviously has nothing to say about all this, and it would make no difference even if it had been represented at the Yalta Conference, for the power of the greater nations would overwhelm it.

Each of the minor nations of Europe, and of the globe, is a pawn in such matters. If some international organization, along the lines of those frequently discussed these days, had already been set up and were now in operation, the Poles and others in the same unfortunate position presumably would have recourse in somewhat the same manner as one of our States which may appeal to the United States Supreme Court for settlement of an interstate dispute. That is not to say the Poles would receive fair treatment, but at least the machinery would be there. As it is, no international organization or code has been set up, accepted, and made workable. The Big Three nations therefore are jumping the gun, taking matters in their own hands, trying to settle the post-war problems of Europe now and in their own way. Why? Because the strong and early bird gets the worm, and any nation that innocently waits until after the war for the establishment of a supposedly just international control body will find the world was already carved up the way the largest powers wanted it long before the war was even ended.

There is nothing Poland or any other helpless nation can do about it except to choose the right allies in the next war.

Why Not Use Male Nurses?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks, I am including a statement by a group of male nurses. It is hard to explain the Army's portrayal of its dire need for more nursing care while it steadfastly refuses to use the hundreds of registered male nurses who are available.

In a recent article by Joseph Israels in Look magazine, he said:

In a recent 6,000 miles of travel from end to end of the Pacific theater, every man I met agreed that his part of the war would go better without American women in the forward areas.

Army and Navy doctors, even nurses themselves, will admit the female nurses in forward areas do nothing male Medical Corps men cannot do better. And do without the protective worrying of those officers and men who don't like to see women shot at.

It has been suggested by a colonel in the Medical Corps now serving in the far Pacific that a subdivision of the Medical Administrative Corps be created purely for male nurses, that as nurses they be given direct commissions in that subdivision, and be used in a specific capacity that best fits their qualifications.

When the need for nursing care is so desperate that we are urged to draft women nurses, surely it is time to revise some ancient traditions in the Army Medical Corps and use the male nurses who want to volunteer.

WHY NOT USE MALE NURSES?

Ever since Pearl Harbor we men nurses have been striving for recognition as nurses in the armed forces. We are not seeking glory; rather, we wish to serve in a capacity in which we sincerely believe the greatest value would be gained from our highly specialized training and experience.

We have intensified our efforts recently because of the critical shortage of nurses in the services. We want our fighting men to have the best care that medical science can give. We have received favorable replies from many Congressmen and other interested officials, yet the Army and Navy Medical Departments continue to offer the same objections to our recognition.

It is time to analyze these objections. From the Surgeon General of the Army, we quote two statements. One: "The situation concerning male nurses is not at all parallel to that of female nurses, who are appointed for a single specific type of duty for which they are peculiarly qualified by reason of their sex."

What does this mean? What is this "specific type of duty" for which men nurses are not qualified? Both men and women nurses have the same education and training. Both pass all regulations set by the National League of Nursing Education. Both are licensed in the same manner.

Statement No. 2: "Army nurses of either sex must accord patients all the usual care required by the duties of their profession, including a variety of intimate offices and quasi-menial services. Women of officer rank can render these duties without incongruity, while men of such rank could not."

We ask, Why not? We realized we would have to render such services when we entered our chosen profession and have rendered these services in civilian life without loss of respect. In fact, in certain types of conditions, male patients have particularly appreciated our relieving the embarrassment occasioned when women performed these duties, and often the treatment has been much more effective just because the barrier of sex was removed. Not infrequently the care of male patients has been left to untrained personnel because of the ever-present problem of sex, and the results have been very unsatisfactory. This is particularly true of psychiatric and genito-urinary diseases. If men cannot render such services to their fellow men without losing respect, then certainly the whole medical and scientific field should have lost its respect and high standing long ago. In many instances doctors have had to perform menial tasks because of the lack of trained coworkers, and yet have retained the respect and undying gratitude of their patients. That is part of the tradition of both the nursing and medical professions.

We are informed that male nurses may enter the Hospital Corps, where, if qualified, they may enter officer candidate school and obtain a commissioned rank. Many men nurses have tried for the past 4 years to qualify for officer candidate school, and yet none have rank equal to that of women nurses with whom they have trained (and whom in many cases they have supervised). If these men were qualified to supervise these women and have equal or more experience in their profession, surely they should be allowed to serve side by side with them rather than under them in an entirely different branch of the service.

Moreover, there is a difference between the Nurse and Hospital Corps. The Nurse Corps is composed of qualified trained personnel which supervises the work of the Hospital Corps. The latter is largely composed of previously untrained personnel who have received their training from the military schools. Since men nurses are trained, qualified workers in civilian life, why is it impossible to utilize this skill in military life on the same basis as that of women nurses, namely, in the Nurse Corps? Is it fair to ask men nurses, who have expended time and effort to gain further education and the right to call themselves registered nurses in civilian life, to start all over again in military life to finally gain recognition as nurses, and on the other hand grant women nurses full recognition immediately upon enrollment?

The Surgeon General of the Medical Corps tells us how simple it is to gain entrance into the medical units of the armed services, but here are a few facts we have found out from actual experience. We are barred from the Army and Navy Nurse Corps, and under present draft laws are unable even to enlist in the armed forces. We may only apply for voluntary induction and hope to be put in the Hospital Corps, though even this is not guaranteed. We are unable to benefit at all from our previous medical training. We receive the rank of private if we are allowed to enter the Army Medical Corps. It has been said that it is easier to get into heaven than into the Army or Navy Nurse Corps, yet 10,000 nurses are still urgently needed. We are merely asking permisison to share the same standing in military life accorded us in civilian life; that is, the right to join the nursing corps, where we can make our maximum contribution to the war effort.

May we have that chance?

America Last

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

AMERICA LAST

(By Roy C. McKenna, member, executive committee of the American Tariff League, and chairman of the board, Vanadium-Alloys Steel Co.)

Internationalists, advocates of the policy of America last, had their inning at the Monetary Conference at Bretton Woods and at the International Business Conference at Rye. Policies, which President Roosevelt states were arrived at by "the best brains," are not accepted by those who believe that America can win the war and the peace without adopting the economic theories of either our allies or our enemies. Internationally minded politicians who advocate a policy of defeatism, America last, place upon those who believe in American principles back in the horse-and-buggy age, and believe that they are uninformed in modern economics. Their objective is, by continual sniping, to bring about the abolition of the century-and-a-half-old

American custom of safeguarding our standard of living by a protective tariff.

Those of us who refuse to accept imported economic theories or a policy of defeatism, America last, despite continuous allegations, have studied history, economics, and are familiar with the aspects of international trade both practically and theoretically. We date the growth of individual government from 1066 when William the Conqueror crossed the English Channel. We recognize the Constitution of the United States of America, adopted in 1787, as the basis of acceptance of government by the individual.

Advocates of the policy of America last do not hesitate to imply ignorance of world affairs to their opponents, but they themselves seem unfamiliar with the history of the tariff, and the adoption, in 1816, of America's policy of protection. From 1791 to 1815 imported items were subjected to a revenue duty, or tariff; and only about 5 percent of all imports were admitted duty free. With the adoption by America of the policy of protection, imports upon the free list increased from 6 percent in 1816 to 66 percent in 1938–40. International trade, therefore, was not handicapped by protection. Imports and exports have risen and fallen with America's prosperity; and for over a century all business recessions in America followed downward revisions in the tariff.

Advocates of the policy of America last have chosen as their spokesmen the crusaders Eric Johnston and Beardsley Ruml. Eric Johnston, who always has an eye to personal popularity, had the audacity to say over the radio, in a national hook-up, The Town Meeting, "We pay in the United States, for instance, about four times the wage that is paid in England to coal miners, and yet the coal miner in this country produces about four times as much." He ignores the difference between virgin mines and those centuries old, and unjustly implies that the difference is in the men working the mine. In the industrial world of today, the production is set by the machine and not by the operator. He is right, however, in his statement that American wages are four times those of England, and that those of other countries are lower still; but he does not follow through and define the effect upon American mining and miners by the importation of coal at less than the cost of domestic production.

The ordinary man recognizes the justice of American workers asking a tariff equivalent to the difference in cost of production at home and abroad. President Wilson, in 1913, stated, "The object of tariff legislation henceforth enacted, must be effective competition." Andrew Carnegie, part of whose fortune is being used by advocates of the policy of America last to advocate free trade, said that in tariff legislation we should in all cases take the safe side.

Those of us who have not lost faith in America, believe in free enterprise, in competition nationally and internationally, but always upon a basis of recognizing the difference in the economic status of peoples. Eric Johnston said, "When our exports exceed our imports, other countries aren't dumping things in America." [Applause.] This statement could have been made for no other purpose by a thinking man than to elicit applause from an unthinking audience. It may be true that for 12 years, under the administration of a Treasury Department favoring a policy of "America last," antidumping provisions of tariff legislation have not been enforced or foreign valuations questioned. A cuckoo clock bought at retail at Fifth Avenue and Fourteenth Street in New York City, valued in Germany where it was made, at 94 cents, upon which a duty of 28 cents was paid (30 cents ad valorem) was priced at $22, a mark-up of 1,636 percent above landed cost in the United States.

Nations will make great sacrifices to balance exchange. At a time when our policy was to plow under, we were importing from areas where people were starving, billions of pounds of starches, vegetable oils, and carbohydrates which under a liberal interpretation of the policy of protection, could have been produced at home.

I know of no group in America which advocates prohibitive tariffs. Those who most violently attack as exorbitant the rates of the Smoot-Hawley Act, fail to remember that they themselves were responsible for a blanket increase of 40 percent in all duties when they devalued the dollar. Since the devaluation of the dollar 12 years ago, under the Reciprocal Trade Agreements Act, reductions in rates have been made on over 1,200 articles, mostly to the full legal extent of 50 percent. Few men realize that our tariff is now on about the same level as that of 1913; in fact, there has been little change in the tariff since the adoption of the principle of protection in 1816. From 1821 to 1830 the average revenue from duties amounted to $2.32 per inhabitant per year, and this compares with $2.37 for the period 1938–40. During both these periods the rates of ad valorem duties averaged between 40 an 50 percent, but the free list grew from 6 to 66 percent.

Advocates of the policy of "America Last" always visualize as American exports to the Hottentot nations such articles as automobiles, typewriters, household appliances—all the products of industries so young that they always have had the benefit of a high wage and the American market and have never been called upon to face foreign competition. America's exports to the world should be materials needed to establish throughout the world nations with balanced economies—machine tools, agricultural implements, and American technology.

Beardsley Ruml states that America does not need duties either for the purpose of revenue or for the purpose of balancing our exchange. This is fortunate. However, the same economic laws that apply to other nations apply also to America. We must ultimately balance our exchange. We may, however, select those things which we need for our happiness and well-being, raw materials, luxuries, and in general, articles which are noncompetitive. America must have a sound fiscal policy, low interest rates, high wages, high prices for agricultural products, in order to hold faith with the patriotic buyers of Government securities which must be retired at full value. To do this, American agriculture and American industry must have the American market. Beardsley Ruml, merchant, economist, social reformer, who has accepted in part imported economic theories, has become a spokesman for advocates of the policy, "America Last." He states, "the tariff is a sales tax paid by the consumer through the retailer direct to the producer without the intervention of any public agency." A merchant, treasurer of R. H. Macy & Co., should know how prices are set in a profit and loss economy, and how much a duty of 2 cents, paid upon a marcel iron, (20 percent advalorem on a valuation of less than 10 cents in Germany) accounts for a price paid to R. H. Macy & Co. of $1.39 retail, or a percentage of retail price to landed cost of 1012 percent.

Information on 10 articles for sale by R. H. Macy & Co. obtained at the request of the Senate Committee on Finance and published by the Treasury Department as a report on foreign and landed valuations of imported merchandise and their retail selling price in the United States, shows percentage of retail selling price to landed cost of a minimum of 187 percent to over 1,000 percent.

As an economist, Mr. Ruml should recognize that the larger part of any duty is paid by the exporter, and only a lesser percentage is divided between the merchant and the consumer. The increase in retail price due to the tariff on commodities is negligible. Merchants search the world for cheap-labor markets, and sell the merchandise which they secure in the sweat shops of the world at American valuation; that is, the assumed cost of reproduction under the privileges and upon the wage scale of American workers who for over 150 years have been partially protected by tariffs.

Defenders of the principle of protection believe in a flexible tariff. The Smoot-Hawley Act provided for increases or decreases of 50 percent. President McKinley advocated reciprocity. Reciprocity, however, should work both ways, and by bargaining we should get value received. The Reciprocal Trade Agreements Act, for the last 12 years, has been administered only to purchase international good will. A reduction to Canada of the tariff on whisky, in spite of the fact that Canada is a small producer of whisky, automatically applies to Scotland, the principal producer. The agreement with France on rayon, of which France is a large manufacturer but small exporter, would apply equally to Japan, who could easily put America out of the business.

Mr. Ruml warns America that other nations may increase their duties because of needed revenue; of which the tariff to many is still the chief source. He admits that any nation with a limited quantity of exports, in dire need of balancing its exchange, would be forced by one means or another to limit imports to those commodities essential to their economy. Nations struggling for reconstruction will undoubtedly not permit the importation of luxuries when machine tools, food, and agricultural implements are needed. Throughout the entire period of sniping at the idea of a protective tariff for America under the Reciprocal Trade Agreements Act, other nations have increased their rates of duties, as demonstrated by recent acts of Brazil and Chile. Mr. Ruml, however, states that increases in duties by these nations were not for the purpose of discrimination against America, and that such acts should not influence our policy (of America last?).

The greatest contribution that America can make to the devastated and conquered nations struggling for reconstruction, would be the establishment of an America as self-sufficient as possible under modern conditions. The rest of the world knows that it mut work out its own salvation. Money will not do the job. Temporary assistance will help, but only by years of toil can the job of reconstruction be done in any country.

An American merchant is free to buy in the cheapest market, and is asked to pay duties only at rates which have remained practically unchanged for a hundred and twenty-five years. He sells on the American market at American prices. Thus he has the preferential position. Agriculture and industry ask only a tariff high enough to guarantee effective competition with foreign produced goods. A square deal, for which they ask, can be secured by a duty equivalent to the cost of production at home and abroad. In the post-war era merchants of other lands will not have this privilege. Most of the world will be under state socialism with planned economies under which foreign trade is rigidly controlled by the government. The individual in these countries will have no part in government.

Political opportunists dare not make the tariff the principal political issue. The ordinary man doesn't want to throw out of work men who have devoted their lives to learning and practising specialized trades, only to save a few cents per dollar on foreign ware. The ordinary man knows that resources invested in sheltered industries, as they are referred to by Mr. Ruml, are made in good faith and that fairness demands the continuation of established principle. The ordinary man who has seen a steam shovel or a bulldozer

work, knows that it is investment in tools and not the physical or psychological difference in nationalities which makes production. The ordinary man thinks of free traders as economic crackpots.

If America has not fought the war in vain, we need not accept the economic philosophy of either our enemies or of our allies. We can maintain a government based upon individuality, with free enterprise, competition in business open and regulated by government only to the extent necessary to maintain order.

Free Enterprise Is You

EXTENSION OF REMARKS

OF

HON. JOHN W. GWYNNE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. GWYNNE of Iowa. Mr. Speaker, under leave to extend my remarks, I include a very splendid editorial written by S. S. Hoffman and published in the Waterloo Press, of Waterloo, Iowa, on February 8, 1945. The editorial is as follows:

FREE ENTERPRISE IS YOU

If you want anybody to do anything well, you'll have to let them make a little money at it. Nobody does anything very well free. So the profit system and good wages are right and proper. American prosperity is a mighty big job and it cannot be pulled out of a hat by any one genius or a set of geniuses in Washington. This responsibility for achievement must be the job for millions of enterprising initiators all over America. The only way to get their achievement is to let them make some money—hitting them with a baseball bat is absolutely killing the goose that laid the golden egg.

The American system of free enterprise is not only privately owned but the souls of the initiators are privately owned. Any government which owns or runs business also owns and runs the souls of every man, woman, and child in the country. Even going so far as to grant that collectivism in some countries is all right would never work here in America—this in spite of some ideas we have had from Washington.

Free enterprise means more to the worker by far than it does to the investors Rockefeller or Ford.

DREAMS

Some day I want to own a big factory or own a garage or invent something and manufacture it. Life, liberty, and the right to dream is something we have in this country which most other countries do not have. This dreaming and working to accomplish these dreams is what millions of little fellows start and keep rising to the top. When the right to dream is taken away all incentive to hustle is destroyed and this country will not be America.

FREE ENTERPRISE

These words have been twisted until they are getting hard to define. We'll try this: Freedom to hustle, freedom of opportunity, freedom for individual initiative, freedom to rise to the top—but not at others' expense. Free enterprise means that your children and mine can go much further than we have come. Business and people in America are not enemies—they both have much in common. Some of us may be fitted to be a machinist or carpenter or brick mason all our lives. Nevertheless we want a chance to save a little and invest a little and this is where we too become businessmen. A man who digs ditches all his life has ambitions and perhaps the outstanding one is to live in a country like America where his children may some day enter the professions or business.

In America everybody is or would like to be a capitalist. A little fellow who has earned a little money and invests it in a business is a capitalist. Anybody who saves it a capitalist.

A CONTINUOUS HALLOWEEN

We kids used to go out Halloween and upset the chicken houses, put the buggy on top of the schoolhouse and in general have a good time. It was fun. We have here in America those economic pranksters who have been getting the same sort of fun out of upsetting any American institution a few years old. The fact that we had a depression which was world-wide in '29 and '30 is no reason why we should continue the Halloween party henceforth and keep upsetting not only business but about everything else.

Now if the Government will realize that the real way to create those millions of jobs is to let business and free enterprise go ahead and take the initiative we will have post-war prosperity of a solid kind and not one created by a lot of Washington politicians who never have been a success in business of any kind.

Butter Shortage

EXTENSION OF REMARKS

OF

HON. ROBERT K. HENRY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. HENRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which I received from Mr. George F. Christian, of Johnson Creek, Wis.:

Hon. ROBERT K. HENRY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: The butter situation is very critical and unless something is done to increase the price of butter and make butter prices more in line with prices on other dairy products we can only look forward to a continuing decline in butter production, and this will eventually work to the detriment of the entire dairy industry throughout the United States. There has been such a tremendous decrease in butter consumption as a result of continued shortages and rationing that it may take years to get consumption back to normal, and when conditions change the surplus from all other dairy products' lines will go into butter production, and there can be only one result—and that is a tremendous oversupply that will force prices down to low levels or force Government agencies to purchase large quantities of butter on a price-support program basis.

If butter prices were more in line with other dairy products now so that production would gradually increase and larger supplies of butter would be available for domestic consumption, the situation would not become quite as critical. The members of the butter industry advisory committee have about given up hope of securing any relief from the O. P. A. or War Food Administration and I believe they are going to make a determined effort to secure the necessary support to correct this situation from the Members of Congress. Butter has been deliberately discriminated against and no creamery in the United States can afford to churn butter if they can sell whole milk or fluid cream, which most of them are doing now. It is a sad state of affairs when a large butter-producing State such as the State of Wisconsin used to be is now producing very little butter. A large per capita domestic consumption of butter is vital to the interest of dairymen everywhere.

Very sincerely yours,

GEORGE F. CHRISTIAN.

Aluminum Discovers the Northwest

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. ANGELL. Mr. Speaker, one-third of the aluminum for war is coming from the Pacific Northwest. This is due to the fact that the Bonneville and Grand Coulee hydroelectric power plants are making available a large pool of low-cost electric power which is essential in the production of aluminum. It is reported that by reason of this and other facts, aluminum is being produced in the Pacific Northwest at a cost of 13 percent under the national average and 30 percent lower than the highest-cost plants. In the post-war period it is important for Northwest economy that the large Government aluminum plants now operating in that area be continued in order to supply the market with the light metal which will be in demand in the post-war activities.

An informative discussion of aluminum in the Northwest was made by N. H. Engle, director, bureau of business research, College of Economics and Business, University of Washington, which appeared in a recent issue of the Christian Science Monitor. The article is as follows:

ALUMINUM DISCOVERS THE NORTHWEST—THE WIDE HORIZON

(By N. H. Engle, director, bureau of business research, College of Economics and Business, University of Washington)

A new industry has sprung up in the Pacific Northwest which intrigues the imagination of post-war planners by its very magnitude. Attracted originally by the abundant and cheap electric power from the great Bonneville-Coulee system, by the growing demand for aluminum by the west coast aircraft industry, and by the easy access to the raw materials and markets of the world from tidewater ports, both the Aluminum Co. of America and Reynolds Metals Co. began to build aluminum reduction works shortly before the United States entered the war. The great war demand for this light metal stimulated construction by the Defense Plant Corporation of three more aluminum works and a large aluminum rolling mill. As a result, Washington and Oregon now possess capacity to produce more than twice as much aluminum as the entire United States had before the war.

Three of the five reduction plants are located close to Portland, Oreg.—one at Troutdale, Oreg., a few miles up the Columbia River, one each across the river at Vancouver and Longview, Wash. These three plants account for 60 percent of total Northwest capacity. Spokane, Wash., 300 miles inland

but less than 100 miles from the Grand Coulee Dam, has the largest single reduction works in the West and one of the three largest aluminum rolling mills in the world. The fifth reduction plant is a small, two pot-line plant (40,000,000 pounds capacity) located at Tacoma, Wash., on Puget Sound, and operated for the Government by the Olin Corporation. All of the other D. P. C. plants are operated by Alcoa.

To appraise the post-war outlook for this new western industry, the structure of the aluminum industry must be understood. As the industry exists today, there are really five stages or levels of aluminum production, beginning with the mining of bauxite. While aluminum is the most abundant metal in the earth's crust, thus far commercial production has depended on bauxite, the only ore of aluminum which has yielded to economical treatment. Bauxite has been found all over the world since its original discovery many years ago in southern France. The chief deposits in the United States have been in Arkansas, with some traces in Alabama, Georgia, and other Southeastern States. United States reserves have been very largely exhausted by the heavy demands of this war. In fact, for many years the United States has imported substantial quantities of bauxite from Dutch Guiana and some from British Guiana.

Th new Pacific Northwest aluminum industry is looking toward the Caroline Islands and the Dutch East Indies for a post-war supply of this basic raw material. It should also be mentioned, in passing, that efforts are being made to use alunite and local clays as a raw material. Thus far definitive results are lacking.

The second stage of the industry consists in refining the raw material. From bauxite a pure aluminum oxide, called alumina, is obtained by the Bayer chemical process. Alumina exists in both alunite and clay but it is difficult to separate from the ore in a pure state economically. A plant at Salt Lake City has been struggling with alunite for about a year with but limited success. A small clay plant is under construction at Salem, Oreg. If this plant is completed and is able to produce pure, cheap alumina from the abundant clays of the region, the new western industry will be free from concern about bauxite supplies.

Aluminum reduction is the third stage of the industry. Aluminum oxide, a white powdery material resembling powdered sugar or finely ground pure white sand, is dissolved in an electrolytic bath of molten cryolite, in an electric "pot" or furnace. By passing an electric current through the bath, the oxygen is separated from the alumina and pure aluminum collects in liquid form in the bottom of the furnace. It is siphoned off at regular intervals and poured into pigs of pure aluminum.

This virgin aluminum is the raw material for the fourth stage of the industry, which consists of converting the pig metal into many different alloys and shapes. Rolling mills roll it into thin strips or sheets; extrusion mills force it through dies into the form of rods, bars, channels, and tubes; forging plants shape it into airplane propellers and many other forms; foundries cast it into a multitude of designs for the industrial market.

Finally, in the fifth stage of the industry, aluminum is made into pots and pans, airplanes, automobiles, washing machines, and thousands of other consumer products.

Two problems or groups of problems face the new aluminum industry of the Pacific Northwest. The first is the disposition of the Defense Plant Corporation plants by the Government. Will these plants be sold or leased, closed down, or dismantled? The second question facing the industrial leaders of the region is: Can an integrated aluminum industry be established? What is the prospect for a plant to refine bauxite from the South Pacific? At present, alumina comes from southeastern United States and bears a heavy freight burden of $8 to $11 per ton. Can the inland Spokane plants be kept in operation after the war, especially the great modern rolling mill? Can additional fabricating plants and consumer industries be established?

The only answer that can be given to these questions now is to point out two cogent facts. First is that the post-war market outlook for aluminum in the United States is very strong. If the price for virgin aluminum can be cut below its present level of 15 cents a pound to 13 cents, it is estimated that over a billion pounds a year of new metal will be used by the fifth year after the war. At 10 cents an even greater demand is forecast. In other words, the post-war demand may rise to four or five times the prewar average.

The second fact of significance to the appraisal of the future of Pacific Northwest aluminum is the potential competitive strength of these new plants. The Spokane reduction plant has been one of the lowest cost producers in America during the war. Low-cost power and efficient operation growing out of superior management and the large capacity have contributed to this fact. Also, the uniform price for alumina has helped.

After the war, all of the Pacific Northwest plants, with the possible exception of the small one at Tacoma, should have very low costs as soon as an alumina plant using South Pacific bauxite is built in the region, preferably near the center of production on the lower Columbia River. In addition to the advantages of new, modern plants, low-cost power, and, for the tidewater plants, proximity by cheap transport to raw materials and markets, labor efficiency has been high. Despite higher wage rates, labor costs per pound of aluminum in Pacific Northwest Defense Plant Corporation plants now average 13 percent under the national average and 30 percent under the highest cost plant. As a consequence, aluminum, particularly from Pacific Northwest tidewater plants, can be made and delivered to eastern and foreign markets cheaper than elsewhere in the United States and possibly on a competitive level with the great Shipshaw project in Canada.

In a word, the war has given a potential new industry to the Pacific Northwest that 20 years of peace might not have built. Here is an opportunity made to order which needs only to be recognized and improved.

F. E. P. C.

EXTENSION OF REMARKS

OF

HON. O. C. FISHER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the Dallas News on February 19, 1945:

F. E. P. C. BILL

It is granted that there is a good deal of unfair discrimination against the Negro and some other racial groups in this country. It should be eliminated, of course. It can be eliminated by law in political matters and should be. And there is no need of new laws, but only that the present provisions of the statutes and the Constitution be enforced. If the Southern States are wise they will beat Congress and the Supreme Court to the draw in seeing that justice is done.

But what some people seem not to understand is that you cannot go into the individual lives of people in economic and social matters to force adjustments such as those aimed at in the new bill to make the Fair Employment Practice Committee a permanent Government agency. We have had one grand, so-called noble experiment of this kind in the past. The prohibition-by-law prohibitionists argued perfectly truthfully that there were millions of people harming their health with drink, and not only harming their health but neglecting their wives and children in the homes, endangering the lives of the public while driving on the highways and, in many other ways, commiting social error. But the American people stood pat on the constitutional guarantee that the individual has a right to eat and drink what he pleases, on the further sound theory that individual responsibility cannot be assumed by the Government in such matters.

The same applies to the matter of racial discrimination in individual economic and social affairs. Any fair-minded American would grant the Negro his full political rights. At the same time, he would grant the employer the right to employ only white stenographers if he pleases and the labor union to admit only white members if it pleases. And the Government ukase that sets up a formula under which the employer must employ, or the union must admit, one fourth or one fifth of its personnel from the Negro race is not going to work any more than prohibition worked.

Representative FISHER, of San Angelo, is right in saying that it is pressure group and class legislation of the rankest kind, and that it will result only in increasing racial prejudice. Mr. FISHER calls attention to "the system of force and compulsion centered in Washington * * * of roving one-man kangaroo courts almost unlimited in power" to be set up to enforce the proposed F. E. P. C. regulations. This reminds one of the fantastically drastic measures adopted to enforce prohibition. It did not work, and it will not work. Prohibition by law set temperance back a generation in this country. Passage of the F. E. P. C. bill would do the same thing in the matter of racial relationships.

A New Mitchell Resolution

EXTENSION OF REMARKS

OF

HON. ROBERT K. HENRY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. HENRY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Waukesha Daily Freeman, Waukesha, Wis., on February 21, 1945:

A NEW MITCHELL RESOLUTION

United States Senator ALEX WILEY paid deserving tribute this week on the floor of the Senate to William L. "Billy" Mitchell on the day—February 19—which marked the ninth anniversary of his death. WILEY has worked untiringly to posthumously restore the rank of brigadier general to Mitchell and we compliment him for it. Never was an American officer treated as badly and for less reason than was General Mitchell and while Congress can never undo the injustice imposed upon Wisconsin's greatest officer and one of the most outstanding military men the Nation

ever had, it can belatedly erase the error his muddle-headed gold-braid superiors made when they court martialed him, deprived him of his rank and made him forfeit all pay and allowances for 5 years and virtually forced his retirement on February 1, 1926.

General Mitchell is a legend and his utterances of as long as 20 years ago are as though he were talking from his grave in Milwaukee. In 1925 he said:

"An air force could reduce our Pacific islands easily and we couldn't defend them with our present armament. Why, conditions are so bad out there that when I was in Hawaii last October and November I found the commanding general wouldn't speak to the commanding admiral and they wouldn't even go to the same social functions together."

That is how Billy Mitchell described Pearl Harbor when he testified before a congressional committee 20 years ago in February 1925. He might just as well have said it on December 6, 1941, the day before Pearl Harbor.

Here is Billy Mitchell calling America to arms in June 1932:

"In case war occurred with Japan what would Japan do? Would she sit still and await the gathering of our resources for a blow at her or would she try a surprise attack? * * * Japan is much more vulnerable than the United States and we could attack her directly from Alaska; but if we do not organize our Air Forces to do so, in case of trouble Japan will have the jump on us and could pull off the greatest military surprise in history. The American people must not think that the Japanese are afraid to do it when they get ready. They are a bold, sagacious, and intelligent people. The American people must not sit back and listen to the doctrines of the mossbacks of a bygone age in the Army and Navy."

Congress now has a new opportunity to write the final chapter in the epic of this great man by adopting the Wiley resolution to restore Mitchell's rank. With gentle and reverent hands Congress can take down from the cross on which he has hung for 20 years the spirit of Wisconsin's outstanding son, the courageous William L. Mitchell.

Foreign Borrowers Control the Fund Under the Bretton Woods Plan

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

THE BRETTON WOODS PROPOSAL

Mr. REED of New York. Mr. Speaker, as part of a broad program to launch this country on vast foreign loans and investments, the administration has recently introduced the bill H. R. 2211, known as the Spence bill. The measure calls for this country to contribute at the outset approximately $6,000,000,000 to a world monetary stabilization fund and a world reconstruction and development bank. Those two unprecedented international bodies, which some have likened to cartels, would proceed to relend our dollars to other members of these financial unions. Both fund and bank would be authorized to borrow in our money markets. Both, moreover, might be increased in size. Our $6,000,000,000 contribution, therefore, would be only our initial commitment. Once Congress agrees to the bill H. R. 2211, the United States will be under an unwritten, but no less real obligation, to see the thing through, however much additional money we are later requested to put up.

Even $6,000,000,000 is a whale of a lot of money in my district. That is $6,000,000,000,000 to be paid out by this country for certain promised benefits, such as that it will mean no more wars. As a member of the Ways and Means Committee encharged with raising revenue no less than as a Member of Congress who must vote on this proposition, I was interested to see how the administration proposes to raise those $6,000,000,000 from the taxpayers. I find that, in the anxiety to get the Bretton Woods program enacted with a minimum of questioning in Congress, they have worked out a method of financing the Bretton Woods program that will bypass not only the Ways and Means Committee, but also the Appropriations Committees of both House and Senate. Evidently, we're not supposed to be too inquisitive about this program. It will be financed partly by inflation—using profits of the 1934 devaluation—and, principally, by increasing the public debt.

The idea behind the Bretton Woods program is that the world will want from us after the war a tremendous lot of goods and services for which the various countries either will not have the means to pay or, as in many instances, possessing gold and United States dollar balances, prefer not to spend them. The taxpayers of other countries naturally will benefit by any scheme of trade which this country will finance. The nature of the proposed world bank as a lending body is obvious. It will be able to make or guarantee loans up to a total of $9,100,000,000. The bank agreement does not say so in words, but it was made clear at Bretton Woods by the Latin-American bloc that this world bank is to lend $50 for development purposes to every $50 it lends for reconstruction. Therefore, the understanding is, members of the bank expect to obtain loans from it as a matter of right. That is a principle which I regard with understandable misgiving.

The proposed stabilization fund would have $8,800,000,000 of miscellaneous paper currencies and gold to play with. We would supply in American dollars $2,750,000,000 of the $8,800,000,000. For an understanding of the fund I turn to articles written by members of the American delegation and staff at Bretton Woods. These statements make perfectly clear that the fund, too, would be a lending institution.

Prof. Mabel Newcomber, a member of our delegation at Bretton Woods, writes:

> Each nation can borrow from this fund to a maximum of its subscribed quota, if necessary.

Mr. Edward E. Brown, another member of our delegation at Bretton Woods, gives this description of the proposed fund's operation:

> Each country receives a right to borrow the currencies of other countries held by the fund up to the amount of its quota, subject to the condition that the money borrowed is for the purposes of the fund, with the proviso that no country shall have the right to borrow more than 25 percent of its quota in any 1 year. When a country borrows it is required to pay a small initial fee and after a certain length of time must pay interest on its borrowings at a rate which increases progressively with the percentage of its quota borrowed and with the length of time the loan is outstanding. The fund agreement, however, does not speak of a country's borrowing or of interest. Instead, it speaks of the fund's acquiring an amount of the currency (meaning thereby a bank deposit in its central bank or else its demand Treasury bills) of a country in excess of its quota and of charges to be paid by a country whose currency is held by the fund in excess of that country's quota.
>
> It is difficult for the average man reading the plan to realize that when the fund acquires currency of a country beyond that country's quota, it is really loaning money to that country, and it is also difficult for the average man to realize that a "charge" paid by that country on such excess is interest on the amount borrowed.

Dr. E. A. Goldenweiser and Miss Alice Bourneuf, of the Federal Reserve Board staff, who were on the staff of our delegation at the Bretton Woods Conference, in their article in the official bulletin of the Federal Reserve Board, write:

> It is important to an understanding of the fund's operations to recognize that a country's currency, as such, is good only in the issuing country, and that when it acquires foreign currencies from the fund and pays from them in its own currency, it, in effect, borrows these foreign currencies and gives the fund, in exchange, demand obligations which constitute a claim on its goods and services. * * * The transaction has elements of a loan by the fund to the country which purchases exchange from it, notwithstanding the fact that the currency paid into the fund for the foreign exchange is money in its own country.

The bankers who have studied the proposed fund naturally come to the same conclusion. They ought to know a lending institution when they see one. Three leading bankers associations in a report published February 5 state, concerning the fund, that it "introduces a method of lending which is novel and contrary to accepted credit principles. Under the system of quotas in the fund, a member country would be virtually entitled to borrow in certain specified annual amounts."

The report of the New York State Bankers Association, "Bretton Woods Proposals," makes it clear enough for a grade school pupil to understand that the proposed monetary found would make loans.

What shall we say, then, of the statement broadcast to the Nation by Secretary of the Treasury Henry Morgenthau, Jr., from St. Louis on February 14, 1945, which reads:

> Now let me make this clear—the Fund is not a scheme for lending money to debtor nations—and those who see it in that light are missing its entire meaning.

The Secretary of the Treasury was party to the long negotiations with the British concerning his own credit plan and that of Lord Keynes, who advocates world-wide pump priming with American dollars. The Treasury itself reports that "3 years of study" have gone into the Bretton Woods proposals. Mr. Morgenthau himself headed the United States delegation to Bretton Woods and served as president of the conference. Yet he either does not know that the Bretton Woods fund is a scheme for lending American dollars to debtor nations, or he does not want the American people to know it. That is the only interpretation I can make of the statement which he broadcast to the nation from St. Louis and gave out to the newspapers.

I think this Bretton Woods scheme should have the most careful examination by Congress and the public before we take the Treasury's word for what it is.

I am including an editorial which appeared in the New York Herald Tribune under date of February 23, 1945:

THE "POLL OF ECONOMISTS"

Commenting upon the changes proposed in the so-called Bretton Woods program the other day, Secretary of the Treasury Henry Morgenthau, Jr. compared the situation with that of the League of Nations, which, he recalled, was defeated by loading it down with amendments.

We venture to predict that if the Bretton Woods program dies, it will have died not at the hands of its enemies, but at the hands of its overzealous sponsors. The high-handed tactics of these latter, their intolerance of criticism and devious strategy could hardly be better calculated to alienate the support of disinterested observers who, though in sympathy with the objectives sought, believe that they have not only a right but a duty to insist upon a thorough airing of the several mechanisms that have been proposed.

The latest example of the kind of misleading propaganda tha has been employed from the outset to create favorable sentiment for the White-Keynes plan is the announcement of the formation of a committee of economists set up within the American Economic Association and a poll conducted of the association's membership purporting to show an overwhelming majority of those canvassed in favor of the Treasury program. While a careful reading of the official release shows that it does not say precisely this, the statement is so worded as to create the impression that 90 percent of those canvassed favor the plan as it now stands.

Actually, only half those polled replied, and it is a fair presumption that most of those who did not return their ballots were out of sympathy with the declaration. But one need not go further than the list of 33 "distinguished economists" who constitute the Committee for Bretton Woods to appreciate the lack of intellectual honesty in this report. First, while the average reader will get the impression that it is a committee named by the American Economic Association, actually its author is a former member of, and still a consultant to, the Office of Price Administration. But that is only a beginning. While its 33 members are identified in the press release by their universities, a check-up reveals that 18 of them, or 54 percent, either are or have been associated with the New Deal administration. Here is the way that a forthright identification of these 18 would read:

James W. Angell, Foreign Economic Administration; also technical adviser to the Bretton Woods delegation.

John D. Black, consultant to Department of Agriculture.

J. M. Clark, Office of Price Administration.

Howard S. Ellis, Department of Research, Federal Reserve Board.

Paul T. Ellsworth, Treasury Department.

J. K. Galbraith, Lend-Lease Administration; formerly with Office of Price Administration.

Seymour E. Harris, Office of Price Administration.

William Haber, War Manpower Commission.

G. Haberler, Federal Reserve Board.

Wassily Leontief, Department of Labor.

Fritz Machlup, Alien Property Custodian.

Edward S. Mason, State Department formerly with the Office of Strategic Services.

Mabel Newcomer, delegate to Bretton Woods.

Paul M. O'Leary, Office of Price Administration.

Winfield Riefler, formerly Minister to England; earlier, with Federal Reserve Board.

Arthur Smithies, Bureau of the Budget, Bretton Woods secretariat.

Jacob Viner, Treasury adviser.

Clair Wilcox, Office of Price Administration.

Analysis of the remaining 15 names, moreover, shows that not more than half a dozen of them at the most can be regarded as specialists in the highly technical subject of foreign exchange. In short, this so-called "poll of expert opinion" is misleading from beginning to end, and it seems to us that the American Economic Association has just grounds for complaint that its name has been used for propaganda purposes.

Supplies and Munitions for Our Fighters—Comparison of May Bill, As It Passed the House, With the Proposed Senate Substitute

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. JOHNSON of California. Mr. Speaker, there has been much discussion concerning the May bill which passed the House by a substantial majority. I worked and voted for the bill because I felt it was the most practical and sensible means to give proper support to our fighters by assuring them adequate supplies of everything they needed at the time and place that these things were needed.

Recently there appeared an editorial in the Washington Star in which a substitute bill for the May bill was analyzed. By unanimous consent, I insert the editorial in the RECORD for the information of Members. It reads as follows:

A DISMAL SPECTACLE

Many members of the Senate Military Affairs Committee probably would be the first to agree that the work bill reported to the Senate yesterday, after 3 weeks of consideration, is neither fish nor fowl nor good red herring and that the committee has fallen down miserably in its attempt to deal effectively with a serious national emergency.

That is a disappointment, not merely because of the confused mess which is left to be unscrambled in Senate debate but because of the spectacle of indecision and refusal to face the issues which the committee has placed before the country. There is dismal contrast between such conduct on Capitol Hill and that of the splendid young men marching bravely to their death in Germany and in the Pacific.

What is the essential difference between the May bill, passed by a courageous combination of Republicans and Democrats in the House, and the version of that measure reported to the Senate?

Under the House bill a man holding an essential war job may be ordered by his local draft board to stay there; should his draft board decide that he can be used more effectively somewhere else, he must go there and serve.

Under the Senate bill the Chairman of the War Manpower Commission, acting under the War Mobilization Director, may set a maximum on the number of workers in any plant or area, fixing that maximum in terms of age, sex, or occupation of employees. He could forbid or regulate hiring new employees. The workers discharged in order to keep below the employment ceilings must find war jobs, remain unemployed or starve. Deferred farm workers who leave the farm are subject to fine and imprisonment. Employers (and perhaps employees—there is disagreement among the lawyers) who violate War Manpower Commission rules are subject to fine and imprisonment.

The ostensible philosophy of the Senate bill in to follow a voluntary instead of compulsory method of meeting manpower needs. But the Senate bill is not voluntary. It is more obnoxiously compulsory, because its compulsion is gained through indirection and subterfuge, than the House bill. It walks up to and then backs away from the sound principle that in total war the citizen must serve where he is most needed, on the bloody island of Iwo or in a foundry or a shipyard, at time-and-a-half for overtime.

As a practical method of meeting the manpower shortage, the Senate bill probably would fail. Its principles have been tried and they are not satisfactory. They are not working in New Bedford, where labor spokesmen have tried fruitlessly but furiously to get the courts to intervene. They did not work in Allentown. The Senate bill is a half-hearted, spineless, short-sighted and politically expedient method of meeting a condition which can mean the difference between life or death of men on the fighting fronts. The Senate Military Affairs Committee has gained for itself no glory.

World Shipbuilding Record Here—Richmond Yards Nearing End of New Production

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks I wish to direct the attention of the Members of the House to one of the outstanding jobs of production that has been done in a country that has shown the world the meaning of production. The job of building ships done by the

Kaiser interests at Richmond, Calif., is phenomenal.

Here intelligent management recognized that to do the job with efficiency there must be teamwork between labor and management. It proceeded to establish the basis for that team work and as a result established a record in shipbuilding that will long stand.

This is better recorded in an article appearing in the Richmond Independent that I ask leave to present.

WORLD SHIPBUILDING RECORD HERE—RICHMOND YARDS NEARING END OF NEW PRODUCTION

When the last ship under existing contracts has been launched at the Richmond shipyards a world's record of construction that will probably stand forever will have been hung up by by the Kaiser company and its thousands of workers.

Starting from scratch on January 14, 1941, when the huge area now filled by the 4 shipyards and a prefabrication plant was only a mud flat, the local yards have launched and delivered 638 vessels, have launched an additional 22 which have yet to be delivered, and are working on the final 87 of a 747-vessel contract.

And the ships built here have ranged in size and tonnage from the little coastal cargoes at yard 4 to the giant troop transports now building at yard 3.

Never in the history of shipbuilding anywhere in the world has such huge tonnage of ships been constructed, launched, and commissioned as fast as they were at Richmond.

In a little over 4 years workers at the Kaiser yards have continually hammered down the man-hours it required to construct the cargo ships, first the 30 V fleet built for the British at yard 1, then the 489 Liberties at both yards 1 and 2, then the Victory ships also built at yards 1 and 2, and the transports, the frigates, the coastal cargoes, and the Navy attack transports.

In 1941 it required 1,165,000 man-hours for the construction of the old Libertys. Before the contract was completed the average was smashed down to 330,000 man-hours.

The fastest production on a Liberty ship ever attained anywhere in the Nation was the record at yard 2, when the *Robert Perry* was launched 4½ days after the keel was laid and commissioned in 7 days. Oregon shipbuilding had previously claimed the record of 10 days. The best eastern yard was 28 days to launching and 70 days to commissioning.

Since the construction of ships was started in 1941, with *Vanguard* hitting the waters of the channel August 16 of that year for the first launching, the local yards have turned out the following ships: 30 British cargo; 43 Victorys; 489 Libertys; 15 landing ships, tanks; 12 frigates; 19 C–4, 16,500-ton troop transports; 22 AP–5 Navy attack transports; 8 coast cargoes.

Remaining to be delivered are:

Yard 1: 23 Victorys.

Yard 2: 54 Victorys.

Yard 3: 16 C–4's.

Yard 4: 16 C–1 coastal cargoes.

This totals 109 ships to be turned over to the Government, but of this total 22 already have been launched and are being outfitted or awaiting acceptance by the Maritime Commission or the Navy.

In paying tribute to the record established here, Kaiser officials said that the speed in construction of ships was due to:

1. Sufficient labor.

2. Sufficient acreage to allow for prefabrication and the use of 140 acres for storage space.

3. Efficient management.

4. Cooperation between labor and management. Yard 2 holds the national record in man-hours saved through labor-saving suggestions. Other yards here are close to the record.

The Bretton Woods Monetary Conference

EXTENSION OF REMARKS

OF

HON. KENNETH S. WHERRY

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 27 (legislative day of Monday, February 26), 1945

Mr. WHERRY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a summary report on the Bretton Woods Conference, prepared by George H. E. Smith, research assistant to the minority leader. I am sure the report will be of interest to all Members of the Senate. While it is somewhat lengthy, I believe it to be worth the cost of printing, which, as estimated by the Public Printer, is $426.40.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

SUMMARY REPORT ON BRETTON WOODS MONETARY CONFERENCE

(By George H. E. Smith, research assistant to the minority leader)

SOME ASPECTS OF THE UNITED NATIONS MONETARY AND FINANCIAL CONFERENCE AT BRETTON WOODS

After more than a year of spadework by experts, the delegates of 44 nations met in an International Monetary Conference at Bretton Woods, July 1–22, 1944, and produced two proposed agreements, as follows:

1. Plan for an International Monetary Fund.

2. Plan for an International Bank for Reconstruction and Development.

These proposals were cast in the form of agreements open for signature by the nations participating in the conference. In passing upon the final agreements, many of the delegates entered reservations in the official minutes of the conference. This, and the debatable character of the proposed plans, points to the conclusion that not all countries will sign the agreements in their present form. Certainly Congress will insist upon a thorough study of the proposals, and it will be surprising if the present plans are approved without change.

In these circumstances the following is an attempt to present the problems involved in summary, digest form. In order to be brief, many matters have been taken for granted without discussion, and extreme technical detail cannot be offered. More comprehensive information is available, however, on special request.

While the problems arise in a world setting, they are also of vital concern to each individual nation. The focal point of the present offering is the interest of the United States in financial aspects of world economy.

International economic relations between two world wars

Every country is profoundly affected by the World War. The internal economy of every nation, neutral and belligerent, has been radically altered. The character of exports and imports has been changed. Normal trade channels have been disorganized, and new ones have been cut throughout the globe. The same confusion is true of international shipping, freight, and insurance services; of international travel, personal remittances, dividend and interest payments, intergovernmental dealings, and of all other transaction which enter into the balance of payments of one nation with all other nations.

International settlements—through the bill or exchange market, through gold transactions, and through the movement of short and long-term capital—have been interrupted and distorted by the war.

Finally, the net affect of all these conditions has drastically altered monetary exchange rates—the relation of the currency of one country to that of other countries.

In the years between the two world wars, international economic relations were grossly distorted by reparations, interallied debts, indiscriminate American foreign lending, tariffs and other foreign trade controls, currency depreciation, and fluctuating exchanges. These conditions and the concurrence in 1929 of a downswing in the business cycle led finally to the complete collapse of the gold-exchange system. Thereafter, economic warfare was intensified and contributed to the political upheavals that finally ended in the Second World War.

The job ahead

During the present war, lend-lease and other devices have taken the place of normal arrangements in international economic relations. As the war draws to a close, and immediately thereafter, new arrangements will have to be made to meet the following problems:

1. Reestablish and adjust the exchange rates between countries (stabilization).

2. Restore the internal economy of nations which have been disorganized by war.

3. Reestablish trade relations between nations, and encourage total trade expansion.

4. Encourage economic productivity and rising standards of living.

The problems involved in these objects fall generally into two broad classes: (1) Those dealing mainly with current transactions; and (2) those concerning long-term capital operations. The problems in each class are different and require special methods of treatment, but there is always a close relation between them.

The International Monetary Fund deals chiefly with current transactions; that is, from year to year. The International Bank also deals with current matters, such as reconstruction, but in the main its major utility looks toward long-term economic developments.

Part I. International Monetary Fund

The fund is an international agency—something like an international corporation with nations as members—having general and specific powers affecting international monetary conditions. It creates a pool of gold and foreign currencies as one of the main devices for carrying out the following purposes:

1. Assist in stabilizing exchange rates.

2. Provide a multilateral system for international payments in current transactions.

3. Assist in maintaining equilibrium in the international balance of payments of all members.

4. To provide for monetary cooperation.

5. To facilitate expansion and balanced growth of international trade.

The fund would work something like this: Nations would trade and conduct other economic transactions through normal channels. Exporters and importers would deal with each other as usual. Familiar exchange markets would resume operation. The banking systems of all countries would perform their usual functions with respect to international transactions. All these operations would be influenced, of course, by many operations and regulations set in motion by the fund.

But the fund would come into operation chiefly as a last resort in maintaining equilibrium in the exchanges and in international economic transactions. Managed fund operations would serve as a balancing factor. This is not exactly a dual monetary system, but there are many features in the fund plan that may lead to that result.

The questions most likely to be of interest to Congress center around the following topics:

1. Quotas and subscriptions to the fund.
2. Monetary exchange adjustments:
(a) Gold transactions.
(b) Par value of currencies.
(c) Foreign exchange dealings.
3. Transactions with the fund.
4. Scarce currencies.
5. Management of the fund and voting rights.
6. Relation of the fund to international economic relations.
7. Alternatives offered.
8. Miscellaneous observations.

1. Quotas and subscriptions to the fund

The initial fund or pool is $8,800,000,000, with quotas as shown in chart I. Quotas may be adjusted from time to time but only on four-fifth majority vote and with the consent of the member concerned.

The fund consists of gold and national currencies, but may also include member securities, nonnegotiable, noninterest bearing, and payable on demand. Members contribute only 25 percent gold, or 10 percent of their net gold holdings and United States dollars, whichever is smaller; but even this provision may be waived in favor of currencies or securities. These provisions, combined with those which allow a member to borrow other currencies at least as high as 200 percent of its quota (100 percent over quotas is the effective amount), mean that the amount of gold is likely to be very small compared to the volume of member paper.

The size of the quota not only determines what a nation puts into the fund, but, more important, what it may take out in the form of international purchasing power. Members have the right to purchase (borrow) other currencies with their own. This makes the fund a lending agency with considerable possibilities of expansion (see below).

What is the position of the United States in these circumstances? In effect, the United States quota would be the soundest contribution to the fund. It consists of gold and dollar currency readily convertible to gold, goods, or services, making the United States quota full and unlimited means of international purchasing power. The situation is almost, but not quite, the same for Great Britain and Russia. In this respect, the currencies of other nations would be graduated downward in value, depending upon a number of factors, until some currencies would merely represent printing-press money.

The United States would take very little out of the fund simply because there would be no occasion for it. The United States has large gold stocks; it would have a large export volume. These and other items in the United States balance would enable the United States to pay for all its own imports and other needs without recourse to the fund. The effect is to make the United States an international lender through the fund to the extent of its quota and beyond its quota in some cases. What is more, by the mechanics of the plan, the United States agrees in advance to lend to forty or more countries a fixed amount of dollars with precarious possibilities of repayment.

A similar situation would be true of other persistent creditor countries. Two explanations are most frequently given in answer to this feature of the plan. One is that the plan is intended to add a new means of international payment to the stock of gold and to all normally acceptable means of payment. An important feature of the plan is its expansionist provisions which are held to be necessary if economic progress (capacity production, full employment, and increased foreign trade) is to be made. In other words, this is the thesis that if the United States wishes to have prosperity at home, it must be prepared to lend abroad, or to open its doors to much larger imports. The second explanation is that loans to debtor countries are intended to be temporary—only to make up a deficiency in their balances until more fundamental measures can be devised. This would make for stability in international exchange and prevent resort to exchange, trade, and other controls which would again disrupt international economic relations.

2. Monetary exchange adjustments

(a) Gold transactions: The fund will prescribe the gold points (par value with plus or minus margins) at which member gold purchases or sales may be made. Members desiring to buy the currency of another member for gold shall do so through the fund, if they can do so with equal advantage. Newly mined gold may be sold in any market.

This is one point at which a dual monetary system may arise. These provisions may have the curious effect of causing a gold-goods group of transactions to compete with and perhaps undermine par values of currencies—exchange competition by another device—something like a black market in international purchasing power. It is also likely to result in channeling considerable unwanted gold into a creditor country like the United States.

(b) Par values of member currencies: The par value of members' currencies shall be expressed in gold or in terms of the United States dollar (weight and fineness, July 1, 1944).

Rates of exchange prevailing on the sixtieth day before the entry into force of the agreement shall be the par value of each member's currency. Where the rate is unknown (as in enemy-occupied areas) or unsatisfactory to the members or to the fund, adjustments for a different rate may be made between the members and the fund.

Provisions are made for changes in par values of member currencies to correct a fundamental disequilibrium. Where international transactions are not affected, or where the cumulative changes do not exceed 10 percent of the initial par value, the proposed change may be made without objection. In all other cases, limits are placed upon the freedom of a member to change the par values of its currency without concurrence of the fund. Unauthorized changes may result in denying the use of fund resources to the member or compel the member to withdraw from the fund altogether.

Uniform proportionate changes in par values of the currencies of all members may be made on approval of every member having 10 percent or more of the total of the quotas; but no par value can be altered over a member's objection expressed within 72 hours of the fund's action.

There is enough in these provisions to give a member considerable leeway in setting its own exchange values on an arbitrary basis. When taken against the background of the plan as a whole, these provisions point toward periodic exchange depreciation. This, and the fact that some currencies would have exceptionally sound support while others may be no more than printing paper, has called forth the objection that good currencies might be pulled down to the bad. Such criticism is hardly intelligent. So long as they have gold and exportable goods, the countries with the good currencies are not going to default on redemption.

What is more likely to happen is that the fund will increasingly lose dollars and other strong currencies and acquire weak currencies. Its assets may progressively deteriorate. Drastic controls may have to be set up in order to appreciate the weak currencies. Failing that, the fund must then either accept the insolvency of its collection of weak currencies, or permit periodic currency depreciation. This would place the creditor countries in the position of lenders who periodically permit partial cancelation of the debt.

The chief counter-argument to this is that by such a device creditors are able to keep export industries flourishing as one means of maintaining full employment at home. No export (creditor) country would persistently and frankly give away the goods produced by its people; but it may be persuaded to do the same thing if a psychologically acceptable mechanism like the fund is used for that purpose. The only other solution for the United States is to increase greatly the distribution of goods at home, among its own people, and then work toward methods that will balance its exportable surplus by imports or other credits beneficial to the American people.

Internationally, the remedy suggested is outright gifts to help start the weakest countries, productive type loans through the International Bank, and carefully planned stabilization loans of modest amount only to those countries in obvious need of them, instead of blanket credits through the fund to all countries.

(c) Foreign exchange dealings: Foreign exchange dealings within member territories shall be based on margins acceptable to the fund except that spot exchange transactions shall not differ from parity by more than 1 percent.

In exchange dealings, as in gold transactions, another market outside of the fund is contemplated. The fund enjoins countries to control exchange operations within acceptable margins. This implies indefinite exchange control—something that was intended to be abolished by the fund. Exchange controls are almost certain to imply government planned trade and other transactions as countries seek to keep within prescribed margins. Advocates of the fund do not say this, but it seems to be the inevitable consequence.

3. Transactions with the fund

Members deal with the fund only through official agencies—no private fiscal transactions contemplated.

The chief feature of the fund appears to be its provisions for making international purchasing power available to members.

When countries run low in their balances of payments (owe on balance more than they have available credits to discharge) or find themselves in exchange difficulties, they may purchase (in effect borrow) the currency of any other nation with their own currency or securities.

Does this power to borrow, together with discretion in the fund under article V, section 4 to waive borrowing limits, give a debtor country unlimited credit? Can a member, as has been charged, just put in enough gold to cover service charges, and then extend its debits indefinitely?

Several limitations restrict a member in this operation as follows:

(1) The outside limit in any 12-month period is 25 percent of its quota.

(2) The maximum (over all) shall not exceed 200 percent of its quota.

(3) A flat service charge of ¾ percent (which the fund may decrease to ½ or increase to 1 percent) shall be payable by the member purchasing (borrowing) the currencies of other members.

(4) Further (interest) charges graduated in brackets according to the amount of currency purchased in excess of quota and according to the time so held, until the ultimate charge reaches 4 percent whereupon the fund and the member shall consult. Thereafter, further borrowing up to a 5-percent charge is permissible whereupon the fund may impose other charges. Charges are payable in gold, but in certain circumstances may be payable in member currency.

(5) Members must be eligible to use resources of the fund (in good standing relative to the rules and operations of the fund).

(6) The currency to be purchased (borrowed) has not been declared scarce.

The fund seeks to keep members as nearly as possible in their initial relation to the fund and to prevent excesses either above or below the quotas plus permissible margins. The plan contains provisions for adjustments working toward that end.

Among the more important of these are the repurchase provisions (art. V, sec. 7, and schedule B) intended to keep a reasonable balance between the supply of key currencies and the demand for them by other countries utilizing their borrowing capacity as set by the quotas. These repurchase provisions and other provisions (such as interest charges on borrowed currencies) attracting gold to the fund are intended to work in two directions: (1) Replenish the fund's supply of key currencies; and (2) reduce the fund's holdings of excess domestic (multiple) currencies for which there is obviously no demand. How effective these provisions will be depends to a large extent on the amount of gold and convertible foreign currencies a heavy debtor to the fund may acquire in transactions outside the fund. But how, if the fund is to correct a debit position of a country arising from that country's transactions outside the fund, can that country have any credit resources with which to redeem its excess currencies in the fund? This is not made clear.

It is the intention of the fund, of course, not to permit debtor countries to borrow indefinitely; and creditor countries will be persuaded to alter such economic conditions as may be responsible for the excessive demand for their currencies.

The power to buy (borrow) member currencies is one of the most controversial features of the plan.

Objection is made that this turns the fund away from its stabilizing function and makes it another lending institution; and that the international bank is a better device for such purposes.

In answer it is declared that the lending is temporary only; that it is controlled; and that it is for stabilizing purposes.

Moreover, it is said, that the United States will give credit to importing countries anyway. If it does not, its export markets will be limited to the value of its imports. Export industries will be disorganized, commercial export houses will be affected, and the effort toward full employment at home will be endangered. Importing countries, on the other hand, will seek credits, or else will resort to internal deflation, currency depreciation, and trade controls. Such measures will once more confuse and restrict foreign trade to the disadvantage of all nations.

The United States, runs another objection, will supply gold, goods, and dollars, and in return accumulate irredeemable paper. This could happen to the extent of the United States quota obligations. In certain circumstances the United States might provide credits considerably beyond its quota. But conditions are not likely to be as bad as that. Foreigners are apt to be wary of United States credits after experiences of the 1920's when American credits first produced a boom and then a collapse when credits ceased.

It is pointed out that the fund increases the probability that repayments of credit will be made because the United States has resort to a pool created by many governments. The United States could increase its imports from any part of the world and would not have to look to one debtor country alone. To benefit by this, however, it would seem that the United States would have to enter upon a very large import trade (and greatly increase its other debit items in the balance) because its nomal tansactions furnish a heavy creditor balance wholly aside from the fund. In other words, the United States would have to increase its imports sufficiently to offset its regular exports and its quota position in the fund

4. Scarce currencies

It is quite possible that the fund may run short of a particular member's currency from time to time. This would create a scarce currency situation. In such cases:

(1) The fund reports the fact, states the causes and makes recommendations for correction, with the scarce-currency member participating.

(2) The fund may replenish the scarce currency by loans from the member or from other sources, but the member is under no obligation to lend currency or approve other borrowings.

(3) The fund may require the member to sell its currency for gold.

(4) The fund shall ration its supply of scarce currency.

(5) When a currency is declared scarce, and after consultation with the fund, a member may impose temporary limitations on exchange operations in the scarce currency.

What position will the United States be in here? It is quite probable that shortly after the fund is in operation, United States currency will become a scarce currency. The reason is that the dollar will be one of the principal means of international payment, owing to American resources and gold holdings. The large demand for American goods will also work toward the direct exhaustion of dollars in the fund.

In such circumstances the United States would be under several disadvantages. It might have to sell more of its currency to the fund for gold. This would channel gold into the United States where it is not needed or wanted while useful resources and produced goods would continue to flow out of the country. Otherwise, the United States would have to accept restrictions on trading in dollar exchange. This would sacrifice American foreign markets, cut down the volume of foreign trade, and result in unemployment in the export industries.

In cases of scarce currency, the fund has the power to ration the supply. This may easily put it in the power of an outside agency to decide what particular foreign markets the United States should have.

To avoid such difficulties the United States might either have to sell dollars for gold without benefit as above described, or lend dollars to the fund in hopes of working off the excess credits over longer periods of time. If no methods were discovered for doing this, the United States would again be in the position of a creditor who cannot collect. This was the case with reparations, with American loans to Germany, with many American loans to Latin America, and will be the real effect with a great part of the lend-lease transactions.

5. Management of the fund and voting rights

The fund is to have a status and organization very much like a corporation in the international sphere. The fund and its officials are to have certain specified privileges and immunities (including certain exemptions from taxation).

Elaborate arrangements provide for the election or appointment (as the case may be) of a board of governors, a body of executive directors, a managing director, and a staff.

(a) Board of governors: Each member of the fund appoints one governor and an alternate to serve for 5 years. The board may delegate any of its powers to the executive directors, except:

(1) Admission of new members.

(2) Revision of quotas.

(3) Uniform changes in par values of member currencies.

(4) Arrangements (other than temporary) with other international organizations.

(5) Distribution of net income of the fund.

(6) Withdrawal of members.

(7) Liquidation of the fund.

(8) Decide appeals on interpretation of this agreement.

The board is to meet annually and on special request. A quorum is a majority of the board exercising not less than two-thirds of total voting power. By board regulations the vote may be had on a question without calling a meeting. Each governor casts the votes allotted to the member appointing him.

(b) Voting: Each member has 250 votes plus one additional vote for each part of its quota equivalent to $100,000. The distribution of voting power is shown in table I. Except as otherwise provided decisions shall be by a majority of the votes cast.

In waivers of conditions on use of the fund's resources and other limitations or ineligibility of members to use fund resources, the vote shall be increased by one vote for each $400,000 net sales of its currency or decreased by one vote for each $400,000 net purchases of the currencies of other members to the date of the vote, provided that neither net sales nor purchases shall be deemed to exceed an amount equal to the quota of the member involved.

TABLE I.—*Voting power, International Monetary Fund (as set forth in Federal Reserve Bulletin, September 1944, table III, p. 862)*

Country	Number of votes	Percent of total votes [1]
Australia	2,250	2.3
Belgium	2,500	2.5
Bolivia	350	.3
Brazil	1,750	1.8
Canada	3,250	3.3
Chile	750	.8
China	5,750	5.8
Colombia	750	.8
Costa Rica	300	.3
Cuba	750	.8
Czechoslovakia	1,500	1.5
Denmark	(2)	(2)
Dominican Republic	300	.3
Ecuador	300	.3
Egypt	700	.7
El Salvador	275	.3
Ethiopia	310	.3
France	4,750	4.8
Greece	650	.6
Guatemala	300	.3
Haiti	300	.3
Honduras	275	.3
Iceland	260	.3
India	4,250	4.3
Iran	500	.5
Iraq	330	.3
Liberia	255	.2
Luxemburg	350	.3
Mexico	1,150	1.2
Netherlands	3,000	3.0
New Zealand	750	.8
Nicaragua	270	.3
Norway	750	.8
Panama	255	.2
Paraguay	270	.3
Peru	500	.5
Philippine Commonwealth	400	.4
Poland	1,500	1.5
Union of South Africa	1,250	1.3
Union of Soviet Socialist Republics	12,250	12.4
United Kingdom	13,250	13.4
United States	27,750	28.0
Uruguay	400	.4
Venezuela	400	.4
Yugoslavia	850	.8
Total	99,000	100.0

[1] The percentage of total votes is calculated on the assumption that only those nations represented at the conference will join the fund. As other countries join the fund, each individual country's share of the total votes will decline.

[2] To be determined when the Danish Government has declared its readiness to sign the agreement.

NOTE.—Of the total number of votes, the British Empire controls 25.3 percent, Continental Europe, excluding the Union of Soviet Socialist Republics, 16 and Latin America 9.7 percent.

(c) Executive directors: Executive directors are responsible for the general operations of the fund and may exercise delegated powers of the board of governors with certain exceptions. There shall not be less than 12 who need not be governors and of whom—

(1) Five shall be appointed by the five members having the largest quotas;

(2) Not more than two shall be appointed in certain circumstances;

(3) Five shall be elected by members not entitled to appoint directors, other than the American republics; and

(4) Two shall be elected by the American republics not entitled to appoint directors.

Elaborate provisions for the election of directors at intervals of 2 years are contained in schedule C.

Executive directors function in continuous session. A quorum shall be a majority of the directors representing not less than half of the voting power.

Appointed directors have the number of votes allotted to the members appointing them. Elected directors have the number of votes counted toward his election. Votes are cast as a unit.

The executive director shall select a managing director, who shall not be a governor or executive director. He shall appoint the staff and conduct the ordinary business of the fund.

(d) Offices and depositories: The principal office of the fund shall be located in the territory of the member having the largest quota (the United States at the start), with agencies or branches elsewhere as the fund determines.

Each member may designate its central bank or other accepted institution as depository for the fund's holdings of its currency.

Other assets of the fund, including gold, shall be held in depositories designated by the five members having the largest quotas, or as the fund may select. Initially, at least one-half of the fund holdings shall be held in the depository designated by the United States and at least 40 percent in depositories designated by the remaining four members. A member guarantees the fund's assets against loss on the part of its designated depository.

(e) Observations on management of the fund: One of the outstanding criticisms of the fund is its overemphasis on machinery. The criticism is justified.

There is no reason, for example, why there should be two directing bodies, such as the board of governors and the executive directors, with vague lines of authority divided between them. A single working executive head would suffice. If it is necessary to have a semipolitical body to supervise the work of the fund, as seems to be the function of the board of governors, it could be done by correlation to a section of the general international organization to be set up by the United Nations. Such a body would include other economic matters, too, and thus avoid an excess of international organizations.

Other parts of the plan for the fund appear to be equally cumbersome. And it should be observed here that the international bank has a similar structure to which the same criticism above applies. Yet it is perfectly understandable that if the plan did not offer these organizational details, it would be criticized for omitting them.

Some critics point out that while the United States puts up a substantial part of the soundest assets of the fund, it will not have a large voice in the management. The aggregate voting power of those who are likely to be debtors to the fund is greater than the creditor voting power. In other words, the fear is that the United States will be outvoted by those nations who will be most interested in voting themselves favors while the United States foots the bill.

Voting rights might be of some consequence if an international agency had the power to make and to enforce a decision detrimental to the United States. This is hardly the case here. The United States is part of the rule-making and enforcing mechanism. Execution of any such decision depends upon the good will and voluntary cooperation of the United States. In the monetary field, few decisions are likely to be made over the protest of the United States even if the American representative holds a minority vote in the international authority. Were the United States to be given a dominant or deciding voice, decisions of the international authority would be widely suspect as the dictation of powerful interests or the unwelcome largess of a rich uncle. In either case, the needed good will and cooperation of small countries may easily be lost. Quibbling over voting rights may be necessary in some matters of international organization, but the fund is not one of them.

Perhaps the strongest criticism that can be made of the fund plan, aside from its cumbersome mechanics, is that its terms are far too flexible—that is, flexible in an undesirable way. The plan is loaded down with so many qualifying, waiver, escape and other provisos attached to its positive statements that the greater part of the fund's operations rest either in the outright discretion of its managers or in powers permitting member nations to nullify their obligations. Flexibility is necessary, of course, but if too many positive commitments can be avoided, the plan has little utility. Why have a plan at all if it is to be filled with escalator clauses? As a matter of fact, the superflexibility of the plan is proof of its novelty. When it is not known for certainty what may transpire or what effects may flow from the experiment, everyone wishes to be safeguarded. This, in effect, is a strong argument for a more modest, simpler and more familiar approach to the whole problem than the fund provides.

6. Relation of the fund to international economic relations

One of the most serious criticisms of the fund is that obsession with technical machinery pushed fundamental matters of international economic policy to the background. Stabilization deals with symptoms while it overlooks the disease. The plan, it is further said, does not strike at the causes of instability.

Exchanges, it is held, will take care of themselves if nations first agree on some principles of sound internal economy. There can be no stability without balanced budgets, sound financial and credit policies, moderate tariffs and agreement on cooperative efforts for better distribution of raw materials, for sound international investment, for expansion of production and trade, and upon other elements of commercial policy. Critics declare that if sound economic policies are followed, no fund will be needed; if they are not followed, the fund would merely produce an artificial stability that will break down.

There is much truth in these views. Sound internal policies and cooperative international economic relations are absolutely essential to stabilization. Delegates to the Monetary Conference recognized the validity of this view. They do not offer monetary stabilization as the main tool of economic progress, but merely as a facilitating means. The fund and the bank, they intimated, are merely parts in a broader program which is to be set in motion as time and occasion permit. Meanwhile, they say, the monetary aspects of international economic relations can be fully discussed and brought to fruition.

Further criticisms hold that the fund actually promotes instability. Its managers are expressly precluded from interference with the internal policies of members. This means that the fund will have little influence over the real causes of instability. The expansionist features of the fund may promote world-wide inflation. And the very thing the fund is supposed to achieve—the abolition of exchange restrictions—is permitted under the fund.

In answer to these criticisms, it can be said that it is not wholly true that the managers of the fund will be unable to influence the internal policies of members. The prime restrictions on the fund are that in publishing reports, making decisions, or taking other actions, it is not to interfere with the economic, political, or social policies of any member. The reason for this is obvious when it is realized that many national economic systems (like Russia and the United States) differ widely. Moreover, in this period when nations are yielding so reluctantly to the need for international action, progress has to be made slowly, if it is to be made at all.

But in many provisions of the plan there are expectations looking toward cooperative action between the fund and its members. Member States have direct representation in the fund management. There are provisions for adjustments in many phases of member economies, for consultations, and for public reports by the fund when undesirable conditions exist. Members expressly agree to cooperate with the fund, to keep the fund informed on a wide variety of national conditions, and to refrain from actions inconsistent with fund operations. In cases of flagrant disregard of the fund's purposes and operations, the fund may declare a member ineligible to use the fund's resources; and may even ask a member to withdraw. Even though lacking arbitrary coercive power, the fund thus has many channels through which to influence the conduct of members. Moreover, the United States and other creditor countries have the power and are almost certain to call a halt to practices abusive of their credit or destructive of the purposes of the fund.

(a) Exchange controls: Exchange restrictions are permitted under the fund for several reasons. They are held necessary in the transition period until experience and adjustment overcome the economic disruption wrought by the war and make international stability possible. Time and interim controls will be needed until national currencies find working levels with each other. Controls will also be needed from time to time when a disequilibrium occurs in the balance of one or more countries. In this case, restrictions will be permitted to avoid break-downs until more fundamental correctives have a chance to work.

(b) The gold standard: It is said that the fund does not adopt the gold standard. This is true; it does not. The plan finds a place for gold, but the emphasis is on a managed system rather than upon the regulation formally exercised by gold.

Gold was not entirely eliminated for several reasons. Traditional thought on the usefulness of gold as a money metal still runs strong. To eliminate gold might produce such a reaction as to endanger the acceptability of the new plan. Equally important is the fact that the United States possesses so large a stock of gold that it would not willingly stand by and see gold reduced from monetary to commercial (commodity) value. A third reason for the retention of gold is that such gold-producing countries as Great Britain, Russia, the United States, and others would be unwilling to give up the extra international purchasing power which gold as a money medium gives them. Another, and by no means unimportant reason, is that gold still possesses utility as a universal currency. In the absence of some internationally acceptable unit of money, gold remains sovereign.

Few countries, it is said, will be willing to accept the severe regulation over their affairs which a rigid gold standard imposes. One of the chief goals of economic life in every country will be full employment, an objective that many economists believe would be hampered by any automatic controls exercised by gold over national monetary affairs.

Through the use of managed currencies the plan of the fund permits discretionary expansion. This need not be undesirable inflation. To some extent the fund looks

toward periodic adjustments through controlled currency depreciation. This, it is believed, provides the flexibility needed to make greater use of international resources and thus contribute toward greater employment in each nation. Currency depreciation, with a multilateral system like the fund, will distribute adjustments (possible losses) over many countries rather than only upon those countries having major dealings with the depreciating country. These losses will undoubtedly be considered the price that has to be paid for more widespread economic progress. Moreover, currency depreciation is probably considered more psychologically acceptable than outright defaults and other devices open to debtors under the gold standard.

(c) Capital transfers: Since it is the function of the fund to deal mainly with the current transactions, members may not use the fund's resources to meet large capital transfers. Controls, at the request of the fund or by members, may be exercised over such transfers provided they are in accord with fund operations.

(d) General obligations of members: In addition to all other obligations,

(1) Members shall not impose restrictions on payments or transfers affecting current transactions without approval of fund.

(2) Exchange contracts in member currency contrary to the exchange controls imposed by the member in accord with this agreement shall be unenforcible. Where consistent with this agreement members may cooperate to make controls more effective.

(3) Members shall not permit discriminatory or multiple currency practices, except as authorized by the fund.

(4) Members shall buy balances of their currencies held by others in certain conditions.

(5) The fund may require members to furnish it with national data and information necessary to the fund's operations.

(6) Members are not to deal with nonmembers in any way contrary to the functions or operations of the fund.

7. Alternatives offered

Many alternatives have been offered to the plans drawn up at Bretton Woods. Space and discretion prevent any complete discussion here, but a few typical and authoritative views follow:

(a) Pre-war gold or gold exchange standards: There are many qualified persons who propose a return to these standards. They point out with considerable force and logic the great utility of gold as a universally acceptable means of payment.[1] The advisability of doing so is highly debatable and the chances for success are questionable. Gold maladjustment has been pronounced ever since 1914.[2] Complete convertibility has become increasingly impracticable. And there is little dispute but that the gold standard collapsed under the pressure of economic distress after 1929. There has been growing objection to the rigidity of the automatic gold standard in any of its pre-war forms. In the face of domestic distress, few countries have been willing to allow external standards to control internal conditions. So much so, in fact, that monetary management gradually came to displace automatic operation. With full employment as a post-war goal in every country, currency and credit management will be even more heavily brought into play.

To these weighty objections to a return to the older forms of the gold standard, there is the very practical one that the United States now holds over 75 percent of the world's gold supply. Insuperable problems present themselves when the distribution of this gold is considered. Gold, it seems, will have to play a part in international monetary stabilization for some time to come, but it is apparent that it will have to be greatly subordinated to managed currency and credit. For more than a generation the world has been groping toward some more workable variant than the old gold standard system. Both the British and American plans (Keynes and White) offered such variants; and the Bretton Woods plan is the outcome.

The main trouble with all these plans is that they place too much emphasis on the monetary aspects of the problem. Machinery and ready cash are not certain guarantors of productive projects wisely planned and soundly executed. Money alone does not affect nature's uneven distribution of wealth, resources, and human energy and talent. These are the things in need of deep thought. Specific methods to make progress in these fields are needed far more than mechanisms for making cash and credit available without assurances that the funds will be wisely employed.

(b) Key currency stabilization: Briefly, this is a proposal to arrange acceptable ratios between those countries whose economic activities are internationally significant or which exert predominant influences in particular trade areas. If this is done, the currencies of all other countries are likely to find their proper relation to the key currencies and also to each other.

The basis of this suggestion, advanced in several quarters and quite strongly by the well-known economist John H. Williams,[3] is that the economic behavior of key countries largely determines conditions in other countries. If stabilization is achieved between the key countries, others will make workable adjustments to them. This approach is held to be more modest and realistic than those plans which introduce novel and dubious changes in traditional economic patterns. Something of the key country principle was tried, with resaonable success, in the Tripartite Agreement of 1936 (United States, Britain, France). There would be nothing basically inconsistent in a proposal to incorporate the key countries principle into the framework of the Bretton Woods proposals; and it may even work toward the simplification of the proposed plan for the fund.

Mr. Williams also suggests that the Bank of International Settlements might easily be adapted to post-war monetary needs without setting up elaborate new machinery. Stabilization and the needs of countries for temporary loans should not be approached in a wholesale manner as the fund does, but with discrimination and modestly. Many countries (such as some neutrals and many of the Latin American nations) have accumulated purchasing power ample to last them for some time. This means that the need for exchange is likely to be specific rather than general. The fund, on the other hand, treats the problem as a general one, thereby going beyond necessity into new and untried territory.

(c) Observations of Charles S. Dewey:[4] Mr. Dewey rejects the Bretton Woods approach as too grandiose and would follow a more modest course by enabling the Export-Import Bank to make carefully considered loans on a 50-50 basis with a foreign government or enterprise needing loans for reconstruction. The Export-Import Bank should be assisted by an advisory board with representatives from Congress, from Government departments, and from a variety of private interests concerned with foreign economic activities. Wherever possible private capital should first be encouraged and assisted in undertaking foreign loans.

By House Joint Resolution 226, introduced by Mr. Dewey February 1, 1944, it is proposed to set up a revolving fund of $500,000,000 as a central reconstruction fund for foreign loans under control of an American advisory board. The purpose of the fund is to enable the United States to participate with other countries on a 50-50 basis in making loans in cash or kind to needy countries for productive operations and to stabilize currency. The bill presupposes U. N. R. R. A. aid for relief and would be devoted mainly to economic reconstruction in foreign countries on a businesslike basis.

(d) The Aldrich proposals:[5] Winthrop W. Aldrich, chairman of the board of the Chase National Bank opposes the Bretton Woods plans as being "unrealistic and unnecessarily complex." They obscure rather than solve the fundamental problems in international economy.

In his substitute, Mr. Aldrich combines several features. He calls for immediate conversations between the United States, the United Kingdom and other members of the British Commonwealth of Nations on problems of tariff barriers, imperial preferences, export subsidies, bulk purchasing and regional currency arrangements. The purpose of such a conference would be to reduce trade barriers, increase trade by reciprocal exchange of real goods and services and provide for a stabilized dollar-pound rate.

If necessary the United States should give Great Britain a grant-in-aid to help stabilize the dollar-pound rate. Other countries should be encouraged to adopt sound internal policies. Many countries will not need aid to adjust to the dollar-pound rate. Those that do can be helped more simply by loans through the Export-Import Bank than through the unrealistic monetary approach of the Bretton Woods plans.

Powers to the Export-Import Bank can also be enlarged to permit it to make longer-term stabilization loans and also loans for reconstruction and development purposes where such loans cannot be obtained privately.

On the initiative of the Federal Reserve banks a simple international institution could be set up where central bankers could meet to consider monetary and credit problems. A modest fund for international lending might be palced at its disposal.

Mr. Aldrich makes a number of recommendations aimed to put the dollar in a better position to function as international currency. He recommends that the debts of World War No. 1 should be canceled; and a liberal settlement made in the lend-lease obligations due to the United States in World War No. 2. The Johnson Act of 1934 (prohibiting foreign countries in default to the

[1] There is the view, for example, of an outstanding expert such as Dr. Benjamin M. Anderson, professor of economics, University of California and member of the executive committee of the Economists National Committee on Monetary Policy. His argument in behalf of gold (address before the Chamber of Commerce of the State of New York, February 3, 1944) is reprinted in hearings before the Committee on Foreign Affairs, House of Representatives (78th Cong., 2d sess.) on House Joint Resolution 226 (April–May 1944), p. 114 ff.

United States from floating loans in the United States) should be repealed. Also silver legislation, the Thomas amendment of 1933, and sections 8 and 9 of the Gold Reserve Act of 1934 should be repealed in the interests of sound monetary policies. Other measures necessary to establish the dollar as an international currency are unblocking of dollar assets of foreigners, elimination of exchange controls on the dollar, balancing of the Federal Budget, refinancing of the Federal floating debt, achievement of a high level of national income at home, and avoiding the excesses of domestic boom or depression by sound governmental policies.

Mr. Aldrich's plan seems to incorporate, in part at least, the key country principle, and some of John H. Williams' and Representative Dewey's suggestions. It attacks the weakness of the fund plan by emphasizing the need of creating sound internal economic conditions in each country as a condition precedent to stabilized exchange between countries.

8. Miscellaneous observations

A number of general questions and observations remain for consideration.

(a) Effect on United States of international money management: Although the fund does not mention the matter directly, it is obvious that any managed monetary system requires highly disciplined planning and controls. Could some of these controls be exercised over the United States and would the United States be willing to accept them?

For example, it has been asserted that the fund has power to block United States capital investments in foreign countries by interpretation derived from article I, sections 5–6 and article VI, section 1 (b).[6]

By other provisions, it is held, the fund has the power to compel the United States to buy gold, provide dollars, and thus take in gold and give up useful resources.[7] In certain conditions, the fund may acquire assets (collateral such as goods) which are held not to be taxable and may be disposed in the United States free from American tariff restrictions.[8] Through an anomalous institution, it is said, the United States may have to assist countries whose political policies are undesirable to us.

Again, as in the case of scarce currencies, the fund has the power to apportion the supply. This, it is said, may have the effect of indirectly determining the course of foreign trade conducted by the United States.

To all these and similar criticisms it is possible to say—not that the circumstances described cannot occur, because some of them may—but that if the fund acted flagrantly contrary to America's interests or over the protest of American representatives the fund would defeat its own purposes and probably collapse for want of American support. There is always the risk in a cooperative undertaking that some of the partners may act against the interests of other partners. If this risk were to be considered valid in all conditions no international cooperation would be possible at all. The point to bear constantly in mind is that by the very nature of the fund's operations the United States is a part of the enforcing power. The fund cannot succeed without America's voluntary cooperation. And the United States would not cooperate when the object was to coerce itself. It is more reasonable to take the view that the risk will not materialize because if it does, the whole enterprise will be doomed to the detriment of the very partners who sought to gain undue advantage.

(b) Significance to American foreign trade: If the United States is not to find itself a chronic creditor in the fund with dubious chances for receiving payment, it is obvious that the United States will have to alter its tariffs to permit much larger imports. One of the weaknesses of the fund is that while other countries in paying for United States exports would use the fund supply of dollars, the United States payments for imports would not be replacing these dollars in the fund, unless somehow the United States contrives a large excess of imports.

(c) Transition period: The fund permits members to impose restrictions on payments and transfers for current international transactions during the transition to peace. The war has destroyed all trade and exchange relationships, and it may require a period of trial and adjustment to establish new relationships. Restrictions may be continued for 5 years without compulsion to change, and longer if the fund makes no objection. Where the fund orders an end of restrictions and a member persists in maintaining them the member may become ineligible to use the resources of the fund.

The fund is not to deal with relief, reconstruction or with international indebtedness arising out of the war.[9]

These provisions were added to the final agreement to meet earlier criticisms and in recognition of the fear that insuperable war problems may endanger the success of the stabilization plan. There is considerable question, however, about these provisions. Either they will delay the full operation of the fund for at least 5 years or nations will come in at once and work out their adjustments at the fund's expense. If there is delay, and the United States acquires a large amount of foreign currencies in the interim period, might it not have to keep them indefinitely under the provisions of article VIII, section 4 (b), providing that the obligations of members to buy back their currencies need not operate in certain circumstances?

Nations, on the other hand, may decide to enter the fund at once and work out adjustment as they go along. If the fund is at work in this way during the transition period, it will not always be possible to say that a country's need for fund exchange is or is not caused by relief, reconstruction, or even unsettled war indebtedness. It has always been difficult in practice, for example, to separate capital from current transactions in the exchange market. The fund has no power to interfere in the internal policies of its members.

(d) Source of criticisms of the fund: It should be of interest that a number of large American banks—those most interested in international payments—are decidedly critical of the fund. Is this because of disinterested technical dissatisfaction with the fund plan? Is it because these banks see a transfer of international monetary business to Government and international agencies with a consequent loss of business to the private banks? If the agreement brought these banks more directly into the plan, would it dispose of their objections? The problem here is one that might very well be pressed when Congress conducts hearings on the Bretton Woods proposals.

Part II. The International Bank for Reconstruction and Development

Much less detailed analysis is called for in the case of the bank than of the fund. The purposes and structure of the bank are simple and clear; its proposed methods and operations are familiar from precedents in international lending, and the plan as a whole is cast upon conservative lines.

Close similarity exists between corresponding provisions of the fund and of the bank plan regarding structure and management; location and depositories; international status and privileges; admission, withdrawal, and voting rights of members (table II); distribution of income and assets, and other operating details. Reference should be made to these topics discussed in connection with the fund plan. Particular observations follow.

All members of the bank must also be members of the International Monetary Fund.

Purposes

Stated succinctly, the bank plans to assist its members in capital financing for productive purposes, for restoration of economies disrupted by war, for reconversion, and to encourage economic development in less developed countries. It seeks to encourage private foreign investment by guarantees and participation and to undertake financing when private capital is not available on reasonable terms. By its operations it aims to promote long-range balanced growth of international trade and equilibrium in balances of payments of its members. Loans are to be coordinated with loans through other channels with a view toward dealing first with more useful and urgent projects. All its operations are to be pointed toward the ends of bringing about a smooth transition from war to peace economy, and toward raising productivity, standards of living, and conditions of labor in member territories.

TABLE II.—*Voting power, International Bank for Reconstruction and Development (as set forth in Federal Reserve Bulletin, September 1944, table V, p. 869)*

Country	Number of votes	Percent of total votes [1]
Australia	2,250	2.2
Belgium	2,500	2.4
Bolivia	320	.3
Brazil	1,300	1.3
Canada	3,500	3.4
Chile	600	.6
China	6,250	6.1
Colombia	600	.6
Costa Rica	270	.3
Cuba	600	.6
Czechoslovakia	1,500	1.5
Denmark	(2)	(2)
Dominican Republic	270	.3
Ecuador	282	.3
Egypt	670	.6
El Salvador	270	.3
Ethiopia	280	.3
France	4,750	4.6
Greece	700	.5
Guatemala	270	.3
Haiti	270	.3
Honduras	260	.3
Iceland	260	.3
India	4,250	4.2
Iran	490	.5
Iraq	310	.3
Liberia	255	.2
Luxemburg	370	.3
Mexico	900	.9

[1] The percentage of total votes is calculated on assumption that only those nations represented at the conference will join the bank. As other countries join the bank, each individual country's share of the total votes will decline.

[2] To be determined when Danish Government accepts membership.

United Kingdom	13,250	13.0
United States	32,000	31.4
Uruguay	355	.3
Venezuela	355	.3
Yugoslavia	650	.6
Total	102,000	100.0

NOTE.—Of total number of votes, British Empire controls 24.8 percent, Continental Europe, excluding the Union of Soviet Socialist Republics, 15.2 percent, and Latin America 7.9 percent.

Capital

Authorized capital is fixed at $10,000,000,000 ($9,100,000,000 initially subscribed), distributed as shown in chart II. Initial payments of each country are set at 20 percent—2 percent in gold (deferred in certain cases) and 18 percent in member currency (or acceptable notes in the bank's discretion). The balance of 80 percent would consist of unpaid subscriptions designed as a surety fund on securities marked by the bank itself or guaranteed by it.

The United States share of the total capital is $3,175,000,000 and its initial payment would be $635,000,000.

Loans

The over-all limit of loans, guaranties, and participations the bank can make is 100 percent of its unimpaired capital, surplus, and reserves. Under carefully guarded conditions the bank "may guarantee, participate in, or make loans to any member, or a political subdivision thereof, and any business, industrial, and agricultural enterprise in the territories of a member."

A competent committee appointed by the bank must recommend the project after careful study. If a member is not itself the borrower, an official guaranty acceptable to the bank will be required. Due regard must be paid to the prospect that the borrower will be in a position to meet the obligation. Loans are to be made chiefly for reconstruction and development.

The bank may raise loans on its own debentures or participate in loans raised in member countries, but only with their approval.

The bank will have some powers of supervision over the expenditure of the loans. The bank cannot require a borrower to spend the proceeds of the loan in any particular country, but in certain cases its shortage of a particular currency may cause a borrower to direct purchases from one country to another.

Several observations have been made on the loan features of the bank. The initial capital is conservative and the limitation on its total lending capacity is wise. Administrative safeguards on the flotation of securities and upon expenditure of funds appear adequate.

The distribution of loans seems to be left to the discretion of the bank. It may not be sound economically to include a provision limiting the proportion of the total lending capacity that can be employed in any one country, but it is quite possible that the pressures on the bank for loans will reflect some dissatisfaction among countries over the allocation of loans. This may lead to considerable friction over the make-up of the loan committees which will have to pass upon projects.

The conflict likely to arise in this connection may well become intensified by the bank's relation to private lending. The apparent intention is to have the bank supplement and not displace private lending. But it may not work out this way in practice. The bank will strongly influence private investment by its power to offer "reasonable terms," grant "suitable conditions," and make loans of a kind lacking commercial appeal. Such provisions point toward possible competition on interest rates, time provisions, and other features of large-scale lending between the bank and private investors. In any such competition private investors would be at a disadvantage, and they may easily adopt the practice of channeling loans through the bank, preferring the multiple-country guarantee of low, well-secured profits to operations on their own.

In the long run displacement of private lending by an international bank is likely to be an advantage, but only if the bank's loans are confined to the field of international lending operations in which experience has proved the special need of an international agency. In this field, for example, loans for the development of independent but backward countries would be better administered by a bank of international character than by the banks of separate countries. Too often in the past such loans were made for political purposes and upon exploitive terms, creating international friction.[10] Loans for the development of certain raw materials might be placed in the same category if provisions of the Atlantic Charter are to be realized in the spirit of equal opportunity for all nations. Loans to particular governments for stabilization purposes form a third group in the field of operations best suited for an international banking agency to handle.

Studies should be set in motion to locate the limits of this field, and then the plan for the bank should expressly confine the bank's operations to the prescribed field. Private foreign investment can then function legitimately and without the irritations and superior competition that would come from a government-financed international bank.

Distribution of income

It would seem that some equitable reservation should be made (perhaps in art. V, sec. 14 (b)) that where a member has contingent liabilities as guarantor of outstanding loans, its share of distributed income shall be held in escrow or shall be applied against the debt if the loan is in default. A provision such as this applies to the withdrawal of a member (art. VI, sec 4 (c) (i)) but why not on current account?

Interpretation of the agreement

Where there is a case of appeal by a member of the bank against a decision of the executive directors, the agreement permits the bank to proceed notwithstanding the appeal. A proviso should be made to this that no action can be taken until the board of governors decides the appeal if the member declares that irreparable damage will be done to it.

The provision for arbitration of disagreements appear to be limited to two cases: (1) between the bank and a country which has ceased to be a member; and (2) between the bank and any member during the permanent suspension of the bank.

These limitations leave all other disagreements to be settled by the executive directors of the bank with an appeal only to the board of governors of the bank. The obvious intention is to avoid long-drawn out legal proceedings in disputes while the bank is operating. While the intention is fair and understandable, the provision is likely to become the cause of great friction and may even endanger the success of the bank as a project.

Objection will certainly be made that decisions made by official bodies of the bank will be self-interested, ex parte decisions, even though the board of governors is supposed to represent member countries.

It would seem to be much wiser, and more conducive to building a genuine body of international law, if provision were made for appeals to the Permanent Court of International Justice or to some other impartial, judicial, or arbitral agency.

Part III. Other Bretton Woods Recommendations

The Bretton Woods Conference made certain supplementary recommendations as follows: (a) a study by interested countries of the problems resulting from wide fluctuations in the value of silver; (b) liquidation of the Bank for International Settlements; (c) approval of steps being taken by the United Nations for the restoration to lawful owners of the property looted by enemy countries; and (d) urging the governments represented at the conference to reach agreements reducing obstacles to trade, securing orderly marketing of staple commodities, and promoting high levels of employment and rising standards of living.

Part IV. Conclusions

1. National or international solution?

The prime question facing Congress in the problem of monetary stabilization and international investment is: shall the solution be sought through a national or international approach? Should the United States go it alone or join with other nations in setting up international agencies to deal with monetary problems?

The answer to this question is inherent in the very nature of the problem. It is true that sound national economy and stability are a prerequisite to international stabilization and economic progress. The parts must be consistent with and be coordinated in the whole. But world monetary stabilization and international investment is primarily an international problem and requires an international approach and international agencies.

No one nation can bring about coordination of different currencies. No nation has the power to coerce others into taking actions or refraining from actions in the monetary field. Stabilization is a cooperative effort if confusion and conflict are to be avoided. Many fields of foreign investment expressly demand an international rather than a national approach. This was true even in the period between the two World Wars. Foreign investments controlled by single nations have left an unsavory record in history. They have strongly contributed to international friction and wars.

Technology and the spiritual forces now at work to bring the nations of the world closer together point in the same direction—that where problems by their very nature are essentially international, an international approach through international agencies is the best course to pursue.

The answer, therefore, is that international solutions of monetary stabilization and of certain kinds of international investment are preferable to national solutions. This conclusion rules out one of the alternatives that has been offered—the suggestions made by Representative Dewey. Mr. Dewey admits the need of American cooperation with other nations, and one of his proposals provides for it. But in the main he places far too heavy emphasis on American controls over the whole process. This is essentially a

[10] Herbert Feis, Europe, the World's Banker.

national approach and does not grasp the international character of the problems. Yet there is much in the Dewey proposals to guide the United States toward a sounder solution than the one offered at Bretton Woods.

All other alternatives offered, and, of course, the Bretton Woods plans themselves, follow the international approach in various forms. They indicate the correct course to follow.

2. Should the Bretton Woods plans for the fund and the bank be approved as they stand?

From the present study the answer is "No." The plan for the fund should be separated from the bank (which is very easy to do) and completely discarded. The reasons are as pointed out previously in detail. They are:

(1) The fund plan is far too novel, attempts too much without a basis of genuine experience.

(2) The fund emphasizes mechanics and cumbersome organization over fundamental economic principles.

(3) The fund is too vague and flexible, leaving too many loopholes for the fund management and for the member countries.

(4) The fund subordinates stabilization (its real reason for being) to something very close to international lending by a monetary inflation device.

(5) The fund inadvertently lays open a path to a dual monetary system which could lead to confusion and economic conflict.

(6) The fund would put the United States at a disadvantage on occasion after occasion.

(7) In abandoning the idea of a clearing union through some common unit and by sidetracking gold as such a unit, the fund handicaps its primary function as a clearing and stabilizing mechanism.

(8) The plan of stabilizing by permissible currency depreciation is likely to be resented when the realities behind it become evident.

(9) Possible deterioration of the fund's assets may endanger the whole plan.

(10) The early years of the fund afford a poor time to provide indiscriminate credits to all members when many members are in no need of such credits and others should make fundamental economic rather than monetary adjustments.

Other points may be suggested by the analysis in this study but those above appear to be the most prominent. The conclusion follows that the fund plan should be rejected both for the interests of the United States and for the welfare of the world economy. The bank, on the other hand, merits approval for the reasons given in part II.

3. Suggested approach

The criticisms and suggestions offered by economists and bankers afford the basis for an approach that would preserve the greater part of the work done at Bretton Woods while avoiding some of the mistakes made there. Such an approach might combine the following features:

(a) Key country stabilization: This follows the suggestion made by Dr. John H. Williams. It goes beyond the undesirable limitation in the Aldrich plan by embracing more countries than the British Empire and the United States. The key country plan affords a greater opportunity for gold to play a more constructive part in monetary relations.

(b) Establish a department in the international bank to make specific stabilization loans: This is another one of Dr. Williams' suggestions. It avoids the grant of wholesale stabilization credits, especially where they are not needed. It economizes on the amount of credits that will be needed. It provides a basis to build upon experience rather than striking out with some grandiose novelty which may retard rather than advance international collaboration. At the same time it correlates stabilization with long-term investment through an international agency.

(c) The bank for reconstruction and development should be approved. A stabilization department should be added as outlined in (b) above. The organizational structure might well be simplified by eliminating the board of governors and replacing that feature by correlation of the bank to the general international organization to be set up by the United Nations. The field for the bank's operations should be more carefully studied and its limits carefully defined so as to preserve a field where private international investment can function better than can governmental agencies.

(d) Utilize the Export-Import Bank along its present lines—chiefly as guarantor of American private investments in foreign countries and in fields of productive enterprise bearing some complementary relation to the American economy. If the long-term lending field of the International Bank is limited as in (c) above, private foreign investors of the United States—and of other countries—will have scope for sound operations best performed by private investors and to the direct welfare of the United States. In that event some national agency, such as the Export-Import Bank, will be essential to sound foreign investment procedure.

(e) The international conference—urged by almost all critics of the fund—on tariff barriers, export subsidies, and other practices restricting international trade and monetary exchange should be encouraged without delay. The delegates at Bretton Woods recognized the need for this (pt. III) and other conferences on correlative topics—so that the time is ripe for progress on these lines.

It is believed that the foregoing suggestions, taken together, offer an international approach to an international problem. They offer progress on lines more certain to be grounded in experience and sound growth. They afford reasonable protection to the United States while they open the way for American constructive participation in the world economy. And they avoid the confusion and hazards which the fund plan, in particular, so carelessly invites.

4. Congressional approval

On this point, the question is asked: "Does the form of the monetary agreement lend itself to constitutional approval by Congress by simple resolution or by the two-thirds rule as in the case of treaties?"

The question appears to be an open one. The agreement itself merely provides that each country "shall deposit with the Government of the United States an instrument setting forth that it has accepted this agreement in accordance with its law and has taken all steps necessary to enable it to carry out all of its obligations under this agreement."

So far as the United States is concerned this leaves the question open to a debate over the appropriate form of congressional approval. A cogent argument can be made that the agreement amounts to a treaty and must be approved by a two-thirds vote of the Senate. But an equally valid argument could be made that this is an agreement that can be approved by a simple majority resolution of both Houses on the ground that the agreement contemplates operations either exclusively left to the House of Representatives (such as bills for raising revenue—for example, the American quota to the fund) or shared equally by both Houses as in powers given to Congress by article I, section 8 of the Constitution.

NOVEMBER 10, 1944.

Oregon Legislature Opposes Daylight-Saving Time

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. ANGELL. Mr. Speaker, the Oregon Legislature, which is now in session, on February 15, adopted House Joint Memorial No. 3, memorializing the President to revoke the Executive order heretofore promulgated changing the standard time to daylight-saving time. In the memorial the Oregon Legislature submits that daylight-saving time has not served the purpose for which it was intended, but, in fact, has cut down the working day rather than extending it, particularly with reference to agricultural labor. They also call attention to the fact that it has caused great inconvenience to laboring people and has compelled school children to travel long distances or to wait for school busses in the dark, which has not only been a menace to their welfare and health but subjected them to great danger. It is also set forth in the resolution that the consensus of opinion of the employers and leaders is that daylight saving has not proved practicable for industrial workers, and they urge that standard time may be restored.

The memorial is as follows:

House Joint Memorial 3

To the Honorable FRANKLIN DELANO ROOSEVELT, PRESIDENT OF THE UNITED STATES OF AMERICA:

We, your memorialists, the Senate and House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas by Executive order of your office standard time was changed to daylight-saving time as an aid to the war effort; and

Whereas, although the purpose of issuing this Executive order was laudable in its purpose, we submit that daylight-saving time has not served the purpose for which it was intended. In fact it has cut down the working day rather than extending it. This is particularly true in regard to agricultural labor. And this is more particularly true of that segment of agricultural labor which lives in settled communities and travels to and from places of work, especially in the winter months. It does not become daylight until quite late and labor is not prone to make up hours that cannot be worked on account of darkness at the beginning of the workday. Those who live in the settled communities desire to return home in time to avail themselves of store and pleasure facilities. The matter of safety to school children is also involved. There is a menace to young children who are alone in the dark at any time. In the eastern part of this State children travel long distances to school, usually being picked up by school busses. Sometimes they stand for a long period of time in the dark in subzero temperatures. The consensus of opinion of employers and labor leaders is that daylight saving has not proved practicable for industrial workers. Much time is lost due to total darkness in many of the industrial plants of Portland. It is common

knowledge that working under artificial light is not as productive as that performed in daylight: Now, therefore, be it

Resolved by the House of Representatives of the State of Oregon (the Senate jointly concurring therein), That you, Mr. President, give serious consideration to restoring our country to standard time in the name of the war effort; and be it further

Resolved, That a copy of this memorial be submitted to the Members of Congress from the State of Oregon.

Capture of Rubber Areas

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. PLUMLEY. Mr. Speaker, that we should post-war build up a stock pile of rubber which shall insure no repetition of the situation which has confronted us is not to be gainsaid.

How much of the taxpayers' money should we spend for experimentation along synthetic rubber production lines is one question. How much should we spend in an attempt to create a stock pile from guayule and other rubber-yielding plants is another question.

I am interested in a newspaper article which, under permission to extend my remarks, I am including:

PROSPECTS BRIGHT FOR EARLY RECAPTURE OF RUBBER AREAS

NEW YORK.—Prospects of recapturing major natural rubber production areas well before Japan's final defeat are brightening.

Large plantings await liberation on Mindanao's 37,000 square miles in the southern Philippines.

There are bigger plantations on Borneo, where invasion also would cut the Japanese off from a major source of oil.

In the China-Burma-India theater our forces are nearing areas in Thailand and French Indochina which in pre-war years supplied around 100,000 tons a year, about the equivalent of all we are able to squeeze now out of Ceylon, South America and Africa.

Biggest goals from a rubber standpoint, of course, are the Dutch East Indies—chiefly Sumatra and Java—and the Malay Peninsula. Each in 1940 shipped out more than half a million tons.

It may take several years to restore plantations to full productivity, but considerable quantities may be captured when our troops land, the industry believes.

They think now the groves are likely to be in better shape than pessimistic forecasts made early in the war indicated.

A trickle of information from underground sources—along with a slim flow of actual rubber into our hands—occasionally reaches this country.

Estimates are that the huge plantings of trees are 80 percent unspoiled. The trees were too numerous to cut down—one company alone for example, had around 7,000,000 trees in its pre-war holdings centered in Sumatra. They are too juicy and too green to burn and the Japanese apparently feared they might earn the hatred of the natives if they detroyed the rubber groves, major source of native income.

Just how many millions would you appropriate in view of the above article?

Five Months and Nine Days After Induction

EXTENSION OF REMARKS

OF

HON. CHARLES L. GERLACH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. GERLACH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from one of my constituents, also an article and editorial from the Bethlehem Globe-Times:

BETHLEHEM, PA., *February 25, 1945.*

Hon. CHARLES L. GERLACH,
House of Representatives,
Washington, D. C.

DEAR MR. GERLACH: I desire to direct your attention to the enclosed editorial which appeared in the Bethlehem Globe-Times Saturday evening, February 25, 1945. It is indeed a tragedy that an American boy of 18, who so willingly accepted the call of his country, should be denied sufficient and adequate military training which he and thousands of boys attaining this age are entitled to have before entering upon their dangerous duties on the world's battle fronts.

Yes, Mr. GERLACH; the American people have been assured from time to time—the Chief of Staff of the Army has repeatedly made this declaration—that no American soldier would be sent overseas and into actual combat until he had had sufficient time and seasoned training to learn the methods of modern warfare. Paul V. Bidwell had little opportunity to adjust himself mentally, physically, and psychologically to the exacting demands made upon a professional soldier. Undoubtedly there are more fine American boys like Paul Bidwell who are being rushed into the maelstrom of war with only superficial training, and we know the terrific price that is being paid by men with much more extensive training. I do not underestimate the large-scale operations that are required both in the use of men and material to prosecute a war such as we are engaged in, but as the editor has so ably pointed out, if the Army manpower requirements are not as critical as the Paul V. Bidwell experience would indicate, then his death is a sacrifice to War Department bungling and inefficiency.

I realize fully, Mr. GERLACH, that you are in no way responsible for such practices, but matters of such grave consequences certainly should be brought to the attention of your colleagues, particularly those on the House Military Affairs Committee. May I respectfully ask you to do this?

Very truly yours.

JOHN J. RODENBACK.

[Enclosure]

OVERSEAS LESS THAN 3 WEEKS, LOCAL YOUTH DIES IN ACTION

Overseas less than 3 weeks, Pvt. Paul V. Bidwell, 18-year-old Liberty High School graduate, has been reported killed in action in Germany. News of his heroic death was contained in a telegram sent to his mother and relayed to his aunt, Mrs. Ruth Bidwell, 1110 Fritz Drive, this city, where he had made his home during his high-school days.

Simultaneously with the tragic news of young Bidwell's death, Mrs. Bidwell received word that the lad's cousin, Lt. Harrison S. Whitman, native of Scranton and well known in this city, had been liberated from a German prison camp in Poland by the Russians. He had been reported missing on December 16.

Private Bidwell was graduated from Liberty High School with the class of 1944. For a brief time he worked at the Laros textile plant and then got employment at the Bethlehem steel plant. However, with others of his class, he felt the urge to enter the Army and he enlisted on August 24. His training was brief in several camps and as far as is known he was sent overseas sometime between January 8 and 15. The telegram from the War Department says he was killed in Germany on February 2.

Bidwell is survived by his parents, Mr. and Mrs. Alvoyda Bidwell, of Blakely, Pa., three sisters and two brothers.

FIVE MONTHS AND NINE DAYS AFTER INDUCTION

Five months and nine days from the time Paul V. Bidwell of this city—he had been 18 years old on June 12—left home to answer the call of the colors, he was killed in action on the western front. And that's too soon in an offensive war.

Thats too soon, too, in an Army approximating 12,000,000 men.

It's all wrong at any time in this twentieth century after the birth of Christ. But accepting the fact of war, as one must and as our people all do, it's wrong for a boy to be pushed into the midst of civilization's most brutal and terrible war less than 6 months from the time he had his last civilian sundae, or soft drink, or date, or meal.

Had Paul V. Bidwell, in the normal course of things, accepted his first job on August 24, the day he was inducted into service, it is hardly likely that he would have received his first raise until he had been on the job at least 6 months. He would not now be thoroughly at home in many types of employment. He should be just now getting "his feet on the ground," just now developing a competent know-how, just now getting the feel of things.

But the greed and rapaciousness and inhumanity of man, the economic disturbances of the world, international politics, the lust for power of a Hitler, the disorders of civilization set the stage to the end that Paul V. Bidwell became a professional soldier on August 24 instead of an apprentice, or an errand boy, or a college freshman. And on February 2 he was killed on the western front.

Paul V. Bidwell personifies hundreds, thousands of other Bethlehem and American boys. And it isn't right.

We have been assured from time to time that no soldier is sent overseas until he is ready—physically ready. These young boys, the military officials tell us, learn quickly, get into shape rapidly, adjust readily to the demands upon them. They make our best soldiers, we are told.

Yes, the physically-fit American boy is quick to learn. And he is eager, enthusiatic. He is the finest type of youth.

But he needs seasoning, maturity, orientation if he is to use fully his capabilities—and protect them. A soldier, like anyone else, needs to be around for awhile. He needs to hear cannonading and get accustomed to it from afar before he enters the range of its fire. He needs to observe the hustle and bustle and rumble of equipment and supplies going up to the front lines. He needs to spend more than 5 months and 9 days getting adjusted physically, and mentally, and psychologically to the job he is expected to do.

We don't know how Paul V. Bidwell was killed. We don't know whether he had had thorough training in the art of protecting himself, of "taking care of himself," as the young soldiers term it today. We can only assume that he had. He must have known what a fox hole is, and how to take cover. But even with that knowledge and with the muscular timing and quick reactions which young soldiers possess, a seasoned psychological adjustment is necessary. And that takes more than 5 months and 9 days from a last kiss at the union depot to a breakthrough of the Siegfried Line.

If Army manpower requirements are as critical as the Paul V. Bidwell experience

would indicate, then his death is Bethlehem's most urgent call to date to buckle down to the job and to stay on the job.

If Army manpower requirements are not as critical as the Paul V. Bidwell experience would indicate, then his death is a sacrifice to War Department bungling and inefficiency. And it is high time to write one's Congressman.

Unfortunately, with all the information we get and with all the misinformation too, we are somewhat confused. We do not know how many of America's 12,000,000 men are still in this country and, thus, how many are on the world's battle fronts. We do not know how many of those who have been in this country for periods longer than 5 months and 9 days are less capable than Paul V. Bidwell was.

We know that many of America's fine youth must die—the figure for Bethlehem alone is now approximately 160—but we want them fully prepared and seasoned physically and psychologically before they move into the thick of an offensive action.

A seasoned veteran of World War No. 1, with considerable action in France and Belgium in 1918, assures us that 5 months and 9 days are not enough to make a front line soldier. It was not enough in those days, he says, and it cannot possibly be enough in this greatly speeded up type of warfare today.

Actually, Paul V. Bidwell was sent overseas some time between January 8 and 15, less than 5 months after his induction. And he was killed less than 4 weeks later. It is not right.

How Broke Is Great Britain?

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include an article which appeared in the February issue of the Nation's Business. This article by Junius P. Wood, well-known authority on world affairs, shows what has been happening to Great Britain's economy and how she plans to regain her former strong position in foreign trade.

HOW BROKE IS GREAT BRITAIN?

(By Junius B. Wood)

The economic condition of England is a problem for every American businessman—exceeded only by his responsibility for his own country. World trade, prosperity, and the future peace depend on the two nations. They are the outstanding commercial leaders. In world markets they are rivals, but the Empire normally buys two-fifths of our exports and supplies one-third of our imports. Britain is the world's greatest importer and the United States its greatest exporter. Unless industry and trade resume on a firm foundation in both countries, both will be crippled and the blight will spread around the world.

So what of England? Is it a bankrupt nation as so many believe? Has it lost or sold the overseas investments which balanced its excess of imports? Is its merchant shipping gone? Has the United States stolen the export trade, the backbone of United Kingdom economy? Can it survive its war debts? Will it emerge from the war a going commercial concern as before?

Lord Catto, governor of the Bank of England, spoke to the point on the last question when he said:

"I am fully confident that the country will regain its old financial and industrial leadership in the world. If it were not for the financial miracle of lend-lease and the Canadian war contribution, it might be different. Other countries have debts in the same proportion but without our external financial problems. However, our external obligations should not fill us with dismay. Our national debt is three times that of the last war, but our productive capacity has increased and we have generations of accumulated experience."

A FISCAL COMPARISON

Government expenditures and debts show the financial situation in the two countries. The comparative figures are from the United States Treasury report for 1943–44 and the latest British white paper giving 1943 totals. As the fiscal years do not coincide, some variation must be allowed for in the comparisons. The pound sterling is converted into dollars at the rate of 4.03, as specified by London, and the population estimates are 135,000,000 and 47,000,000, respectively. The figures are:

	Millions of dollars		Per capita	
	United States	United Kingdom	United States	United Kingdom
Annual expenditure	93,744	23,301	$694	$496
From receipts	44,149	11,590	327	247
From loans	49,595	11,711	367	249
Percent from cash	47.1	49.7		
National debt	201,003	64,003	1,489	1,361

Not included in this total of the United Kingdom national debt is $4,368,000,000 which the British still carry on their books as owing to the United States from the First World War. Nor do the British include lend-lease from the United States or mutual aid from Canada in their figures. The former, by the President's last report, has reached $9,321,000,000, with a reverse lend-lease deduction of $1,934,000,000.

By meeting close to 50 percent of its annual expenditure by heavy taxes and other government revenue, the United Kingdom has held down the debt burden which it must carry after the war. Through the 6 years since 1938, current receipts have covered 47.6 percent of all expenses.

Though our expenditures increased $14,930,000,000 over 1942–43, this is the first year that the United States has even approached a 50–50 pay-as-you-go status. In 1942–43, only 28.5 percent of our expenses were met by current receipts. However, 92.2 percent of the 1942–43 expenditures and 92.8 percent of 1943–44 were for war activities, indicating that receipts can cover expenses in normal times.

Our Treasury Department's year-end report fixes the national debt of the United States at $230,630,000,000, or $1,662.68 per capita, on January 1, 1945. During the year it had increased $64,752,000,000, or $454.20 per capita, an addition of $176,920,000 for each of the 366 days. After World War No. 1, on August 31, 1919, our national debt, the greatest to that time, was $26,597,000,000, which divided to $250.18 for each man, woman, or child.

Like any other country, or the humblest merchant, England's problem divides into two parts: Debts and resources for resuming post-war trade. Although the latter is the more urgent because debts can be liquidated over the years, let us dispose of debts first.

Of the British national debt only 7.6 percent is external—chiefly the $4,000,000,000 still carried as an American World War No. 1 loan. The internal debt consists almost entirely of bond issues to support the war. Carrying charges on the entire debt are $1,310,000,000, or 1.8 percent. The internal debt is an expense but not a problem.

In addition to this debt and not appearing in the Government figures are the much-discussed blocked sterling balances. They are what the United Kingdom owes to other countries for materials and services, some received before the war. The total, while increasing, is roughly $8,000,000,000.

All of the dominions and most of the colonies and protectorates in the British Commonwealth are among the creditors. About three-eighths of the total is owed to India and one-eighth to Egypt. Included is the Canadian interest-free loan, our Reconstruction Finance Corporation loan, and $180,000,000 from Argentina; $180,000,000 from Portugal; $121,000,000 from Brazil; $20,000,000 from Iceland; and $16,000,000 from Uruguay.

CONFIDENCE IN BRITAIN

No interest is paid on these balances and they are an impressive evidence of sympathy for Britain and confidence in her economic stability. They are not a serious obstacle to post-war recovery as so often claimed. They have accumulated because of the conversion of Britain's industries to war production and the curtailing of exports which normally balanced the raw materials received from the various countries.

It is lain that, when Britain returns to a peace-production basis, these countries cannot be permitted to place unlimited orders against their credits. Britain must have current receipts to buy more goods.

Among the many proposed solutions is a glorified tie-in selling plan fixing a proportion between what each country can charge off against its blocked sterling and what new purchases it must make in Britain. Another plan is to fund the debt in long-term British bonds. Finally, fearsomely suggested by some of the creditors, is that the pound sterling may be depreciated to reduce the debt. While that might increase exports, it also would increase the price of imports on which Britain so largely depends. Whatever solution is reached, the blocked credits will be a potent inducement to "Buy British."

Argentina already has liquidated part of its credit in exchange for Argentine bonds held in Britain. While these covered a long-term loan, desirable for Argentina, Buenos Aires was paying service charges on the loan and receiving no interest on the credit. British interests also own nearly 70 percent of the railroad mileage in Argentina. They are willing, some say eager, to sell a minority holding of stock to Argentina, further reducing the frozen credits. Argentine stockholders might induce their government to permit increases in rail rates while the majority stockholders would still control the roads, buying British equipment and supplies.

India was a big factor in British recovery after the last war and, with increasing disturbed political conditions and larger sterling credits, will have a larger role after this one. The credits may be a substantial exchange for greater political independence. Included in these credits, according to Indian Nationalists, are more than $200,000,000 in Britain's dollar pool. They cite one transaction—a jute purchase by the Soviet Union through the United Kingdom Commercial Corporation where 40 percent was paid in dollars. This was added to the London dollar pool and India received credit in pound sterling.

Like its internal debt, the large frozen credits can be settled largely on Britain's terms. The creditor countries obviously must cooperate as their exports and their own

prosperity depend on continuing trade with the United Kingdom.

LOSSES AND GAINS FROM WAR

So much for the problem of indebtedness. Meanwhile, Britain's first problem is adjusting its current economies to the losses and gains in assets from the war. Prevailing discussions in this country emphasize the losses. More optimistic English economists contend that, over the years, the gains will be greater. Let us consider the losses.

The outstanding items are gold, dollar balances, foreign investments, shipping, and property destruction. They were important for England's balance of trade. For banks and insurance companies, also important, war has not been a hardship. American tourists who were another profitable source of income, are expected to return with peace in greater numbers than ever.

Since the war began, according to British figures, $1,887,000,000 in gold and $231,000,000 in dollar balances have been sold in the United States. The United Kingdom holdings in 1938, our Government figures show, were $2,038,000,000 and $595,000,000, respectively. Britain's present holdings are a war secret. The future value of the yellow metal depends on how many countries return to the gold standard and whether the United States continues to buy it for burial at Fort Knox. Gold-producing countries are hopeful.

In addition to gold, dollars, and foreign currencies, British pre-war investments overseas totaled $16,000,000,000. Little of this was originally Government investment but, since all private holdings abroad have been taken over under war-emergency acts, it is, at present, Government-owned for all practical purposes. British investments in all parts of the globe include property and business but are chiefly stocks or bonds of foreign companies. Investments of nearly $1,000,000,000 were engulfed in Axis-occupied Europe and an equal amount in the Orient. They are not lost, but their value when recovered and their future earnings—of rubber plantations, for instance—are speculative.

Other holdings, as in India, Canada, and the United States, probably have increased in value. The investment in Latin America has been given as $4,000,000,000, nearly half in railroads. Britain also owns outright or has stock holdings in railroads in Canada, the United States, and elsewhere.

Of the total mileage south of Mexico, 42 percent is British-owned. Guatemala, Honduras, Nicaragua, Panama, Haiti, and Ecuador are the only countries without a British railroad. Mileage, however, is not a criterion of a railroad's value. In Mexico, the "Mexicano" between Mexico City and Vera Cruz, British-owned, is one of the heaviest traveled in the country, though only 4 percent of the total mileage. Other roads show unpaid dividends, as the "United" of Habana, but after each listing of a British-owned road in a recent survey by our Department of Commerce is the significant note: "Purchases made by London office." Even a railroad which shows no profit may be a big money maker for British industry, finance, shipping, and corporation officers and employees.

MANY FOREIGN HOLDINGS LEFT

Of the $16,000,000,000 in overseas investments, Sir John Anderson, chancellor of the exchequer, says $4,000,000,000 have been sold. Lord Kindersley, banker, says the income has dropped from $800,000,000 to $500,000,000 a year. Axis-occupied countries contributed $100,000,000. Presumably most of the three-fourths still in British hands will be returned to private owners. Some assert that the cream has been skimmed, but other reputable economists contend that the securities sold were largely those bringing low returns and that the increased market value of the remainder is greater than that of the total before liquidation. They figure that if trade is restored as hoped for, the income will not be appreciably reduced. It is certain, however, that the United Kingdom has not been stripped of overseas investments as so many believe.

Liquidation of British investments in the United States gives a clearer picture. When British war buying started, gold reserves were used until early in 1940. In the next few months, the dollar balances were added. As these ran low, liquidation of investments started. At that time our Government survey showed $2,743,000,000 in British investments in the United States, of which $833,000,000 were direct investments. The remainder was in stocks, bonds, and assorted funds.

Securities were offered on the New York Stock Exchange in small lots to avoid breaking the market. The American Viscose Corporation, a United States subsidiary entirely owned by Courtaulds, Ltd., was a test for liquidating the direct investments. Though it was a profitable $100,000,000 going concern, it brought only $54,350,000 at a distress sale. When the Brown & Williamson Tobacco Co., subsidiary of the British-American Tobacco Co., Ltd., was put on the block, our Government made a $25,000,000 loan and the British retained control through the common stock.

In the interim until lend-lease in March 1941, obviated further direct purchasing, the Reconstruction Finance Corporation advanced money for British purchases. R. F. C. was authorized to lend $425,000,000—only $390,000,000 was called for—at 3 percent for 15 years with a possible extension of 5 years. Deposited as security for this loan are: British-owned listed securities of 75 American companies ($205,000,000), unlisted securities of 47 companies ($115,000,000), the capital stock of 41 British-owned American insurance companies ($180,000,000), and the pledged earnings of the American branches of 41 British insurance companies (reserves $200,000,000).

In the 3 years, the British Ministry of Supply mission in New York, with R. F. C. approval, sold $13,474,000 of the securities, the only liquidation out of the $700,000,000 holdings pledged for the loan.

The rest of the securities for these loans, of course, continue British owned. In 3 years ending June 30, 1944, they earned $120,457,000. From the total income from sale and interest, the R. F. C. deducted $28,000,000 for interest and set aside $11,000,000 toward future interest and sinking fund. The remaining $94,000,000 was applied to the principal, reducing the loan to less than $296,000,000.

Canada, which wants to retain British investments for postwar purposes, has adopted a modified form of lend-lease. When liquidation of these investments approached $750,000,000, Canada voted $1,000,000,000 mutual aid as a gift and followed that with interest-free loans which promise to be even larger.

Through the centuries, shipping has been the next big producer of British overseas income. Profits in 1939 were $525,000,000. The usual off-hand estimate is that they will be less than $325,000,000 after the war. That figure is based on tonnage. In the 25 years between the wars, world tonnage increased 51 percent, that of the United States more than four and one-third times, that of Japan more than three times, while that of the United Kingdom decreased 5.3 percent.

In 1939, the empire had 21,000,000 tons of merchant shipping, one-seventh flying flags of the Dominions. According to the British white paper, 11,643,000 tons were lost up to this year by enemy action or marine risks. In the same 5 years, the white paper reports, 4,717,000 tons were built in the United Kingdom. The net loss on these figures is only one-third. Nor do the figures include what has been built for Britain in Canada, Australia, and the United States.

OCEAN SHIPPING NOT RUINED

It is true that increased tonnage under the American flag dwarfs that of the United Kingdom. The shipping business will continue highly competitive and none is so optimistic as to expect that future world agreements will prorate cargoes on the basis of available national tonnage. Shipping profits depend not only on a vessel's tonnage and knots but on utilization of cargo space, economy of operation, quick turnaround and other factors in which the seafaring British have generations of experience. England's shipping income therefore will not be reduced in the same proportion as its possible loss in tonnage.

According to official figures, the United Kingdom's exports went down from $1,868,000,000 in 1938 to $935,000,000 in 1943, whereas America's exports went up from $3,094,000,000 in 1938 to $12,718,000,000 in 1943. But there is a catch in these official figures because 80 percent of America's exports in 1943—more in 1944—were lend-lease shippings. With lend-lease deducted, America's commercial exports for 1943 were only $2,609,000,000 which represents a decrease from 1938.

Any forecast of future commerce based on wartime figures with all the restrictions in production and shipping is therefore ridiculous.

Apprehensive of future American encroachment in the export field, one British industry reports a reassuring canvas of commercial representatives of foreign governments in London. A couple of the published replies, while possibly tuned to please the callers, are illuminating. Trade will return to an unsentimental competitive business basis.

"We definitely prefer British goods when local production is not sufficient," the Commerce Officer of Australia is quoted as saying. "Neither the United States nor Australia will have any claim on the other after the return of peace. Only the operation of American lend-lease prevents Australia from buying heavily from England at present."

"Brazil not only favors buying British goods but once imported everything from Great Britain," that country's Commercial Counsellor said. "This has changed somewhat as Americans have studied the Brazilian market, printed catalogs in Portuguese, allowed 6 months' credit, and given better service than British exporters."

The representative of Argentina explained that most commercial houses in his country are pro-British and eager to buy British goods, but that British export methods, compared to those of the United States, leave much to be desired.

With large debts and liquid foreign assets close to exhaustion but with substantial productive overseas investments remaining and vastly increased productive capacity at home, the United Kingdom is confident of its future as a going concern.

"Our tax load for reconstruction will be greater," says Lord Woolton, minister of reconstruction. "The budget will not balance each year, but will balance over a long term. We need not dismay if exports do not immediately balance imports. Our experience and our continued progress in technical efficiency and production will soon change the picture."

INCOME IS HIGHER

Figures justify his confidence. The net national income, exclusive of pension, unemployment, relief, and health insurance payments and interest on the national debt, increased from $18,554,000,000 in 1938 to $32,933,000,000 in 1943. Annual private income, including the above transfer items but deducting $2,212,000,000 direct taxes in 1938, and $7,677,000,000 in 1943, increased from $18,091,000,000 to $27,392,000,000. Private savings, after living or operating expenses, steadily increased from $1,414,000,000 in 1938, to $7,048,000,000 in 1943.

This result has been accomplished chiefly by increased production through reduced unemployment and higher efficiency, doubling the food production at home, curtailing investments and reducing consumer consumption by one-fifth. The country's machine tool production has increased 70 percent and, in addition to its established position in cutlery, machinery, textiles, glass, chinaware, and whiskies, war experience has brought efficiency in other high-grade export lines.

The post-war home demand for clothing and other consumer goods will be great, but war controls will not be abolished or relaxed to the extent of threatening the present regulated national economy. Britain at the same time foresees increased expenses for debt charges, war pensions, military, education, health, and social insurance—the Beveridge plan under another label.

But Nicolas Kalder, of the London School of Economics, calls fears that the proposed social burdens will be heavy nonsense.

BRITISH INCOME HIGHER

He estimates that national income, though lower than now, will be almost half again as much as in 1938.

"Contrary to a widely held opinion, the financial burden which the Beveridge plan imposes on the various classes of the community (even if its benefits are not considered), is extremely small and cannot affect the post-war levels of taxation or disposable income to any significant extent."

How the overseas markets which Britain must have for its increased production will finance their purchases is the real problem and this brings the United States into the plans.

The demand will be there but most countries will need credit or other help until their own economies are restored.

The most popular suggestion in England is that the United States become the world's creditor nation, also lower the tariffs for freer entry of British goods.

Specifically, the suggestion as explained in the New Statesman and Nation of London is that Britain "continue to borrow from the United States—lend-lease supplies under another name—to cover the deficits in its current international accounts and to obtain resources for investment in less-developed parts of the world."

READY FOR COMPETITION

On the theory that high wages in the United States increase production costs and that its own domestic economy can be controlled, Britain is ready to meet its only worth-while competitor in world markets after Germany and Japan have been eliminated.

It is satisfied that its seasoned judgment is better than that of the United States "with its still immature attitude toward world affairs," a valuation of American foreign policy by the Round Table, a British Empire political quarterly.

"We want to be in friendly collaboration with the United States," the Chancellor of Exchequer explained to a correspondent, "but do not want to be in a position in which, if unhappily some disaster befell the United States, we should similarly have to go down and suffer with them. We do not want to be tied in that way."

The United States wants to bring prosperity to all nations and to all people, but the United States is not the eternal almoner of the world. Bretton Woods plans are for the participation of many nations instead of a dual combination.

Those plans as summarized by Harry D. White, assistant to Secretary of the Treasury Morgenthau, "are to eliminate competitive depreciated currencies and discriminatory bilateral agreements, to reduce the likelihood of economic warfare which leads to political wars, to put nations on their feet economically and to increase trade and employment, both for us and for all other nations."

ENGLAND WILL HAVE TRADE PLANS

Britain's policy still awaits adoption and Britain will decide for its best interests.

The Federation of British Industries favors continual government controls and bilateral trade agreements with other countries. The British Chamber of Commerce, London Chamber of Commerce, and the National Union of Manufacturers endorse the imperial preference policy.

Import and export controls, bilateral or multilateral agreements, bulk government purchases, blocked balances and clearing restrictions, another sterling bloc area, government supercartels and even a world divided into four marketing spheres are also in the hopper from which Britain's final plan will emerge.

The United States has faced most of them in the past without serious handicap to its own trad

Its future policies can wait until Britain's plan emerges. In the meantime, the United States may well raise an eyebrow at any suggestion that the great trader nation of the world is either impoverished or discouraged.

An Awakening Congress

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. HOFFMAN. Mr. Speaker, Rip Van Winkle, it is said, slept 20 years in the Catskill Mountains and finally awakened to find a greatly changed world.

For the past 12 years Congress may have been awake but for practical purposes it might just as well have been asleep. Playing the old game of following the leader, which in childhood days took us over the top of fences, the ridge pole, on top of barns, into the tallest trees and in winter out on thin ice, for something like 12 years the Congress has been blindly following New Deal leadership.

Now, jolted partly awake by the arbitrary acts of bureaucrats, it dazedly looks around and finds that it has entrusted to other hands much of the power which, under the Constitution, it should zealously guard and exercise and which is shackling much of our liberty.

Before the war, repeatedly, upon Mr. Roosevelt's cry that some sort of an emergency confronted the Nation, Congress handed him blank checks for billions of dollars and almost unlimited power. Between 40 and 50 corporations have been established by the President under these grants of power, and they have control of billions—yes; I mean billions upon billions—of dollars, which all too often have been used in such a manner as to curtail private business, sometimes wipe it out and usually advance the political fortunes of the administration.

THE DRAFT

More recently, the President took it upon himself to adopt a change in the Selective Service Act, governing induction of agricultural workers. He was so successful that Congress was shocked at the results, and this next week will have up for consideration a resolution to investigate the whole matter, pass adequate legislation, designed to compel selective service to follow the intent of Congress.

MANPOWER BILL

On January 31, Democratic Speaker SAM RAYBURN, making one of his rare speeches, told the House, in substance, that the so-called work-or-fight bill must be passed without delay or we might lose the war. The House fell in line and passed the bill, but it has not yet been adopted by the Senate; all of which goes to show that sometimes haste is not progress; that a cry of "Wolf! Wolf!" does not always mean that one of the beasts is around ready to devour us.

CONTRAST

One day the press advises us that the not-yet-won battle on the little island of Iwo had cost us more than 1,000 dead or missing in some 70 hours of desperate fighting.

The press of the same day carried the news that in one plant 8,500 workers, because of a jurisdictional dispute, left their jobs at a cost to the armed forces of 6,000 tons of steel daily. At the same time, our losses on Iwo were piling up at the rate of 90 casualties an hour.

Why is it, when men drafted by the millions, leaving their loved ones, enduring all kinds of hardships, of suffering, dying by the thousands, far from their loved ones, that, here at home, other thousands of men, living with their families in comfortable, well-furnished homes, with plenty to eat and to wear, with almost everything which men can ask at their command, are permitted, for trivial reasons or for no reason, to go on strike and stop the flow of the guns, the ammunition, the trucks, the tanks, the bombers, which our fighting men must have if they are to live, if they are to win the war for us?

The administration has power to end these strikes. It fails to exercise that power, and Congress, after a brief awakening, seems to be dropping back into its somnambulant state. Vigorous kicks administered in the right place, from those at home, whose flesh and blood are paying the cost, seems to be the only thing which will awaken us to effective action.

Railroad Grant Lands in Oregon Should Be Restored to Mineral Entry

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. ANGELL. Mr. Speaker, the Secretary of the Interior has ruled that the act of Congress of August 28, 1937, providing for permanent forest yield has impliedly prevented mineral entries on the revested Oregon and California grant lands and the reconveyed Coos Bay Road grant lands. As a result of this holding

it becomes necessary to enact legislation to restore these lands to mineral entry, which should be done.

Senator CORDON, of Oregon, has introduced a bill, S. 313, for this purpose, which should have the favorable consideration of the Congress and be enacted into law at an early date. The Oregon Legislature, which is now in session, on February 15, 1945, adopted Senate Joint Memorial No. 6, memorializing the Senate and House of Representatives of the United States to enact this legislation. I respectfully urge all of my colleagues in the House to give careful and favorable consideration to this proposal, which is essential to the welfare of the people of Oregon.

The Senate joint memorial is as follows:

Senate Joint Memorial 6

To the Honorable Senate and the House of Representatives of the United States of America, in Congress assembled:

We, your memorialists, the Senate and House of Representatives of the State of Oregon, in legislative session assembled, most respectfully represent and petition as follows:

Whereas the original act of the Congress providing for the administration of the revested Oregon and California grant lands and the reconveyed Coos Bay Wagon Road grant lands restored to mineral entry all of such revested and reconveyed lands; and

Whereas the Secretary of the Interior has ruled that the act of Congress of August 28, 1937, providing for permanent forest yield has impliedly prevented mineral entries on said lands; and

Whereas this ruling forever forecloses the development of more than 2,000,000 acres of the public domain within the State of Oregon containing vast mineral potentialities and prevents the proper economic development of the State of Oregon; and

Whereas there is now pending in the Senate of the United States a bill (S. 313), introduced by Senator CORDON, to restore to the citizens of Oregon the right to locate, explore, and develop these mineral lands as intended by the original act of Congress relating thereto: Now, therefore, be it

Resolved by the Senate of the State of Oregon (the House of Representatives jointly concurring therein), That the Congress of the United States be, and it hereby is memorialized and requested to enact S. 313, to the end that those lands may be opened to mineral entry; and be it further

Resolved, That the secretary of state be authorized and he hereby is directed to forward immediately a copy of this memorial to the President of the United States, to the President and the Chief Clerk of the United States Senate, to the Speaker and the Chief Clerk of the House of Representatives of the United States, and to each member of the Oregon delegation in the Congress of the United States.

On the Road

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of February 26, 1945:

ON THE RECORD

(By Dorothy Thompson)

War and the Working Class, continuing the Soviet press campaign against American journalists, has accused several journalists, including myself, of spreading "poisonous rumors," a "structure of lies," and "myth," about the Free German Committee and Union of German Officers in Moscow by suggesting that these groups might form the basis for a post-Hitler German government.

Now what does War and Working Class want? Shall I recant? Shall I say:

1. There never was a Free German Committee headed by Eric Weinert, and Soviet newsreels released here showing him surrounded by his collaborators are fiction?

2. There never was a Union of German Officers headed by Gen. von Seidlitz, broadcasting regularly to Germany, as recorded by the F. C. C., appealing to German officers and soldiers to overthrow Hitler and help recreate a new German republic?

3. Shall I say that Miss Ella Winter, well-known apologist for the Soviets, never brought from Moscow accounts of the activities of these committees and her articles in the New York Post on the eve of Yalta were figments of imagination?

4. Marshal Stalin never spoke the following words on November 6, 1942:

"It is not our aim to destroy Germany, just as it would be impossible to destroy Russia, but the Hitlerite state can and should be destroyed. That cannibal Hitler said, 'We shall continue the war until Russia ceases to have an organized military force.' That would appear clear but illiterate. It is not our aim to destroy all military force in Germany, for every literate person will understand that this is not only impossible in regard to Germany as it is in regard to Russia, but it is also inadvisable from the viewpoint of the future. But Hitler's army can and should be destroyed."

5. The manifesto of the Free German Committee of July 1943, as printed in the Soviet press, was an optical illusion, and did not contain the following words:

"The formation of a genuine national German Government is the most urgent task of the people. Only such a government can bring peace. This government must be strong and possess the necessary power to render harmless the enemies of the people. It must establish firm order and represent Germany with dignity to the outside world. There are forces in the German Army which are loyal to the country. This government will immediately cease military operations, recall the German troops to the Reich's frontiers, and embark on peace negotiations. In this manner it will obtain peace and once again place Germany on an equal footing with other nations."

6. Shall I say that Miss Winter's reports that every German prisoner of war in Russia has been invited to get in touch with the Free German Committee, that many of the German officers are genuine converts, that prisoners are asked to answer questionnaires regarding the form of a future German Government—all this, and more, is a tissue of poisonous lies?

But should I so recant, just where do we stand? Would I be convinced? Are the Soviets? or the American public?

Students of the Soviet Government know that changes of policy are accompanied by purges and covered by denials that the previous policy ever existed. This has had a queer effect on the Soviet history. During the lifetime of the Soviet-German pact things were said by Mr. Molotoff, which were afterward expunged from the record. Soviet histories pass over the role of Trotsky in the Russian revolution, I doubt whether future Russian histories will contain any account of the long period of close collaboration between the Reichswehr and the Red Army in the 1920s, nor of the official Soviet attacks on the Treaty of Versailles. But what can be unsaid in Moscow cannot be unsaid in New York, and it is extremely silly of the Soviet press to try to do it. Here it is not a crime to change one's mind.

But the falsification of history cannot be maintained in a world of free journalism, whose writers try to discern truth, and are not organized propagandists for one policy or another. To try to present this search for truth as a conspiracy will fail. American journalists are intelligent enough to see through such transparencies, and so is the American public.

Pollution Is Choking Our Rivers and Suffocating Our Streams

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. MUNDT. Mr. Speaker, under leave extended me by the House, I am inserting in the RECORD at this point an interesting and informative discussion of pollution which appeared in a recent issue of the Washington Post and which was written by Richard L. Neuberger. It merits careful reading.

On the opening day of this Congress I introduced H. R. 519, known as the water pollution control act. It is now before the House Committee on Rivers and Harbors. I am hopeful that as we get a little further into the session it will be possible for the Rivers and Harbors Committee to hold hearings on H. R. 519 and all other legislation dealing with the pollution problem. Shameful pollution is verily choking our rivers and suffocating our streams. It is to be hoped that the Seventy-ninth session of Congress will take definite action to remedy this sorry situation.

Mr. Neuberger's article follows:

CHOKING OUR RIVERS

(By Richard L. Neuberger)

DELIBERATE WASTE OF RESOURCES

Thoreau said the only good river was one you could drink. Not so long ago this description applied to nearly all the streams in America. A wayfarer could quench his thirst in any of their quiet reaches. Now thousands of the rivers of the land are toxic to man and lethal to fish. A drink from them involves risk of a hospital, if not of life itself. Trout, salmon, and sturgeon cannot find enough oxygen to billow their gills. These rivers are open sewers, clogged with chemicals, offal, sawdust, and sludge.

The white man has done this—deliberately, consciously, and with full knowledge of the consequences of his acts.

In the days when the Indians roamed America, the rivers were pure. Only an occasional landslide or flood ever clouded them. They teemed with fish. Elk, moose, deer, and bison drank at the fords. But civilization—a civilization that we like to think of as the most highly developed in history—has fouled and polluted the waterways which drain this continent.

PROGRESS MADE

For many years two Government agencies have denounced the practice of turning our rivers into chutes of industrial waste and urban excretion. These agencies are the United States Public Health Service and the Fish and Wildlife Service of the Department of the Interior. One is concerned with the effect of pollution on humans, the other with its effect on fish and animals. Both effects are threatening and harmful.

During the past decade progress has been made in the prevention of pollution. Yet the Public Health Service has warned, "The discharge of raw sewage and of inadequately treated effluents into our coastal and inland waters still constitutes a sanitary problem of great importance, as is attested by the deteriorated condition of many natural waterways in the more populous sections of the country."

Epidemics of typhoid, malaria, dysentery, and similar diseases have focused public attention on pollution and its dangers. So, too, has the disappearance of valuable fish runs which once contributed materially to the Nation's food supply. As a result of these epidemics and the dwindling of our aquatic life, a number of large cities have installed modern sewage-disposal plants. Rivers formerly heavy with sludge and offal are being restored to their natural condition.

Yet despite these advances, approximately 3,300 communities in the United States still dump raw sewage into nearby rivers, brooks, and creeks. Another 240 communities dump raw sewage into adjacent salt water—the ocean, bays, or inlets.

Nor is ordinary sewage the only source of stream pollution. Dredging and strip mining fill rivers until they are the color of rust. Careless grazing and lumbering take away the grass and roots anchoring the soil; the result is invariably a waterway choked with silt and top soil.

SILT COAT

"With the advent of civilized man and unrestricted deforestation," reports the Fish and Wildlife Service, "the erosion problem has become gigantic, and the effects of the loads of erosion silt carried by inland streams overwhelming on aquatic life in many places."

This silt coats the riverbed with a stifling layer that kills the plants, insects, and crustaceans on which fish depend for food. It also clogs the gills and respiratory tubes of the fish themselves. In addition, it reduces the oxygen content of the water. "Silt and sewage are far more deadly enemies of our fish than an angler's hook," says Dr. Ira N. Gabrielson, Director of the Fish and Wildlife Service.

Pollution has killed billions of fish. Some rivers even have been stripped of their fish life completely by city sewage and industrial wastes. Sludge from towns, coke companies, and steel mills has destroyed so many fish in the Niagara River for example, that in recent years hundreds of tons of dead fish have been observed floating in the current. The Buffalo River, which discharges into the Niagara, is heavy with waste products.

This recklessness has not been confined to the eastern part of the country. Even in the wilderness of the far West, pollution has worked its grim havoc. The sludge from zinc and lead mining has annihilated countless trout, perch, and bass in the Cœur d'Alene River of Idaho. Sewage from the city of Portland has blocked off the autumn salmon runs in the Willamette River of Oregon.

Yet the outlook is not hopeless. Public opinion can force many reforms and the cleaning up of America's rivers is one of them. New sewage-disposal units have been built in recent years in Illinois, Maryland, Minnesota, Texas, and Wisconsin, placing those States near the head of the list in the adequate treatment of wastes. Of course, sewage-disposal plants are not so necessary in the far-flung fastnesses of the West, where there are comparatively few cities and not much manufacturing.

HOPEFUL STEP

To protect the salmon runs of the Columbia River, the Bonneville Dam Power Administration has inserted in its contracts with industrial plants a clause requiring the disposal and reduction of waste products. If chemicals and sludge harmful to fish are dumped in the river, the Power Administrator, Dr. Paul J. Raver, can cut off the offending factory's electric supply. However, this forward-looking step has been canceled somewhat by the fact that mushrooming war communities near the new factories are not compelled to demonstrate the same care in the disposal of sewage.

Various wildlife and conservation groups throughout the country are demanding that post-war public works funds be withheld from cities which pollute neighboring rivers and bays. This could be a threat that would force the construction of thousands of modern sewage-disposal units. Hotels, laundries, and other large users of water have often resisted the move to build such units, because it is a customary plan to prorate the cost of the sewage-disposal plant against all local water bills.

Whether it stems from open sewers, belching factories, or eroded hillsides, pollution is a threat to practically all the values which the Nation holds dear. It imperils health and life. It reduces the food supply. It mars the landscape and blots the countryside. It lowers pride in countless cities. It is a symbol of man's inability to protect the resources with which this Nation has been endowed.

Our rivers rank near the forefront of the wealth of America. They provide hydroelectricity, navigation, recreation, irrigation, and drinking supplies. Much of the history of the United States is told in the tale of the Hudson, the Potomac, the Columbia, the Colorado, the Mississippi, the Missouri, and the Ohio. To foul and choke and stifle these great waterways with wastes and excretion constitutes a sin against America itself.

Contributions of Farmer Cooperatives to the American Economy

EXTENSION OF REMARKS

OF

HON. CLIFFORD R. HOPE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. HOPE. Mr. Speaker, under unanimous consent granted me to extend my remarks in the RECORD, I include an address recently delivered by Mr. John H. Davis, executive secretary of the National Council of Farm Cooperatives.

This is a most interesting and informative address and should have a wide circulation. I hope that it will be read extensively by American businessmen, particularly small businessmen, as an antidote to the fantastic propaganda being circulated by an organization calling itself the National Tax Equality Association:

CONTRIBUTIONS OF FARMER COOPERATIVES TO THE AMERICAN ECONOMY

(By John H. Davis)

I want to talk with you today about farmer cooperatives with an eye to the post-war period—particularly about how they can strengthen American agriculture and at the same time contribute to the general welfare in terms of a high standard of food, clothing, and shelter.

During the war period the American farmer has achieved the greatest production record in history both in terms of quantity and quality. He has done this despite the lack of adequate equipment and an acute shortage of labor. The whole Nation—yes, the entire Allied world—can be grateful to the American farmer and his wife and children for the food and fiber they have produced. Our health and energy to do the war job—even our ammunition of war—have depended on 11-hour days in field and barn.

Our agricultural plant has expanded roughly 130 percent of pre-war. Our supply of such commodities as cotton, wheat, and wool will be very large and we will have dislocations in production of certain so-called war crops such as peanuts, soybeans, and hemp. All of this will necessitate major adjustments. But agricultural production does not adjust too easily. In this respect it is like taffy which stretches but does not contract automatically.

And there are other factors peculiar to agriculture which will complicate the farmer's job after the war. For one thing there will be no backlog of demand for food or fiber when the war ends such as will exist for such industrial products as automobiles, refrigerators, typewriters, and a thousand other items, because the farmer, unlike many industrial producers, has been producing the same things during the war that he did before the war and will produce after the war. The big difference is that he has been producing more of them.

Another general characteristic of agriculture is that the amount of most farm commodities consumed does not increase greatly when prices fall. One might liken the effect of even a small surplus on farm prices to a rowboat loaded until it is floating deep in the water. Each additional pound of cargo affects the depth of the boat in the water very little up to the point that the density of the boat about equals that of the water. Then as little as 1 pound more weight will sink it.

In a similar way, the domestic market will absorb food and fiber at fair prices up to a certain point. But a surplus beyond this quantity causes prices to drop all out of proportion to the extent of the surplus. In other words, large surpluses of foodstuffs are not moved by letting prices sag.

More land may come under cultivation and there is every reason to believe that higher yields and improved varieties of agricultural commodities will be developed and better techniques of production designed. This may well mean that fewer people will be needed to produce sufficiently for pre-war levels of national and world consumption.

FARMING A SMALL SIZE ENTERPRISE

Still another characteristic of agriculture is that most types of farm production do not lend themselves to large-scale operation. The widespread areas involved in farming, the peculiarities of animal husbandry, the combining of livestock and crop enterprises, the changes with the seasons, the advantages of family labor are all factors which tend to make the assembly line technique uneconomic in agriculture. We have more than 6,000,000 farm units averaging less than 100 acres each. It is difficult for so many farmers to decide on business policies as do industries composed of relatively few units, unless a system adapted to their needs is

found. The cooperative type of organization particularly suits the farmers' needs.

Fundamentally the economic reasons why farmers have formed cooperatives have been to give these widespread individaul farm operators the advantages of large-scale wholesale buying and marketing operations practiced by industrial and commercial enterprise. While production has been proved more efficient on an American family farm than any other farming system in the world, the buying of production supplies and marketing of farm products is most economic when farmers pool their volume. They can bring down the net cost of production by no other practical means at present.

However, at the same time we are worrying about surpluses of food and fiber there is widespread want for such articles, even within our own country. Nutrionists have recently written volumes which on the face of them appear to show that if everyone in the world had adequate food and clothing we would have to considerably increase agricultural production even above that of 1944. This, in general, was the theme of the Hot Springs Conference.

There are some, who seeing the shadows ahead for agriculture, are calling for severe production control. This is the road we took in the thirties and we may be hard pressed to take it again. If we are, I hope that we do so with our eyes open and mindful of the fact that adequate production is the basis of all new wealth. To the extent that needed production is curtailed or unbalanced we reduce our potential standard of living. This is a fact of which we should remind ourselves over and over again. I submit that full employment must be predicated by a high level of production.

AGRICULTURE AND INDUSTRY MUST MOVE TOGETHER

A corollary to this is that agriculture cannot successfully continue on a basis of full production if industry is on a basis of controlled production and sustained prices such as existed during much of the twenties and thirties. I hope that business and industrial leaders will ponder this fact seriously. I am convinced that we simply cannot have full employment if any great segment of our economy attempts to maintain wartime price structures by controlled output. This goes for the prices of labor as well as for industrial items and other goods and services. I think that it is high time that we learn that the mere manipulation of production and prices is no substitute for developing an adequate and sustained demand. A high rate of industrial production and employment is basic to any satisfactory solution to our agricultural problems.

While I do not pretend to know the answer to all our economic ills and problems, I believe that an important part of the answer to so-called overproduction and unsatisfied consumer demand lies in more efficient distribution at all levels both in agriculture and industry. One is almost forced to this conclusion when he stops to reflect that up until the war we were able to produce more of many things than we were able to put into use. One cannot but suspect that part of our problem lies in the throttling effect of hoarded patents, monopolies, hoarded labor, soldiering on the job, excess profit margins, excess handling margins, excess salaries to management, and wage increases out of proportion to increased labor efficiency—all of which have increased the price and reduced effective demand. Management, labor, and capital have all contributed to these inefficiencies in our industrial and trade economy.

ECONOMY THROUGH COOPERATION

It is in reduction in the cost of production supplies and distribution that farmer cooperatives can and will, I believe, render yeoman service in the post-war period. Through their cooperatives, farmers reduce their cost of production, and of marketing—thus freeing purchasing power for the other things which industry produces. Through their cooperatives, farmers foster better grading and standardization of products, better varieties, improved storage facilities, and reduced costs and increased values to the ultimate buyer. In brief, cooperatives have narrowed distribution margins from both ends—thus making both the producer's and consumer's dollars go farther.

The New England supply of many foodstuffs depends on large quantities of imported feeds, fertilizers, machinery, and other farm supplies shipped in and distributed by farmer cooperatives to members, who turn them into the quarts of milk found on the doorstep, bags of potatoes, baskets of apples, crates of berries and cranberries, cans of fruits and vegetables, cartons of eggs, crates of vegetables, tobacco, and many other products sold in stores and shops. That these products are graded and fresh and dependable and available at the lowest percentage of the consumer dollar on record, is due in no small measure to self-starting efforts of farmers through cooperative effort.

As I see it, the principles underlying farmer cooperatives stand foursquare with the principles of democracy, free enterprise, and the Golden Rule. They might have originated wherever, and only wherever, free people with restricted resources get together to meet a common need. One would expect cooperatives to be prominent in New England. Certainly the principles were early exemplified and perfected in the development of the New England church societies and the town meeting. Certainly the cooperative principle is well established in insurance societies, thrift and savings institutions, and both urban and farmer cooperative associations serving the area now. The cooperative society is basically a thrifty conservator of both human effort and shy economic resources. It provides a working economic and cultural democracy for small operators who pool their common interests, and yet maintain their individual independence and dignity.

Basic to farmer cooperatives is the fact that they are owned and controlled by the people they serve—for the most part the stable, sound, middle classes who are the backbone of America. Farmer cooperatives contribute to the building of America as we want it to be, by making for a stronger, self-reliant rural economy. Through cooperatives groups of farmers work together to supplement their primary tilling operations and husbandry. Those interested in maintaining the free enterprise system at its best can render no greater contribution than to strengthen the family owned and operated farm. Farmer cooperatives do this by providing the economies of large-scale buying and marketing at cost for the operators of family farms.

And may I say here that mere size of a cooperative is no test as to its genuineness. In many lines today cooperatives must deal in large volume to be efficient. The truth is that if you will examine a so-called big cooperative closely you will usually find that it is composed of many local units all operated by the farmers they serve. The ownership of bona fide cooperatives is never by a small group at the top but by the farmers at the bottom. Farmers engage in processing and manufacturing through their cooperatives, provided it is related to their production or marketing operations. However, it is not farmer cooperative policy for a group of farmers to engage in the manufacturing or merchandising of things they neither produce nor use in farming operations and contend that such is a farmer cooperative enterprise.

COOPERATION IN OTHER FIELDS

I think that to get the true perspective of the use of the cooperative principle we might consider the scope of nonprofit business in America. In addition to farmer and consumer cooperatives, it includes mutual insurance companies, mutual savings banks, mutual building and loan associations, mutual telephone companies, mutual irrigation companies, mutual power and light associations, and a host of others.

For the most part, farmer cooperatives constitute a different method of doing business than does the ordinary corporation. The relationship between the patron and the association is that of principal and agent. This is distinctly different than the relationship between an ordinary corporation and its stockholders, or for that matter between a cooperative and its stockholder. In neither of the latter instances do the courts hold the relationship to be that of principal and agent. In other words, the savings dollar of a cooperative belongs to the patron and not the association, whereas the profit dollar of a corporation belongs to the corporate entity itself. The investor in a corporation frequently does not patronize the business at all. He is interested in profits from use of his capital only. This is the fundamental difference between a savings dollar and a profit dollar—they result from different methods of doing business. Both partnerships and proprietary businesses resemble cooperatives in that the title to earnings is vested in the partners or proprietors, respectively, and not in artificial business entities. Of course, the source of their earnings is not from within their membership patronage as in the case of a cooperative.

In view of this, a strange thing about the groups of tradesmen and businessmen who have been inveigled into opposing cooperatives is that many of them—in small communities almost all of them—are partners or samll proprietors of private business enterprises and are not corporations. And here I want to pause long enough to say that not by any means are all business interests fighting cooperatives—in fact, those that are no doubt constitute a minority. Nor is there any strong evidence that it is big business that is fighting cooperatives. The truth seems to be that certain competitive trade groups are the most active.

COOPERATIVES PAY TAXES

Still another point often overlooked is that savings of cooperatives do not escape income taxation since the patrons must include such earnings as income in their personal tax returns. The same is true of small proprietors and partnerships.

Of course, farmer cooperatives contribute to the support of Government and pay taxes on about the same basis as other businesses. To mention some of them, they pay State and local property taxes, excise taxes, transportation taxes, social-security taxes, unemployment insurance taxes, use taxes, import taxes, and occupational taxes. In general they even pay income taxes to the extent that they issue stock or do business with nonmembers for profit. If a way could be found of taxing the farmer's income while it is in the custody of his cooperative, farmers might be forced to reduce deductions and overcharges (commonly referred to as margins) to the point that there would be no savings. This, of course, would result in a competitive situation which cooperatives historically sought to avoid.

I am sure that if the American public fully understands what farmer cooperatives are, what they stand for, how they operate, and how they have contributed to our national interest in the field of foodstuffs and materials, they would have undivided support in their efforts to narrow the gap between farm and urban tables and clothes closets.

THE COOPERATIVE STORY MUST BE TOLD FAR AND WIDE

In the last analysis the big job of education necessary to bring about a general understanding of cooperative principles must

take place at the grass roots. This means that local cooperatives and cooperative leaders must do a large part of it. There is plenty of room for rural educational services to contribute unbiased research and information on the whole subject of farmer cooperatives. The major task of the national council, as we see it, is to supply information, coordinate the activities of local units, and assist them so that the total efforts will add up to an effective national operating program.

We are not attempting to do the whole job from Washington. Nor are we in any sense attempting to advise regional, State, and local groups as to just how they are to go about the details. Because conditions differ so from State to State and area to area, we believe that our work of organizing and developing a program for cooperatives should leave details to be worked out locally. Experience already indicates that this procedure is sound. I wish I had time to tell you what different groups are doing.

There is another phase to this educational process which is equally as important as that of teaching cooperative principles to the public and to national leaders, and that is getting farmer cooperatives and cooperators to realize the limitations and responsibilities of cooperatives under the law. In this connection questions of law, adequate records, allocation of reserves, revolving funds, patronage refunds, and the responsibilities of patrons for reporting taxable equities not paid out in cash are particularly important. Cooperative leaders and officials should discuss these and related matters among themselves and with their attorneys and accountants. We must keep these matters straight with members and with the public. I am glad to report that State councils of farmer cooperatives are rendering excellent service in this direction.

In carrying forward this or any other program for farmer cooperatives, we must provide for active participation of the farmer members and patrons themselves. Farmer cooperatives do not exist as ends unto themselves, but as means to a sounder economy based on free enterprise. And in the same way farm organizations at the local, State, regional as well as national levels can justify their existence only by serving the farmers of America within the pattern of the general welfare.

FREE ENTERPRISE MUST ENDURE

One of our main concerns is that lack of understanding of the farmer cooperatives may be used to drive a wedge between agriculture and business which will be to the detriment of both groups and may take a generation or longer to overcome. It would be extremely unfortunate if these two large segments of American free enterprise should dissipate their strength baiting each other at a time when the system of free enterprise is engaged in a serious struggle to maintain itself. Both agriculture and business should devote their entire energy in constructive positive action rather than trying to hinder the other fellow. Such efforts might include improving the preservation and storing of perishables, such as by dehydration and quick freezing; improving the tools and equipment for cultivation and harvesting; improving the effectiveness of disease-control equipment and materials; improving distribution between farmer and consumer; finding new uses for farm products; enlarging our foreign outlets. The ultimate reward will go to those who fill each minute with 60 seconds of constructive effort rather than destructive horseplay. Farmer cooperatives are prepared to go ahead, and if others lag, will set the pace and lead the way toward processing higher-quality foods and distributing them widely and efficiently.

I believe that in the post-war period, agriculture, industry, and labor must each look beyond its own narrow restricted interest to the common good and the national welfare if we are to achieve our greatest potential success as a nation. An Army officer stated recently that if an army's strategy is right it can make mistakes in tactics and still win the battle. I submit that the correct over-all strategy of industry, labor, and agriculture should be to work directly for the good of the whole Nation. If this strategy is used, the Nation will win out in the post-war period in spite of mistakes in tactics. If this fails, there is the alternative of more governmental controls and ultimately stateism.

Finally, the need of the country for sound rural institutions was never greater nor the opportunities more challenging than they are today. Farmer cooperatives shall not lack for public approval if they are sufficiently diligent in proclaiming sound objectives to the world and in maintaining sound cooperative principles. Cooperatives should not seek competitive advantages through special privileges under the law, nor should the public be denied the advantages inherent in the cooperative way of preparing and delivering its food and textiles. A prominent business leader recently struck a true note when he said that the expansion of farmer cooperatives in the future will depend in a large degree upon how well other business serves the farmer's needs. I see no inherent conflict between farmer cooperatives and other business. From the farmer's viewpoint, the future of farmer cooperatives will depend on what is done through cooperatives, not on what is done to cooperatives.

Memorandum on Anti-Semitism

EXTENSION OF REMARKS

OF

HON. SAMUEL DICKSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. DICKSTEIN. Mr. Speaker, under leave to exend my remarks in the RECORD, I include the following article by Mr. Philip Wylie, appearing in the American Mercury for January 1945:

MEMORANDUM ON ANTI-SEMITISM

(By Philip Wylie)

"Hitler," said the man beside me on the train, "was right about one thing: the Jews. After the war, we'll have to take care of them."

I asked how. "Build furnaces and burn them?"

He was shocked. "Deport 'em. Segregate 'em. Maybe, later, sterilize 'em. Painlessly," he added. "I'm no murderer. We've got to do it in a decent, democratic way."

Up a couple of seats, Sam Morris rose and went to the smoking car. I know Sam. He has served in the war. He has stars on his ribbons. He is an athlete. He wasn't afraid of the man beside me; indeed, he could have licked him with one hand tied behind his back. But Sam is a Jew. Sam cannot argue with a man who has already condemned him; Sam's persecutors are out to get Sam—not to hear him.

So it was up to me to answer. To me, because I'm a Gentile. To me, because anti-Semitism is a sickness of Gentiles' minds that has nothing whatever to do with Jews.

"What business are you in?" I enquired.

His name was Johnson—though he wasn't one. ("Johnsons" are the honest, generous, bright people of this world.) He was an engineer—built skyscrapers—a graduate of a leading technical institute.

"What's the matter with Jews," I asked, "that isn't, equally, the matter with other human beings?"

Mr. Johnson made the standard accusations. Launched them like clay pigeons, which they are, and I shot at them with the truth any Gentile can discover in a day, if he respects himself enough to want to be guided by truth instead of prejudice. It's an easy list of facts. Everybody ought to learn it.

The Jews, said Mr. Johnson, own everything—the banks, Wall Street, the newspapers, the movies, the theater, radio, and so on.

They don't, of course. Less than 5 percent of the population of America is Jewish. Jews do not own 5 percent of the national wealth. A mere half dozen of Wall Street's myriad gentile bankers could buy out the banking interests of all the Jews.

He thinks he can distinguish Jews. That, too, is part of his easily demonstrated illusion. He cannot point out the Jews in the car where we are sitting—with accuracy. He tries. He skips a tall, pug-nosed blond who is the son of a rabbi. He indicates a dark, hook-nosed gentleman who presently begins to converse in Italian—with a red-headed Italian woman.

Here, Mr. Johnson is partly the victim of our poor American education; he has not had the energy or will to remedy its oversights, after growing up. In spite of the fact that America understood its biologically superb and idealistically wonderful function as a melting pot, America's little red schoolhouse never taught the similarities of people. It concentrated on their differentness. The fact that people are alike fundamentally—with the same feelings, the same power for good, the same capacities for harm—is always lost through classroom attention to dissimilarities.

That blunder is a terrible one. Mr. Johnson—and you and I—were told to think of Eskimos not as uneducated people but as strange, primeval creatures. Frenchmen were presented to us as total foreigners. Germans were a quaint folk who dressed in their native costumes. The fact that the Chinese used chopsticks instead of knives and forks set them far apart from us in our young minds; we did not learn that they were philosophers, scientists, inventors, and city builders thousands of years before there was a London. Fiji Islanders were described to us as cannibals—as remote in space as Mars and, in heredity, as monkeys.

Mr. Johnson still thinks of people in those terms. An accent or a different trouser-cut is to him non-Johnson and therefore sub-Johnson. Since he has held pieces of this attitude from the first grade on, he seems to sense a reality in anti-Semitism. Mr. Johnson nowadays is distressed. The years of his life have been lived amid wars, plague, holocaust, depression, and global madness. He is a "practical" man; if he could find persons responsible for his travail, he would destroy those people or, at least, their power. He yearns to locate the responsible ones because he yearns for peace, progress, and prosperity. He wants of life only an assurance that he will be able to go on putting up skyscrapers at a reasonable profit. In all of that, he is sincere and he is justified.

II

To be told that the Jews have been man's nemesis suggests a name for the wanted culprit; it satisfies his tribal feeling; it falls in line with the prejudices he was casually given in the name of education, and Johnson doesn't really know anything about Jews. He is acquainted with a dozen, likes two or three, and knows the rest only through crowd-competition on streets and subways and in the offices of a big city. He never studied the history of Jews—or Johnsons, for that matter. He knows nothing of Jewish religion and cares to know less. Since many

people say that the ruinous estate of man is the fault of Jews, he is willing to listen.

And people have been saying it everywhere in America at the top of their lungs. Nazis, for instance. Nazis, bigots, and the deathless mass of mere ignorant haters. But many of these people have a shrewd reason for saying so. If they can make enough Johnsons believe that the Jews are enemies of mankind, they can keep American eyes turned from man's real enemies—their own conniving organizations. Hitler accomplished that. He consumed the minds of the Germans and of millions of Europeans and even of many Americans by lighting in them the fire of anti-Semitism. Then, while they were blazing with irrelevant fury, he closed his iron fingers upon Europe. That is today the hidden policy, and the hope, of various organized and articulate minorities in America. It has always been and will always be. If enough of us can be convinced of the baseless notion that our troubles stem from Jews we will go blind, politically and socially, and intellectually. Then we'll be easy pickings for the plotters. Because the mind that believes in anti-Semitism has ceased thinking, it is perfectly prepared to accept the next lie, and the next. Catastrophe comes that way. Look across the Atlantic and see.

Curdle the common sense of the common people and you can capture them. Anti-Semitism curdles every cranium in which it reposes for just one simple reason; it's not based on truth—any truth. And it is not based on religious principle, either. Mr. Johnson professes Christianity. I mentioned the fact to him. He has that all figured out. The Jews, he says, slew Jesus.

Now, according to the Bible, the Romans put Jesus to death to satisfy the indignation of certain dogmatic Jews who resented Him. Even then, as we can see, the Jews were divided among themselves. Mr. Johnson is still holding today's Jews responsible for that 2,000-year-old tragedy. If you told Mr. Johnson that he was to blame for the comparatively recent Gentile assassination of Lincoln, he would think you were crazy. But that is what he is saying about the Jews. You see, Mr. Johnson's sense of justice isn't doing business any more.

That makes Mr. Johnson a pretty dangerous person—no matter how earnest he is, or how good to his children, or how honest about his taxes, or how ingenious with steel, concrete, and a drawing board. Part of his brain is already on the sucker list of various groups of people who are out to sabotage the rest of it.

All the failings of mankind, failings of which he secretly knows we are equally guilty, have been loaded by Mr. Johnson upon the Jews, as if only they could sin. That lack of heart and wisdom is man's snidest weakness—a weakness born out of blind fear and its answering rage. Numberless times in history we have punished one group in spiteful vengeance for calamities caused by the greed and stupidity of all groups together. That is the real source of every calamity. But Mr. Johnson is eying Jews with the old, lop-sided malignance if he can, will hide from himself his portion of responsibility for today's disasters by this outrageous claim that one small fraction of humanity is to blame.

That will undo his senses, for Mr. Johnson has thereby made himself believe he is afraid of Jews. Afraid! In the last 10 years, they have been cut a quarter or a third. Hitler's ashpits contain the murdered millions. Here in America, their number is so small that even if they were armed and organized, we gentiles would be feeble indeed to fear them. And they are without organization. And they have no arms at all. Through the centuries they never armed themselves. They fought bravely in hundreds of wars for the lands they hopefully adopted. But they were always the few. They loved peace. For this they have been bullied. So Mr. Johnson is actually growing afraid of nimself—or of mankind in general. Scared by the suspected intellectual consequences of a creeping hypnosis—anti-Semitism. It is a very self-frightening state of mind. I know. Some of my best friends are anti-Semites.

III

To be an anti-Semite is to repudiate our Constitution and to deny every syllable of meaning in the story of America. People don't think of that, but every law we have made is based upon the principle of the individual and his rights. Talk does not often lead to chaos. But there has never been a chaos that was not preceded by talk, much talk, all prejudiced, ignorant, underground, dishonest and evil. Unlike Mr. Johnson, most of my mean-talking friends are not planning action. The very thought would make them shudder. But the tone their muttering takes is the sort that can stampede idiots—and has done so a thousand times. They are people who should not stand as poor examples to the less intelligent, the less decent, the vicious and the morally deficient.

They just don't reason. They tell me—all of them—that some of their best friends are Jews and that there are "fine" Jews. Five minutes later, they belittle and demean Jews—thus thrusting knives in the backs of those very friends. They are too empty-headed to perceive that, by everybody else, their Jewish friends are automatically included in their debasing generality. That is one measure of their stupidity. They ought to know, if they are over 10 years old, that the proportion of "fine" people among Jews and Gentiles runs just the same, to the last decimal point. And they should remember that whenever a group is disenfranchised or destroyed, mankind then has the tyrant or executioner to deal with. In such a case it would be—themselves. Finally, they should have been taught this truth: Those who persecute one group inevitably turn upon others. I daresay 50 percent of the anti-Semitic talkers known to me are also anti-Catholic. Suppose their words, which have the same darkling color that made pogroms in Europe, become reality? Against whom would they strike next?

But—let us half-suppose it. Like the shrewd hill-billy in the fable, let us turn propaganda into imagined reality. If it happened—what? Suppose all Jews vanished at the stroke of midnight. What evil would be undone? What blessing would result? What's this talk all about? If Mr. Johnson drew a graph, what would it reveal?

The next day there would still be as many crimes committed, per capita. Prisons would remain proportionately as full. The number of corrupt politicians and office-holders would hardly diminish by a handful. We would lose ground in the war, because the Axis would lose nobody, but hundreds of thousands of good allied soldiers would be missing. No problem of the peace would change a hair-breadth. Even Palestine would then be the Arab problem it always was. The strikers would still strike; John L. Lewis and Petrillo would still haunt us. There would be 5 percent more food—but distribution would buckle; 5 percent more material for clothes—and nobody much left to make clothes, and, of course, taxes would rise 5 percent. The movies and the radio wouldn't miss a beat, in spite of what the anti-Semites have said. Only the quality would suffer. The market would sag, but not collapse, for there are not that many Jews in it and the average Jew is poor, in spite, again, of the illiterate folklore.

No gain. What loss? Well—most of the people who make America laugh would be gone, for one thing. And many of the people who touch our hearts every day. Poets, writers, dramatists, journalists, best-loved radio and movie stars and musicians—thousands upon thousands of these. You can write the list yourself. We would lose hundreds of great philanthropists, myriads of lesser ones, and hundreds of thousands of the kindest people in America, besides. Our culture would be knocked out and the throat of our mirth would be cut. Quite a loss. We would lose so many scientists that the progress of man would be set back the length of your whole lifetime. We would lose the millions of babies and adults their research was going to have saved. We would lose thousands of men now thinking up instruments of victory—and all the uncountable engines they would have invented for the empire we call the future. If we had caused this, we would lose the Constitution and its Bill of Rights, our security, everybody's liberty, our self-respect, and the immortal souls of those who had contributed to the measureless catastrophe even by talk. "Information, please," would be wiped out. We would lose Barney Baruch and Hedy LaMarr and Albert Einstein, and Walter Lippmann, and—

That's what anti-Semitism is.

And what I have had to say about it is not merely what I think. It is what I know. What can easily be known by you, to the great relief and enlargement of your soul, if you are anti-Semitic. It is the truth known by me, Philip Wylie, a sixth-and-seventh generation Scotch-Irish-Presbyterian American. It is written by me of my own free will in this great, freedom-loving land, because I, too, love liberty and justice and truth. Written by me, who, because I am part Irish and because Caesar's legions stayed so long in Ireland, am also part wop. Who because I am of that Iberian descent, am also part spic and possibly (as every living man may be) in some minute part, Negro. By me, whose ancestors on the British Isles, 70 matings' distant in my direct line, were cannibals—as, definitely, were yours if you claim British blood.

During the days when our sires were stewing each other's joints in clay pots—a mere 70 grandfathers back—the Jews had been civilized for 2,000 years. They had already given to humanity its first concept of organized law and the stupendous idea of one God. At that time they also produced the most deeply-discerning and articulate philosopher the world has ever known—a Man who spent his life teaching people the whole truth about human relations: "Do unto others as you would have others do unto you."

National Farmers Union 1945 Program

EXTENSION OF REMARKS

OF

HON. EDWIN C. JOHNSON

OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, February 26, 1945

Mr. JOHNSON of Colorado. Mr. President, as a long-time member of the Farmers Union, and having, among other capacities, served as manager of a Farmers' Union cooperative for 11 years, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of the Farmers Union program for 1945.

I have received from the Public Printer an estimate of the cost of printing, which indicates that the matter will cover approximately 4⅓ pages of the CONGRESSIONAL RECORD, at a cost of $249.60.

There being no objection, the program was ordered to be printed in the RECORD, as follows:

NATIONAL FARMERS UNION 1945 PROGRAM

The lives of our finest men and women are being spent on the world's battle fronts to give us, and all peoples, another chance to organize a people's peace. If we fail, they are betrayed.

Their hopes and the hopes of millions in every land add up to nothing less than a new world, a world that will make sense to returning veterans and to all productive workers, a world in which they can buy back with their incomes and wages the products of their hands and brains and their eternal courage, a world in which abundance for the first time spells health, security, and happiness not breadlines, foreclosure sales, bonus marches, and "made work" at pauper's wages. The world they want will deny the rule that because we can always produce too much we shall never have enough except in war. The world they seek will accept abundance and know how to use it for people.

Most of those who fight and produce to win this people's war have promised themselves that this time we shall not again lose the peace after we have won the war.

If permanent world peace is to be a reality, we must maintain the level of production, prosperity, and practical international cooperation which we have achieved in war.

We must have a world organization with power to enforce decisions against those who disturb or break the peace.

There must be full employment, with all it means in terms of prosperity, security, happiness, and good will among men and among groups in our society. It must be maintained by private enterprise if possible, by a combination of private enterprise and public undertakings if necessary.

Neither of these two goals can be won and held without the other; they are dependent upon each other; we must work for both at once.

The President and the Congress that our democracy has just elected must be held to these principles. This we propose to do, and we call upon all other people's organizations and individuals of good will to cooperate in that endeavor. We note this statement of the citizen's responsibility made by the successful candidate for the Presidency on the eve of the national election:

"When the ballots are cast, your responsibilities do not cease. The public servants you elect cannot fulfill their trust unless you, the people, watch and advise them, raise your voices in protest when you believe your public servants to be wrong, back them up when you believe them to be right."

So be it. We have done so; we will continue to do so.

Actions, and failures to act, in the coming year will largely determine the lives and well-being of farm people, and all people, for many years to come. In a democracy such as ours, all responsibility rests with the people. In an organized society such as ours, people must effectively express themselves between elections through organizations of their own choosing and whose policies and officials they control and direct. We shall continue vigilant, quick to criticize, to support, and to recommend.

As a people's organization of, by, and for working farm operators and their families, we, the democratically elected delegates to the thirty-ninth annual convention of the Farmers Educational and Cooperative Union of America (commonly known as the National Farmers Union), on this 22d day of November 1944, at Denver, Colo., do adopt the following program for the coming year, the same to be the guide and mandate for united action by our members, our officials, and employees, and by affiliated cooperatives which Farmers Union members, as stockholders, build and control as instruments to achieve the whole program of our educational and cooperative union.

We pledge our continued utmost efforts to bring the war to its speediest complete victory.

We pledge ourselves to work with men of good will everywhere for an international organization which, through political and economic cooperation, can bring about an era of enduring peace and universal brotherhood. This time we must not fail.

We pledge ourselves to use every resource at our command to create and implement a post-war program that will continue full production and full employment, allowing for the employment of all returning veterans, and that will provide full distribution and full consumption.

We pledge ourselves to cooperate with other forces to eradicate discriminations and prejudices of race, religion, nationality, color, political belief, or other distinguishing features that now expose any minority to persecution and intolerance.

We pledge our renewed faith in, and loyalty to, the basic principles that have guided the Farmers Union down through the years as sound means of building this world of abundance for ourselves and our families, and for families everywhere. Those principles are expressed in the Farmers Union creed and the triangle representing education, cooperation, and legislation as equally important and inseparable means of achieving these ends.

We pledge ourselves, and call on all farm families not yet members of our union to join with us in our pledge, to support the way of farming by farm families secure on the land as basic to American democracy, and to maintain stable farm prices at a fair exchange value as an essential of security.

We pledge ourselves to cooperate with other groups, including such parts of organized labor, business, and industry, such technical, professional, religious, political, civic, and welfare groups as concur in the objective of abundance for all to be attained by creating a system of genuine free enterprise. Such a system will include:

The right of people to cooperate freely to supply their needs;

The rights of businessmen and firms to compete freely to supply wants of customers;

The right of all the people to use freely their Government to curb monopoly and scarcity practices, together with the people's rights to provide through Government action for the common good, wherever, whenever, and to the extent that common good cannot be, or is not being, provided by private and cooperative enterprises.

In conformity with this general statement, we adopt the following specific proposals:

I. LAND POLICY

A. Action to save family-type farming

For years, farm organizations, legislators, and Government spokesmen have declared that family type farming must be made the basic pattern of American agriculture, that it is the basis of rural democracy and thus one of the foundation stones of democracy for all Americans. Yet, with few exceptions, no realistic effort has been made to advance this pattern in agriculture.

It is time to act to check and reverse the dispossession of American farm families from the land. Fair competition must be established within American agriculture. To do this, we propose the following program:

1. To extend the Wages and Hours Act to include all farm-wage earners, and the amendment of that act to set a minimum of 60 cents an hour, the least that will sustain purchasing power necessary to meet dietary needs. The same minimum must, of course, be used in computing the payment for the labor of a farm family in determining the price formula to be used in production agreements, as set forth under B below.

2. To extend the Social Security Act to cover all farm people, including farm labor.

3. To extend the National Labor Relations Act to include farm labor and employers of more than two wage earners for more than 30 days in any calendar year.

4. To direct greater production by family-type farming through adoption of a conscious and deliberate policy of assigning progressively larger shares of needed production goals and of such farm-program payments as may become necessary to family-size operations.

5. Vastly increased use by farmers themselves of cooperative mechanisms not only in the purchase of supplies and the assembly and marketing of farm products in their original state but the use of such mechanisms in every stage of the entire farming, marketing, processing, and distribution cycle. This must be done with utmost speed to take advantage of:

(a) The surplus materials and war plants already being made available; and

(b) To survive against the competition of factory-type farming in the rapid transformation of farming practices that accumulated technological development has stored up and will release when the war ends. Government aid in credit, in technical assistance, research, and the release of patents and know-how must be available, starting at once.

B. Production and pricing

For the immediate post-war period as well as for a long-time agricultural program there must be adopted a sound land policy which fortifies the security of farm families on the land. Family-type farming can best conserve and enrich the irreplaceable natural resources and develop and enrich the human resources of people made free and happy.

The Farmers Union has long called for such declaration of land policy as the basis of all farm programs. But to date all agricultural programs have been developed on an emergency basis without consistent regard for their effect on the pattern of farming and rural life.

Therefore, we propose the following items to carry out a policy for the benefit of farm families:

1. Production agreements voluntarily entered into by individual farmers and the Federal Government to assure production of an abundance of needed foods and fiber for a high and rising standard of living and for use in cooperative trade with other nations; and to provide a stable price structure based on fair exchange value.

While such agreements would take each participating farmer into partnership with the Federal Government, they would be administered by democratically elected farmer committees who would have full authority to pass on the justice, equity, and practicality of each agreement (which is to be adapted to each individual farm unit) and thereafter to cooperate with and assist participating farmers.

2. Such fair exchange value requires the determination of a new price formula, including, in addition to accepted costs:

(a) Payment for the labor of the farmer and the working members of his family at prevailing American wage levels, and payment of necessary hired labor at the same levels, but in no event less than the statutory minimum herein recommended;

(b) Insurance of production costs and of minimum income of farm families;

(c) Costs of proper conservation and soil building practices.

Such a price formula should be a yardstick of fair income.

3. In such production agreements, the Government stipulates in advance of the growing season the prices at which it will support the market for production pursuant to these agreements. These prices are to be set so as to secure production in the kinds

and quantities determined to be needed to meet the nation's nutritional and health requirements, plus ample reserves, and with due allowance for sales in international trade, on an orderly, not a dumping, basis.

4. Adjustment of farm lands into sound economic family-type units is part of basic policy in all such farm programs as here proposed.

5. As a possible supplement to the steps set forth in this section, we authorize the National Board and other officers to study carefully the principles and method of a National Agricultural Relations Act designed to enable farmers to use their own bona fide organizations and genuine cooperatives effectively to bargain collectively for fair exchanges prices, to determine the contract price at which various commodities would be sold and to determine the schedule of premiums and discounts for grade and quality; these collective bargaining agreements to be binding upon all participating sellers and buyers, with appropriate enforcement procedure under Federal statute.

C. Credit

If America is to have an economy of abundance, in which family-type farmers are to produce the bulk of fiber and foodstuffs, then such farmers, and those desirous and capable of becoming family-type farmers—veterans, war workers, and young farm boys—must have access to adequate low-cost credit which will enable them to acquire economic farm units, sufficient modern machinery and foundation herds, decent housing, and provide for conservation practices, production and marketing needs. Such a credit system will enable a farmer to utilize more efficiently his farm plants and his energies, meet his obligations, and give him an incentive to participate in more abundant living.

Such a credit embraces a wider use of private, cooperative, and Government-guaranteed and Government-sponsored credit agencies than has yet been utilized in agriculture, and the development and use of more trained practical personnel for credit work and credit supervision in agriculture.

Such credit structure should provide:

1. Long-term real-estate loans amortized over a long-time period with low interest rates based on actual cost of the money; such loans to be made on noninflated values, geared to production potentials, for proven farming ability and good character, and, where needed and desirable, at substantially full value.

2. Long-term loans for all types of agricultural credit, except feeder operations; repayments to be based on recognized depreciation schedules.

3. Credit for farm housing and other farm buildings, to provide adequate farm plants based on needs of each farm unit with repayments spread over enough years to permit the use of buildings and improvements while paying for them.

4. Credit for modern machinery and equipment on a depreciation basis, if desired.

5. Adequate credit for livestock, seeds, fertilizer, household improvements, farm electrification, and other farm supplies to enable the farm family on an economic farm unit to enjoy efficient operation and desirable rural life.

6. Adequate credit to attain objectives in conservation and better soil management.

7. Extension of the ever-normal granary type of credit (C. C. C. loans) to agricultural commodities not now covered, such as livestock and poultry products, dried and frozen products, etc.

8. Use of nonrecourse loans as a risk-sharing device in encouraging production of any necessary high-risk crops needed for immediate production without resorting to undue price incentives.

9. Long-time credits for hospital and clinic facilities, such health centers to include a cooperative prepayment plan for adequate health care. We recommend that the banks for cooperatives expend their facilities to cover health-center needs.

10. Credit for educational loans, on a deferred payment plan tied to the income-producing years, for college educations and other training.

11. To safeguard the extension of low-cost, long-term credit for all of these types of loans we advocate the creation of an extensive insurance program covering all farm production hazards.

D. Temporary action

Pending enactment of such a land and credit policy as the foregoing, we reiterate our support, as in past years, of present agencies such as Farm Security Administration, Commodity Credit Corporation, Farm Credit Administration and its various agencies, the Agricultural Adjustment Administration, War Food Administration, and other action programs endorsed by the Farmers Union in the past, each with adequate appropriations and each to be continued within the Department of Agriculture.

II. CONSERVATION OF NATURAL RESOURCES

A. Regional development

The measure of abundance and standard of living which can be attained in our Nation has no real limitation, unchangeable by man, except the extent of our human and natural resources. They must be developed to their fullest and finest uses for the people of our generation and all the generations of men to come. They must not be dedicated to exploitation, waste, or idleness by the few.

The Tennessee Valley Authority, a new type or regional government corporation without bureaucratic powers but with full responsibility for the best development of a valley's resources, has proved in 10 years' existence the vast superiority of unified development of the valleys of our Nation over development by exploitive interests or numerous unintegrated bureaus of Government.

We endorse the extension of the T. V. A. principles to all the river valleys of America, beginning with a Missouri Valley Authority, which is now before Congress.

We oppose the passage of any legislation by Congress whatsoever that would in any way jeopardize or foreclose the full development of the basin by a Missouri Valley Authority and of other river basins using T. V. A. principles. The establishment of this Authority should be followed by others in the Arkansas, Colorado, Columbia, St. Lawrence, Delaware, Mississippi, Ohio, and other major basins in the order of their importance.

We direct that major attention be given to this important and symbolic struggle in which bureaus of government, power monopolists, the railroads, the Fertilizer Trust, and other greedy and avaricious, selfish interests are conspiring to prevent development of our God-given heritage in the interests of all the people.

We oppose alteration of the 160-acre limitation on individual lands served by Government irrigation development as proposed in the so-called Elliott amendment to the river and harbor bill. Our Government must not subsidize large commercialized farming.

B. Soil conservation

We urge all farmers, union members, in areas not now in soil conservation districts, to work for the creation of such districts, and urge a speeding up of soil conservation work. We propose that surplus war equipment such as heavy-duty tractors, bulldozers, blades, scrapers, and other equipment adaptable to soil conservation work be transferred at the earliest possible time from the War and Navy Departments to the Soil Conservation Service.

C. Technology

1. We urge extensive research by the United States Department of Agriculture into full possibilities of the mechanization of family-type farm units to the end that the smaller units can secure the full benefit of modern science and technology. Further, we urge that the Congress make adequate appropriations for such purpose.

2. The age of abundance is dependent on technical progress and on the wise use of natural resources; it is the duty of government, therefore, to conduct extensive research into all phases of technology to the end that all technical progress may be made available to all the people. In peace, no less than in war, no cartel or patent agreement should be permitted to stand in the way of use of technical, scientific, and natural resources.

3. We particularly urge immediate preparation for the conversion of agricultural products into alcohol and other industrial products, and to develop processes and plants for making various synthetics out of lignite, clays, and other mineral resources of the Nation.

III. CONSERVATION OF HUMAN RESOURCES

If an era of abundance is to work for the common good, the human resources of our country must be conserved and developed so that every individual may have opportunity to develop his potentialities to the fullest. To this end we propose:

1. Health service

Adequate public-health services for rural areas, clinics and hospitals in rural areas, mobile health units, and the inducements needed to attract doctors to these areas, and a program to provide such facilities and opportunities, through private and cooperative action, supplemented by Government funds where necessary.

In such a program, the $264,000,000 worth of hospital equipment already declared to be war surplus should be used for equipping such hospitals and clinics in areas not now being served.

Such a program should supplement the medical-care provisions of the social-security program expanded along the lines proposed by the Wagner-Murray-Dingell bill.

2. Standard of nutrition

An adequate diet for the maintenance of health for all as a prerequisite of an age of abundance for both producer and consumer, including nutritional education, hot school lunch plan, stamp plan, or similar plan to insure those not yet receiving a minimum standard of income the food necessary for an adequate diet.

3. Farm homes

Decent housing for all farm families, including tenants; rapid post-war extension of rural electrification; creation of a national agency to develop rural telephone service in areas not now served on a basis similar to rural electrification, and to be made a part of R. E. A. if possible and practicable.

4. Federal highway program

We urge an expended Federal-aid program to bring all-weather roads to all family-type farms in America; we particularly urge that wartime technological advances and economies in the building of roads and air strips be made freely available for use in this road program and for other purposes; we urge early enactment of the pending Federal roads program with amendment to provide larger amounts for farm-to-market roads and to do away with the 50–50 Federal-State matching provision. We urge that the Federal Surplus War Property Board, by policy and regulation, provide for the leasing of surplus road-building machinery to smaller governmental units, such as township boards, such leases to be at the nominal sum of $1 a year.

5. Public education

Education in America must be free, not only in terms of money, but also in terms of academic standards. The extension services in many States are not only subservient to a private pressure group but are contaminating academic standards within the land grant colleges themselves, also involving them in improper use of public moneys, and in political, social, and economic partisanship. As a first step in the overhauling and coordination of our agricultural education system, we demand the complete separation of the Extension Service from any private organization.

We further recommend that: The Farmers Union launch a study of changes and improvements needed to provide educational facilities that will better meet the needs of farm boys and girls in preparing them to develop a more attractive and satisfying rural living for themselves and their communities. Included in this study should be consideration of means of making the rural teaching profession more attractive to those capable of assisting in community development, by providing longer tenure, better salaries, and more desirable living opportunities. Federal aid should be extended to schools on a basis of need without disturbing the autonomy of existing school administration.

College education should be made available to all by providing for those who need it, payment of tuition and living expenses.

6. Veterans

To enable returning servicemen to reestablish themselves in civilian life under a post-war age of abundance, we propose:

A public-appraisal system to be made available to any veteran or any other person to determine the true productive value of any property to be acquired;

Extension of medical care and health services, now available to veterans, to members of veterans' families;

Early completion of a survey in every agricultural township in the Nation by local community groups to determine the availability of land of family type units to provide homes for returning servicemen and war workers.

Immediate action by Congress to authorize acquisition, by option or otherwise, of available land suitable for resale or long-time lease with option to purchase, to veterans and others.

Amendment of the G. I. bill of rights to provide full rehabilitation, vocational training; and educational opportunities for all service men and women.

Since young men and women who are old enough to die in the service of their country should be deemed old enough to vote, we recommend that the voting age be lowered to 18 years.

7. Recreation

Recreation, long recognized as socially desirable, is now seen to be economically necessary to maintain and develop morale and the national health and well-being. We urge further development of cooperative recreation, including community centers, which the Fermars Union has pioneered, and that such recreation facilities be available to people of the entire community under community sponsorship and control but financed where necessary with public funds.

8. Minority groups

All minority groups must be given protection against discrimination as to employment, voting franchise, education, and living conditions in the transition period and must be given opportunity to participate fully in the coming age of abundance. Specifically, this requires abolition of the poll tax as a prerequisite for voting, and the establishment of a permanent Fair Employment Practice Commission.

IV. THE PEOPLE'S MOVEMENT

Organized farm families, as well as other people's organizations, must have a voice and participate in the creation of a durable peace and the creation of an economy wherein we can live with abundance and like it. To that end we propose:

A. The making of a people's peace

1. Farmers and wage earners should be represented at all peace conferences through delegates chosen from their respective organizations.

2. Full participation by the United States in a world organization based on political and economic justice, governed by law and with power to enforce its decisions, and in which all peace-loving nations, great and small, cooperate.

3. Full adherence to world trade policies that will give all peoples everywhere real opportunity to make a decent living. Trade barriers contributed to World War No. 2 and, if permitted to continue, will bring on World War No. 3. When peace comes we must freely exchange substantial parts of our farm and industrial production with other nations, receiving from them products which we need.

In applying such a policy, groups adversely affected must be provided economic assistance and technical information in order to bring about a sound readjustment within the national economy. This must be provided before, not after, adoption of such policies.

4. We commend the ground work that has already been laid to accomplish these ends by the proposed international organization for food and agriculture, monetary stabilization, trade, air, shipping, communications and world security itself. We urge all farm people to support ratification by the Congress of such proposals for building the structure of world peace.

5. We oppose any attempt to establish permanent peacetime conscription while plans are being formulated for a decent peace that will make nationalistic militarism unnecessary.

6. We oppose the forced rule of any people by a foreign power, except such supervision as the United Nations may find necessary in relation to aggressor nations in the interest of world peace.

B. The post-war economy

1. Compensatory fiscal policies: For farm people, as for all other people, the prime need is for full employment, the same full use of our human and material resources in peace that we have achieved in war. This can be achieved only as the people, through their Government, plan and provide that their Government will take up the slack whenever private and cooperaitve enterprise fall short of investing sufficient capital to provide jobs and markets for all. The Farmers Union has proposed that the Federal Government do this through a planned program of useful public works and services, the necessary funds to be obtained by taxation based on ability to pay. We are proud that the Farmers Union first proposed this practical plan whereby the people would guarantee themselves full production, full employment, fair distribution, and full consumption at fair prices and wages.

2. We urge that farm-machinery production be given high priority in reconverting plants from war to peace production and, in any event, that production for the next crop year be expedited.

3. To attain an abundance in the post-war economy, Congress must create an agency to formulate and recommend methods to utilize all national resources to the fullest extent and enact legislation creating agencies with full responsibility for developing such resources.

4. A Government-cost analysis of every product and service in our farm, industrial, commercial, professional, and service operations so that every person may be informed of the true costs of the goods and services he buys and sells.

5. We commend the National Farmers Union representatives for writing into the Surplus War Property Act provisions to protect family-type farming, to give farmers and farmers' cooperatives equal access to surplus goods and plants on terms that will make it possible for farmers and their cooperatives to acquire such goods and facilities. We demand that in the administration of this act these provisions be carried out in letter and spirit. We commend National Farmers Union President Patton for exposing the now discredited Baruch reconversion plan and the late Surplus War Property Administrator, Will Clayton.

6. The Farmers Union position on price control and in opposition to inflationary propcsals has been proven sound and is now recognized as desirable for the reconversion period by those who fought us bitterly. We recommend that the Price Control Act be extended for 2 years after the war, when inflationary pressure of more than $120,000,000,000 in liquid funds will be competing for scarce manufactured goods.

7. We again urge long-overdue congressional action to prevent further land-price inflation by enactment of a 100-percent capital-gains tax on increases in sale prices over purchase prices on all farm lands purchased subsequent to the introduction of such legislation and sold prior to 5 years after the war, with appropriate allowance for interest on investment and improvements.

8. We renew our demand for removal of all interstate trade barriers, including discriminatory freight rates, trucking regulations, licensing, etc. We continue to oppose proposed increases in freight rates on agricultural products now pending before the I. C. C. We urge standardization of State insurance laws and we oppose exempting the $10,000,000,000 insurance industry from the provisions of the antitrust laws.

9. The right to cooperate—

(a) The right of farmers to cooperate to serve their needs at cost is being challenged in a well-financed campaign by antidemocratic forces who speak of free enterprise but who seek to misrepresent and discredit free enterprise when exercised by peoples' cooperatives. Most conspicuous of these forces is the National Tax Equality Association, whose stated objectives are to destroy the income-tax exemption status of bona fide farmers cooperatives and to deprive cooperatives of access to Government credit on terms comparable to those available to big private business enterprises.

Farmers' cooperatives pay all other taxes paid by other enterprises. Having no profits and no income, since savings are the property of its members, not of their agent, which is the cooperative, a cooperative cannot pay taxes on what it does not have—profits—and it should not be required to pay taxes on savings belonging to its members.

The National Farmers Union, which alone among farm and cooperative organizations immediately denounced and opposed the requirement, now written into the Federal Tax Act, that farmers cooperatives file income-tax returns, will continue to lead the fight to protect cooperatives and their members against double taxation. We shall gladly cooperate with other groups whose purpose is to protect bona fide cooperatives from all such attacks.

(b) Another instance of discrimination against farmers marketing organizations is the rule of the American Association of Railroads providing for equal allotment of boxcars, in case of short supply, to elevators at a

shipping point regardless of their past shipping volume. We deplore the edict of the Interstate Commerce Commission which puts the force of that Federal regulatory agency back of this unfair rule and direct our National Board and officers to take whatever steps are deemed advisable to correct this situation.

10. Taxation: We have always favored taxation based on ability to pay and have opposed in principle all forms of general sales and consumer taxes. A powerful and plausible drive is now being made to shift more of the post-war Federal tax burden from those best able to pay to the lower and middle income brackets. If tax programs now proposed should become law, the tax burden inevitably would be shifted to sales and other taxes which would limit consumption.

While recognizing the need for carefully revising Federal tax policies, we oppose beginning such revision by wiping out corporation and excess-profits taxes before the various loopholes, evasions, and inequities are cured. We specifically oppose the preposterous proposed constitutional amendment that would limit all income, gift, and inheritance taxes to 25 percent and thereby wipe out two-thirds of present taxes on higher incomes and inevitably bring on extortionate sales taxes.

11. Department of political information: Because final effectiveness of our legislative program requires that our members be currently informed of the record and attitude of public officials and candidates for public office on issues pertinent to the Farmers Union total program, we authorize and direct the national board to create a department of political information which will keep us informed on the record of all public officials. We recommend that State unions consider the establishment of such a department.

12. We endorse the proposal to put Congress on the air so that all citizens may have direct complete current information about the proceeding of their Representatives and Senators.

13. We urge that there be no closed hearings before congressional committees, except when national security is involved.

14. Cooperation with other people's organizations: We recommend and again endorse the Farmers Union policy of cooperation with other people's organizations in areas of agreement, which policy has proven its value in saving programs of vital importance to farm people and the general welfare.

V. THE FARMERS UNION MOVEMENT

As members of the Farmers Educational and Cooperative Union and stockholders in its various affiliated cooperatives, we mandate ourselves, local, county, State, and National officials and personnel of Farmers Union cooperatives to adhere to the following prog am in order that the Farmers Union may play its rightful role in the people's movement and promote greater unity in the total Farmers Union program for farm families:

A. Farmers Union cooperatives

1. To make the tremendous growth of all our Farmers Union cooperatives in the past few years even more effective in our total program, we urge every Farmers Union member to direct his entire patronage to all the various activities which Farmers Union members have set up and which they control.

2. We commend the National Farmers Union board and officers for creation of the National Farmers Union Service Corporation and recommend that it conduct a campaign to raise capital from Farmers Union members and cooperatives to the end that it may more speedily develop needed services, including a Farmers Union automobile insurance company serving members in the various States.

3. We recognize the necessity of the producer to carry business operations, on the cooperative plan, into the distributing as well as the productive field, whereby we are able, by taking our production to the consumer, to eliminate all unnecessary labor and profits.

Recognizing this charge to develop cooperatives placed upon our organization in 1902 by the founders, we commend our National Farmers Union for the establishment of national insurance services through National Farmers Union Service Corporation, and direct Farmers Union organizations everywhere to give due emphasis to the organization of cooperative services in geographic areas not now properly served and in fields of service not now developed by Farmers Union cooperatives.

4. Ties of Farmers Union cooperatives to the Farmers Educational and Cooperative Union are paramount to any other affiliation because such activities have been built by Farmers Union people as component parts of an organization of, by, and for farm families. Affiliations of Farmers Union cooperative activities with other cooperatives in associations, federations, and joint undertakings are highly desirable if they do not jeopardize ties with the Farmers Union or harm any other Farmers Union cooperatives.

Farmers Union members determine broad policy through county, State, and national conventions and authorize their elected officials and personnel employed by those officials to speak for them in accordance with those policies.

Farmers Union cooperatives support this Farmers Union program and must not permit any association or federation to which they belong to speak for them in conflict with any part of this program. No cooperative organization can truly represent farmers on general farm policy because farmers can only make their wishes known through organizations which they specifically join for that purpose.

We favor cooperation between our affiliated regional cooperatives and other bona fide cooperatives to the fullest extent possible without sacrificing their relationship to the parent organization and to other Farmers Union business activities which Farmers Union members have built as instruments to use in advancing the total Farmers Union program. Such relationships include, of course, payment by regional cooperatives of the 5-percent educational fund to State Farmers Unions and the encouragement of existing and new local cooperatives to check dues of shareholders in the Farmers Union and payment of the 5-percent education fund to State and county unions.

We direct our national board and officers and personnel to keep us informed regarding progress and relationships among the various co-operatives as these may concern the total Farmers Union program.

B. National Farmers Union education

Democracy depends on education. Knowledge of social and economic problems will provide the understanding necessary to achieve the goals set forth in the National Farmers Union program. We know that an organization is not strong and useful solely because of large membership, but that our real strength derives as much from the quality of membership in understanding of our total problems as it does from numbers. We recognize that the National Farmers Union has held together and has grown in numbers, and even more, in standing and power in American life only because, in good times and bad, the informed and educated membership has known and understood, and has not been divided by enemies of family-type farming and democracy.

It is the responsibility of the National Farmers Union department of education to assist with leadership training and to make available study materials for all age groups on long-range policies and current issues affecting family-type farmers.

It is also the responsibility of this department to interpret in new areas the Farmers Union program.

1. The necessary mechanism to carry out the aims of the Farmers Union educational program consists of the National Farmers Union department of education, with its director and advisory council appointed by the national board, who work through the State, county, and local directors of education. This department is set up for the purpose of developing a pattern and building mechanics for the Farmers Union program of education. It is a coordinating center for the maintenance of a uniform pattern for education throughout the union. In States where this plan is not in effect, it should be put into operation.

To further carry on leadership training, the program of camps, schools, and conferences should be developed and enlarged. This training should be made available to leaders in all departments of the Farmers Union.

2. Action officials: In order that current information on all phases of the Farmers Union program may be given to the members and that a maximum number of people in the local may be active, we recommend that the full slate of action officials be appointed in all local and county organizations. These will include legislative, cooperative, and membership officials, in addition to the program director and education director. The Action Guide, which specifically states the duties of these action officials, should be distributed to all Farmers Union locals.

In order to assist them in carrying out their work, information should be available to these action officials through the program service, State and national union farmers, and through direct contact with the State and national offices.

3. National study topic: The uniform study topic for the year 1945 shall be, Recreation. This is the first-year topic under the 5-year plan of study, designed to give the junior a well-balanced background for adult membership. The 5-year plan includes: The first-year study on recreation and its place in community life and total living; the second year, the Farmers Union as a people's movement and a family organization; the third year, the farm family and its relation to government; the fourth year, cooperatives and their relation to a people's organization; and the fifth year, techniques in building the Farmers Union. Throughout the 5 years there will be coordination of special projects and actual practice in each field under study.

In addition to the national study topic, the National Farmers Union Department of Education will prepare study packets and one-night discussion outlines on current topics such as: M. V. A., Rural Health, Social Security, and Housing.

4. The Department of Education should continue to follow up the work of other departments, such as organization, as rapidly as personnel funds permit.

5. We urge county and local leaders to include a program of education and recreation of special interest to the group of young people, who, although adults, are not completely acclimated to the local, thus encouraging them to participate in the regular activities of the local.

6. Farmers Union study units should be placed in public schools to the greatest extent possible. In some states, this has already been done through the approval and recommendation of the State superintendent of schools. Many county Farmers Unions have provided kits of study materials for their county libraries and county schools. We recommend that the county education directors bring our study materials to the at-

tention of the superintendents of schools in their counties.

7. Insofar as possible, Farmers Union study materials should be adapted for use of those members who have special language difficulties. Primarily, this calls for a simplification of terminology, but in some instances, there should be actual translations into Spanish, French, etc.

We commend National Educational Director Gladys Talbott Edwards for her vision and leadership in developing a program of education, and her inspiration that has given the leaders the will to put that program into effect.

We also commend all those who have given voluntarily of their time and energy in making this educational program a vital part in rural community living.

C. Organizational recommendations

In the difficult days of post-war adjustment and momentous decisions, family farmers will need, as never before, a voice that is powerful and respected in the legislative and administrative offices of the Nation. Expanding membership is consequently vital. It can be achieved, in effective numbers, only by the cooperation of every division and every member of the National Farmers Union. We recognize the challenge to increase membership all over the Nation implicit in the splendid accomplishments of South Dakota, North Dakota, Oklahoma, and other States which, this year, have led membership increases. We pledge our local, county, State, and regional organizations to accept that challenge and to strive with renewed devotion to attain new membership goals in an all-out effort to match and exceed the membership gains of the past 3 years.

1. We direct the National Farmers Union to promote and assist in the development of the Farmers Union movement in new States and regions in the Nation.

2. We direct our established State and regional divisions to devote the limit of their finances and strength to enrollment of new membership in their areas, assisting county and local organizations in conducting Statewide membership drives.

3. We note with gratification the phenomenal expansion of the National Union Farmer, and urge that our members and divisions use it extensively in connection with their organization work to educate nonmembers in the objectives and activities of the Farmers Union. Further, we urge all members and divisions to cooperate in its further expansion in circulation as soon as paper rationing is relaxed, by conducting circulation campaigns.

4. We urge the intensification of leadership training, to the end that understanding of national problems, techniques of organization and administration of our union shall be improved.

5. We take pride in the development of our national staff and in its outstanding competency. Farm people deserve and must have the services of men and women second to no other organization if our goals and immediate objectives are to be won. We direct the maintenance of our staff at its present high degree of excellence and its expansion, to render additional services, as conditions permit.

6. The National Farmers Union shall again plan and conduct a campaign through Farmers Union divisions and cooperatives to provide, in addition to other income, a national budget of $100,000 to support the services and the continued expansion of our organization.

7. The national officers are directed to appoint a drafting committee of five persons, to be in session at the national office 1 week before the national convention. Recommendations and resolutions are to be presented to the national secretary-treasurer and be in his hands at the national office 1 week prior to the convention so that they may be considered by the drafting committee.

No resolution may be presented from the floor of the convention without a majority vote of the delegates.

This directive shall be printed in the next issue of the National Union Farmer and again 60 days prior to the next national convention, so that all State, county, and local farmers unions and members shall have had adequate notice.

To supply the means and achieve the ends set forth in this program, we, the delegates to the thirty-ninth annual convention of the National Farmers Union, dedicate ourselves and the farmers union members we represent.

We will devote all our thought and energy and cooperative effort to bringing complete military victory at the earliest hour.

We will, in thought and action, seek a sensible, just, and lasting peace.

And we will cooperate with all people of good will in this and other lands to make that peace a peace of abundance for all within this Nation, and increasingly, among nations, so that it will endure and grow stronger through the generations yet to come. Insofar as it lies within our individual and organized power, and with the help of a Supreme Being, we shall prove our faith by our works.

The Philippine Commonwealth

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. STEFAN. Mr. Speaker, yesterday's news that General MacArthur had turned the civil government of the Philippines over the Philippine Commonwealth was received with much rejoicing by the American friends of the Filipino people. Those of us who assisted in the inauguration of the Philippine Commonwealth Government at Manila in 1935 are thrilled by the ceremonies that occurred in the Philippine capital yesterday. This action by a great American general is the essence of the determination of the Government of the United States that complete freedom and political independence shall come to the people of the Philippines.

The original Tydings-McDuffie Act provided for complete independence of the Philippines on July 4, 1946. This act was later amended by the Congress to give the President of the United States authority to declare complete independence of the Philippine Islands after the enemy has been driven from the Islands and when constitutional processes may have been restored.

The first step toward Philippine independence was taken in Manila when the Philippine Commonwealth Government was inaugurated. The amendment to the Tydings-McDuffie Act was the second step. The third step was taken on Leyte Island when General MacArthur turned over the civil functions of government of that island to President Osmeña. The fourth step was taken yesterday in Manila when, in historic setting, MacArthur restored civil government to President Osmeña.

We now join our Filipino brethren in the fervent prayer that the fifth and final step can soon be taken—taken when the enemy has been driven from the islands and the President of the United States has proclaimed complete Philippine independence.

Americans and Filipinos fighting side by side for freedom have shed blood in many battles from Bataan to Australia and back to Bataan. Americans and Filipinos are fighting together against the common enemy at the very door of Tokyo. Victory will be the inevitable outcome of this great effort, and that victory will make sure and secure the dream of Philippine independence. That victory will release the will of the American people to aid the rehabilitation of the Philippine Commonwealth.

In this hour of rejoicing in Manila I join with many others in this Congress in sending to that great American soldier, Douglas MacArthur, and his heroic forces, to President Sergio Osmeña, and our colleague, the Honorable CARLOS ROMULO, and the people of the Philippine Islands, our felicitations and prayers for early victory and freedom.

Rural Electrification Administration

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 27 (legislative day of Monday, February 26), 1945

Mr. SHIPSTEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Whither R. E. A.," written by Judson King and published in the March 1, 1945, issue of the magazine Public Utilities Fortnightly.

I have received from the Public Printer an estimate of the cost of publication in the RECORD, which indicates that the cost will be $160.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHITHER R. E. A.?

(By Judson King, director, National Popular Government League)

The introduction in both Houses of Congress of an identical bill to take the Rural Electrification Administration out of the Department of Agriculture and restore it to its original independent status, the resignation of Harry Slattery as Administrator, and the appointment of Aubrey Williams to succeed him, once more focus attention upon the fortunes of that popular but troubled agency. Its fate has been hanging in the balance for nearly 2 years as the result of a heated controversy over its administration, of importance enough to hit the front page even in wartime.

What is the present status of the controversy? What effect will the appointment of Mr. Williams have upon the movement for

independence? What, from the viewpoint of businesslike, honest, nonpartisan management, is best for R. E. A.? In short, where should we go from here? These are the queries posed for answer by the editor of the Fortnightly as a contribution to his forum in which are printed articles on all sides of utility problems.

I am glad to comply. The Fortnightly, though not an advocate of public power, has been fair in its treatment of this R. E. A. matter, and reported accurately and impartially the hearings of the Senate committee investigating the administration of the agency. This committee, it will be recalled, last June reported an "emergency situation within R. E. A." due to disintegration and confusion which "is an indictment of the administration under the Agriculture Department"; recommended restoration of its independence "at the earliest possible date"; and introduced a bill (S. 2034) to take the agency out of the Department. The report was unanimous, and was signed by the late Senator Smith, Democrat, South Carolina, Senator SHIPSTEAD, Republican, Minnesota; Senator AIKEN, Republican, Vermont; and Senator Gillette, Democrat, Iowa. The Presidential campaign intervened and the bill died with the Seventy-eighth Congress.

THE PARLIAMENTARY SITUATION

The bill in exact text (S. 309) was reintroduced on January 15 by Senator SHIPSTEAD on behalf of himself and Senators AIKEN and WHEELER (Democrat, Montana), and referred to the Committee on Agriculture, of which Senator THOMAS, of Oklahoma, is now chairman. The next day it was introduced in the House by Representatives A. S. J. CARNAHAN, Democrat of Missouri, and HENRY O. TALLE, Republican of Iowa. These bills are numbered H. R. 1505 and 1532, respectively, and were referred to the Committee on Interstate and Foreign Commerce, the chairman of which is Representative CLARENCE F. LEA of California. From its inception rural electrification has always been considered a nonpartisan issue, and bills and appropriations have been handled in Congress upon that basis. The introduction of this bill for independence by members of both parties further emphasizes that fact.

Senator THOMAS has appointed a subcommittee, with himself as chairman, to hold hearings on the bill. The other members are Senators RUSSELL of Georgia, ELLENDER of Louisiana, and BILBO of Mississippi, Democrats; and SHIPSTEAD of Minnesota, and AIKEN of Vermont, Republicans. The House subcommittee had not been announced at this writing.

As to the appointment by the President of Mr. Williams as Administrator, the five Members of Congress who have introduced this bill state that they are urging the freedom of R. E. A. as a matter of principle distinct from personalities; that they are concerned over the permanent, as well as the immediate, welfare of the agency; and that they will present evidence and press for the passage of the bill regardless of who is Secretary of Agriculture or Administrator, and also in complete disregard of partisan politics.

It is no secret that Senators Shipstead, Aiken, and Gillette, who did the hard work on last year's investigation (Smith was preoccupied with his campaign and BILBO did not attend or sign), did not take kindly to the contemptuous propaganda campaign set going by Secretary Wickard, his Department heads in R. E. A., and the officials of the N. R. E. C. A. They contended that the probe was a farce, one-sided, and merely a political smear campaign to embarrass the Roosevelt administration. The committee indicated in its interim report that the scant appropriation allowed it (it was only $7,000) permitted the employment of an utterly inadequate staff to sift a mountain of official documents, and did not allow the holding of hearings in St. Louis and elsewhere as they desired, or even to bring witnesses to Washington. With Senators SHIPSTEAD and AIKEN who are thoroughly aware of the shortcomings of the inquiry to date and who know the subject as did Senator Gillette, made members of the new committee, it is practically certain that a mass of new evidence will be produced, with special attention paid to the political and managerial activities of Secretary Wickard since the interim report of last June, which seems to have had no effect upon him.

THE KEY TO THE CONFLICT

The parliamentary situation cleared, we may now turn to a brief review of Mr. Wickard's administration of R. E. A., which led to the present crisis in its affairs. It can be cheerfully recalled that for the first 4 years of its history R. E. A. had the proud reputation of being one of the cleanest and most efficient nonpartisan agencies of the Government. It was then independent like T. V. A.

When it was put under the Department of Agriculture in 1939, Administrator Carmody promptly resigned, sensing political interference and because, as he told the Senate committee, in essence, no executive could efficiently administer an action agency like R. E. A. in the highly competitive utility field if he had three or four "layers of authority" over him. Its troubles began when Secretary Wickard on his accession to power in 1940 promptly started to dismantle the united organization which had been built up and trained by Carmody for this experiment in cooperation, and to distribute its functions among the various divisions of his department. Administrator Slattery, who succeeded Carmody, objected because he perceived the political purpose behind these changes. Wickard's efforts to eliminate him began at that time, and mainly for that reason.

At bottom this whole ruckus over R. E. A. stems from the Secretary's violation of the letter and spirit of the Norris-Rayburn Act of 1936, which provided independence in management and nonpartisan, nonpolitical administration.

Indeed, a measure of independence was retained in the Reorganization Act of 1939, since it gave the Secretary of Agriculture only general supervision and left execution to be exercised by the Administrator. At that time Chief Counsel Nicholson, of R. E. A., in a requested legal opinion, advised Mr. Slattery in substance that he, not Wickard, was legally responsible for the day-to-day management of R. E. A. and its various divisions. He has since apparently revised his opinion in favor of Wickard. (See Senate subcommittee hearings pt. 3, p. 792.)

There follows some account of the attempts to turn R. E. A. and the co-ops into a political machine; the inevitable repercussions of this policy upon the business management of R. E. A.; and the enlistment of R. E. A. personnel in the campaign to defeat the Senate bill removing the agency from Wickard's control.

ENTER DEPUTY ADMINISTRATOR CRAIG

One of the mosrt astonishing aspects of Mr. Wickard's official conduct has been his close connection with the heads of the National Rural Electric Cooperative Association before mentioned (N. R. E. C. A. for short), an organization which now claims a membership of 547 of the 815 R. E. A. cooperatives.

Note that I say "the heads," because the member cooperatives were not consulted upon, and did not authorize, the actions of these gentlemen which have been so severely criticized.

The writer is a strong advocate of a democratically controlled national organization. The Public Utilities Fortnightly of July 8, 1943, carried an article of mine which first exposed the actual origin of this association, and the facts of which were substantiated later by testimony before the Senate investigating committee. This evidence proves that the National was the brain child of Deputy Administrator Robert B. Craig, who secretly and in violation of Department regulations, planned and promoted it.

Considerable attention must be paid in this article to the varied activities of Mr. Craig, because in his present position he, in my opinion, is still a factor to reckon with and because all known evidence points to the conclusion that it was he who sold Mr. Wickard a bill of goods as to the potential political influence and power of the infant N. R. E. C. A. It was the Secretary's second major bungle, the first being his move to integrate the staff and functions of R. E. A. with the Agriculture Department.

Any sound adviser could have told him that the cooperatives in this respect are nonpartisan in fact and spirit and would resent any attempt to influence their votes. Also, such a move would boomerang, as far as the general public was concerned, about as effectively as an attempt to commandeer the Sunday-school vote.

Returning to the National, it was incorporated March 20, 1942, by 10 men, hand picked by Mr. Craig, who became its officers—Steve C. Tate, a Georgia businessman-politician and head of a co-op, president, and E. J. Stoneman, a co-op president of Wisconsin, vice president. It was these officers and board members who, upon their own initiative, brought charges against Administrator Slattery last year in an effort to eliminate him and secure an Administrator more to their liking.

This after he had refused to endorse a now notorious insurance scheme they were promoting. Mr. Wickard joined in this effort. There was widespread resentment among the cooperatives over this high-handed business. Many withdrew and some 260 of them never have joined the N. R. E. C. A.

But right at the time when the prestige of these leaders and promoters was imperiled, Wickard promptly threw his support behind them and in particular ex-Congressman Clyde T. Ellis of Arkansas, its executive manager. Mr. Craig was permittted to resign, without prejudice, on May 5, 1943, while still under official investigation, and 10 days later accepted a position with the Copperweld Steel Co. at a salary reported to be $20,000 a year.

Mr. Craig was succeeded by William J. Neal, president of the New Hampshire Cooperative.

TEAM PLAY BEGINS

Active team play then began. Unlike Slattery, Neal was not a "disturbing" factor, but obeyed Wickard's directives most satisfactorily. When Mr. Neal spoke before State-wide meetings of the co-ops, Mr. Ellis was allowed to appear with him, and made long speeches against Slattery, with Neal never protesting. On the other hand, when Mr. Ellis attended regional meetings of the national association, Mr. Neal would appear, usually accompanied by several headquarters and field men of R. E. A. This cooperation continued right through the campaign of last fall and still continues.

It is germane to note that in April of 1943, when Wickard began working with Mr. Ellis and his board, the National claimed a membership of 494 cooperatives, with 570,845 rural consumers connected. In that year it reported collections of $69,786 from the co-ops in fees and dues, although expenses exceeded income by $5,848. Dues reported for 1944, totaled nearly $75,000. Such an association could be useful if kept well in hand, and Wickard was looking ahead. The sentiment for independence was growing, and he needed the aid of N. R. E. C. A. to keep his hold on R. E. A. Besides, the 1944 campaign was approaching.

During the summer of 1944 the N. R. E. C. A. pay-off for his support came. After

the Senate bill for independence was introduced on June 23, the executive committee of the National announced it would remain neutral on the issue. But President E. J. Stoneman, who had succeeded Tate, came to Washington, had a conference with Secretary Wickard, and from then on conducted a campaign among the co-ops, which he said was personal, to keep R. E. A. in Agriculture. His board members stood by him.

This action caused a lifting of eyebrows among the cooperatives and many regarded themselves betrayed. The demand for independence grew and became organized and vocal.

THE SAN ANTONIO CONVENTION

The third annual convention of the N. R. E. C. A. was held at San Antonio, Tex., on January 16 and 17, last. There were 276 voting delegates present out of the 547 member co-ops, and a general attendance of around 1,100. President Stoneman, ex-President Steve C. Tate, Secretary Avery C. Moore, and a majority of the board of directors, which majority consisted of hold-overs, were in command and opposed to independence which was the only real controversial issue in sight, and scheduled to be silenced. In addition there were an estimated 30 or 40 R. E. A. men in attendance from St. Louis and Washington headquarters and the field, headed by Acting Administrator Neal and Deputy Nicholson, who made addresses, and several division chiefs. All these, of course, were for retaining R. E. A. in Agriculture.

Present also were former Deputy Administrator Robert B. Craig and Executive Manager Clyde T. Ellis, who traveled together from Washington to attend. Mr. Craig was in charge of an exhibit for his company. Mr. Ellis is now a lieutenant in the Navy, having been granted a leave of absence by the N. R. E. C. A. board for the duration, but plans to return to his old position when peace comes. Delegates report that in his address he affirmed his continued interest in the work of the association, and explained that although he was unable to obtain a leave from his commanding officer to attend the Chicago convention on invitation last year, this time he succeeded, and had come by plane from England, where he is now stationed. The lieutenant's attendance is of interest here because he had previously, while Congressman, and later as manager, been an advocate of independence for R. E. A., but unfortunately made no mention of it in his address.

THE INSURGENTS ORGANIZE

The night before the convention opened over 100 delegates and co-op representatives, who were not delegates but in attendance, met and formed a permanent committee to work for independence and to support the Senate and House bills lately introduced. It was unanimously voted to present the following resolution to the resolutions committee for consideration:

"Whereas we desire the very greatest opportunity for R. E. A. to expand to the utmost in electrifying rural America; and

"Whereas the aim and purpose of the R. E. A. Act is definitely nonpartisan: Therefore be it

"*Resolved*, That this National Rural Electric Cooperative Association favor the restoration of R. E. A. to an independent status; and further, be it

"*Resolved*, That this resolution be voted on by secret ballot by delegates assembled.

"*Resolved*, That the program be changed on Wednesday, January 17, 1945, so that the business session can be held in the morning due to the amount and importance of business at hand and in fairness to the delegates whose reservations require that they must leave early."

The resolutions committee, after a long battle, by a 9 to 7 vote reported the resolution with the recommendation that "it was the opinion of the committee that ultimately the R. E. A. should become an independent agency of the United States Government," but that due to the war emergency the resolution should not be acted upon. Former President Steve C. Tate was in the chair and the recommendation was adopted without debate just before adjournment. It is the opinion of the insurgents that if open debate had been allowed and a secret ballot taken their independence resolution would have been adopted by a large majority.

The result spells victory for the insurgents. Manifestly they represented the majority sentiment of the 276 accredited delegates in attendance, the 271 cooperatives that are members of the N. R. E. C. A. but which did not send delegates, and the 277 coperatives which are not members of the association. Otherwise, the officers in control of the gathering, despite their devotion to Wickard, would not have conceded the principle of independence. They were forced to do that, however, to maintain their standing among the cooperatives and to prevent further withdrawals from the National. Hence, they stalled for time. A former R. E. A. engineer writes, "same old steam roller."

It is generally agreed, and even President Stoneman had admitted in private, that a big majority of the cooperatives desire the freedom of R. E. A. from Agriculture. It is undeniable that a large number of them have to date refrained from expressing their will for fear that open action would adversely affect their receiving allocations and permission to extend their lines at the hands of the present administration of R. E. A.

R. E. A. CO-OPS USED AS CAMPAIGN PLATFORMS

Admittedly any man in public life has not only the right but the duty, especially in campaign times, to explain to the voters the attitude of himself and his party toward such nonpartisan agencies as R. E. A., and it is noticeable that most speakers in agricultural states do.

I trust it will also be admitted that it is highly improper for a Secretary of Agriculture, who is boss of R. E. A. and controls allocations of money and permission to extend lines in this difficult time, to invade the regular business meetings of the statewide cooperatives to make speeches in the midst of a Presidential campaign. And is it exactly in conformity with the Hatch act or Civil Service regulations for his subordinates in R. E. A. to solicit and insist upon appointments for such speeches?

Yet that is what Mr. Wickard did last fall in the doubtful states of Pennsylvania, Ohio, Indiana, Illinois, Kentucky, Wisconsin, and Oklahoma, in the course of his regular campaigning for his party. He did not urge his co-op audiences to vote the Democratic ticket. That would be playing politics. He simply stated his profound devotion to rural electrification, and announced that he had reccommended an appropriation of $585,000,000 for an immediate post-war program, and urged the cooperatives to make commitments at once for materials and be ready to start construction when Germany surrendered. The amount allocated to each state was announced, all of which got a good press. In arranging some of these meetings N. R. E. C. A. leaders were very active.

The proposal is fine. The money will be needed, but I am informed that many co-op members raised the question, Why break the good news at this time and in this way, leaving other States to be informed by mail? The Missouri State-wide declined to allow Mr. Wickard to appear at their meeting on the grounds that theirs was a nonpolitical, nonpartisan affair.

THE SPLIT IN THE R. E. A. STAFF

The cause of another phase of R. E. A.'s misfortunes requires further account of the activities of former Deputy Administrator Craig. One of the most startling and revealing pieces of testimony given at the Senate inquiry was by John A. Becker, a rural-electrification leader of Wisconsin, who swore that in December 1940 Craig had revealed to him his ambition to "run R. E. A."; this, by means of a personal machine loyal to himself he was building up within the organization's staff, and, secondly, by a national association of the co-ops he proposed to organize and dominate. One method of control was to be through such adjuncts as appliance and insurance cooperatives which would be profitable to both the head office and local co-op officials who were to be also officers of the appliance-vending concerns. The National would engage in politics since there would be a potential 4,000,000 votes in the co-ops' families. Big campaign contributions could be secured from private corporations doing business with the selling concerns. Craig denied the interview, but the pattern of N. R. E. C. A., as organized 15 months later, checked with the memorandum in which Becker recorded the talk.

Craig had established his personal machine in R. E. A. all right, long before the unexpectedly resigned in May 1943, but the chiefs of some divisions and their subordinates, men and women down the line, refused to cooperate with Craig because they disliked his methods, and well knew the danger to R. E. A. from his aims. These employees privately favored Mr. Slattery's side of the ensuing controversy, although they took no open part in it. They became marked persons, however, when Mr. Wickard teamed up with Ellis and the national board in May 1943 to eliminate Slattery, in which effort Craig participated, as his testimony shows. As a result of all this, when Mr. Neal succeeded Craig as Deputy Administrator, he, in cooperation with Carl Hamilton, Wickard's assistant handling R. E. A. affairs, started a purge of the anti-Craig personnel, which continues to the present day. And it is significant that scarcely any pro-Craig, pro-N. R. E. C. A. men have been discharged or forced out; rather they have been advanced. True, the personnel appropriation had been cut, but why this discrimination in discharge of employees for that reason?

In this process civil service provisions were blandly disregarded in several cases. Many were loyal, experienced veterans of unquestioned professional ability who had helped build up R. E. A. from scratch. Several others resigned in disgust. Such management is disastrous in two ways: it discourages faithful employees, and, when eliminated, deprives the cooperatives of their trained and competent services, which in practice means millions saved in money and time.

This situation was a prime cause of the "growing discontent and distrust" which the Senate committee found to exist. But Mr. Wickard, determined on running R. E. A. in his own fashion, and with not too much attention to the statutes, made what, in my opinion, was another blunder.

BETWEEN TWO BOSSES

Administrator Slattery would not play Mr. Wickard's kind of ball, and Wickard determined on putting in a pitcher who would. Note the curious language in the memorandum appointing Mr. Neal, dated June 23, 1943:

"William J. Neal has been appointed Deputy Administrator of the Rural Electrification Administration. Effective immediately, Mr. Neal will exercise coordinating and administrative authority for the operation of the Rural Electrification Administration. All section and division heads and the members of the administrative staff will report to the Administrator through Mr. Neal."

The press has sufficiently reported that this directive resulted in conflict between Administrator Slattery, who held it illegal, and Deputy Neal, as to who was what. Conflicting orders demoralized the staff for

months, and of course interfered with efficient administration.

But the big point raised here is, did the memorandum of the Secretary amend the act of Congress which requires that all allocations of money and contracts must be signed by the Administrator? Incidentally, when Wickard was testifying, Counsel Beedy asked him if he had asked for a legal opinion on his authority to vest such powers in a deputy. The Secretary replied: "No; I don't remember of having thought that was in question." He further stated, "If you will read that memorandum you will see that all the agencies are to report to Mr. Neal through Mr. Slattery, . . . " which is the precise reverse of the language (hearings, pt. 2, pp. 387–388).

To be sure, the Solicitor General, a year later, rendered an opinion that the transfer did give the Secretary administrative as well as supervisory authority. This was a surprise to certain able lawyers in and out of Congress who hold a contrary opinion. Meantime, as Slattery will testify, Deputy Neal ignored him and signed many allotments and contracts aggregating millions, with Slattery sitting in his office a few feet from Neal's office. Question. What would happen if the Federal courts should overturn the Solicitor General's opinion, and the contracts and documents which bear Noel's signature become void?

WHAT THE NEW CONGRESS FACES

For 18 months Administrator Slattery, in defense of the basic principles on which R. E. A. was founded, resisted what he regarded as betrayal of those principles, and in that alone rendered a great public service. He held on until he had had his day in court, which the late Senator Norris demanded for him and Wickard had denied, and the Senate committee had cleared him of slanderous charges against his private character and public service which the report states were "suddenly discovered." Finally he resigned on November 25 last, and in a statement to the press made charges of illegal acts which "jeopardize the repayment of Government loans and are dangerous to the welfare and permanent success of R. E. A." Such charges indicate a slumbering volcano of misrule and cannot be dismissed as the vaporizings of an ousted officeholder.

They lay a very serious responsibility upon the doorstep of this Congress, serious indeed if rural electrification is a necessary factor in the rehabilitation of American agriculture, and agriculture is a major part of the national economy. Also serious if public confidence in the capacity of the Federal Government rightly to manage public power projects is to be established and maintained in the fashion exemplified by T. V. A.

GETTING DOWN TO CASES

I surmise it will be helpful if we now get down to some illustrative, concrete cases. Let us first glance at a few hang-overs from the incomplete probe of last year, which Senators AIKEN and SHIPSTEAD already know a lot about.

There is that copper versus aluminum controversy. The committee found there was "the almost constant effort of some of the employees and engineers of the R. E. A. to force upon the farm coperatives a higher cost of conductors than was desired by some of the farm cooperatives, that the products of the Copperweld Steel Co. were favored over aluminum by some of the engineers having to do with the approval of contracts." In this connection we now have the report of the Department of Agriculture investigators made March 24, 1942, not made public by Wickard but published by the committee (hearings, pt. 5, pp. 1517–1798), which names the engineers responsible, whose chief was Mr. Craig at the time and who also is named. The Senate committee states its opinion "that there was something more than a legitimate and ethical connection" in all this copper business.

This statement, considered in the light of the testimony of several engineers who protested the policy, seems rather significant. Mr. Craig testified that 10 days after he resigned from R. E. A. he took a position with the Copperweld Steel Co., but on condition that he was "to have nothing to do with R. E. A." Incidentally, this part 5 of the hearings contains three other reports of Department investigators, likewise not made public, which contain evidence quite adverse to Mr. Wickard's attitude in this controversy.

Next. The Shipstead resolution, in effect, directed an inquiry into the financing of the N. R. E. C. A., and what efforts it had made to influence the administration of the act. The first was not done; the latter only partially. It seems clear from available data that the National has to date collected in the neighborhood of $175,000 from the co-ops in membership fees and dues.

The committee reports that the evidence before it raised questions about many matters of administration within R. E. A. which deserve and even demand further study. But enough for the hold-overs. Pass now to more recent happenings.

As a rule Government bureaus send only one or two representatives to attend or speak at the conventions of voluntary associations at Government expense. It might be fruitful, therefore, to discover the real purpose of and the cost to R. E. A. in money and time expended in sending 30 or 40 R. E. A. chiefs, division heads, subordinates, and field men to attend the national conventions of N. R. E. C. A. Also, why dispatch half a dozen to attend the 10 regional meetings of the association, at each of which a member of the board of directors of the National is elected?

There are also the meetings of the state-wide organizations of the cooperative managers and directors quite distinct from the N. R. E. C. A. It may be fairly asked, why was it desirable that 10 headquarters and field men should travel from St. Louis, Washington, and nearby regional points to be present at the meeting of the South Carolina State-wide at Myrtle Beach last fall? What was the purpose St. Louis officials had in mind when they called a special meeting of the Colorado State-wide at Denver last June? It turns out that in both instances the hot, undercover issue was the attitude of the cooperatives on independence. The same is true of the North Carolina, Georgia, and other State-wide meetings.

If it be maintained that only a few R. E. A. chiefs and employees were given orders and travel permits to attend these meetings, how did it happen that so many others just chanced to have customary work to do on those particular days in those particular towns and cities and, so, incidentally dropped in to meet the boys and girls?

Pertinent questions arise as to the use of the R. E. A. personnel for partisan campaign purposes already dealt with. If such use become an allowed practice what will happen to R. E. A.? And what about the enforcement of the Pernicious Political Activities Act of 1939 which prohibits such conduct?

If Mr. Wickard, Mr. Neal, or their aides have directed or permitted office and field men to influence the cooperatives against the pending bill for independence, as repeatedly reported, what about the 1919 act prohibiting Government employees from attempting to influence legislation pending in Congress?

Mr. Slattery asserts serious infractions of the rules governing competitive bidding, a subject important enough in itself to justify a probe. Not only are hundreds of millions of dollars involved, along with the integrity of the agency but, as is well known, finagling in this respect is a hoary method of paying political party debts or securing support.

These are a few of the questions forced by the tactics of the present administration of R. E. A. which is now asking Congress to appropriate for expenditure by it a special fund of $585,000,000, to be spent in 3 years, along with the continued supervision of the $525,428,288 already appropriated. There is widespread dissatisfaction and disillusionment among the cooperatives themselves over the present fiasco. Not for light reasons did the insurgents organize and force the machine-controlled convention of N. R. E. C. A., at San Antonio, to endorse the principle of independence, while stalling for time.

The public power world is shocked by the R. E. A. debacle and is fearful of its repercussions upon the movement. No doubt most private power executives are gleeful and have an "I told you so" attitude; but not all. Many of them sell wholesale power to the cooperatives and many would prefer a stable, impartial administration of R. E. A., unaffected by politics. The same is true of reputable manufacturers and dealers selling equipment and appliances to the cooperatives to the tune of millions of dollars now, and more to come.

THE STAKE OF THE AMERICAN PUBLIC

No appropriations by Congress for domestic purposes in recent years have met with more genuine approval from the American public—urban and rural alike—than those to finance loans to the R. E. A. cooperatives. It would be most unfortunate if the prestige of this splendid enterprise be further besmirched by party politics and its twin sister, bad administration. It is high time to restore confidence, and the answer to the editor's question, "Where should we go from here?" is this: The first step is to set R. E. A. free from agriculture or any other Government department or bureau, including Interior. In support of that position I can quote no more competent authorities than the father of the R. E. A. Act and the Administrator who brought together the harmonious, efficient organization which Messrs. Craig and Wickard have done so much to wreck. There follows an excerpt from a long letter Senator George W. Norris wrote me shortly before his death last August:

"You ask if I favor setting R. E. A. free. I answer emphatically 'Yes.' I am in favor of any bill that Congress can enact into law that will restore the R. E. A. to its independent organization and you can say so in the bulletin.

"I think the transfer of R. E. A. to the Agriculture Department in 1939 was a mistake. I said so then. I told the President it was. I regretted very much that this transfer took place. I have been opposed to this transfer to Agriculture or any other department ever since because the truth is that it will not fit in with any department. I have not changed my mind. R. E. A. ought to be an independent, nonpartisan organization and it must be if it is going to succeed. If it becomes a political football it is bound to fail."

In the same month Hon. John M. Carmody, Administrator of R. E. A., just prior to its transfer to Agriculture, made this statement:

"In spite of this forthright policy of independence that laid the foundation that not even maladministration has been able completely to destroy, R. E. A. during its period of independence never once caused the administration a moment's embarrassment. It was a clean show. He took care of our own business. We told the selfish power operators to stay on their own side of the fence and we would stay on our side—precisely as the Congress provided in the R. E. A. Act. We worked for the farm people and they worked with us. We had no subtle plans; our cards were on top of the table. We went on the theory that good adminis-

tration will make plenty of friends for any administration and let it go at that. What a pity the tinkers tinkered in this case."

From the outset those in R. E. A. and N. R. E. C. A. responsible for this whole mess have advised a hush-hush policy. They argue that if uncovered the power trust would make capital of it and that would hurt R. E. A. or hurt the National. That is quite uncomplimentary to the astuteness of the utility boys and their political friends, and I am one of those who advise that it is better that the friends of R. E. A. and an honest National Association should clean house before our opponents and a disgusted public do it for us. The only safe way to conduct the public business is right on the barrel head—especially in a democracy.

Adequate Hospital Facilities for Disabled Persons in Albany (N. Y.) Area

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I hereby insert Senate Resolution 50, which was adopted by the Senate of the State of New York on February 14, 1945, and concurred in by the assembly on February 15, 1945, memorializing Congress to take appropriate action for the construction of adequate hospital facilities to take care of disabled persons and service-connected veterans in the Albany area of the State of New York:

Senate Resolution 50

Whereas the city of Albany and adjacent communities, commonly referred to as the Albany area of our State, is the home of large numbers of members of the armed forces of the United States on the many battle fronts throughout the world, and

Whereas many of these residents of this area in our armed forces already have been disabled in combat with the enemies of our country and have been returned to the United States, and are being returned in increasing numbers at the present time for hospitalization, and

Whereas an urgent and immediate need exists for a hospital and other facilities for these disabled persons and service-connected veterans in the Albany area of the State in order that they may be near their homes and accessible for visits by their relatives and friends, and

Whereas at the present time no hospital for the care and treatment of these disabled service-connected members of our armed forces and veterans has been provided in this area by the Federal Government, and

Whereas the vital need for the establishment of such hospital, or other disabled-veteran facility, repeatedly and forcibly has been brought to public attention by the Albany Times Union and the Veterans Service Officers of the area: Now, therefore, be it

Resolved (if the assembly concur), That the Congress of the United States be and hereby is respectfully memorialized to take appropriate action to provide for the construction of adequate hospital facilities for the care of the wounded and service-connected veterans hereinabove described at a suitable location within the Albany area of our State, and be it further

Resolved (if the assembly concur), That a copy of this resolution be transmitted to the Administrator of the United States Veterans' Administration, the Secretary of War, the Secretary of the Navy, and to each United States Senator and each Member of the House of Representatives elected from the State of New York.

By order of the senate.

WILLIAM S. KING,
Clerk.

In assembly, February 15, 1945, concurred in without amendment.

By order of the assembly.

ANSLEY B. BORKOWSKI,
Clerk.

The International Monetary Fund and the International Bank for Reconstruction and Development

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Hon. JESSE P. WOLCOTT before the Economic Club of Detroit, on February 26, 1945:

Mr. Chairman, I consider it a distinct honor to share this discussion of post-war international exchange stabilization and reconstruction and development with our distinguished guest, the Secretary of the Treasury, Hon. Henry Morgenthau, Jr.

Secretary Morgenthau represents an administration with which many of us have frequently disagreed; however, the Treasury Department is outstanding in the manner in which it has functioned under his very able management. No finer tribute has ever been paid to a man than that expressed by Hon. FRANK KEEFE, an ardent anti-administration Republican Member from Wisconsin, speaking in the House of Representatives last Tuesday; Mr. KEEFE told the House:

"The Treasury Department, struggling with problems of a magnitude undreamed of a few years back, is in the over-all picture, staffed and manned by men and women of courage, rare intelligence, and distinction. I have nothing but praise for the manner in which the functions of this great department of Government have been carried on. In my judgment, it is simply amazing that the Department has been able to attract and keep men of such outstanding character and ability. The tremendous problems of finance have been met with courage and fidelity. The people of the country are entitled to know that from the Secretary of the Treasury down through the long list of administrative assistants and heads of bureaus and agencies, the work of this great department of government has been met in a manner that should challenge the admiration of the people of the country, regardless of political affiliation."

It was under this leadership that the representatives of 44 of the United Nations met last July at Bretton Woods, N. H., to formulate proposals for an International Monetary Fund and an International Bank for Reconstruction and Development.

We met in an atmosphere of tolerance and cooperation.

The professed objectives, as I understood them, were: (1) the expansion of our trade with other countries by making available credits and exchange; it was expected that his would result in (2) full employment and would be a dominating factor in (3) preserving peace by offering assurance against economic maladjustments which sometimes cause wars.

Many were skeptical of the proposed means of accomplishing these objectives. No one denied the advisability of attempting to devise plans to stabilize the relationship of world currencies and to give each county a fair and proportionate share of the world's business. Many thought, and still think, that in balancing world trade in the manner proposed and agreed upon, we should be certain that in the accomplishment we did not destroy our own commercial and financial position in world affairs to the prejudice of American industry, agriculture and labor. Full employment does not depend entirely upon full approval without amendment of the Bretton Woods Articles of Agreement; but will it be an aid or will it be a deterrent to the gainful employment of from fifty-five to sixty-five million of our people? That is the question which the American people and the Congress must satisfactorily answer after full consideration has been given to the claims of both the proponents and opponents before it will be wise to take definite action.

The conference was careful not to bind any country it agreed only to submit the Articles of Agreement to the various countries for such action as they see fit to take. No government will be bound by the articles until it has formally approved them, and then only when they have been approved and signed on behalf of governments having 65 percent of the total of the quotas.

Enabling legislation has been introduced in the Senate and House of Representatives. It is expected that hearings will start within the next 2 weeks.

The subject is of tremendous and far-reaching importance. It is important, not only as a possible key to our economic destiny, but I cannot emphasize too strongly that it may well become a potential and perhaps controlling influence to our social and political position in the world of nations. Congress realizes its responsibility and will have a thorough understanding of the basic and affiliated issues before it finally takes action.

It is only because I want to provoke thought and debate, as an aid to a full understanding of the many questions which must be considered and satisfactorily answered before the Congress can intelligently act, that I call attention to some of the alleged deficiencies and to some of the objections made to both the fund and the bank.

Time and space will not permit an enumeration of all of them, but from what has been published and from many conferences I conclude that the following are considered fundamental and are those most likely to be considered by Congress. I submit them without comment in the hope that public discussion of them will crystallize intelligent popular opinion and thus fortify Congress in any action it may finally take.

SOME ARGUMENTS AGAINST THE PROPOSED INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

It is alleged that:

1. The Bretton Woods lending program is only a part of a much larger program of expanded exports through loans, and will inevitably results in defaults abroad and disillusionment at home, because this country will not permit the large-scale imports necessary for the repayment of all the loans and investments.

2. The program for vast exports, predicated in part on Bretton Woods credits, will ultimately produce a third world war, for the reason that it will cause a disequilibrium in world trade.

3. Although the stated objective of the Bretton Woods program is the balanced growth of world trade, by financing the industrialization of other countries, we may rather find that, in the end, we shall have balanced trade at low level, instead of at our high level, to the detriment of our laboring men, our farmers and industrialists.

4. The bank will be under political pressure to make unwise loans.

5. Our past lending experience should dampen our ardor for such a scheme.

6. The bank will kill off private lending, to the detriment of foreign borrowers.

7. The bank would be under debtor-country control.

8. Private bankers can take care of all lending needs.

9. If American dollars are to be loaned, they should be loaned without the intermediation of other nationals.

10. The bank and the fund should be separated, and not regarded as one program for simultaneous enactment.

11. The guaranty of debtor countries is of questionable value to the United States.

12. Concessions to the other countries like the Latin Americas, who insisted at Bretton Woods that the bank be devoted equally to reconstruction and development, mean in effect that members desiring to develop have an automatic right to loans.

13. Our subscription is unlikely to be the full measure of our contribution, since the bank may later increase its capital.

14. Repeal or suspension of the Johnson Act, as is provided in the Wagner-Tobey-Spence bill, means tearing up billions in old I O U's, and the pouring out of new billions of private American capital.

SOME ARGUMENTS AGAINST THE PROPOSED INTERNATIONAL MONETARY FUND

1. It is contended that it is inadvisable to set up two distinct agencies; that there is no necessity for the fund; that the functions of the fund can be better administered by creating a department in the International Bank for making exchange stabilization loans, and that the functions of the bank in this respect may be supplemented by increasing the capital and powers of the Export-Import Bank of Washington. It was partly in deference to this theory that in considering the so-called George bill in the House last week amendments were suggested which in effect would create the Export-Import Bank of Washington as an independent agency of the Government, divorcing it from all domination by the Secretary of Commerce and making it possible for the Congress to control its policies.

2. From the United States standpoint, the stabilization fund created out of the devaluation profits of 1934 is more than ample for our needs, since $1,800,000,000 of the original $2,000,000,000 has never had to be touched.

3. If we are going to attempt to stabilize the economies of other countries, it should not be done in the guise of currency stabilization.

4. The fund in most cases would start out by recognizing as the value of individual foreign monetary units the artificial quotations which have been in force throughout the war, whereas many foreign currencies if released from control would have a true buying power of only a fraction of the present artificial quotations. Therefore, the fund would conceal the true condition.

5. The fund will be used for capital purposes, as well as for the intended short-term purposes.

6. Our subscriptions to the Bretton Woods program (fund and bank) would be as much money as the value of all the goods we exported in 3 entire pre-war years: 1936, 1937, and 1938. We should therefore look this program over carefully before committing ourselves.

7. The hope that the Bretton Woods fund will assure or even materially contribute to world peace is vain in the light of the realities among which the world lives.

8. The Bretton Woods program is really just a variation of the W. P. A., but on a world-wide scale. It is international pump priming.

9. The fund will destroy the control by Congress over the dollar, and the constitutional prerogative to regulate the value of our money will be imperiled.

10. The fund is premature; the world is not yet ready for it. Domestic currencies should be stabilized before we attempt to stabilize foreign exchange.

11. The fund is too large for stabilization purposes, and consequently would encourage member nations to delay the necessary steps, generally disagreeable to effect a balance in their international payments.

12. The fund gives the member countries virtually an automatic right to borrow and leaves little or no discretion to the fund to refuse to make a loan.

13. The fund would be controlled by the debtor countries.

14. The fund will not, as asserted by some advocates, eliminate exchange control.

15. The fund does not tackle the important question of blocked balances.

16. The fund will acually encourage exchange control. To control capital movements, the members must control short-term transactions as well.

17. Virtually the only internationally desired money in the fund, apart from about $1,000,000,000 of gold, would be that money contributed by the United States.

18. The fund will interfere with the sovereignty of its members and with their powers to control their own economic lives.

19. The fund is too complex to be understood or honestly explained so that the average person can undersetand it.

20. The fund has a marked inflationary bias. Under it, all changes will be in the direction of devaluation.

21. Our past lending experience should dampen our ardor for such a scheme. (See bank No. 5.)

22. The fund erroneously presumes that there is a general scarcity of international monetary resources.

23. The fund would be dissipated without any material accomplishments.

24. The benefits of the fund in the monetary field could readily be offset by trade controls.

25. The wide divergence of interpretation of the meaning and operation of the fund, both here and in Britain, bodes only ill for the fund's future.

26. The funds' safeguards are inadequate.

27. The fund is likely to break down because currencies and trade outside the fund will far exceed those within the fund area.

28. The fund is objectionable because it is a cartel.

29. The Fund, by section 5 of article IV, is rendered powerless to achieve its proclaimed purpose of ending economic warfare.

30. There is no real compulsion on members to continue membership, once their quotas have been exhausted.

31. The United States would have the legal right to withdraw from the fund, but once a member it would not have the moral right to do so. Withdrawal later would be much more difficult than abstention now.

32. Since the fund may borrow here, there is no telling what its total cost will be to us.

33. The fund is unsuited to the problems of the transition period; it is primarily a long-run agency.

34. Government and other organized propaganda has focused attention on the Bretton Woods program, to the exclusion of other solutions of the problem. The President instructed the American delegation at Bretton Woods to consider no alternative plan.

35. The fund will only obscure the underlying problems and render more difficult their ultimate solution.

36. Under the Bretton Woods program (fund and bank) gifts will be confused with loans.

39. The fund promises too much; in particular, there is a gap between the fund's supply of dollars and the rights under the fund to dollars.

38. The quotas have no realistic relation to credit needs and credit worthiness of members.

39. The fund does not really stabilize.

40. The fund does not provide for two-way adjustment.

41. The best solution of the world currency problem is restoration of the gold standard.

42. The best world monetary system is international bimetalism.

43. The fund is only a device for lending dollars cheaply and will soon be wasted or lost.

44. The fund gives to its members indiscriminately, without regard to credit worthiness, the automatic right to borrow foreign exchange.

45. Both because of the terms of the agreement, and the nature of the good-neighbor policy, the fund will be managed by debtor countries, and the U. S. A. in reality will exercise only a minority voice.

46. The fund is too ambitious; stabilization of key currencies is more practical.

47. Before stabilization is attempted, trade barriers must be removed. To set up the fund now is to put the cart before the horse.

48. International currency stability cannot endure unless based upon prior economic and political stability within the various individual nations.

49. The fund may force us to lower our tariffs.

50. The fund's safeguards are not effective safeguards, because they may be waived.

51. In the Bretton Woods program, we should be pouring our money down a rat-hole.

52. The fund implies Government control of foreign trade.

53. The fund is an unnatural monstrosity, because it attempts to reconcile the irreconcilable; its appearance of agreement is really a diplomatic fiction.

54. The fund cannot work as we are told it would, because economic considerations were set aside for military and political reasons at Bretton Woods.

The proponents of the fund and the bank, especially the Treasury, have given assurance that many of these criticisms are not justified, and answers have been offered to many others; to many persons, however, the answers are not considered sufficient. Apparently much study must still be given to many of them by the people and the Congress.

You, as a club, and as representatives of units of our economy, vitally interested in the purposes, plans, and operation of the fund and bank, can be of tremendous assistance.

The economic, social, and political future of America was at stake at Bretton Woods. The final decision will be dictated by the people of America.

It has been a pleasure to be here today, and I know that you will feel at liberty to give the Congress the benefit of any decisions you make in respect to these proposals.

Pennsylvania Victory Ships Launched—U. S. S. "Pittston," U. S. S. "Coaldale," and U. S. S. "Mahanoy City" Slide Down the Ways at Baltimore and Are Christened in Tribute to the Record Wartime Production Achievements of the Anthracite Mine Workers

EXTENSION OF REMARKS

OF

HON. IVOR D. FENTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. FENTON. Mr. Speaker, Members of the House, on Saturday, February 24, 1945, I had the privilege and honor of attending the christening and launching of the Victory ship *Mahanoy City* at the Bethlehem-Fairfield shipyard at Baltimore, the third of three ships christened in tribute to the record wartime production achievements of the anthracite mine workers. The other two Victory ships launched in tribute to "King Coal" and which are certain to be kings of the waves, are the U. S. S. *Pittston* and the U. S. S. *Coaldale*.

I regret very much that I did not have the opportunity of attending the launching of the *Pittston* and *Coaldale*, the former being a tribute to the hard coal mine workers of district 1, United Mine Workers of America, and the latter honoring the anthracite workers of district 7, part of which is in my congressional district which includes the whole of district 9, United Mine Workers of America, for whom the *Mahanoy City* was dedicated.

It was a thrill to me and every one present to see the *Mahanoy City* slide down the ways, and to witness a tangible recognition by the Solid Fuels Administration and the United States Maritime Commission of the great part the anthracite coal industry has played in the superb war effort made by labor and management in the United States. The recent triple launchings of the Victory ships were made possible also through the cooperation of the United Mine Workers of America, the Victory ships bearing names proposed by Theresa Grodzki, 13, Wilkes-Barre—district 1, U. M. W. A.; Regina Miller, 17, Coaldale, district 7; and Roseann Konsavage, 13, Mahanoy City, district 9; miners' daughters who wrote prize winning essays on "Why maximum production of anthracite is essential to the war effort and to the post-war future of the industry."

The honor of christening the *Mahanoy City* fell to Miss Roseann Konsavage, a student in the ninth grade schools and the daughter of Joseph N. Konsavage, of Mahanoy City, Pa., my home town. Roseann was escorted by Reginald Razzi, 15, of Minersville, son of Leo Razzi, whose essay was judged the best by young men in district 9. The other two young men sharing honors at the previous launchings of the U. S. S. *Pittston* and the U. S. S. *Coaldale*, were Kenneth Edwards, 15, of Wanamie, and Nicholas Popiak, 17, of West Hazleton.

Three distinguished citizens from each of the three anthracite coal-producing districts in Pennsylvania served as judges in the contest, one of the most successful of its kind ever staged in the area. They read more than 1,000 entries submitted from schools in 10 hard-coal counties in picking the final winners from among the several thousand entrants. Only essays written by sons and daughters and brothers and sisters of the United Mine Workers of America were accepted in the competition.

To all those organizations and individuals who contributed in any way to make the triple launchings possible as an indelible expression of recognition to the part the anthracite-coal industry and mine workers have played in the war program, I want to extend my congratulations and heartfelt gratitude. Space does not permit naming all the individuals who contributed to the success of the launchings, but through the Messrs. Michael J. Kosik, Martin F. Brennan, and Joseph Kershetsky, presidents respectively of districts 1, 7, and 9, United Mine Workers of America, I want to extend my appreciation to them and all those mine workers, members of their families, civic, professional, and business groups, who contributed in any way with the officials of the Solid Fuels Administration and the U. S. Maritime Commission, in making the launching of the three Victory ships, the U. S. S. *Pittston*, the U. S. S. *Coaldale*, and the U. S. S. *Mahanoy City*, possible.

And before closing I would like to cite that the ship which made the 4-year-old Bethlehem-Fairfield Shipyard at Baltimore the first single yard in the country to launch 450 ships is the *Mahanoy City Victory*.

Improvement in the efficiency and mass-production technique is to some extent compensating for lack of manpower, and is permitting the Bethlehem-Fairfield Shipyard at Baltimore to produce 9 or 10 Victory ships each month with half the labor force it once had.

Although the yard's employment figures have dropped to the 26,000 mark from a peak of 47,000 in late 1943, launchings of Victory ships are being stepped up to 9 or 10 a month now, according to Mr. J. M. Willis, vice president and general manager.

The yard's 450 ships include 384 Libertys, 30 tank-landing ships, and 36 Victory ships; a record of which Mr. Willis the other officials, and employees of the Bethlehem-Fairfield Shipyard can well feel proud.

The Coal Miners of the Country Broke All Records in Coal Production in 1944

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. JENKINS. Mr. Speaker, in these stressful times we are occasionally advised that some of our industries are not producing to their capacity. However, that may be I am glad to be able to bring to you some facts that will prove conclusively that the American coal-mining industry is doing its part. This applies to those who manage the mines and it applies especially to the miners themselves.

In 1944 the miners broke all records for the production of coal. They produced 620,000,000 tons of bituminous coal and 64,455,000 tons of anthracite coal in 1944. The coal-mining industry is peculiar in that it is almost impossible to produce to the total capacity. In fact it is difficult to estimate definitely a total capacity. The reason for this is that there are many thousands of mines operating in the country. It is impossible to keep all of these mines operating at full capacity every day. Frequently mines are closed down through no fault of the mine operators or the miners. For instance, the railroads, which everyone knows have been doing a magnificent job in the last few years, suffer accidents and wrecks and congested conditions which prevent them from moving the coal as rapidly as it can be produced. Probably not in the history of the country have the railroads had more difficulty by reason of snow and ice than they have had during the past 3 months. It must be remembered that the great coal-carrying railroads of the Nation are located principally in the northern half of the United States and naturally are subjected to all inconveniences of cold weather.

The coal-mining industry has given to the armed forces a fair share of its employees. Out of a normal personnel of 550,000, the miners have given 130,136 men to the armed services. Of this number 2,345 have been killed in action.

When the young men among the miners answered the call of their country, many old men who had retired from active work around the mines returned to their places. There are 15,000 men past the age of 65 now doing their daily turn in the coal mines. There are many over 70 and there are some over 80 years of age doing their part to win the war through the production of coal.

It is well known that coal mining is the most hazardous of any of our great industrial activities. When coal mines are operated under high pressure and when many of the most agile and capable men are taken into the service, it is only natural that the hazards of the mine business would be commensurately increased. Since the war and during the years 1941, 1942, and 1943, the total fatalities in the coal mines of this country were 4,213. The statistics are not complete for the year 1944, but incomplete statistics show that 1,306 lost their lives in the coal mines of this country in 1944. Thousands of additional men were injured in many different ways, but the sad feature of mine accidents is that the majority of all recorded mine accidents are fatal.

Mr. Speaker, I know from experience something of the life and hazards of coal mining. There are a large number of coal miners in the district which I have the honor to represent. All of them that I know are loyal American citizens.

Many of them own their own homes and many of them are prominent in the church, civic, and public life of the communities in which they live. They need no encomium from me. Their performance in 1944 proves their patriotism and shows that they have assumed and discharged their full duty in this great emergency which is confronting our country and the world.

Drafting Nurses

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegrams:

MINNEAPOLIS, MINN., *February 17, 1945.*
Dr. WALTER JUDD,
Congressman from Minnesota,
House of Representatives,
Washington, D. C.:

Rumor Military Affairs Committee is recommending draft of cadet nurses as first step. Could you contact committee members to prevent this discrimination against one small group of nurses? If draft of nurses to be recommended it should affect all nurses. Law creating Cadet Corps specifically names it a civilian corps. Nurse applications for military being processed very slowly. As of February 16, 250 applications from Minneapolis area alone since January 1. Of these only 38 have received notice of assignment from the military. Two hundred and twelve wondering why they must wait to be drafted.

KATHERINE J. DENSFORD.

ROCHESTER, MINN., *February 24, 1945.*
Hon. WALTER H. JUDD,
House Office Building:

Draft bill No. 2277 discriminates against nurses. Many nurses in service state need is for better utilization of those already in service rather than more nurses. Threat of draft caused 12 percent of applicants for our February class to cancel registration. Nurse question badly jumbled, but think they will enlist if need is shown.

ROY WATSON KAHLER HOSPITALS.

Spending or Economy?

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of February 26, 1945:

SPENDING OR ECONOMY?

The President's recent budget message, as the National City Bank points out in its current monthly letter, was less a war-budget message than it was a peace-budget message. Perhaps the most significant feature of the budget figures, from the long-range point of view, is the rapid growth of nonwar costs. The total of such expenditures for 1946 is estimated at more than $13,000,000,000, which is twice as high as such expenditures just before we entered the war, and five times as high as the average of the 1920's.

What we seem to be pointing toward is a level of post-war Federal expenditures that may easily reach $25,000,000,000, and even this figure may prove too low if Government-spending and subsidies are looked to as a major reliance for reaching desired social objectives. How are we going to get the tax relief that is needed to stimulate post-war enterprise? How are we ever going to get the budget under control?

The bank puts forward the suggestion that in our thinking about post-war problems we are being influenced unduly by the memory of conditions in the 1930's, when we were constantly contending with unemployment and striving to build up purchasing power. Today, we may be underestimating the force of inflationary elements now accumulating. Potentialities for a great wave of spending lie in the huge extension of bank deposits and currencies since 1939, and in the pent-up demands for goods of almost every description for consumers and industry.

Nevertheless, scarcely a day passes without new announcements of post-war spending plans not only by the Federal but by local governments. After detailing some of the latter, the bank finds that "the conclusion of the war threatens to let loose the greatest concentrated spending in the history of States and municipalities." The latter may discover that this spending is badly timed, that instead of bridging over a period of depression it will only compete unnecessarily with private employment. The State and city spending plans nearly all depend, moreover, upon the assumption of generous aid from the Federal Government. The Federal-aid policy ought to be reexamined in the light of the war debt now loaded on the Federal Treasury and of the vast improvement in the finances of States and municipalities.

The many State and Federal spending projects are usually put forward on the ground that they will make jobs for returning soldiers. We must remind ourselves that they will also make taxes to be paid by those same soldiers, and perhaps create an inflationary rise in living costs with which these soldiers and their families will have to contend.

Dawning of World Peace

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Grosse Point (Mich.) News. It is a timely and analytic commentary on the Yalta Conference:

DAWNING OF WORLD PEACE

The announcement that came from the Big Three conference at Yalta on the eve of Washington's birthday contained a greater assurance for a world free from the fear of war than any previous document in history. Its formal signing by Churchill, Roosevelt, and Stalin gives it a character and substance utterly beyond the mere expression of generalities such as occurred in the scribbled memoranda issued, unsigned, to the world by Roosevelt and Churchill under the impressive title of the Atlantic Charter.

While the implementation of many of the principles and objectives set forth in the Yalta Declaration may yet encounter many checks and disagreements, the concrete fact stands out that the heads of the world's three greatest states have pledged over their signatures the ultimate fulfillment of these aspirations. It is difficult for heads of state, even in a period of flouted international obligations, to renege on their promised best efforts to carry through to fulfillment the purposes to which they have subscribed with their own signatures.

The mere pledge of the Big Three to fight the war through to a victorious end had been well discounted in advance by the peoples of all the nations involved, but the explicit declaration that the victory is to be secured by the military occupation of Germany for an indefinite period will be heartening to the many who have feared a revival of the maudlin "generous treatment of a fallen foe" sentiment which negatived the sacrifices of the men who died in 1917–18 in the "war to end wars."

Probably the most satisfactory accomplishment of the Yalta Declaration is the definite and complete denial of any hope the Germans may have had of profiting in the war settlement through disagreement among the Allies.

The provision for the establishment of a reparations commission with headquarters in Moscow is a natural disposition of this question, as Russia is more deeply concerned with it than even Britain, and the United States not at all, as it affects our homeland. Germany may be required to replace some of our 500 ships her submarines sank in the Atlantic. Russia has claimed and been given the green light on her demand for reparations in the form of payments in kind, which may take the form in part of several hundred thousand Germans laboring for many years in Russia to replace the property she destroyed in that country.

Russia has a moral support for her demands exceeding that of Britain or France, as she was wantonly attacked by Germany in June 1941, when there was still in force between her and Germany a treaty of friendship and nonaggression whereas Britain and France did take the initiative in declaring war on Germany when she invaded Poland on September 1, 1939, as had been threatened after the absorption of Czechoslovakia.

There is hope that the rankling Polish boundary question will be disposed of to the reasonable satisfaction of the Polish people in the acceptance of the Curzon line which was set up by Britain, France, and ourselves in 1919. It is the reestablishment of this line which Russia now accepts as satisfying her territorial and ethnical demands.

One of the most encouraging assurances, for the continued political and military collaboration of the three great powers is in the provision that their foreign ministers are to meet every 3 or 4 months, with the first such meeting scheduled for London by the middle of the year.

Probably the most important decision coming out of the conference looking to the establishment of a long-ranged and enduring world peace, covering world economic problems and the building up of a world will for peace affecting intimately or directly every country in the world, is the provision for a great meeting of all the United Nations in San Francisco beginning April 25. The purpose and spirit of this meeting is to examine the ways and means of implementing the principles of the Dumbarton Oaks Conference, to which, happily, all of them are committed in spirit.

The three big powers have agreed to assist all of the liberated countries in carrying out their desires, by their own free untrammeled vote, to choose their own government.

The significance of the total pronouncement to the American people is that we are henceforth committed to an active participation in the affairs of Europe not only for

the maintenance of world peace, but in the support of free government in that continent. It bids a final farewell to the political isolation which we have consistently advocated since the founding of the American Commonwealth, but which in fact we have never wholly practiced. The rush of world events in the past quarter century has uprooted this policy and the Yalta Conference has finally proclaimed our complete divorcement from it to the world.

The last expression in the Yalta declaration comes as an inspiring promise to a war-weary world. It denies the age-long and despairing acceptance of the belief that wars will always be, and its words that it "will provide the greatest opportunity in all history to create a lasting peace," falls on the ears of the world as the answer to the prayer of suffering humanity for centuries past.

One of the disturbing developments following the Yalta Conference is the reaction of De Gaulle in France and the present government in Italy. De Gaulle is peeved because he was not invited to sit in as a full-fledged and equal fourth of the Allied leaders. He has doubtless been told already that France will be welcomed by the Allies as a partner in the occupation and policing of those parts of Germany which impinge on her territory.

France was defeated and crushed in the war. The liberation of her territory was achieved wholly by American, British, and Canadian arms. Her people are going to need vast aid in food, clothing, and every variety of commodity before they can resume normal peacetime processes of living. These will have to continue to come out of the sacrifices of her civilian allies, largely those in America. She was illy prepared to fulfill the role of a fulltime, efficient partner in the great decisions that must be made immediately with the ending of the war in Europe.

De Gaulle deserves credit and honor for his patriotic role in keeping alive the light of liberty among his people. He has received them, but when his ruffled dignity moved him to spurn an invitation from the President of the United States for a friendly conference some place in the Mediterranean area he shrinks his own stature as a statesman and does an immeasurable harm to his country.

The case of Italy is more simple. This country was a late enemy of the Allies. She was defeated by them, but even yet a substantial part of her territory is occupied by fotces of her former good friend and ally, Germany. Italy has a long way to go before she can be accepted as a member in good standing of the company of great States which must assume the direct responsibility for arranging a world of peace and order.

Reference of Missouri Valley Authority Bill to Commerce Committee

EXTENSION OF REMARKS

OF

HON. JOHN H. OVERTON

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 27 (legislative day of Monday, February 26), 1945

Mr. OVERTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the St. Louis Globe-Democrat of Saturday, February 24, 1945, in defense of a certain ruling made by the able and distinguished presiding officer of the Senate, the Vice President.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHERE THE SHOE PINCHES

Vice President TRUMAN has drawn the fire of proponents of a Missouri Valley Authority. The high crime of which he is accused is that he followed the rules of the Senate in assigning the 1945 Murray M. V. A. bill to the Commerce Committee, where it belongs, instead of to the friendly Committee on Agriculture.

This betrayal of the cause, complain the M. V. A. supporters, is not cricket. Moreover, the Commerce Committee, they charge, has had no experience with the subjects dealt with in the bill, whereas, we would infer from the M. V. A. proponents, the Committee on Agriculture qualifies as an expert.

This harsh criticism of the Commerce Committee must come as a surprise to its members. This committee has, since the inception of the Federal programs of flood control and river improvement, handled all legislation on this subject in the Senate, including the flood-control bill of 1944, which incorporates the Pick Plan for the Missouri Valley, and the 1945 rivers and harbors bill, passed yesterday by the House.

The Commerce Committee also has been concerned with electric power, particularly in connection with the rivers, and may be presumed to be as much an authority as the Committee on Agriculture.

The bill of complaint against the Vice President seems to resolve itself to this charge: The Murray bill has not been placed in the hands of its friends. There is, of course, no connection between this fact and the demand of the M. V. A. proponents for a "fair and impartial hearing."

Premium Payments to Nonferrous Mining Industry

EXTENSION OF REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. BUNKER. Mr. Speaker, the nonferrous mining industry is deserving of much praise for its patriotic contribution to the Nation's war efforts. The men who have worked in the production of the vital war metals are to be congratulated; they have worked hard and long to keep the industrial wheels of our Nation turning. Many of these workers transferred to the mines after induction into the Army because they felt their job in the shafts were important and vital in our great fight to preserve our democracy.

But at the present time many, possibly the majority, of the domestic nonferrous mines are faced with costs of operation that ceiling prices do not bring in sufficient revenue to permit continued operation. Withdrawal of producer subsidy support to our strategic and critical minerals would immediately force suspension of operations in scores of mines. The effect upon the Nation's war effort might be disastrous. The last paragraph of section 2 (e) of the Emergency Price Control Act of 1942, as amended by the Stabilization Act of 1944, states that no subsidies may be paid after June 30, 1945, without a specific appropriation from Congress. We cannot question the thought behind the amendment, as it was well-meaning, and certainly Congress has the right to know the amounts necessary to carry out the producer subsidy program and receiving full information as to the way the money is spent.

But the amendment to the Stabilization Act of 1944 went too far. While designed to check the wholesale application of consumer roll-back and similar subsidy devices, these vital producer subsidies affecting principally copper, lead, zinc were not exempted as previously had been the case.

Prior to the passage of the restrictive amendment, Metals Reserve Co. had announced the extension of the subsidy plan for copper, lead, and zinc until July 31, 1945, a month beyond the limiting date afterward established by the Stabilization Act of 1944. Reports say that certain individual contracts had been made for even longer periods. In some instances the Government may not be able to carry out its contractual obligations. The industry, including both employers and employees, is being affected adversely by the uncertainties of the situation. As far as is known to thousands of mine operators, they must close down within the next few months or must start making arrangements to do so. Metals Reserve Company, it is said, is ready to announce the terms of premium payments for the new fiscal year the moment Congress gives it the green light. It is obvious that producers should know at the very earliest moment what they can expect in the way of premium payments. It goes without saying that we must have full production of these vital war metals; we cannot tarry, for our future depends upon the rolling wheels of our industry.

H. R. 2077 amends the Stabilization Act of 1944 and if approved will permit the Metals Reserve Company to continue the subsidy payments to the nonferrous mine operators. I trust that my colleagues realize the seriousness of the situation and support the measure.

Huge Beer and Whisky Profits Bypass the Farmer

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article written by William Paul Walker, agricultural economist of the University of Maryland, and published by the Civic Forum, organ of the National Civic League, in its issue of January-March 1945.

The article follows:

HUGE BEER AND WHISKY PROFITS BYPASS THE FARMER

(By William Paul Walker, agricultural economist, University of Maryland)

There is scant foundation for the liquor industry's contention that it is an economic

asset to the community and the country at large, providing a vast market for the farmer's products, giving employment to labor, and making a generous contribution to the Nation's over-all prosperity.

In fact, it is not beyond the range of possibility that the distillers, in pleading for the use of corn in making whisky during the August 1944 holiday, emphasized how small a percentage of grain after all goes into the manufacture of alcoholic beverages, quite a different tune from the one they sang during the pre-repeal campaign, when their objective was to round up enough votes to do away with the eighteenth amendment.

Warren M. Persons, in Beer and Brewing in America, states, in substance, that the revival of the brewing industry opened up a large market for farm products, requiring the yearly cultivation of 3,000,000 acres of land in supplying farm products used in beer production.

Based on average yields of crops used in making beer, average pounds of materials used per barrel of beer produced for the 5-year period, 1939 to 1943, and allowing for loss or shrinkage in converting farm products to base materials used in brewing, the equivalent of 4,100,000 acres of land is required to raise the crops used in making the 76,900,000 barrels of beer reported as being tax-paid for the 12 months ending June 30, 1944. This acreage represents nine-tenths of 1 percent of all land in crops and plowable pasture in the United States.

Assuming a premium above average farm prices paid for crops used in brewing, farmers received in 1943 about $154,237,000 for their crops sold for beer making. Allowing for wastage in bottling and in selling draught beer, and assuming a retail price of 12 cents per 16 ounces of beer, excluding excise taxes, the 76,900,000 barrels of beer sold at retail for approximately $2,236,000,000. Therefore, farmers receive 6.9 cents of the retail dollar spent for beer made principally from farm products. If Federal and State excise taxes are included in the retail price the farmers get only 5.3 cents of the retail dollar.

This national picture can be illustrated more clearly perhaps if a farm is used as the basis for comparison. Let us compare the use of land in producing milk with its use for producing raw materials for brewing. Five acres of land will produce the feed for a cow giving 6,500 pounds of milk per year. The farmer gets $201 for the milk (in 1943) which sells at retail for $384 (in 1943). Therefore, the farmer receives 52 cents of the retail dollar spent for milk.

However, the 5 acres will produce the equivalent of materials used in making about 672 gallons of whisky, which retails for $4,032, excluding excise taxes, for $1,875. The farmer gets $127 for his crops sold for brewing, or 6.7 cents of the retail dollar for beer. If the excise taxes are included in the price, the farmer received 5.2 cents of the beer retail dollar.

Based on average yields of crops used in making whisky, average pounds of materials used per gallon of whisky made during the 3-year period, 1939 to 1941, and allowing for loss and shrinkage in converting farm products into base materials for distilling, the equivalent of 1,239,500 acres of land is required to raise the farm products used in making the 141,400,000 gallons of whisky reported as being tax-paid for the 12 months ending June 30, 1944.

At $6 per proof-gallon, excluding excise taxes, consumers will pay $848,000,000 for that amount of whisky. Based on farm prices, plus premiums, farmers would receive $35,300,000 for their products used in making the whisky. Therefore, farmers receive 4.2 cents of the retail dollar spent for whisky if excise taxes are excluded, or 1.5 cents of the retail dollar if such taxes are included in the retail price.

Again let us bring the national comparison down to an individual farm basis. Five acres of grain fed to hogs will produce 1,570 pounds of live-weight pork. This pork sells at retail for $309 in 1943. The farmer gets $219 for his hogs, or 71 cents of the retail dollar spent for pork.

However, the 5 acres will produce the equivalent of materials used in making about 672 gallons of whisky, which retails for $4,032, excluding excise taxes, or $10,920, including excise taxes. The farmer receives $164 for his grain sold for distilling. Thus, the farmer gets 4.1 cents of the retail dollar spent for whisky if excise taxes are excluded from the price or, if included, 1.5 cents of the retail dollar.

Based on their experience in 1943, the farmers get from 25 to 75 cents of the retail dollar spent for most of the important foods. In contrast, the farmers get from 4 to 7 cents of the retail dollar spent for whisky and beer made from farm products, if excise taxes are excluded, and if included, from 1.5 to 5.3 cents of the retail dollar. It should be noted, however, that some of the grain used in brewing and distilling is recovered and utilized as livestock feed.

The total acreage of land used in producing the crops for brewing and distilling purposes (excluding crops used in producing wines) is equivalent to about 1.2 percent of all land in crops and plowable pasture in the United States. Farm income from the sale of such crops to manufacturers of alcoholic beverages (excluding wine) is equivalent to only 1 percent of the total farm cash receipts from marketing farm products in the United States in 1943.

It is obvious that the manufacturing of beer and whisky offers limited opportunity to the American farmers as a whole in disposing of their crops. In fact, the depletion of consumer income by the purchase of alcoholic beverages to the extent of $7,000,000,000 a year could mean that fewer dollars are available for buying the necessities of life, upon the production of which in the form of food most farmers depend for a living.

Compulsory Military Training During Peacetime

EXTENSION OF REMARKS

OF

HON. DWIGHT L. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which was written to me by Mr. G. Barry Shannon, publisher of the Palm Beach Publications, Inc., of West Palm Beach, Fla., dated February 16, 1945:

PALM BEACH PUBLICATIONS, INC.,
West Palm Beach, Fla., February 16, 1945.
Hon. DWIGHT L. ROGERS,
House of Representatives,
Washington, D. C.

DEAR MR. ROGERS: I beg to acknowledge receipt of your letter of February 12, asking me for my advice on the question of compulsory military training during peacetime.

In reply, I wish to state that I am utterly opposed to compulsory military training when a boy becomes 18 years of age. I served with the Seventh Cavalry during the last war and, while I am a great believer in military training, I think that our country has proved conclusively that we raised two pretty good fighting armies during World War No. 1 and World War No. 2 without compulsory military training.

I believe in military training, but I believe that it should be taught in the high schools and colleges on the same basis that we have taught it in the past. No doubt, the standards of this sort of training will have to be raised to meet the demands of highly technical warfare as it is today, but this can also be taught in the high schools and colleges under military tutorship rather than take a young man at the age of 18 and put him directly under Army training.

What we want to avoid in this country is anything pertaining to dictatorship and classifying the American people as "the masses." We still want to remain a people and have some sort of individuality and initiative, and a soul left in us, but to take a young boy at the age of 18, when he is deciding upon his career, would be to destroy all his personality and his initiative.

When the people of the United States are no longer known as "the people" and are referred to as "the masses," then we have lost everything we have fought for since the Declaration of Independence. To take a full year out of a boy's life at a time when he is trying to build the beginning of a career is likely to be highly disruptive, for training can be spread over a period of years in high school and in college which will serve the same purpose without disruption.

The war is not altogether won by its fighting forces. Too much credit cannot be given the big industries of this country that have made this present war such a success. Had it not been for the various scientists, big industrialists, surgeons, doctors, chemists, and other highly technical trained men, our fighting forces would have been of little use, and the military heads would have been lost without them. These highly trained men followed their vocations and studies without any interruption, and, had they been forced into military training for 1 year at the age of 18 years, their careers might have been diverted so that they would not have been the successful men they are today, and who have assisted the military heads with their skill and judgment. The Army leaders themselves have stated on numerous occasions that we have the best fighting force and best trained men of any army in the world; so why try and inaugurate and experiment with a foreign atmosphere of military training into a program which heretofore has been highly successful?

I also put your question up to Don Morris, our editor, and he feels that a great need of military training in schools and elsewhere will depend on what sort of peace plans are drawn up and what type of international organization remains thereafter.

Trusting that you are enjoying good health, and with best wishes and kind regards, I remain,

Sincerely yours,

BARRY SHANNON.

Today's Challenge to American Moral Leadership

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. BENDER. Mr. Speaker, throughout the entire world today a spirit of deep unrest is clearly at work. Men and wom-

en whose job it is to observe and analyze the daily activities of the human family sense this disturbed atmosphere. They feel it as something almost alive and sometimes almost frightening in its intensity. Yet, properly directed and properly used this new stirring of the energies of mankind can give rise to a new era of productive creativity in which all peoples may share a richer, more satisfactory, and orderly life.

To achieve this goal, there must emerge from the chaos of this bitter war a vision big enough to mobilize the resources of the entire world. In the years of World War No. 1, the spiritual leadership which came closest to rallying the strength of the embattled nations and revitalizing those who were the victims of that struggle was furnished by Woodrow Wilson. His "fourteen points" became the rallying cry of the oppressed and the discouraged. They saw Wilson as someone striving to achieve a peaceful world without planting a new wilderness of dragons' teeth. However, history may record its conception of Wilsonian ideals, it must be granted that for at least a moment it seemed possible for even our cobelligerents to rise to this American position. The vision faded; and with its disappearance another war became inevitable in the gloom of that failure.

Today, American moral leadership is still the beneficiary of that Wilsonian era. Our flag is hailed wherever American arms gain the day, and even those who oppose us know that our men and our country are freer of malice—softerhearted if you wish—than any other people whom they fight. This attitude toward us constitutes that reservoir of good will which the late Wendell Willkie remarked in his trip around the globe a few years ago.

But no amount of good will can survive the challenges and strains of time unless it is constantly rewon by those who seek it. Now is the time for America to reassert her claims to the moral leadership of the world. Now is the time when the victory of our arms grows daily more certain for us to enunciate the principles for which we have been willing to fight.

So many events have occurred to becloud those principles that many among us have lost sight of the forest in the depths of the woods. The war for liberation has become obscured by the rise of new antagonisms, by the rebirth of "blocs," "power politics," seizures of territory, establishment of regimes upon a basis of force rather than the will of the governed. These developments must be labeled "temporary" if we are to achieve the goals of the Atlantic Charter and the "four freedoms." We owe it to the men who have died in the name of America on the battlefields of this war to keep the faith for which they fought. To whittle it down, to dismiss it as the empty phrasing of wartime oratory is to make a mockery of all that our people regard most sacred.

The time is at hand when the highway markers must be erected. We must know where we are going, and we must illuminate the road for those who come after us to follow. Walking in the darkness offers neither safety nor assurance to those who would march under our banners or to those who would march at our side.

Thus far, neither our State Department nor our President has seen fit to utilize the tremendous prestige of the United States to mobilize world-wide sentiment. Inevitably the result of this silence has been the rallying of large sections of central and eastern Europe to the economic and political causes represented by Russia. There they have found clarity and decisiveness in action. From us they have found nothing but pleasant platitudes, easy to speak, easy to ignore.

If we are to rebuild on the ashes of this terrible war anything of value, we must prepare the blueprints now; we must publish them to the world; we must convince the world that they are both desirable and meaningful in the establishment of a better international society. The time to undertake this task is now. The place is here.

The Big Three conference has done much to reinforce our determination. But there is still lacking the moral and spiritual upsurge required to make of this war a new rebirth of international freedom and human betterment.

Appraisal on Taft

EXTENSION OF REMARKS

OF

HON. EDWARD J. GARDNER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. GARDNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial and article from the Hamilton (Ohio) Journal News:

APPRAISAL ON TAFT

Have you read Walter Lippmann's column appearing elsewhere on this page today? If you have not, we'd like to suggest that you let your eyes glance to the right for the best appraisal of Senator ROBERT TAFT we have yet seen in print.

Mr. Lippmann, a few days ago, criticized TAFT and others for their attitude on the Henry Wallace appointment. TAFT made his reply, after a fashion, in the United States Senate. Today Mr. Lippmann comments on that TAFT reply. Read it, please. You'll get a kick out of such statement as this:

"But though Mr. TAFT is an intelligent man, who would always get a high mark in school, he has never acquired sufficient wisdom and understanding to be a good and sound conservative leader in times like these. He is probably more responsible than any other single man for leading the Republican Party into blind alleys of dumb obstruction on the vital issues of our time, and of making it incapable of offering a trustworthy alternative to a third and a fourth term for Roosevelt."

That is what we call getting down to cold facts. It's the best appraisal of TAFT's lack of ability yet put into words. Please read the entire column. It's worth anyone's time.

TAFT LACKING IN WISDOM AND UNDERSTANDING NEEDED TODAY

(By Walter Lippmann)

WASHINGTON, February 22.—The other day I wrote that it was contrary to the American constitutional tradition and incompatible with our form of government to confirm a member of the President's Cabinet on the ground that the Senate did not like him or approve of his ideas. On Monday, in the Senate, Mr. TAFT, of Ohio, declared this was the most blandly nonsensical argument that I have ever happened to read. Any college boy has more knowledge about the Constitution than Mr. Lippmann exhibits in this article. I know of no one who has ever before questioned the Senate's right to refuse to confirm.

What Senator TAFT does not know on this subject, as on a good many others, is most of what there is to be known about it.

"History shows," says Mr. TAFT, "that Cabinet appointments have been rejected." In support of this statement, Mr. TAFT cites just one case—that of President Coolidge's appointment in 1925 of Charles B. Warren as Attorney General. Now, as a matter of fact, the Warren case is a perfect example of the exception that proves the rule.

The objection raised against confirming Warren as Attorney General was that as a lawyer he had been closely connected with the sugar companies which had just been charged by the Federal Trade Commission with conspiracy in restraint of trade. As Attorney General he would have had to decide whether to prosecute his own clients for a violation of the Sherman Act, and on this ground Warren was rejected by a vote of 41 to 39. The issue was not Warren's general views, or wild and woolly words he had used, but whether he could be relied upon to execute the law without fear or favor against his own clients.

Although Mr. TAFT told the Senate that he knew of "no one who has ever before questioned the Senate's right" to reject cabinet appointments, the fact is that the Senate's right was questioned in this very case. It was questioned by President Coolidge, who issued a statement expressing the hope "that the unbroken practice of three generations of permitting the President to choose his own Cabinet will not now be changed, and that the opposition to Mr. Warren, upon further consideration, will be withdrawn, in order that the country may have the benefit of his excellent qualities and the President may be unhampered in choosing his own method of executing the laws."

So strongly did President Coolidge question a right, which Mr. TAFT says has never been questioned, that he sent Warren's name back to the Senate and announced that he would give Mr. Warren a recess appointment if on a second vote the Senate rejected Warren again. The Senate did reject him again, and the controversy ended with Mr. Warren's refusal to accept a recess appointment.

When President Coolidge spoke of the unbroken practice of three generations, he was evidently referring to the rejection in 1868 of Andrew Johnson's nominee for Attorney General. No one would ever site anything that happened between Congress and the President during that dark period as a good precedent in constitutional usage. Whether there is any case of the rejection of a Cabinet officer in our early history I do not know.

But it may be safely stated that there is no single case in our whole history where a Cabinet appointment was rejected on the ground that the nominee's views were not acceptable to the Senate. The Warren case shows that the outer limit is the Senate's right under the usage of the Constitution to reject on the ground that the nominee is

disqualified to execute the laws. Thus President Grant withdrew the nomination of A. T. Stewart for Secretary of the Treasury when the Senate pointed out to him that as head of Wanamaker's department store, he was a large importer, and was, therefore, by statute ineligible to administer the tariff.

So much for Senator TAFT's right to dismiss as "blandly nonsensical" an argument in which I did no more than remind him of an American constitutional usage that, except for the Warren case which proves the rule, is unbroken. A Senator who sets himself up to be the leader of American conservatives ought to be sufficiently well grounded in American history and American political wisdom to understand what he is doing.

But though Mr. TAFT is an intelligent man, who would always get a high mark in school, he has never acquired sufficient wisdom and understanding to be a good and sound conservative leader in times like these. He is probably more responsible than any other single man for leading the Republican Party into blind alleys of dumb obstruction on the vital issues of our time, and of making it incapable of offering a trustworthy alternative to a third and a fourth term for Roosevelt.

The difference between a sound conservative and Mr. TAFT's kind of conservative has been illustrated in the Wallace affair. The sound conservative position was that since Mr. Wallace is the exponent of a radically new national policy, he should be deprived of the personal power to carry out that policy on his own initiative and that Congress and the country must be guaranteed full opportunity to pass upon the concrete measures under that policy. That was the reason for not confirming Mr. Wallace until the George bill had been passed.

But after that a wise conservative would recognize that the policy which Mr. Wallace proclaims, often in wild and wooly words, is going indubitably to be attempted and that it is the first duty of conservatives to identify themselves with its purposes and to participate in making a program for it. Thus Governor Dewey is as explicitly committed to these purposes as is President Roosevelt or Mr. Wallace. Yet it is an inordinately difficult undertaking in which the chances of complete success are far from certain. In the circumstances a wise conservative will welcome, indeed insist upon, the popular exponent of the new and radical policy sharing the responsibilities and facing personally the enormous practical difficulties.

Mr. TAFT's desire, which is to keep Mr. Wallace on the outside looking in, would simply mean that Mr. Wallace's fervent following would attribute to him all the successes of the undertaking and feel forever sure that its failures would not have occurred if prejudiced partisan politicians had allowed him to become Secretary of Commerce. That is what the wiser men among Mr. TAFT's colleagues have understood and that is why the Senate will not follow him.

Jackson Day Dinner Address of Hon. Philip J. Philbin, of Massachusetts

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me February 24, 1945, at Boston, Mass.:

Mr. Toastmaster, Senator WALSH, Governor Tobin, distinguished guests, fellow Democrats, and friends, I am very much honored to join with this impressive gathering tonight in celebrating the birthday of one of our truly great Americans. To be here is a happy privilege indeed for which I am deeply indebted to our able and militant State chairman, my friend, John Cahill. To him, as to his distinguished predecessors in office, it is my pleasure in common with our fellow party members throughout the State, to pledge humbly my aid and whole-hearted support of his endeavors. There is no doubt whatever in my mind but that under his able and forceful leadership, our party more united and harmonious than ever in its long history will sweep forward militantly and unflinchingly to new successes.

I will confine my remarks to a few general observations.

We have seldom met in such happy circumstances for party as those in which we meet tonight. The laurels of one of our greatest State-wide victories are still fresh on our brows. Governor Tobin's election by such an emphatic majority was an outstanding demonstration of the popular will—an expression of confidence and approval of which he, his associates on the ticket, and indeed all leaders and members of our party may well be proud. That our vigorous and able young governor will amply vindicate that confidence and that approval we have the most abundant faith.

But we must also remember that victories like these do not come out of the clear sky. Behind them lies great ability, persistency, and perseverance on the part of candidates, and immeasurable zeal, self-sacrifice, and devotion on the part of many faithful workers for the party. Behind them, too, lies years and years—many long years—of constructive effort and superlative conscientious service to party, State, and country of great Democratic leaders of the caliber of our unsurpassed senior Senator, DAVID I. WALSH; Governor Curley; our splendid majority leader, JOHN W. MCCORMACK, and many great leaders too numerous to mention. We must never lose sight of the fact that unity, harmony, common American ideals, and unselfish cooperation have been the sound foundation stones for these victories as they will continue to be the only secure basis for future party success.

When we speak of common American ideals, it is most appropriate that we should on this occasion pay our tribute to that shining patriotic figure, Andrew Jackson, soldier and statesman, who exemplified such sterling Americanism and vigorous, unrelenting devotion to democratic principles.

Of very humblest origin, not favored by background, education, or early training, Jackson possessed great natural powers which he concentrated on the preservation of the American form of government and the American way of life. He was an avowed enemy of too much centralization of power in the National Government and the tendency, apparent even in his day, to interpret the Constitution too broadly. The American people trusted Jackson because he was one of them, because he sprang from the great rank and file of the masses, because with indomitable spirit he was willing to fight for his beliefs and convictions, because he was faithful and true to basic American principles of liberty, justice and righteousness, because he was eager to battle fearlessly against exploitation, special privilege, and selfish aggrandizements of class and group.

In these days of peril to democratic institutions when totalitarian government is threatening to engulf human freedom the world over, we may well give serious thought tonight as we rededicate ourselves to the exalted principles of Jackson and other great American leaders, to the future shape of America.

Will we, of this war-torn generation, succumb like the peoples of Babylonia, Greece, Rome, and practically all the other great governments of history to the blandishments, threats, and impossible, oily promises of zealous visionaries and take the same course they did to ruin and destruction, or will we, bravely and resolutely, like the early founders, like our noble sons of the battle fronts, do our full part, as the founders did and our gallant sons are doing, to sustain here against foreign foes or domestic enemies alike, the glorious form of government and way of life that have constituted our beloved Nation as the greatest democracy of all times?

Will we, in brief, in our humble way, strive to do for our country in our time what Jackson and the other great American immortals did for our country in theirs—to save it as a citadel of liberty and a sanctuary for political, social, and economic freedom where every man, woman, and child, regardless of origin, faith, color, or creed has the right to live in decency and comfort under free institutions?

With swiftest possible prosecution of the war to an early victorious conclusion as our watchword and ever-present goal, let us go forward under the Commander in Chief to the establishment of an honest just peace that will treat all nations, the great and the small, fairly and honorably, to a future America which will provide unbounded opportunities for all our citizens.

It has been a great pleasure to greet you all this evening, and I look forward with anticipation and confidence to continued participation with you in the great democratic success of the future that is bound to crown our efforts if we cling to the principles of Andrew Jackson whom we honor at this auspicious meeting. Let us go forward in unity and determination to victory and peace.

Full Employment After the War

EXTENSION OF REMARKS

OF

HON. HERBERT J. McGLINCHEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. McGLINCHEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech I delivered at a legislative conference of the Sixth Congressional District in Philadelphia on February 23:

Ladies and gentlemen, I feel honored to have been invited to address this first legislative conference of the Sixth Congressional District legislative committee. And I wish to congratulate this committee, composed of representatives of all parties and all shades of opinion in this congressional district, on its organization and its program. Although I was elected to Congress from this district on the Democratic ticket, as a Democrat, I do and will in my work as Congressman, represent everyone in this district in Congress. All of your interests and all of your concerns in Congress are my interests and my concerns, regardless of party affiliation.

It is a wonderful thing that the citizens of this district are taking such an active interest in governmental affairs, and have organized this committee to keep this interest alive. As you know, this is not the usual thing in American politics, where interest in Government seems to pick up only

around election time. As a Congressman, I welcome your activities, because through organizations like yours I can keep in close touch with public opinion in this district and can know what the citizens who elected me feel and think and want. In conferences such as this one we can exchange ideas and discuss the problems which confront you and which confront us in Congress.

Now one of the subjects to which I am sure you have all given thought is the problem of full employment after the war. This is not a faraway problem. It is not too much to say that the war in Europe is drawing to a victorious close. Our glorious successes in the Pacific may indeed shorten that war, too. I do not prophesy in saying this—but with all of you, I utter this as a fervent prayer and hope. What are we doing, what can be done in Congress to make sure that after the war we will have the full employment in this country upon which our high American standard of living and our American prosperity depend?

One thing is sure—we cannot just let things take their course and just hope for the best. We cannot afford to just sit back and say that the enormous backlog of demand for automobiles and refrigerators and electric irons, and the backlog of demand in foreign countries for their reconstruction will take care of everything. We have before us the bad example of what happened after World War No. 1 as a warning of the dangers of lack of foresight and lack of planning. In addition, this war is infinitely bigger than World War No. 1. So many more millions of men are involved and our whole economy (not only a part of it) is now geared to the war effort. The job of changing over, of conversion to normal peacetime production and peacetime living will, after this war, be tremendously more complex and tremendously more difficult.

The first objective, to my mind, of a full post-war employment program, is the goal of 60,000,000 productive jobs in our factories, offices, shops, mines, and farms—and all of them paying enough for a decent living up to our high American standard of living. If we can achieve and maintain this goal, we need have no worries about our continued prosperity. To me, one thing about this goal is clear—its achievement rests fundamentally on our system of private enterprise. It can and must and will be reached by the brain and brawn of American businessmen, American labor, and the American farmer. It is they who must have the ideas and make the plans, invest the necessary capital, produce the raw materials, machinery and finished products, develop the markets, and deliver the goods and services.

Although, as I see it, the chief responsibility for this goal of 60,000,000 jobs rests on our private enterprise system, the Federal Government must inevitably have a part in it. Our entire economy is so complex that it must have a necessary measure of governmental regulation to make sure the system does not get out of hand, to make sure that bottlenecks do not develop, and to make sure that the big do not crush the small.

For instance, as you know, the Government has built a large number of new industrial plants for essential war production. These plants are now operated mostly by private industry. The conversion of these plants to peacetime production will be a vital factor in shaping the goal of 60,000,000 peacetime jobs. How will the conversion of these plants take place? To whom will they be sold? How will they be used? Will they be shut down to protect some monopoly, or will they be sold to whomever wants to buy them to keep tens of thousand of men and women at work, to make more and better goods for open competition in an open market? You can readily see the part that controlling legislation and proper administration of such laws must play in this vital phase of achieving the goal of full post-war employment.

For another example, What should be the Government's part in financing post-war business enterprise? What should the Government do to encourage the financing of the great post-war productive capacity on which the 60,000,000 jobs depend? Should the Government, if necessary, assist in such financing, and if so, how? That, too, will require Congressional legislation.

In peacetime, as you know, a large part of our economic enterprise consists of the service industries, such as retail and wholesale trade, repairs, and servicing of our various mechanical installations in business and at home, and the like. These service industries are generally in the hands of what we call little business. They employ hundreds of thousands of workers. What will be done to encourage and develop these businesses?

A housing program, with a goal of millions of new houses; a farm program, with a goal of fair prices and decent living returns for farmers; a program for economic readjustment for millions of men now in military service—all these are factors in the goal of the 60,000,000 peacetime jobs which must be the measure of a prosperous post-war United States. In all of these factors, a measure of Congressional regulation has been and will be required.

Time, this evening, does not permit any more than this sketch of the many, many parts of this complex problem. As you see from this brief outline of the problem, the attainment of this great goal is not a simple matter. To a large extent, it will be worked out through our private enterprise system. Congressional laws will undoubtedly be required for regulation and, when necessary, to prime the pump. I can assure you that in regard to such legislation, I will always be vitally interested in your opinions, and will be constantly vigilant to advocate and support all measures which seek to lead us to the goal of 60,000,000 post-war productive jobs.

The War Food Administration—What Is the Truth?

EXTENSION OF REMARKS

OF

HON. JESSE P. WOLCOTT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. WOLCOTT. Mr. Speaker, under leave to extend my remarks, I include two recent newspaper articles referring to a situation alleged to exist in the War Food Administration.

The Des Moines Register of February 23, 1945, said:

CHARGES OF FOOD SPOILAGE BRING CALL FOR F. B. I. PROBE

(By Richard Wilson)

WASHINGTON, D. C.—Sensational reports of inefficiency and maladministration in the War Food Administration (W. F. A.) have been placed before a House appropriation subcommittee by investigators for the committee.

The nature of these charges has caused Marvin Jones, Food Administrator, to ask the subcommittee to request a Federal Bureau of Investigation inquiry.

Spoilage of food acquired by W. F. A. is the principal topic of reports which have been made by three investigators.

Mysterious references to alleged poker parties at the home of a high W. F. A. official in which warehousemen are reported to have participated in games with W. F. A. officials make up the most sensational portion of the reports.

MALICIOUS LIES

Names of those mentioned in the reports are withheld, and at W. F. A. the stories about the poker parties were branded as "malicious lies."

Jones disclosed Thursday that he has asked the subcommittee, headed by Representative MALCOLM C. TARVER (Democrat), of Georgia, to call on the F. B. I. for an investigation which will go to the bottom of the reports. Whether such inquiry will be made was not disclosed.

READ THE REPORTS

TARVER refused to comment on the reports which other members of the Appropriations Committee described. Jones, as well as other officials of W. F. A., acknowledged, however, that they had read the reports.

"These reports," Jones said, "are confessedly based on hearsay, gossip, and rumors. I want to go to the bottom of this whole matter, and I have every confidence the persons involved will be cleared. There are, of course, disgruntled employees in W. F. A., as elsewhere. We have had the biggest farm production in history and have furnished all the demands of our fighting allies.

"Spoilage in all this has been exceedingly small. In this matter we want to know what all the facts are."

DENIES IMPUTATIONS

Reference is made in the reports to the subcommittee to the poker parties at the home of a W. F. A. official. That official acknowledged, Thursday, that he and his friends sometimes did play at his home for small stakes but denied every imputation that any hidden transactions with warehousemen were involved. He said that so far as he knows, there never has been a warehouseman in his home.

Some members of the House Appropriations Committee regarded the reports of the poker parties as very flimsy, but were impressed by reports of large-scale spoilage and what they described as inefficiency and maladministration.

One incident dealt with in the report placed in the subcommittee's hands has to do with 20,000,000 pounds of lard which allegedly became unfit for human consumption while in storage in a warehouse without a cooling system. This lard later was sold to soap manufacturers under circumstances regarded as unsatisfactory by the investigators.

Lt. Col. Ralph Olmstead, vice president of the Commodity Credit Corporation in charge of supply, said the transaction involving the lard had been completely above board. He said that last year when there had been a heavy hog marketing run, the Government ran out of adequate storage space for lard in ordinary containers.

The Government acquired, he said, 150,000 tons of lard in steel drums. It contained antioxygen ingredients intended to prevent it from spoiling for a relatively short period of time.

LARD PACKERS

Even this large purchase, Olmstead said, was found not to be enough and the lard packers were calling for further Government buying to relieve the pressure of surplus supplies.

Twenty million additional pounds were purchased, he said, for relief needs on the basis that if relief needs did not develop the lard could be used for the manufacture of soap.

SOLD TO ARMY

As it turned out, he added, the relief needs did not develop, and it was necessary to offer the lard for sale. Representatives of the Army, upon hearing of this offer, requested that the lard be sold to the Army, Olmstead said, and that was done.

Later, he declared, and at the direction of the Army, the lard was sold for the manufacture of soap, which he said was the high on the list of desired materials for the Army.

Olmstead said it was true that the lard had become unfit for human consumption.

The question of what shall be done with the reports and whether there shall be open hearings on them is holding up House consideration of the Commodity Credit Corporation bill which renews that agency's authority to use Federal funds in controlling the supply of surplus food commodities.

One member of Representative TARVER'S subcommittee said Thursday that the committee would take no further action until it had heard from the F. B. I. This was the first indication that the F. B. I. would actually take up the matter as Jones requested, but there is no official confirmation of it.

The Times-Herald of this morning, Tuesday, February 27, 1945, carried the following:

W. F. A. HEAD ASKS THAT F. B. I. PROBE FOOD SPOILAGE CHARGE—ANSWERS REPRESENTATIVE TABER'S CLAIM TO EVIDENCE THAT SUPPLIES ARE GROSSLY MISHANDLED

(By Dorothy Williams)

War Food Administrator Jones disclosed last night that he has asked the F. B. I. to investigate reports of food spoilage that one Member of Congress claims would "make the Teapot Dome scandal look like a piker."

Jones said he proposed the inquiry before a House appropriations subcommittee hearing last week. He said he understood the group has asked the F. B. I. to go ahead.

EVIDENCE OF MISHANDLING

Representative TABER, of New York, ranking Republican member of the full Appropriation Committee, reported that he had evidence of flagrant W. F. A. mishandling of the Nation's food supply that would overshadow even the Teapot Dome oil scandal.

He contended that Jones was at fault "because he knew some of the things that were going on and did nothing about it." He also placed part of the blame on former Vice President Wallace, one-time Agriculture Secretary, and on present Agriculture Secretary Wickard for their selection of personnel.

Jones said he was told by a congressional investigator that it would be "surprising" if some errors were not brought to light by the F. B. I. inquiry in view of the large quantities of food W. F. A. handled. He asked for the investigation after a congressional committee investigator said there should be one.

"ONE OR TWO" INSTANCES

He said there had been "one or two" instances of food spoilage, but that he doubted if an investigation would reveal widespread waste.

TABER said congressional investigators had uncovered unsavory evidence about management of the Agriculture Department, W. F. A., and Commodity Credit Corporation during a routine spot check of departmental appropriations requests.

The Foreign Affairs Committee should look into this and the authority for it.

The article follows:

LEND-LEASE PACT ADOPTED BY FRANCE—AGREEMENT IS SAID TO INVOLVE $2,500,000,000, WITH AID TO US OF $1,000,000,000

(By Harold Callender)

PARIS, February 23—The French cabinet approved today a lend-lease agreement with the United States. There were reported to be only slight modifications.

Jean Monnet brought the text of the proposed agreement from Washington, where he negotiated it for about a year. He will return to Washington next week to sign it. It is expected to take effect immediately thereafter.

While the terms have not been made public, it is understood that the total involved is $2,500,000,000. Of this amount, $1,600,000,000, covered by section 3 (c) of the act, will be on a lend-lease basis until the end of hostilities, when it will be transformed into a 30-year credit, at about 2¼ percent interest, it is understood.

Apart from this sum, there are understood to be $900,000,000, which will be on a 30-year-credit basis from the beginning, except for about 20 percent for which cash will be paid by the French Government on delivery of goods. This part of the agreement is said to be intended to cover durable capital goods such as locomotives and machinery.

The French 8-month plan for relief and industrial supplies, which was designed to provide a criterion for shipping allocations, will now disappear, since the program which it involved is expected to be covered by the new agreement.

In addition to the master lend-lease agreement, there is a reciprocal-aid agreement, similar to those made with other countries, by which the French will contribute to the American war effort to the extent of possibly $1,000,000,000, at the present rate of exchange, the French say. This would assume that aid would continue at about the present volume.

The Cabinet was said to be pleased that the new agreement, which should hasten shipping equipment and raw materials for the revival of French industry and transport, would permit the French to retain most of their gold and dollar exchange in the United States, which otherwise they would have been obliged to spend for indispensable supplies.

Present industrial production in France is about one-third that of 1939. It is expected that a low living standard will be necessary for several years, although this will depend upon the rapidity of reconstruction by means of imported capital goods.

It was emphasized that the Cabinet, including Gen. Charles de Gaulle, was impressed by the agreement.

Some Government officials voiced gratification that the lend-lease accord was reached at this time because, they said, it might serve to offset a possible adverse effect on French-American relations resulting from General de Gaulle's refusal to meet President Roosevelt in Algiers.

Lend-Lease Pact Adopted by France

EXTENSION OF REMARKS

OF

HON. JOHN TABER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. TABER. Mr. Speaker, I am placing in the RECORD an abstract of an agreement with France allegedly made under the authority of the Lend-Lease Act.

Alaska and Statehood

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, I am in receipt of a joint resolution from the Legislature of the State of Montana duly passed by both houses and approved by the Governor, requesting the Congress of the United States to initiate proper action for the admission of Alaska as a State.

I wish to go on record as being wholeheartedly in favor of this resolution and to urge the Members of this body to give it their most earnest and serious consideration. Alaska, with its huge territory, great natural resources, and fine citizenry, is capable of becoming a State with all the rights, privileges, and responsibilities that go with it. Because of the war, Alaska is much closer to us than before and with the development of highways and air transport systems her future is more closely tied up with the rest of the States. Speaking from the viewpoint of one State alone, great progress has been made in furthering the already fine friendship and understanding which has always existed between the Territory of Alaska and the State of Montana. The military highway built because of the war has furthered that understanding a great deal, and the development of an air-transport system extending from Great Falls, Mont., to Fairbanks, Alaska, has proved its worth and brought the territory and Montana within a few hours of each other.

Mr. Speaker, I should like to call to the attention of the House the fact that millions of pounds of strategic material and thousands of planes have been flown from the port of Great Falls to Fairbanks, Alaska, and from there have continued their flight under Russian supervision to the fighting fronts in Europe. This economic start between Alaska and Montana augurs well for the future and we in Montana stand ready and willing to do all that we possibly can in furthering the admission of Alaska as a State at the earliest possible moment.

The resolution follows:

House Joint Resolution 4

A joint resolution to the Congress of the United States to initiate proper action for the immediate admission of Alaska as a State

Whereas realizing the crucial importance of Alaska to the defense of our country; and

Whereas being ever increasingly aware of her matchless natural resources and of the growing community of interest between that Territory and the United States of America, but more particularly with the State of Montana; and

Whereas we have observed the highly successful and uninterrupted operation of communications and transportation between Montana and Alaska, both by highway and air; and

Whereas appreciating the difficulties of administration under existing conditions or under legislation now before the Congress: Now, therefore, be it

Resolved by the House of Representatives of the Twenty-ninth Legislative Assembly of the State of Montana (the Senate concurring), That the Congress of the United States of America is urged to initiate proper action for the immediate admission of Alaska as a State; be it further

Resolved, That copies hereof, duly authenticated, be forwarded to the President of the United States, to the Senators and Representatives from the State of Montana in the Congress, to the Territorial Governor of Alaska, and to the Delegate from Alaska in the Congress.

GEO. W. O'CONNOR,
Speaker of the House.
ERNEST F. EATON,
President of the Senate.

General Hines Admits Need for District of Columbia Veteran Medical Center

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article by Joseph Lieb:

GENERAL HINES FINALLY ADMITS NEED FOR DISTRICT OF COLUMBIA VETERAN MEDICAL CENTER—BUT ACTION MEETS DELAYING TACTICS

(By Joseph Leib)

On January 31, 1945, the writer issued a caustic statement regarding certain objectionable conditions that exist at the veterans' hospital in Washington, D. C., known as Mount Alto. This appeared in the CONGRESSIONAL RECORD.

Reference was made to the fact that the Costello Post of the American Legion had instituted a resolution requesting an investigation of a number of inadequacies at the mentioned veterans' facility and that this resolution was approved and adopted by the executive committee of the American Legion, Department of the District of Columbia.

This was followed by a bitter controversy in the public press.

In what appears to have been an effort to offset criticism of deplorable conditions at Mount Alto, a story was planted in the Washington Times-Herald on February 12, 1945, in the hope that the dogs would be called off.

The Times-Herald article went into detail to explain that final approval of a mammoth veterans' medical center awaited only President Roosevelt's signature and that the project would be started in time to provide accommodations for Washington veterans needing hospitalization.

This story, however, confirmed Costello Post's charges that Mount Alto has only 327 beds and that the hospital was constantly overcrowded.

In order to confirm the autnenticity of the statements made in this apparently planted story, a letter was directed to General Hines.

Here is his confusing reply, but note that the Veterans' Administrator now definitely admits the need for additional facilities.

FEBRUARY 22, 1945.

I have received your letter of February 12, 1945, that forwarded a clipping that appeared in the Washington Times-Herald, concerning the construction of a medical center for veterans residing in the District of Columbia.

While it has been determined that there is a need for expanded facilities for the hospitalization of beneficiaries of the Veterans' Administration in the District of Columbia area, provision for the establishment of additional facilities has not been made in our present program. It is expected that such a project will be included in our next submission to the Federal Board of Hospitalization.

Very truly yours,

FRANK T. HINES,
Administrator.

As can be seen this letter is as clear as mud. The Veterans' Administration was respectfully requested to send a more detailed report.

Here is the second reply:

FEBRUARY 23, 1945.

Reference is made to the inquiry from your office regarding the erection of a medical center for veterans in the District of Columbia area.

As stated in my letter of February 22, 1945, it is expected that the inclusion of such a project will be made in our next submission to the Federal Board of Hospitalization. Our next program of additional hospital construction will be submitted not later than July of this year.

Very truly yours,

FRANK T. HINES,
Administrator.

Now, the question arose as to who represented the Federal Board of Hospitalization.

An inquiry revealed that General Hines, himself, is the Chairman of this Federal Board of Hospitalization. Among his assistants are: Dr. Norman T. Kirk, Surgeon General of the Army; Dr. Ross T McIntire, Surgeon General of the Navy; Dr. Thomas Parran, Surgeon General, United States Public Health Service.

(Note, that all of these men play a leading role in the American Medical Association. This will be discussed later.)

According to General Hines the Washington project hadn't even reached first base.

A break-down of the above-quoted communications indicates that by the time the proposed District of Columbia Medical Center is unraveled from bureaucratic red tape it will be years before the project could be ready for occupancy.

In the meantime conditions are and will become more desperate as each day goes by. Washington has a permanent population of many thousands of locally registered veterans.

But Washington is not the only city that is in need of additional veteran hospital beds. We are not the only ones that have been confronted by these same dodging and ducking tactics.

What are the facts behind this controversy? Why is this admitted need for a Washington veteran medical center now faced with all kinds of disheartening obstacles?

Here are the unvarnished facts and the complete story behind this conspiracy.

Since September 7, 1944, this writer had inserted in the CONGRESSIONAL RECORD a number of critical analyses of the Veterans' Administration. Immediately after these constructive and illuminating criticisms were published, the Veterans' Administration started to send its trouble shooters to Capitol Hill in an attempt to mollify certain Members of Congress who have thought first of the welfare of veterans and secondly of the bureaucrats who are paid to administer the laws enacted by the Congress.

In some of these articles this writer charged that the greedy American Medical Association was fighting and would continue to bitterly oppose the adoption and construction of a forward-looking veterans' hospital program.

In the foregoing I shall substantiate this charge with documentary evidence in the form of a letter written by the American Medical Association.

General Hines has protested that a hospitalization program for veterans is receiving his active consideration. Perhaps General Hines does mean well, for it is claimed that he has done a pretty good job since he has been Administrator, but it is becoming increasingly apparent that someone is pulling his leg and that he is not the master of his own house.

Time and time again, in the hope of offsetting constructive criticism, General Hines and his associates have reported that hospital facilities are being steadily enlarged to eventually provide more than 300,000 beds throughout the United States. But when you try to pin them down to facts and dates, you get nowhere fast. They talk only in obscure generalities.

The startling fact remains that, according to the Veterans' Administration's own reports, there were 82,204 available domiciliary and hospital beds in all United States veterans' hospitals on June 30, 1940. (Source: American Legion National Legislative Committee Report, September 1940.)

Today there are 89,000 domiciliary and hospital beds—an increase of merely seven-thousand-odd beds. (Source: The Veterans' Administration Statistical Section.)

Think of it! There have been more than 1,167,000 servicemen medically discharged from this war alone, and out of this total over 300,000 of them are now drawing disability pensions. Each of these veterans are potential hospital cases. Where are they to go for medical treatment or hospitalization?

The American Medical Association is out to get this trade. They are determined that this future business will not be taken away from their membership; i. e., the civilian doctors.

As proof of this statement I cite the American Medical Association's stand toward the construction of veterans' hospitals.

On March 14, 1933, during the economy debate, Senator Walcott placed in the CONGRESSIONAL RECORD the following letter from Dr. Hugh H. Young, famous surgeon, of Johns Hopkins Hospital. (Source: P. 343, bound copy; p. 327, unbound RECORD.)

As noted, Dr. Young was the spokesman for the American Medical Association.

The letter is as follows:

BALTIMORE, MD., *March 14, 1933.*

MY DEAR SENATOR WALCOTT: You will be interested to learn that Dr. Dean Lewis, president-elect of the American Medical Association, telephoned to the executive offices of the American Medical Association in Chicago and presented to them the great desirability of the American Medical Association, showing how strongly the organized medical profession of America felt against the payment of the huge sums to veterans, particularly for nonservice disabilities and the fabulous hospital program which they have begun. As a result of this, a letter was dispatched from the executive offices of the American Medical Association strongly urging that the President be upheld in his efforts to effect these large economies, vitally important at this time in the balancing of the Budget; in particular, the great reduction of the money to be paid to nonservice veterans and for the program of excessive hospitalization.

I would like to say personally that this hospital program, if continued, will injure very greatly the established hospitals of the country, the great hospitals connected with medical schools, and will also be of incalculable injury to the medical profession of America.

Very sincerely,

HUGH H. YOUNG, M. D.

There you have the crux for the delaying tactics of the Veterans' Administration towards the construction of additional veteran hospitals.

Maybe General Hines is not to be blamed. Maybe his hands are thoroughly tied.

To get a complete picture of this situation it is well to read the recent letter from the American Medical Association that Representative GILLIE placed in the CONGRESSIONAL RECORD on November 30, 1944. (Source: Appendix of the RECORD, pp. A4569–A4570.)

Obviously the position of the American Medical Association remains the same down through the years. They have their powerful friends holding high offices in Washington. In their hands lay the fate, health, and hospitalization of millions of veterans.

They are the ones responsible for the obnoxious pauper's oath that veterans must sign before being granted hospitalization. Through the medium of the pauper oath scheme this selfish and greedy group intend to scare and humiliate veterans in the hope that they will take their business to private doctors. It is difficult to believe that the rank and file of the medical profession approve the stand taken by the American Medical Association.

Still the A. M. A. is opposed to the deletion of this degrading oath from the Veteran Hospital Application Form P-10. Through their lobby in official Washington they insist that the pauper's oath must remain undisturbed.

The Tydings Amendment

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, my colleague, the Honorable WILLIAM LEMKE, has tried diligently to bring to the floor of this Congress House Concurrent Resolution No. 27, which provides for the investigation and interpretation of the Tydings Amendment to the Selective Service Act.

It is regrettable, indeed, that the distinguished gentleman seems to be having difficulties in getting this resolution presented to the Congress.

I want, however, the record to show that I stand unconditionally behind this resolution. I am in full and complete support of its aims and objects. And, further, I want the record to show that I highly commend my colleague for the leadership he has shown in his devotion to so worthy a cause, that cause being the giving to the young American farmers their rightful place in this most important national crisis.

The country has been annoyed by much discussion on the question of the Tydings amendment. Meeting after meeting has been held with General Hershey on this question, and still, with few exceptions, there is evidence that the local boards continue to follow the call of Justice Byrnes, issued through General Hershey, and by so doing placed a new interpretation upon the meaning of the legal statute known as the Tydings amendment passed by this Congress.

There is a side to this great question, Mr. Speaker, that I think in many respects has been lost sight of. I think it is clearly the intent of the Tydings amendment to defer farm workers and farmers themselves in the food-producing industry and recognizing the same as an essential part of our war program. Men who have been thus deferred should be dealt with with honor. If their industry has been recognized as one indispensable in the war effort, then those who work in it must be given a place in the world today and particularly in the world of tomorrow, where they feel they have measured up and answered the call of their Government in a great hour of need. Theirs must be a duty of patriotism, and they must be made to feel that their efforts are patriotic. Young men who are working today, deferred under the Tydings amendment, dedicating themselves to the noble work of farming must never feel in the days to come that they failed their Government in an hour of need. It must be clearly impressed upon them that they are doing as great a service to remain on the farm and produce food in the interest of our country and our allies as would be the case were they carrying a gun, driving a tank, or flying an airplane. And in that period following the war there must never come a time when they fail to receive equal recognition with those who have the fighting part of the real war.

And I think, Mr. Speaker, that the Tydings amendment, if properly administered, would justify that. The fact that General Hershey, under his orders from Mr. Byrnes, has seen fit to treat the Tydings amendment as a scrap of paper has placed a stigma upon these young American farmers which they will long have to carry. The confusion and the great controversies has reached a point in which many ask, Is the Tydings amendment the law of the land?

Let me remind you that these young farmers are patriotic; they work without question long hours, and they work with great devotion in their given profession for their country.

It is the duty of this Congress, now, to find a way to return to these young men a condition in which they may feel they are accorded equal honor with the men in the fighting fronts. The problem will not end with an Armistice Day, the rehabilitation and feeding of liberated countries, and assistance which must be given to our allies will require that they continue for an indefinite period in these long days of hard work.

Credit Where Due

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article from the Washington Post, Thursday, February 20, 1945, and letter concerning the article written by Constantin Fotitch, former Ambassador of Yugoslavia:

RADIO SIGNAL LEADS TO RESCUE OF 250 STRANDED ALLIED FLYERS

ROME, February 16.—A mystery radio message, picked up and recorded by R. A. F. radio operators in Italy, led to the rescue recently of 250 Allied airmen, mostly American, who had bailed out over the Balkans.

One afternoon an operator attached to an R. A. F. heavy bomber wing received a call sign which he could not identify. For 2 hours he struggled with signals, trying to determine the location of the caller.

The next day the mystery station called again and the sender used a commercial rather than a service procedure. R. A. F. operators suspected that the mysterious calls came from Yugoslavia.

Gradually a procedure was worked out. The mystery station used ingenious phrases—there was no code—which were at first unintelligible. Translation of the messages indicated that a large number of Americans, some of whom were sick, were stranded in Yugoslavia. They were awaiting rescue anxiously, for enemy troops were not far distant.

The Balkan air force dropped a parachutist at a spot indicated by the unknown wireless operator. Full arrangements were soon completed and the airmen congregated at a secret airfield. There they were all picked up and brought back to their bases.

LETTERS TO THE EDITOR

CREDIT WHERE DUE

In the Post of February 20 you published a story about a mystery radio message picked up by R. A. F. radio operators in Italy, which led to the rescue of 250 Allied airmen, mostly Americans, who had bailed out over the Balkans.

Now that there seems to be no reason for keeping this matter secret, I should like to bring to light the full story of the action which led to the rescue of more than 600 American airmen plus scores of British and other Allied airmen from Yugoslavia. In the course of the year 1944, when the Allied Air Force from Italy launched heavy bombardment operations over the Balkans and Central Europe, many of the Allied and especially American airmen, while returning to their bases, were forced to bail out from their damaged ships in the territory which was under the control of the army of General Mihailovich. General Mihailovich's men were given strict orders that whenever Allied airmen were forced down over their territory, those detachments which were close by must go at once to their rescue, and bring them to his headquarters for further evacuation. In several instances these rescues were effected only after severe fighting with the Bulgarian and German troops of occupation.

Almost daily report came from General Mihailovich giving the names of the rescued Allied aviators with their serial numbers and the number of the plane assigned to each of them, so that the American authorities were promptly and fully informed about many of their airmen who had been missing in action. I have in my possession many touching letters which I received from the families of these airmen, expressing their gratitude and telling of the great comfort that this information was to them.

By the middle of this summer the number of airmen gathered around Mihailovich's headquarters amounted to several hundred, and the problem for the general was how to return them safely back to their respective units in Italy. As it was practically impossible to reach the seacoast through the occupied country, General Mihailovich's men built an air field in southwestern Serbia, near the village of Pr——, on which the American planes could land in order to evacuate their comrades. With no bulldozers and modern equipment at their disposal, Mihailovich's men built this air field by the use of their bare hand and what primitive equipment they possessed.

On July 17, I was informed by General Mihailovich that the airfield was completed, and that they were ready to receive the American transport planes. He stated that his army would take full protection of the landing and evacuation operations. The next day I conveyed this information to the proper authorities in Washington, who in turn, made the further necessary arrangements with General Mihailovich. In one single day, on August 10, 17 American Liberators landed on Mihailovich's airfield and evacuated the first group of 254 airmen. Further evacuation continued, until all were brought safely home.

Even this action did not prevent a continuation of slanderous accusations against General Mihailovich, and I am not aware what recognition was given him for this contribution to the Allied cause. Probably the general did not expect any recognition, because he felt that he was merely carrying out his duties as an ally. Nevertheless, today, when the story of this rescue is disclosed,

credit should be given to those who deserve it, and should not be presented as an anonymous action which occurred somewhere in the Balkans.

CONSTANTIN FOTITCH,
Former Ambassador of Yugoslavia.
WASHINGTON, *February 20.*

Nazi Reeducation

EXTENSION OF REMARKS
OF
HON. ROBERT SIKES
OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. SIKES. Mr. Speaker, under leave to extend my remarks, I am placing in the RECORD an article on reeducation of Nazi prisoners of war which I believe is worthy of the consideration of the Members of the House. It is from the Christian Science Monitor for January 27, 1945:

REEDUCATION OF NAZI WAR PRISONERS TERMED "KEY TO REFORMATION OF GERMANY"

(By Ernest S. Pisko)

The problem of whether or not attempt should be made to reeducate German war prisoners in the United States is approached with somewhat more than caution by the War Department, but with enthusiasm by those interested in the post-war reformation of Germany.

There is evidence of the efficient manner in which German prisoners uphold Nazi ideals in their camps. They still greet each other with "Heil Hitler"; they keep pictures of "Der Führer" in their barracks; they display the swastika flag on suitable occasions; and, by means of a well-organized camp gestapo, they maintain rigid party discipline among camp inmates.

The St. Pölten (Austria) newspaper, Heimatbote, on July 6, published an article by Lt. Christian Köhler, a former prisoner of war in this country who was returned as an exchange prisoner. Lieutenant Köhler described the attitude of his captiv comrades in the United States as marvelous. He particularly praised the noncommissioned officers for the splendid propaganda work they were doing among enlisted men. "Although the only news available to war prisoners," he wrote, "is the fabricated news from our enemies, the sergeants explain to their comrades the political and military situation day after day. Their sound political instinct helps them to detect any lie at once."

For obvious reasons Lieutenant Köhler kept silent on the specific methods by which the "sound political instinct" of the German noncoms succeeds in asserting itself. These methods begin with social boycott against any nonconformist and end with murder or compulsory suicide.

Public opinion in the United States, though basically in favor of reeducating German war prisoners, has been hampered in expressing itself by the notion that any attempt to interfere with the political views of the prisoners would violate the Geneva Convention on the treatment of prisoners of war.

Actually there is nothing in either the Geneva Convention of 1929 or in earlier International agreements to vindicate this opinion.

The only article that could be interpreted as recommending a hands-off policy is article 3 of the Geneva Convention, waich stipulates that prisoners of war "have the right to have their person and their honor respected." While it must be admitted that the special brand of "Nazi honor" would be infringed upon by anyone suggesting that Hitler is wrong or that democratic procedure is superior to totalitarianism, the question arises whether the term "honor," as used in the Geneva Convention, does not apply to human dignity in general rather than to any specific political creed.

Besides, two articles of the Geneva Convention must be construed as coming out expressly in favor of reeducation.

Article 17 provides that "so far as possible belligerents shall encourage intellectual discussions * * * organized by prisoners of war.

And article 33, which states that war prisoners shall be allowed to receive shipments of books individually, adds that "duly recognized and authorized aid societies may send books and collections of books to libraries of prisoner camps."

Perhaps even more important than those two positive provisions is the fact that the drafters of the 1929 convention rejected three separate motions advocating the banning of political propaganda among war prisoners.

The question remains whether it is possible to awaken German war prisoners to democracy by means of discussion groups, lectures, and books. An affirmative answer was given by two countries— Russia and Sweden.

The Russians embarked on reeducation of their war prisoners almost immediately after the German invasion. They are said to have scored a tremendous success and to have denazified the overwhelming majority of the prisoners. The anti-Nazi union of German officers in the U. S. S. R. has among its members 1 field marshal, 1 colonel general, more than 30 generals, and thousands of commissioned officers of all ranks. Scores of thousands of noncoms and enlisted men are said to be members of or sympathizers with the Free Germany Committee in Moscow.

In Sweden, a number of youth organizations have begun carrying out a program of "enlightenment" among some 5,000 German Army deserters interned in Swedish camps. The internees not only are given lecture courses on various political and historic topics, but they also are provided with copies of those German books that have been banned and burned by the Nazis. The Swedish youth organizations concerned hope that the internees, upon their return home, will be spiritually equipped and eager to act as "reeducators" in their own circles.

SUSPICION, HOSTILITY, AND RESISTANCE

It has been suggested by various political and educational organizations and by many individuals that the opportunity to awaken German war prisoners to the value of democracy, and perhaps make them the spearhead of a democratic post-war Reich, should not be missed.

On the other hand, the War Department and the office of the Provost Marshal General have rejected suggestions for a program of reducation among German war prisoners.

Only recently, Henry L. Stimson, Secretary of War, denied the request of a Harvard University group to make an educational survey among German prisoners and send literature and lectures into prison camps. "Any such procedure," Mr. Stimson stated in his reply, "would be met with suspicion, hostility, and resistance, and instead of being persuaded by unwelcome teaching, the prisoners would turn against it."

The fact that lectures on democratic government or on modern history, as seen by non-Nazis, should be "unwelcome" to German prisoners is regrettable. It not only proves how badly the German captives need reeducation, but it also implies that, after having helped to destroy nazi-ism in Germany, the United States is going to repatriate several hundred thousand Nazis, well-fed, well-rested, spiritually unchanged, and eager for action.

The Tydings Amendment Is Not Being Considered

EXTENSION OF REMARKS
OF
HON. EDWARD O. McCOWEN
OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. McCOWEN. Mr. Speaker, that the Tydings amendment is being given very little consideration, if any, in the deferment of farm-labor workers in the age bracket, 18–26, is a matter of general knowledge. That the National Selective Service has given a different interpretation to it than the Congress intended is a well-known fact that has been stated on the floor of the House of Representatives a number of times in the last few weeks. That, following this wrong interpretation, Selective Service has apparently been determined to put almost all farm laborers in the age bracket 18–26 in military service cannot be successfully denied by anyone. And that the National Selective Service System has been and is now putting pressure on the local draft boards generally to conscript more and more young farmers in the 18–26 age bracket, has also been evidenced on the floor of the House by several Members who have given instances of such pressure in their respective States. That the same high-pressure method has been used in the State of Ohio is disclosed in the subject matter of three affidavits made by members or officials of the Lucas County U. S. D. A. War Board and handed to me by Hon. HOMER A. RAMEY, of the Ninth Ohio District:

STATE OF OHIO,
Lucas County, ss:

John A. Zenk, being first duly sworn, deposes and says that he is past chairman of the Lucas County U. S. D. A. War Board, and is representing the present chairman of the Lucas County U. S. D. A. War Board, Toledo, Ohio, and that on the 9th day of January 1945, Lt. S. A. Dwyer appeared before selective service board, No. 22, located in Toledo, Lucas County, Ohio, representing that he was acting for and under the direction of the State selective-service board, headed by Col. C. W. Goble, and made the following statements to said board regarding drafting of farm boys, stated in substance as follows:

In reply to a case submitted by the selective-service board of a lone owner-operator of a 40-unit farm, whose brothers were all owner-operators whose units average approximately 40 units, Lieutenant Dwyer said, "Let the brothers farm it."

He further said in substance that the Tydings amendment is still in effect but these boys are deferred for the convenience of the Government, therefore, they can be taken at any time. They will all have to go sooner or later.

There are enough people on farms to produce enough food to supply the armed forces and lend-lease; if civilians want to eat let the city people come out and help grow the food.

And further affiant saith not.

JOHN A. ZENK.

Notarized by Lavon M. Saneholtz, notary public.

LUCAS COUNTY, OHIO, *February 20, 1945.*

STATE OF OHIO,
Lucas County, ss:

John C. Maddy, being first duly sworn, deposes and says that he is agricultural investigator for the Lucas County U. S. D. A. War Board, Toledo, Ohio, and that on the 9th day of January 1945, Lt. S. A. Dwyer appeared before selective-service board, No. 22, located in Toledo, Lucas County, Ohio, representing that he was acting for and under the direction of the State selective-service board, headed by Col. C. W. Goble, and made the following statements to said board regarding drafting of farm boys, stated in substance as follows:

All registrants between 18 and 26 years of age presently classified in II-C shall be reclassified in I-A and given preinduction physical examination, all of which shall be inducted except a few hardship cases.

Food production should no longer be given consideration, as the need for young men is more important in the armed services than in the production of food. If civilians expect to have sufficient food to meet the need for 1945, it will be necessary for them to do their share on the farm front.

And further affiant saith not.

JOHN C. MADDY.

Notarized by Lavon M. Saneholtz, notary public.

LUCAS COUNTY, OHIO, *February 20, 1945.*

STATE OF OHIO,
Lucas County, ss:

H. W. Waugh, being first duly sworn, deposes and says that he is a member of the Lucas County U. S. D. A. War Board, Toledo, Ohio, and that on the 9th day of January 1945, Lieut. S. A. Dwyer appeared before selective service board, No. 22, located in Toledo, Lucas County, Ohio, representing that he was acting for and under the direction of the State selective-service board, headed by Col. C. W. Goble, and made the following statement to said board regarding drafting of farm boys, stated in substance as follows:

The Tydings amendment is to be no longer considered for the age group from 18 to 26 years. Food production would have to suffer if the induction of this group causes it. Other means of production will have to be worked out.

The tomatoes you are talking about might well be produced in the South where they have plenty of labor. The prisoners of war in your area might well perform all of the farming operations.

Each II-C below 26 should be placed in I-A. All of these cases should go to the board of appeals and the war board should appeal them.

And further affiant saith not.

H. W. WAUGH.

Notarized by Lavon M. Saneholtz, notary public.

LUCAS COUNTY, OHIO, *February 20, 1945.*

Mr. Speaker, these affidavits do not carry any personal reflection whatever on the officials mentioned in the respective affidavits, because they doubtless are working under orders from higher up. The affidavits speak for themselves and show that local draft boards in Ohio while having been told the Tydings amendment is still in effect, at the same time they are given an interpretation by the national Selective Service contrary to what the Congress intended and are high pressured by being verbally told in substance by Army officers in uniform not to consider the Tydings amendment, not to consider the production of food, but to put farm-labor draftees in the 18–26 age bracket in the Army. While the affidavits refer only to one county, there is reason to believe that the practice has been general in other parts, if not all, of the State.

Now the Congress is attempting to reenact the Tydings amendment to try to make it necessary for the National Selective Service System to apply the law according to the meaning intended by Congress. There should never have been any confusion on the Tydings amendment. It was written in very clear and forceful English.

Is the interpretation of laws to suit themselves becoming a habit of Government officials?

Is This Pampering?

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 26, 1945

Mr. SIKES. Mr. Speaker, I submit two articles, one of them from Time, of February 19, 1945, and the other from the Mobile Register, of February 22, 1945. They portray all too clearly the difference in German and American conceptions of proper treatment of prisoners of war under the rules set forth by the Geneva convention.

[From Time Magazine of February 19, 1945]

NOTHING BUT THE BEST

Passengers boarding the Pennsylvania Limited at Washington, D. C., one day last week peered curiously at the 16 prisoners of war in the private car at the end of the train. They were Germans—mostly veterans of the ill-fated Afrika Korps; they looked smug and well-fed in their khaki uniforms stenciled with large P. W.'s. Three United States Army noncoms watched over them.

Halfway to New York City some of the passengers got a better look. The dining car was crowded for lunch. Waiters hustled to clear away the debris of departed diners. Four standees waited to be fed. Then the Germans filed in, stood stiffly while their guards bustled about ordering diners to seats at other tables so the prisoners could sit together.

The P. W.'s ate a hearty dinner of stewed chicken, white bread, jam, ice cream. The standees swallowed their anger. On the battle fronts United States soldiers ate C rations from cans, and were glad to have them.

[From the Mobile Register of February 22, 1945]

OFFICER TELLS OF NAZI PRISON CAMP

(By Lt. John N. Dimling, Jr.)

(U. S. Army officer of Winston-Salem, N. C., captured a year ago on the Anzio beachhead in Italy and freed by the Red Army drive through Poland, where he was held with other Americans in a Nazi prison camp.)

Moscow.—One year ago I was in no man's land outside of Anzio beachhead when a German counterattack cut me off and I was taken prisoner. It was a mighty tough moment.

But last month sitting in a blacked-out Polish farmhouse behind what was the enemy's line, I had the thrill of my 30-year life. Off in the distance a bunch of us American officers who had eluded German guards that morning could hear the rumble of tanks.

"Lord, they can't be Jerry tanks," I told my side-kick. "They sound like M-4's—Shermans."

The rumble came nearer, then right past on the road a hundred yards from the farmhouse. It blended in with people's voices shouting and screaming with joy in Polish.

EMBRACED BY POLES

A Polish farmer burst into the room where we were lying low, "Russky, Russky," he yelled. I don't know when news like that could ever sound better. Then and there Marshal Zhukov became our favorite army commander.

The Poles, men, women, and children, crowded in and embraced us. They sang one of their hymns. I sang, "God Bless America," and how we meant it!

Soon a Russian tanker poked his head in just for a few seconds' chat with our senior officer, a colonel who used to be with the armored force himself.

The Russian through our interpreter said he was very pleased to see us, shook hands all around, whipped out a bottle of vodka, and proposed a toast to our common victory. We offered him cigarettes.

"Got to keep going to Berlin," he said in Russian as he saluted good-bye. And off he went. It was like that all night as the Russian armored spearhead, mostly Stalin and Sherman tanks, raced after the retreating German Army.

LAUDS RED FIGHTERS

I've never met a better type of rough and ready soldier than the Red Army fighting men. All of them hate the Germans worse than anything else in the world and all of them are determined to get to Berlin just as fast as humanly possible.

Liberation by the Red Army ended what had been 1 year of modified hell for me. You can't realize what freedom means to you until you lose it. The Germans in handling American prisoners had thought of many ways, large and small, to harass us. They did as little as possible for us. Rations they provided would have broken us by starvation if it hadn't been for Red Cross parcels.

As a "kriegie," our name for war prisoners, of Kriegsgefangener, I suppose my experience has been typical until the Red Army fortunately cut it short.

Four months before the American Fifth Army ever saw Rome the Germans marched me and hundreds of other prisoners from Anzio through the Eternal City in a parade designed to humiliate Allied arms in the eyes of the wavering Italians.

CAPTURED BY "GOONS"

I had been snagged by "goons"—the name the American prisoners gave their captors—while commanding Company A of the Thirtieth Regiment in an attack in the direction of Cisterna by the Third Division. That was February 1, 1944. Our executive officer was wounded and I had taken over temporarily.

The Goons sucked in our attack, then came at us from ambush. A dozen of them with burp guns—Schmeisser automatic pistols—got the drop on me and my company radio operator.

At Velletri they grilled us and an English-speaking Goon private sneered, "When our artillery comes from the Russian front we'll push your comrades back into the sea."

"How can you spare anything from the Russian front?" I asked.

He couldn't answer that one.

Outside Rome in a kind of car barn the Goons assembled over a hundred United States officers and enlisted men and trucked us to the Coliseum. There they lined us up in columns of fives and we were marched across the city along streets jammed with curious but undemonstrative crowds.

Believe it or not, but some of the Italians furtively gave us the "V" sign. Some of us sang, "Heigh ho, Methusaleh," to keep up our spirits and we named the whole thing "our victory."

On the other side the Germans reloaded us in trucks and off we went to spend 7 weeks in a modern black hole—a stinking prison camp at Laterina, south of Florence.

The camp had no water supply of its own and what we used was carted in unpurified from an open stream nearby. Lice and fleas abounded. Many prisoners suffered dysentery. Our daily ration consisted of ersatz tea or coffee unsweetened, in the morning; a small chunk of bread and watery soup and a dab of margarine at noon, and the same thing at 5 p. m. Sundays we got nothing at all in the afternoon.

PRISONERS FAINTED

All of us got so weak it was difficult to walk around. At two roll calls daily there were always a number of prisoners who fainted. Any sudden physical movement made the brain whirl and the effect was like a blackout.

Our senior officer was a British major, who protested continually to Germans over camp conditions, but there was no improvement. At last they loaded us on boxcars, 25 prisoners and 5 guards in each, and shifted us to Moosberg, Bavaria. They took away our shoes and belts to prevent attempts to escape and furnished us only a small loaf of bread, less than a pound of canned beef and one portion of soup per man for the entire journey.

At Moosberg we were deloused and handed our first Red Cross package. It was like Christmas. In fact, thereafter the weekly issuance of the Red Cross package always was referred to as "Christmas Day."

Another month and they shipped us off to western Poland to a camp at Szubin, once used for the R. A. F.

Farmers' Problems

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of a letter which I have received from one of my constituents in regard to the problems of the farmers.

The letter follows:

FEBRUARY 24, 1945.

Hon. HENRY L. LARCADE, Jr.,
Member of Congress, Washington, D. C.

MY DEAR MR. CONGRESSMAN: I have yours of the 19th instant enclosing copy of the bill, H. R. 754, by Mr. PACE amending the Agricultural Marketing Agreement of 1937, etc.

Many thanks.

I further note what you have to say in regard to Mr. PACE's efforts in having the Government take into consideration the increased farm wages, etc., and what he has been able to secure from the Bureau of Agricultural Economics.

I hope that you are correct in your estimate of the situation but in all frankness I have never seen a period in the country's history when it was more plain than right now that the farmer is not only being discriminated against but actually robbed by the very agencies created to protect him.

To begin with Henry I do not recognize the so-called Bureau of Agricultural Economics or any other Bureau as the Government.

I say to you that the lawmaking part of the Government is the Congress of the United States, and if there is anything wrong, and you know there is, then Congress must correct it or bear the blame.

I wrote you many times before calling your attention to certain rulings and orders that seemed designed for and did result in the farmer being robbed. I have sent you carbon copies of letters to Senators OVERTON and ELLENDER going into detail.

Sad to relate, it is getting badder and badder instead of better.

To start off, Henry, if you were to take all your clothes off of your body and your shoes off your feet and then put the shoes to one side and put all the clothes on a pair of scales and weigh them and then list what each item of clothes cost you would realize that the costs of the cotton or wool in what you had on your body has as much to do with fixing the prices you paid for your clothing as the salt and black pepper had in the price of the meal you purchased in the House Restaurant.

Your hat would be the same and your shoes at the price you paid for them would buy at the price the farmer is paid in your congressional district 22 cow hides.

What is the trouble? Nothing except Congress has delegated its authority to others who study some way and generally find it by which the farmer may be robbed.

To illustrate: (And page Mr. PACE) A floor price of $56 per ton is fixed for cottonseed so as to protect the producer.

We are paid our seed from $40 to $30 per ton.

We protest, protest, and protest.

The result: You are advised in writing by C. C. Farrington, vice president, United States Department of Agriculture, Commodity Credit Corporation, that to get the support prices the farmers must combine and offer five tons, or more, lots to the mill.

If this floor price was to protect the farmer, then the blush of shame should cover the face of every self-respecting Congressman who reads Mr. C. C. Farrington's letter.

What southern Congressman outside of the larger cities who does not know that the farmer sells his cottonseed to the ginner. The cotton is sucked up by air and sent to the gin saws and then placed in the bin or storage at the gin from the wagon or truck, and to expect the farmer to have 5 tons of seed at the gin at one time assumes an ignorance unworthy of one in high place and authority.

That's not the worst, as the oil mill buys from the ginner, but the prices shown in the parity arrangements covered by Mr. PACE'S bill are listed as if the farmer had gotten the price paid to the ginner.

If you will take the World-Telegram Almanac and see the tables showing what the producer gets from his seed and other agricultural products, you will realize what I mean.

In other words, Congressman LARCADE, the floor prices should be to protect the producer or farmer and not the processor, oil mill, ginner, and others who have for too long already enjoyed too much from what the farmer produced.

You know all the oil mills and ginners in your congressional district act together and that they are all prosperous.

What the farmer wants and what he needs is a fair share of what the consumer pays for what the farmer produces.

Most of the Congressmen worry about the dangers of communism, but they get mighty silent when Mr. Farrington requires that the farmer reload his seed and combine it with the seed of other farmers and then go to the oil mill or else lose the floor price, supposedly in their interest.

Isn't this compulsory communism?

The real remedy is very easy if Congress really wants to do something?

All that has to be done is to do for the farmer what is done for the consumer. The ceiling prices are fixed for the consumer, and the floor prices are supposedly fixed for the producer. But it is a criminal offense to either buy or sell at above the ceiling price. One who violates the ceiling price not only may be punished criminally but he may be sued civilly in triple damages with his attorney's fees paid by the defendant. Yet, strange to say, the one who was to be protected by the floor price is told that his sole and only remedy is to combine and haul it directly to a mill who is selling its product on a contract by which the Government hopes will result in the producer receiving floor prices.

Is there any reason in the world why the floor-price violation cannot be punished either by civil or criminal action?

Absolutely none, save and except that those in authority do not want it.

The southern representative on the triple-A for the Department of Agriculture takes the position that to make it a criminal offense to buy or sell below floor prices would result in the Government having to buy perishable products and then sell them later in competition with regular dealers.

My answer was that if it were true that was no more than what the Government agencies were then doing, and I called attention to the fact that cabbage and all other manner of truck was being given to the asylum at Pineville and other places free and thereby destroying the chance of the farmer who had been raising truck near Pineville to sell to the asylum by a governmental agency dumping its surplus free to the one purchaser the trucker planted to sell his product to at Pineville. A strange doctrine it is that holds it to be unfair for a governmental agency to sell a product in competition with a dealer in the same product yet who is so dumb as to fail to see the injustice of dumping or giving away a product that a poor farmer had to plant, cultivate, and harvest and then find that the very governmental agency that asked him to plant truck had destroyed his market by giving to the very party to whom the farmer was to sell.

But, Mr. Congressman, there is no logic in saying that the Government would have to enter the market and buy if it made it a crime to sell at below the floor price than to hold that the Government would have to buy when no one wanted to pay the ceiling price.

If there was a law making it a crime to sell mean that at times there would be no market but not nearly as often as a lack of market caused by ceiling-price fixing. Again, a or buy below the flooring prices it might governmental agency that has limited our acreage as well as the little pigs ought not to give up and say "we are helpless" just because no one will buy at floor prices. Let them try it and see. If it hurts the farmer, then let it hurt him. He has been hurt by everything else tried thus far, at least to the extent that he now, as in the past, has and is not receiving a fair share for what he raises when compared with what the consumer pays for the product.

With personal regards and best wishes, I am,

Sincerely yours.

The Wallace Pattern: Go-to-Work Paternalism

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. PLUMLEY. Mr. Speaker, under permission heretofore granted, I am including as an extension of my remarks an article by Gould Lincoln which discusses what might happen after former Vice President Wallace is confirmed by the Senate tomorrow, "if"—

THE POLITICAL MILL

(By Gould Lincoln)

The approaching confirmation of former Vice President Wallace's appointment to be Secretary of Commerce shoves into the foreground the Murray "full employment" bill. This bill, which was introduced by Senator MURRAY, of Wyoming, for himself and Senators WAGNER, of New York, THOMAS of Utah, and O'MAHONEY of Wyoming, all Democrats, seeks to set up a system to assure full employment in this country—with the Federal Government carrying on if and when private industry fails to provide enough jobs. More than that, the Federal Government under the terms of the proposed law would undertake to bolster private industry. When that bolstering takes place it is likely to be at a price.

The reason the Murray bill steps into the limelight, along with Mr. Wallace, is that its objectives, and probably its performances, are right in line with the theories and program for full employment laid down by the former Vice President in his statement to the Senate Commerce Committee not long ago. Whether the bill will ever become law is another matter. Mr. Wallace—because of his ideas—received what amounted to a vote of no confidence in both the House and Senate, when those bodies voted for the passage of the George bill, stripping from the Commerce Department the R. F. C. and other great Federal lending agencies as prerequisite to confirmation of the Wallace appointment.

In brief, the bill provides for a "National Production and Employment Budget," to be transmitted to Congress at the beginning of each regular session. This budget would set forth the estimated aggregate volume of investment and expenditure by private enterprises, consumers, State and local and Federal Governments. It would also estimate the size of the labor force, including the self-employed in industry and agriculture. If it appears that employment offered by private industry, agriculture, and the various State, local, and Federal Governments is insufficient, then recommendations will be made to aid private industry and to provide Government employment if necessary.

This is superplanning. While on the surface it leaves a great deal to private initiative, underneath it looks to regimentation to the nth degree, if it becomes necessary. The bill asserts: "All Americans able to work and seeking work have the right to useful, remunerative, regular and full-time employment." Once it has been established by law that a man or a woman has a right to work it will not be a long step to assert that a man or a woman has a duty to work—that has to work. It is easy to imagine that a paternalistic government, having set up its plans for full employment and finding perhaps a million persons who do not wish, for one reason or another, to take the jobs, will become a bit sore and insist on these individuals going to work. Involuntary unemployment, of which the bill speaks and which it seeks to cure, might on occasion find itself turned into involuntary employment. This is far from the thoughts of the proponents of the measure—but that does not mean it cannot happen.

Opponents of the Murray bill, including Senator TAFT, of Ohio, argue that in addition to regimentation by the Government, the measure would result in huge deficit spending. This its supporters flatly deny. Mr. TAFT has pointed out that Mr. Wallace is talking about the need of supplying 57,000,000 jobs—a bit less than the President's estimate of 60,000,000. If only 50,000,000 jobs are available—a far greater number than have been employed in this country in the past—then 7,000,000 workers would have to be provided by the Federal Government with jobs at a cost of $2,000 a year each. This would make a total layout of $14,000,000,000.

The Wallace confirmation, which may be completed March 1 or soon after by the Senate if the George bill is approved by the President by that time, will be hailed by the C. I. O. as a great victory. It is true that Mr. Wallace and the C. I. O. have been compelled to withdraw from their original demand that Mr. Wallace have the loan agencies along with the Commerce Department. But they have faith that Mr. Roosevelt will give other powers, and broad ones, to Mr. Wallace. And they will drive ahead in support of the Murray bill in the hope Wallace will have its administration.

Synopsis of Federal Taxes on the Income Since Adoption of Sixteenth Amendment

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks, I am inserting a synopsis of the Federal income taxes imposed on the income of individuals and of the normal, excess-profits, and war-profits taxes imposed on the income of corporations since the adoption of the Sixteenth Amendment. In the case of individuals, the special treatment of gains and losses from sales or exchanges of capital assets after 1921 is included.

SYNOPSIS OF FEDERAL TAXES ON THE INCOME OF INDIVIDUALS SINCE THE ADOPTION OF THE SIXTEENTH AMENDMENT

Normal Tax, Individual

Rates, personal exemptions, and credits for dependents in effect for normal tax purposes during 1913 and subsequent years

Act	Year [1]	Personal exemption [2]		Credit for each dependent [3]	Rate
		Single	Married		
1913	1913 (Mar. 1)-15.	$3,000	$4,000	None	1 percent.
1916	1916	3,000	4,000	None	2 percent.
1916	1917	1,000	2,000	$200	4 percent (2 percent on first $2,000).
1917					
1918	1918	1,000	2,000	200	12 percent (6 percent on first $4,000).
	1919-20	1,000	2,000	200	8 percent (4 percent on first $4,000).
1921	1921-23	1,000	[4] 2,500	400	Same. [5]
1924	1924	1,000	2,500	400	6 percent (2 percent on first $4,000; 4 percent on second $4,000).
1926	1925-27	1,500	3,500	400	5 percent (1½ percent on first $4,000; 3 percent on second $4,000).
1928	1928	1,500	3,500	400	Same.
1928	1929	$1,500	$3,500	$400	4 percent (1½ percent on first $4,000; 2 percent on second $4,000).
	1930-31	1,500	3,500	400	5 percent (1½ percent on first $4,000; 3 percent on second $4,000).
1932	1932-33	1,000	2,500	400	8 percent (4 percent on first $4,000).
1934	1934-35	1,000	2,500	400	4 percent.
1936	1936-37	1,000	2,500	400	4 percent
1938	1938	1,000	2,500	400	4 percent.
I. R. C.	1939	1,000	2,500	400	4 percent.
	1940	800	2,000	400	4 percent. [6]
	1941	750	1,500	400	4 percent.
	1942-43	500	1,200	350	6 percent.
	1944-	500	[7] 500	None	3 percent.

[1] For 1917 and earlier, the calendar year; for 1918 to 1932, inclusive, the calendar year and fiscal years ending therein; for 1933, the calendar year and fiscal years beginning or ending therein; and for 1934 and later, the calendar year and fiscal years beginning therein. In the case of a rate change during a fiscal year ending in the period 1918 to 1933, inclusive, the tax was prorated. Proration is also provided for in the case of fiscal years ending after June 30, 1942, and in the case of fiscal years ending in 1944.

[2] In the statute effective for 1944 and subsequent years, the term "personal exemption" is no longer used to describe this credit against net income; it is supplanted, for normal tax purposes, by the term "normal tax exemption."

[3] For the years 1934 to 1940, inclusive, the credit was allowed "for each person (other than husband or wife) dependent upon and receiving his chief support from the taxpayer if such dependent person is under 18 years of age or is incapable of self-support because mentally or physically defective." For the years 1941, 1942, and 1943, this allowance was qualified by the provision that "if the taxpayer would not occupy the status of head of a family except by reason of there being 1 or more dependents for whom he would be entitled to credit * * * the credit * * * shall be disallowed with respect to 1 of such dependents."

[4] $2,000 in the case of net incomes in excess of $5,000.

[5] The tax for 1923 was reduced 25 percent by the 1924 act.

[6] Not including the defense tax, which was 10 percent of the combined normal tax and surtax but not to exceed 10 percent of the excess of the net income over the combined normal tax and surtax.

[7] In the case of a joint return, the exemption is $1,000, except that if the adjusted gross income of one spouse is less than $500, it is $500 plus the adjusted gross income of such spouse.

Surtax, individual—Personal exemptions and credits for dependents in effect for surtax purposes during 1934 and subsequent years

Act	Year [1]	Personal exemption [2]		Credit for each dependent [4]
		Single	Married [3]	
1934	1934–35	$1,000	$2,500	$400
1936	1936–37	1,000	2,500	400
1938	1938	1,000	2,500	400
I. R. C.	1939	1,000	2,500	400
	1940	800	2,000	400
	1941	750	1,500	400
	1942–43	500	1,200	350
	1944–	500	[1] 1,000	[2] 500

[1] The calendar year and fiscal years beginning therein. Prior to 1934, no personal exemption or credit for dependents was allowed for surtax purposes.

[2] In the statute effective for 1944 and subsequent years, the term "personal exemption" is no longer used to describe this credit against net income: it is supplanted, for surtax purposes, by the term "surtax exemption."

This surtax exemption is $500 each for the taxpayer, the taxpayer's spouse (in case of a joint return or, if the spouse has no gross income and is not the dependent of another taxpayer, in the case of a separate return), and each of the taxpayer's dependents whose gross income for the calendar year in which the taxable year of the taxpayer begins is less than $500. No surtax exemption is allowed for a dependent who is married and has made a joint return for a taxable year beginning in such calendar year.

[3] For the years 1934 to 1943, inclusive, a head of a family was allowed the same personal exemption as a married person living with husband or wife. Effective for 1944 and subsequent years, a head of a family, as such, is allowed no surtax exemption.

For the years 1934 to 1943, inclusive, if a husband and wife made separate returns, the personal exemption could be taken by either or divided between them. Effective for 1944 and subsequent years, a married person making a separate return is allowed a surtax exemption of only $500, unless the spouse has no gross income and is not the dependent of another taxpayer, in which case the surtax exemption is $1,000.

[4] For the years 1934 to 1940, inclusive, the credit was allowed "for each person (other than husband or wife) dependent upon and receiving his chief support from the taxpayer if such dependent person is under 18 years of age or is incapable of self-support because mentally or physically defective."

For the years 1941, 1942, and 1943, this allowance was qualified by the provision that "if the taxpayer would not occupy the status of head of a family except by reason of there being one or more dependents for whom he would be entitled to credit * * *, the credit * * * shall be disallowed with respect to one of such dependents."

Effective for 1944 and subsequent years, the statute defines the term "dependent" to mean "any of the following persons over half of whose support, for the calendar year in which the taxable year of the taxpayer begins, was received from the taxpayer:

(A) a son or daughter of the taxpayer, or a descendant of either,

(B) a stepson or stepdaughter of the taxpayer,

(C) a brother, sister, stepbrother, or stepsister of the taxpayer,

(D) the father or mother of the taxpayer, or an ancestor of either,

(E) a stepfather or stepmother of the taxpayer,

(F) a son or daughter of a brother or sister of the taxpayer,

(G) a brother or sister of the father or mother of the taxpayer,

(H) a son-in-law, daughter-in-law, father-in-law, mother-in-law, brother-in-law, or sister-in-law of the taxpayer."

As used in the above definition, "brother" and "sister" include a brother and sister of the half-blood and "for the purposes of determining whether any of the foregoing relationships exist a legally adopted child of a person shall be considered a child of such person by blood. The term 'dependent' does not include any individual who is a citizen or subject of a foreign country unless such individual is resident of the United States or of a country contiguous to the United States."

VICTORY TAX [1]

Specific exemption, rate, and tax credits

Specific exemption [2] ---------- $624

Rate [3] ---------- 5%

Tax credits:	Percent	Maximum amount
Single	25	$500
Married or head of family	40	[4] $1,000
For each dependent	2	100

[1] Imposed on the "Victory tax net income" of individuals for taxable years beginning in 1943. In general, Victory tax net income was gross income with certain exceptions and less certain deductions, generally of a business character, specified in the statute.

[2] In the case of a joint return by husband and wife, if the Victory tax net income of one was less than $624, the aggregate exemption of both was limited to $624 plus the Victory tax net income of that one.

[3] The amount of the tax was limited to the excess of 90 percent of the net income over the sum of the normal tax and surtax.

[4] In the case of a separate return by each spouse, the maximum was $500.

Surtax, individual—Rates in effect during 1913 and subsequent years [1]

[1] For 1917 and earlier, the calendar year; for 1918 to 1932, inclusive, the calendar year and fiscal years ending therein; for 1933, the calendar year and fiscal years beginning or ending therein; and for 1934 and later, the calendar year and fiscal years beginning therein. In the case of a rate change during a fiscal year ending in the period 1918 to 1933, inclusive, the tax was prorated. Proration is also provided for in the case of fiscal years ending after June 30, 1942, and in the case of fiscal years ending in 1944.

[2] For 1933 and prior years, the entire net income. for 1934 and subsequent years, the net income after credit thereagainst of the personal exemption and credit for dependents.

[3] The tax for 1923 was reduced 25 percent by the 1924 act.

[4] Not including the defense tax, which was 10 percent of the combined normal tax and surtax, but not to exceed 10 percent of the excess of the net income over the combined normal tax and surtax.

Income tax, individual—Treatment of capital gains and losses in 1922 and subsequent years

Act	Year [1]	Capital assets	Holding period	Percentage of gain or loss taken into account in computing net income	Treatment of capital gain	Treatment of capital loss
1921	1922–23	Property acquired and held by the taxpayer for profit or investment for more than 2 years (whether or not connected with his trade or business) not including property held for the personal use or consumption of the taxpayer or his family or stock in trade of the taxpayer or other property of a kind which would properly be included in his inventory if on hand at the close of the taxable year.	More than 2 years	100	Net gain (the excess of capital gain over the sum of capital deductions and capital losses) is taxed at 12½ percent at the election of the taxpayer 12½ percent of the capital net gain plus the tax on the ordinary net income to be not less than 12½ percent of the total net income in the event of such an election.	No special treatment as such.
1924	1924	Property held by the taxpayer for more than 2 years (whether or not connected with his trade or business) not including stock in trade of the taxpayer or other property of a kind which would properly be included in his inventory if on hand at the close of the taxable year or property held primarily for sale in the course of his trade or business.	do	100	Net gain (the excess of capital gain over the sum of capital deductions, capital losses and the excess of ordinary deductions over ordinary gross income) is taxed at 12½ percent at the election of the taxpayer the total tax in the event of such an election to be 12½ percent of the capital net gain plus the tax on the ordinary net income.	12½ percent of the capital net loss is deducted from a tax computed on the basis of the ordinary net income the remainder to be not less than a tax computed on the basis of the net income (determined by allowing the capital net loss as a deduction).
1926	1925–27	do	do	100	do	Do.
1928	1928–31	do	do	100	do	Do.
1932	1932–33	do	do	100	do	Do.
1934	1934–35	Property held by the taxpayer (whether or not connected with his trade or business), not including stock in trade of the taxpayer or other property of a kind which would be properly included in his inventory if on hand at the close of the taxable year, or property held by him primarily for sale to customers in the ordinary course of his trade or business.[2]	Not over 1 year	100	No special treatment of the amount taken into account in computing net income.	No special treatment of the amount taken into account in computing net income. That amount, however, is limited to $2,000 plus the capital gains taken into account.
			Over 1, but not over 2 years.	80		
			Over 2, but not over 5 years.	60		
			Over 5, but not over 10 years.	40		
			Over 10 years	30		
1936	1936–37	do.[2]	do	30	do	Do.
1938	1938	Same, with the additional exception of property, used in the trade or business, of a character which is subject to an allowance for depreciation.[3]	Short-term: Not over 18 months.	100	Net short-term gain (the excess of the short-term gains for the taxable year over the sum of the short-term losses for the taxable year and the net short-term loss of the preceding taxable year, brought forward to the extent not in excess of the net income for such preceding year) receives no special treatment. ("Preceding taxable year" includes none beginning before 1938.)	Net short-term loss (the excess of short-term losses over short-term gains) is treated as a short-term loss in the succeeding taxable year (for the purpose only of determining the net short-term gain for such year), to the extent not in excess of the net income for the taxable year.
			Long-term: Over 18 but not over 24 months.	66⅔	Net long-term gain (the excess of long-term gains over long-term losses, each to the extent taken into account in computing net income) is taxed at 30 percent, if such a tax plus a tax computed upon the net income reduced by the net long-term gain is less than a tax computed on the net income.	30 percent of the net long-term loss (the excess of long-term losses over long-term gains, each to the extent taken into account in computing net income) is deductible from the tax computed on the net income increased by such loss, if the result is an amount greater than the tax computed on the net income.
			Over 24 months	50		
I. R. C.	1939	do.[2]	do	50	do	Do.
	1940–41	Same, with the additional exception of obligations of the United States or any of its possessions, or of a State, territory, or any political subdivision thereof, or of the District of Columbia, issued on or after Mar. 1, 1941, on a discount basis and payable without interest at a fixed maturity date not exceeding 1 year from the date of issue.[3]	do	50	do	Do.
	1942	Same, with the additional exception of real property used in the trade or business of the taxpayer.[3]	Short term: Not over 6 months.	100	Excess of net long-term gain (the excess of long-term gains over long-term losses, each to the extent taken into account in computing net income) over net short-term loss (the excess of short-term losses over short-term gains, each to the extent taken into account in computing net income) is taxed at 50 percent, if such a tax plus a tax computed on the net income reduced by such excess is less than a tax computed on the net income.	Net capital loss (the excess of losses over the sum of gains—each to the extent taken into account in computing net income—plus the smaller of $1,000 or the net income computed without regard to capital gains and losses) in any taxable year beginning after 1941 is treated as a short-term capital loss in each of the 5 succeeding taxable years, to the extent of the excess of such net capital loss over the total of any net capital gains [4] of any taxable years intervening between the taxable year in which the net capital loss arose and such succeeding taxable year.
			Long term: Over 6 months.	50		
	1943–	do.[2]	do	50	do	Do.

[1] For 1921 to 1932, inclusive, the calendar year and fiscal years ending therein; for 1933, the calendar year and fiscal years beginning or ending therein; and for 1934 and later, the calendar year and fiscal years beginning therein.

The Revenue Act of 1921, the first to provide for special treatment of capital gains and losses, applied to such gains and losses from sales or exchanges consummated after Dec. 31, 1921.

[2] In taxable years beginning in 1934 or later, gains or losses from short sales of property are considered as from sales or exchanges of capital assets. Gains or losses attributable to the failure to exercise privileges or options to buy or sell property are considered as gains or losses from sales or exchanges of capital assets held for 1 year or less under the 1934 and 1936 acts and as short-term capital gains or losses under the 1938 and subsequent acts.

In taxable years beginning in 1934 or later, amounts received by the holder upon the retirement of corporate (including Government) evidences of indebtedness are considered as received in exchange therefor.

In taxable years beginning in 1938 or later, if shares of stock in a corporation or rights to subscribe for or to receive such shares become worthless during the taxable year and are capital assets, the loss resulting therefrom is considered as a loss from the sale or exchange, on the last day of the taxable year, of capital assets.

In taxable years beginning in 1938 or later, if evidences of indebtedness issued by a corporation (including a Government) with interest coupons or in registered form are ascertained to be worthless and charged off during the taxable year, and are capital assets, the loss resulting therefrom is considered as a loss from the sale or exchange, on the last day of the taxable year, of capital assets.

In taxable years beginning in 1942 or later, if the gains from sales or exchanges of "property used in the trade or business," held for more than 6 months, plus the gains from the compulsory or involuntary conversion of such property and capital assets held for more than 6 months, exceed the losses from such sales, exchanges, and conversions, such gains and losses shall be considered as from sales or exchanges of capital assets held for more than 6 months. If such gains do not exceed such losses, neither

are considered as from sales or exchanges of capital assets. (For the purpose of this provision, neither the percentage limitation on gains and losses taken into account nor the income and gains limitation on allowable losses is applicable; and losses upon the distribution, in whole or in part, theft or seizure, or requisition or condemnation of "property used in the trade or business" or capital assets held for more than 6 months are considered losses from a compulsory or involuntary conversion.)

In taxable years beginning in 1943 or later, if a nonbusiness debt becomes worthless within the taxable year, the loss resulting therefrom is considered a loss from the sale or exchange, during the taxable year, of a capital asset held for not more than 6 months.

In taxable years beginning in 1944 or later, at the election of the taxpayer, the cutting of timber (for sale or use in the taxpayer's trade or business) by the taxpayer who owns or has the contract right to cut the timber (provided he owned or had the contract right to cut it for a period of more than 6 months prior to the beginning of the taxable year) is considered a sale or exchange.

[3] Net capital gain is the excess of the sum of capital gains plus the smaller of $1,000 or the net income (computed without regard to capital gains and losses) over capital losses. Net capital gain and net capital loss for the taxable year are computed without regard to any net capital loss carry-over to that year. For the purposes of the net income limitations on net capital gain and net capital loss, adjusted gross income is substituted for net income if the tax is measured by adjusted gross income.

A net short-term capital loss for the last taxable year beginning in 1941 (computed without regard to any carry-over from the preceding taxable year), in an amount not in excess of the net income for such taxable year, is treated as a short-term capital loss for the succeeding taxable year, to the extent of the net short-term capital gain of such succeeding taxable year. This treatment is in consideration of the carry-over from taxable years 1941 previously allowed.

SYNOPSIS OF FEDERAL NORMAL TAX AND PROFITS TAXES ON THE INCOME OF CORPORATIONS SINCE THE ADOPTION OF THE SIXTEENTH AMENDMENT [8]

Normal tax, corporation—Rates in effect during 1909 and subsequent years

Act	Year [1]	Rate base [2]	Rate (percent)
1909 [3]	1909-13 (Feb. 28).	Net income in excess of $5,000	1
1913	1913 (Mar. 1) to 1915.	Net income	1
1916	1916	do	2
1916, 1917	1917	Net income from dividends out of Mar. 1, 1913, to Dec. 31, 1915, earnings.	1
		Net income from dividends out of 1916-17 earnings.	2
		Net income other than from dividends, after credit of excess profits tax for the current year.	6
1918	1918	Net income after credit of: $2,000; excess profits and war profits taxes for the current year; and interest (if included in gross income) in United States obligations and War Finance Corporation bonds.	12
	1919-20	Net income after credit of: $2,000; excess profits tax for the current year; excess profits and war profits taxes for the current year on income from Government contracts; and interest (if included in gross income) on United States obligations and War Finance Corporation bonds.	10
1921	1921	Same, except for restriction of the specific credit of $2,000 to net incomes of $25,000 or less (the tax on a net income of more than $25,000, however, not to exceed the tax payable if the credit were allowed, plus the amount of the net income in excess of $25,000).	10
	1922-23	Same	12½
1924	1924	Net income after same specific credit and credit of interest (if included in gross income) on United States obligations.	12½
1926	1925	do	13
	1926-27	do	13½
1928	1928	Net income after a specific credit, in the case of net incomes of $25,000 or less, of $3,000 (with a marginal relief provision corresponding to that in force since 1921) and credit of interest on United States obligations (if included in gross income).	12
	1929	do	11
	1930-31	do	12
1932	1932-33	Net income after credit of interest (if included in gross income) on United States obligations.	13¾
1934	1934-35	Net income after credit of interest (if included in gross income) on United States obligations and of interest (if included in gross income and exempt, under the act authorizing issue, from normal tax) on obligations of corporate instrumentalities of the United States.	13¾
1936	1936-37	Normal tax net income: [4]	
		First $2,000	8
		Next $13,000	11

		Over $50,000	24

[1] For 1909 to 1912, inclusive, the calendar year; for 1913 to 1932, inclusive, the calendar year and fiscal years ending therein; for 1933, the calendar year and fiscal years beginning or ending therein; for 1934 and later the calendar year and fiscal years beginning therein.

In the case of a rate change during a fiscal year ending in any of the years 1916 to 1933, inclusive, the tax was prorated. Proration is also provided for in the case of fiscal years ending after June 30 in 1942, and in the case of fiscal years ending in 1944.

[2] Net income, the excess of gross income over deductions, varies under the several acts by reason of variation in the character of items excluded from gross income or allowed as deductions. Credits against net income are indicated in this column.

Dividends received from domestic corporations have been treated as follows: From 1909 through Feb. 28, 1913, net income was "exclusive" of such dividends; from Mar. 1, 1913, through 1917, they were not excluded or deducted from gross income or credited against net income; from 1918 through 1935, they were deducted from gross income; and for 1936 and subsequent years, credited 85 percent against net income, the credit not to exceed, during the years 1938 to 1941, inclusive, 85 percent of the adjusted net income, or, in 1942 and subsequent years, 85 percent of the adjusted net income reduced by the credit for income subject to excess-profits tax.

Adjusted net income, for 1938 and subsequent years, is net income minus the credit for interest on obligations of the United States and corporations organized by the United States.

[3] Although the Sixteenth Amendment was not adopted until 1913, the excise tax imposed by the Tariff Act of 1909 is included in the table, as essentially like the taxes imposed directly on income by subsequent legislation. Section 38 of that act imposed on corporations an annual "special excise tax with respect to the carrying on or doing business * * * equivalent to 1 percent upon the entire net income * * * over and above $5,000 * * * exclusive of * * * dividends * * *."

[4] The net income minus the credit for interest (if included in gross income) on United States obligations and for 85 percent of dividends received from domestic corporations.

[5] Special class net income is the adjusted net income minus the credit for dividends received. That credit is 85 percent of the amount of dividends received from domestic corporations subject to the income tax; it may not exceed, however, 85 percent of the adjusted net income, which is the net income minus the credit for interest on obligations of the United States and corporate instrumentalities thereof.

[6] This first $25,000 is made up of: First, interest subject to credit; second, dividends subject to credit; and third, the excess, if any, of $25,000 over such interest and dividends.

The portion of the net income in excess of $25,000 is made up of: First, any interest subject to credit which is not included in the first $25,000; second, any dividends subject to credit which are not included in the first $25,000; and third, any balance of net income.

[7] See the second and third paragraphs of the note, above, designated (6).

[8] Normal tax net income means the adjusted net income minus the credit for dividends received.

Adjusted net income means the normal tax net income minus the credit for interest on obligations of the United States and corporate instrumentalities of the United States.

[9] Normal tax net income here means the adjusted net income minus the credits for income subject to excess-profits tax and for dividends received.

Profits taxes, corporation—Rates of excess-profits and war-profits taxes for 1917 and subsequent years

Act	Year[1]	Credit	Rate base	Rate
1917	1917	For invested capital corporations in existence at least 1 whole calendar year during the pre-war period (1911-13): $3,000 (in the case of domestic corporations only),[2] plus (1) the same percentage (but not less than 7 nor more than 9) of invested capital for the taxable year as the average annual pre-war net income was of pre-war invested capital, or (2), in the case of no pre-war net income, of a comparatively low pre-war percentage of net income to invested capital, of an indeterminable pre-war net income, or of indeterminable invested capital, the same percentage of invested capital for the taxable year as shown by representative taxpayers in the same or a similar trade or business.	Net income, after the credit:	
			Not in excess of 15 percent of invested capital	20 percent.
			In excess of 15 percent but not in excess of 20 percent of invested capital.	25 percent.
			In excess of 20 percent but not in excess of 25 percent of invested capital.	35 percent.
			In excess of 25 percent but not in excess of 33 percent of invested capital.	45 percent.
			In excess of 33 percent of invested capital	60 percent.
		For invested capital corporations not in existence at least 1 whole pre-war calendar year: $3,000 (in the case of domestic corporations only),[2] plus 8 percent of invested capital;		
		For corporations with no, or nominal invested capital: $3,000 (in the case of domestic corporations only).[2]	Net income, after the credit, if any	8 percent.
1918	1918	Excess profits credit: $3,000 (in the case of domestic corporations only),[2] plus 8 percent of the invested capital for the taxable year.	Net income:	
			In excess of the excess-profits credit and not in excess of 20 percent of the invested capital.	30 percent.
			In excess of the greater of the excess-profits credit or 20 percent of the invested capital.	65 percent.
		War profits credit:	The amount by which 80 percent of the net income in excess of the war-profits credit exceeds the excess-profits tax.	100 percent.
		For corporations in existence at least 1 whole calendar year during the pre-war period (1911-13): $3,000 (in the case of domestic corporations only),[2] plus the greater of the following: (1) average pre-war net income, plus 10 percent of the increase or minus 10 percent of the decrease in invested capital for the taxable year as compared with average pre-war invested capital or (2) 10 percent of invested capital for the taxable year.	[Maximum total of excess-profits tax and war-profits tax equals $5,160 (20 percent of the net income in excess of $3,000 and not in excess of $20,000) plus 80 percent of the net income in excess of $20,000.]	
		For any corporation not in existence at least 1 whole calendar year during the pre-war period, if (1) the majority of its stock was owned or controlled at any time during the taxable year by a corporation which was in existence at least 1 whole calendar year during the pre-war period; or (2) 50 percent or more of its gross income was derived from Government contracts made after Apr. 5, 1917, and before Nov. 12, 1918: $3,000 (in the case of domestic corporations only),[2] plus 10 percent of invested capital for the taxable year.		
		For other corporations not in existence at least 1 whole calendar year during the pre-war period: $3,000 (in the case of domestic corporations only),[2] plus the same percentage (but not less than 10) of invested capital for the taxable year as the average pre-war percentage of net income to invested capital of corporations in a trade or business of the same general class as that of the taxpayer.		
1919-20		Same as for 1918	Net income (if not more than $10,000 thereof is from Government contracts made after Apr. 5, 1917, and before Nov. 12, 1918):	
			In excess of the excess-profits credit and not in excess of 20 percent of invested capital.	20 percent.
			In excess of the greater of the excess-profits credit or 20 percent of invested capital.	40 percent.
			[Maximum tax=$3,400 (20 percent of the net income in excess of $3,000 and not in excess of $20,000) plus 40 percent of the net income in excess of $20,000.]	
			Net income (if more than $10,000 thereof is from Government contracts made after Apr. 5, 1917, and before Nov. 12, 1918).	Prorated tax computed at 1918 and current rates.[3]
1921	1921	do	Same as for 1919 and 1920	Same as for 1919 and 1920.
I. R. C.	1940	The sum of $5,000:	Adjusted excess-profits net income (excess-profits net income minus the credit):	
		The excess-profits credit (that is, in the case of (1) a domestic corporation in existence before 1940, or (2) a foreign corporation engaged in trade or business in the United States or having an office or place of business therein, of which the first excess-profits tax taxable year begins on any date in 1940, which was in existence 48 months prior to such date, and which at any time during each of the taxable years in such 48 months was engaged in trade or business or had an office or place of business therein, whichever of the following results in the lesser tax: 8 percent of the invested capital for the taxable year, or 95 percent of the average base period (1936-39) net income, plus, in the case of a domestic corporation, 8 percent of the net capital addition or minus 6 percent of the net capital reduction for the taxable year; in the case of all other corporations, 8 percent of the invested capital for the taxable year); and	First $20,000	25 percent.
			Next $30,000	30 percent.
			Next $50,000	35 percent.
			Next $150,000	40 percent.
			Next $250,000	45 percent.
			Remainder	50 percent.
		The excess profits credit carry-over (that is, the excess of the excess-profits credit over the excess-profits net income for the first preceding taxable year; plus such an excess for the second preceding taxable year, reduced by the excess, if any, of the excess-profits net income for the first preceding taxable year over the sum of the excess-profits credit for such year and the excess of such credit over such net income for the third preceding taxable year).		
	1941	The sum of $5,000:	Adjusted excess-profits net income (excess-profits net income minus the credit):	
		The excess-profits credit (the same as for 1940, except that the invested capital credit is 8 percent of first $5,000,000 plus 7 percent of the remainder of the invested capital for the taxable year); and	First $20,000	35 percent.
			Next $30,000	40 percent.
			Next $50,000	45 percent.
			Next $150,000	50 percent.
			Next $250,000	55 percent.
			Remainder	60 percent.
		The unused excess-profits credit adjustment (the aggregate of the unused excess-profits credit carry-overs and carry-backs from the 2 preceding or succeeding taxable years).		
	1942-43	Same as for 1941, except that the invested capital credit is 8 percent of the first $5,000,000 of invested capital, 7 percent of the next $5,000,000, 6 percent of the next $190,000,000 and 5 percent of the remainder of the invested capital for the taxable year; and, in the case of a mutual insurance company (other than life or marine) which is an interinsurer or reciprocal underwriter, the specific exemption is $50,000.	Adjusted excess-profits net income (excess-profits net income minus the credit).	90 percent.
			[Maximum tax=an amount which, when added to the normal tax and surtax, makes a total equal to 80 percent of the surtax net income, computed without regard to the credit for the adjusted excess profits net income.]	
	1944	Same as for 1942-3, except that the invested capital credit is 8 percent of the first $5,000,000, 6 percent of the next $5,000,000, and 5 percent of the remainder of the invested capital for the taxable year; and the specific exemption of $5,000 is increased to $10,000.	Adjusted excess-profits net income (excess-profits net income minus the credit).	95 percent.
			[Maximum tax=an amount which, when added to the normal tax and surtax, equals 80 percent of the surtax net income, computed without regard to the credit for the adjusted excess-profits net income and without regard to 80 percent of the credit for dividends paid by a public utility on its preferred stock.]	

[1] For 1917 to 1921, inclusive, the calendar year and fiscal years ending therein; for 1940 and thereafter, the calendar year and fiscal years beginning therein.

In the case of fiscal years beginning in 1916 and ending in 1917, the tax is proportioned to the 1917 portion of the fiscal year. In the case of fiscal years ending in any of the years 1918 to 1921, inclusive, the tax is the sum of the taxes computed on the basis of the 2 calendar years involved, proportioned to the calendar year portion of the fiscal year. In the case of fiscal years ending in 1922, the tax is proportioned to the 1921 portion of the fiscal year.

Proration is also provided for in the case of fiscal years ending after June 30 in 1942, and in the case of fiscal years ending in 1944.

[2] Any corporation the net income of which is less than $3,000 is exempt from the tax, however.

[3] Proration is on the basis of the net income attributable to Government contracts, which determines the portion of the tax payable on the basis of the 1918 rates. Net income not so attributable determines the portion payable at current year rates.

Medals for Congress an Inappropriate Gesture

EXTENSION OF REMARKS

OF

HON. J. LEROY JOHNSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. JOHNSON of California. Mr. Speaker, it seems to me to be wrong in principle for Congress to vote itself medals as provided by a bill now pending.

From every contact that I have had with Members of Congress they are working hard and each is doing his level best to do his full duty. That is exactly what we were elected to do and for performing our duty we are paid a salary and are provided money for clerical hire and other purposes. It does not seem right to me, for us to vote medals to ourselves for doing our duty. Medals are bestowed for unusual service or extraordinary heroism. Also, the award is made by someone else than the recipient of the medal.

For the information of the Members I am including in my remarks an article from the Stockton Record by a veteran of both this war and the last one. Colonel Rohrbacher, the author of the article, has performed a remarkable job in this war as the director of an Army hospital in Australia. He not only made a remarkable record as an Army surgeon in the administration of the hospital unit referred to, but he literally worked so hard that he broke down his health and had to be retired for medical reasons. This is the article:

MEDALS—FOR VALIANT CONGRESSMEN

EDITOR, RECORD:

As a veteran of World War No. 1 and World War No. 2, I offer my services as chairman of a "medals for Congress" committee for this county. The offer is prompted by Representative DINGELL'S bill to furnish medals for Congressmen and Cabinet members.

Because of the metals shortage we can ill afford to use any of our precious metal for this purpose, so I propose that we collect enough service medals from the disabled veterans of World Wars Nos. 1 and 2, Spanish-American War and Civil War veterans so that every Congressman and Cabinet member will have a medal of some description. Because their secretaries, office boys, and members of their families might feel slighted if they, too, were not so honored, I would be glad to accept medals from Boy and Girl Scouts, various and sundry convention badges and last year's dog licenses, and, in fact, any sort of medal that the donor might think appropriate. I would be more than happy to forward these at my own expense to Mr. DINGELL. He could distribute them at his own discretion.

I feel certain that within the boundaries of this county there are many sorrowing parents whose sons and whose daughters have given their all in combat with the enemy. Many of these parents have received posthumous awards for the valiant deeds of their children. If everyone connected with the war is to wear a medal these awards would be of little value. Maybe some of these parents would be glad to relinquish these medals and they, too, could be used to decorate the chests of our wishful Congressmen.

This is written with apologies to our own Congressman LEROY JOHNSON, who has no need of a medal of any sort. He earned his own on the field of battle during World War No. 1.

GEORGE H. ROHRBACHER,
Lieutenant Colonel, Army of the United States (Retired).

Jobs and the Little Man

EXTENSION OF REMARKS

OF

HON. HELEN GAHAGAN DOUGLAS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial which appeared in the San Diego Journal on February 6, 1945:

JOBS AND THE LITTLE MAN

San Diego workers and businessmen have almost a life-and-death stake in the jobs-for-all bill, which has just been introduced in the Senate, and in the Government lending policies for which Henry A. Wallace stands.

The two are tied together. The jobs bill makes employment one of the rights of man—an economic right just as his personal freedoms are among his civil rights. It empowers the Federal Government to step in and bolster employment when private industry fails to provide enough jobs to go around.

The Wallace lending policies propose to use Government credit to expand our free enterprise system to make sure that there will be enough jobs to go around. The chief means of doing it would be credit to stimulate small business. The jobs bill thus creates a national employment policy, and the Wallace proposals provide an economic foundation to give full employment by private business.

That is why the two proposals are so important to San Diego: First, because our people need jobs just as people everywhere need them; second, because small business is the life blood of this city, the source of jobs for most of its workers.

We are not a big-industry town. But we are admirably situated for little business, small manufactures, mercantile and service trades, food processing and handling, etc. The aggregate of jobs to be provided by expanding our numberless small independent businesses, and enabling enterprising men to start new private businesses is enormous.

Moreover, it is what free enterprise is intended to be—opportunity for the little man with an idea to gain independence; not trustified big industry under the free enterprise label.

San Diego's interest in such a choice is clear. It wants real free enterprise—the kind that will enable its businessmen to expand their factories and stores and give jobs to more people; the kind that will enable new enterprises to get a footing here. For every new enterprise means more employment.

Such a program gives this city a real chance to take up the employment slack that will come with reconversion. With it San Diego not only may be able to take up the slack but even increase its employment ceilings, and build a great and diversified economic life for itself.

New Crops for the New World

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article appearing in the Atlantic Monthly of January 1945:

NEW CROPS FOR THE NEW WORLD

(By Samuel ZeMurray and John Terry)

I

The Japanese had just hit Pearl Harbor and the Philippines when a representative of the United States Government came to see me in our Boston office of the United Fruit Co. He said: "All the Manila hemp for hawsers needed by our warships, auxiliaries, transports, and merchant vessels comes from the Far East—or did up to December 7. The supplies we have on hand will last for a while, but from now on we'll not get any more where it has been coming from—not for a long time. You know the need. What can you do?"

The need? Liberty ships were soon to go down the ways and out to sea by the score. Our Navy was tripling its pre-war size. Yet for a century American vessels had been wholly dependent on far eastern sources for Manila hemp, which makes the finest cordage. Ninety-five percent of the supply came from the Philippine Islands and the rest from the East Indies. At the time of Pearl Harbor our supply was limited to coiled lines on ship decks or what was stored in warehouses.

Something could be done, as the Government knew when its representatives came to see us. In 1925 we had worked with the United States Department of Agriculture in a 10-acre planting of abaca (the bananalike plant from which Manila hemp is produced) in the Almirante district of Panama. By 1940 we had 2,000 acres planted, all on an experimental basis. There, in the Middle American Republic of Panama, was the only supply of abaca seeds in the world available for American use at the time when our normal supply was cut off by the Japanese.

On January 3, 1942, less than a month after Pearl Harbor, we entered into contract with the Defense Supplies Corporation to plant from 7,000 to 30,000 acres of abaca, and to supply fiber to the Government. On our own stipulation, the contract provides that we receive not a dime of profit.

Last August, Almirante was producing 50,000 to 60,000 pounds of dry abaca fiber weekly, the equivalent of 6 miles of 8-inch circumference hawser. As I write, the latest weekly report shows a yield of 173,520 pounds from the same fields. Today abaca plants are growing on 29,000 acres of rich Middle American tropical soil. Plants in Guatemala came into production in August 1944. A mill in Honduras started stripping fiber in October. By the end of the year, two plantations in Costa Rica, and one each in Panama, Guatemala, and Honduras, were producing fiber at the estimated rate of a millions pounds a week.

For the first time since the early days of whaling, American ships are being moored by hawsers of all-American production, at berths from India to the docks of Cherbourg. Never again should the Americas be cut off from this vital material.

In abaca, one of the great crops has moved nearly halfway around the earth and has come to the Americas, where it will stay. What has happened with abaca can happen

with many other growing things, for in the republics of Middle America and the northern part of South America are the soil, the sun, the rain, and the people to grow crops which heretofore have been the almost exclusive monopoly of the far eastern tropics.

I am convinced that various crops of the Asiatic tropics can grow as well or better in the American tropics. For strategic reasons they should be developed in this hemisphere, so that never again can an enemy fleet cut us off from such indispensables as rubber, quinine, and fiber for rope.

That is not all. The crops of the East, replanted in the Americas, where in many instances they originated, can offer new peacetime employment and industrial opportunities for the Americas.

What we call Middle America comprises much of Mexico and all of the six republics of Central America—Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama; the three Caribbean island republics—Cuba, Haiti, and the Dominican Republic; Puerto Rico and the Virgin Islands; and the British possession of Jamaica. In those countries live about 40,000,000 people, some of them our own citizens.

Such, geographically, is Middle America. But if the criterion is one of tropic climate, we should properly include in that designation lands and additional millions of people in the three northern republics of South America—Ecuador, Colombia, and Venezuela—and whatever tropical lands lie still farther to the south—certainly part of Brazil. The enormous agricultural importance of this region has long been overlooked. Japan's invasion of the fertile lands of southeast Asia has brought the American Tropics into the lives of all of us. The war has made Middle America a reservoir of manpower, food, and other needs vital to our common well-being; the peace must do no less.

II

Abaca is only one example on a long list of commercially valuable trees and plants and grasses that grow untended in the jungles and uplands of Middle America, or are now cultivated in experimental gardens under the eyes of agricultural scientists.

Since the 1880's the United States has imported millions of gallons of palm oil annually. By the time of Pearl Harbor, virtually all such oils used in this country came from Oceania and tropical Africa. Yet it is common knowledge that many varieties of oil-bearing palms can be grown successfully in Middle America—notably the African variety, for which the field as a new Middle American crop is almost unlimited. I predict that in 10 years copra will be scarce as a result of the disease known as bud rot, which is attacking coco palms of the Pacific Tropics. African palm oil is just as good as coconut oil. Such oil is required in vast bulk for chemical and industrial uses, and is critically needed in peace and war. It furnishes food for man as well as for livestock, and it makes a valuable fertilizer.

A powerful and efficient organization was operated by the Dutch in the manufacture and distribution of quinine, which is produced from the bark of cinchona, the "fever tree," much of it on the islands of Java and Sumatra. To get quinine for the treatment of malaria, the world went to the Dutch. Early in 1942 the Japanese took over. But cinchona, a tree native to Middle America and transplanted years ago to the East Indies, can return to the land of its birth, where its systematic cultivation as a product of Middle America can free malaria sufferers everywhere from dependence on a virtual East Indian monopoly. Perhaps more than a million and a half cinchona trees are growing wild in the forests of Guatemala today. One great lesson of agricultural history, however, is this: Wild crops can never compete with the same crops in farm production. Today the systematic planting of cinchona in Middle America has begun.

What Japan's southward sweep did to our rubber supply is only too well known. By heroic effort we have developed a notable synthetic industry. But there is no doubt we shall have a continuing need for natural rubber. If the Middle Americas could supply 100,000 tons a year or better—and there is no question that the finest rubber can be grown there—it would seem to me that the United States could readily absorb that amount.

There are the essential oils, basic in the manufacture of menthols, perfumes, and insect sprays, produced from citronella, vetiver, and lemon grass. Thanks again to the necessity imposed by the Japanese offensive of 1942, these grasses are beginning to win an important place in the trade and agriculture of the Middle American Tropics.

Many commercially valuable trees thrive in the rich tropical soil of Middle America. Among them is teak, which supplies a splendid timber used in ship construction. Heretofore our teak has come exclusively from the Tropics of the Far East. Teakwood seeds have been imported from Siam and Burma, and the young trees are now thriving in experimental growths in Panama, Costa Rica, and Honduras.

Mahogany, balsa, tropical cedar, rosewood, and lignum vitae are other tree crops that can be developed over wide areas of the middle Americas, and can find markets in this hemisphere and in Europe. Bamboo furnishes still another example of a plant for which we have looked in the past to lands across the Pacific; yet bamboo, useful in construction of furniture, can be a worthy addition to the crops that can be grown profitably in our own tropics of the Americas.

Rotenone, a powerful insecticide produced from the root of derris and similar plants, is needed in multi-million-pound quantities to protect crops of the United States from ruinous insect enemies. Two million pounds of rotenone powders were recently allocated to our military services by the War Production Board. Derris, already growing in middle America, is capable of great expansion.

The list could be extended indefinitely—spices historically associated with tropics other than American, the oil-bearing seed of the manaca palm and the tung tree, fruits, and a vast array of commercial and subsistence crops, among them the soybean. The middle Americas are fast becoming the food laboratory of the world.

In realization of this, the United Fruit Co. recently established a department of new crops. The department has as its unfettered function the investigation of every possibility in the development of new crops. It is to learn what new products can be raised economically and marketed advantageously in the interest of middle American agriculture, the people of middle America, and consumers wherever they may profitably be reached. Promising results of experimental plantings on a 2,000-mile stretch from Honduras to Ecuador are already visible. Governments of the middle American republics and the United States are showing keen interest, and their research organizations and ours work in close cooperation.

Superior productivity of middle American soil, shorter lines of transport to American markets, and application of advanced scientific technology are the factors which favor agriculture in our own tropics.

Under the abnormal economy of wartime it is possible to develop new crops in Middle America even at wage levels far above East Asian rates. On the other hand, the postwar restoration of competition will pose serious questions. Reasons of hemispheric security should compel the continued cultivation of the strategically valuable crops we have neglected in the past. Likewise there is need for greater crop diversification in the interest of a balanced Middle American economy. Can these objectives be retained after the war without some modification of competitive free trade? That is a question which calls for careful calculation and statesmanship.

III

To grow the new crops successfully and to maintain the old ones will require more and more technical knowledge. As one response to the need, Escuela Agricola Panamericana—the School of Pan-American Agriculture—which was formally opened on Columbus Day, October 12, 1944, has come into being. Early in 1942 the National Congress of Honduras authorized establishment of such a school in the beautiful Zamorano Valley, 25 miles from the Honduran capital of Tegucigalpa, on lands purchased out of an original appropriation of $500,000 by the United Fruit Co. (Since then the company has added another $300,000 and has guaranteed the permanent maintenance of the school.)

Some months later, in September of 1942, we opened the school experimentally in response to urgent needs. At that time 74 carefully selected students moved into the new red-tiled buildings to begin their study. They were representative of Middle America, coming from Mexico, Nicaragua, Guatemala, El Salvador, Honduras, Costa Rica, and Panama. We planned for a capacity enrollment of 160 students.

The course covers 3 years of intensive study, with a fourth year of specialization for students who have displayed outstanding proficiency. No tuition is charged, and classroom and laboratory equipment, lodging, and other necessities are supplied without cost.

A pan-American faculty has outlined a course of study designed to develop native agrarian leadership in whatever fields of agriculture the students may choose—independent farming or agricultural extension service. The school is entirely divorced from any personnel requirements of our company and is recognized as a Middle-American institution serving middle America's students. Its curriculum includes modern training in soil analysis, land survey, the building of roads, irrigation and drainage systems; physiology and hygiene, with emphasis on treatment of common tropical diseases; forestry, crop rotation, animal husbandry, blacksmithing, practical farm engineering, carpentry, orchard culture, and marketing.

Dr. Wilson Popenoe, whose reputation in the field of tropical agriculture is international, is the head of the school and its professor of horticulture.

Dairy barns, stables, plant propagation sheds, greenhouses, a creamery, a splendidly equipped carpenter shop, together with classroom buildings, a dormitory, faculty residences, an emergency hospital, and a dental clinic, have been built. Work in the classroom is matched by farm work in the field. The school will also publish information of value to farmers everywhere in middle America, on new crops that can be grown for cash income, on improved methods of cultivating the old crops, on public health, on producing better and more varied foods for home consumption.

Education in the past has too often had the effect of separating the ablest Middle-American youth from the soil. But it is from the land that the strength and the ultimate well-being of the people must come.

Commenting on the development of new crops in Middle America and the establishments of Escuela Agricola Panamericana, Vice President Henry A. Wallace recently said: "The United Fruit Co. in the future intends to bring to bear even more than in the past the full force of modern technology on the production of crops which will diversify the agriculture and improve the standards of living of tropical America.

Above everything, the school in Honduras interests me. Would that every corporation had such precise plans for expanding its activities in terms of the welfare of the common man and his children."

IV

Through a gap in the Montaña del Mico Quemada—the Burnt Monkey Mountains—the Comayagua River flows out to join a larger stream, the Ulua, which, as it meanders toward the sea, forms the 65-mile Ulua Valley of Honduras. In October the heavy rains of the tropics drench the watershed, swelling the Comayagua and Ulua to flood. Through winter months the rains continue; and for decades past, the Ulua has swept through the valley, destroying planted fields and discharging its excess waters into pestilential swamps and jungles characteristic of much of the Middle American lowland.

Some 20 years ago our engineers sought to tame the Ulua. They began with swamp drainage, a task which called for flood control. Permanent spillways and levees were built, holding the river in check here, guiding its floodwaters there, in channels that spared the cultivated fields.

When the Ulua is in flood, it carries perhaps 20 percent silt in suspension. It occurred to us that, valuable as drainage and flood control had proved in the preservation of existing agricultural enterprise, these two processes could be utilized to accomplish a third result: the building of new land where crops had never grown before. So the waters that poured over the spillways in the rainy season were deliberately swung back and forth across the western side of the valley, and the silt gradually settled over the drained swamps year after year, in depths ranging from 6 inches to 10 feet. No richer soil exists on earth.

Conservative estimates indicate that more than 15,000 acres of land have been built up in this fashion. With the extension of this program to the eastern side of the valley, we believe another 35,000 acres will become available in time. Similar methods were employed by the Egyptians along the Nile, but the process is new in Middle America, where the ancient Mayans moved to new land when old land gave out.

I mention the Ulua River development because, while silting itself is an exceptional process that can be utilized in few areas, the making of new land is characteristic of the banana industry in Middle America. Bananas are not planted on lands which the natives have developed; rather the plantations have been developed on soil that had literally been created from jungle and swamp. As the new lands have come into productive use, diseases have been fought back by specialists in tropical medicine, and healthful, productive plantations flourish in regions once given over to malarial swamps.

The fight against pestilence has meant the expenditure of enormous sums, and science has not always won. For instance, Panama disease, known as the wilt, has attacked several of our plantations where the Gros Michel banana once flourished.

Because the wilt has forced banana plantations to move to uninfested areas, some critics have jumped to the conclusion that banana culture robs the soil of its fertility. Inasmuch as the banana industry is of tremendous importance in the economy of Middle America and in our relations with these republics, I will quote—with utmost emphasis—one of the most respected authorities on tropical agriculture, Dr. Lewis Knudson, profesor of botany at Cornell University, who says:

"Panama disease (wilt of the banana) is caused by a specific fungus which will live in the soil for many years after the land is no longer used for the production of bananas. Such an area replanted to bananas will not be productive of bananas because Panama disease reoccurs. The fungus causing the disease is specific for the Gros Michel variety and various other species of bananas but does not cause disease in other crops. Since Panama disease may occur in very fertile soil the question arises, can such land be reutilized for crops other than bananas? The answer is definitely yes, for the organism causing Panama disease in no way decreases the fertility of the soil."

The United Fruit Co. has not surrendered without a fight. Obviously we are reluctant to abandon any producing properties brought to bearing after much time and expense. For many years we have conducted the most thorough research in the hope of combating the disease, which, nevertheless, remains the great unsolved mystery of banana agriculture. If we find the answer, the cure will be made known to every agricultural company and every individual Middle American who grows the Gros Michel for sale or for his own consumption. That we have already done in the case of another banana blight, the Sigatoka disease.

If the hope of conquering Panama disease is not realized, however, the company is determined to use its resources and organization to help work out methods whereby lands which can no longer produce bananas successfully may be planted with other crops on a commercially profitable basis.

For all other crops the fertility of the deep alluvial soil remains unimpaired. The infested areas total only a minute fraction of Middle America—approximately 100,000 acres for the United Fruit Co. At least 68,000 acres of that land are now growing healthy crops of cacao and abaca. Perhaps another 100,000 acres cultivated by other companies or private farmers may be unavailable for bananas because of Panama disease. We see the problem not as a lack of fertile soil but as one of getting more of it into production for the benefit of more people. Our thoughts have not been directed exclusively or especially to lands suitable for banana cultivation, but, rather, to all productive soils.

V

On the afternoon of June 2, 1944, a rising wind blew in from the Pacific over the west coast of Guatemala. As it mounted to gale proportions, banana plants loosely rooted in rain-sodden soil started to fall. The top-heavy weight of hundred-pound stems of bananas pushed against the nearest plants, and these fell in turn, pushing against the next row. So, like collapsing cards, the plants went down. After 1 afternoon and night of such wind we surveyed the damage at our Tiquisate division.

Nearly a million and a half available banana plants (those with fruit at or nearing the harvest) were destroyed. Another 2.3 million, not yet available, were down. Strewn like green straws over 18,000 acres of plantation lay a total of 3.7 million plants, either bearing or soon to bear a valuable food product.

Unusual? Not at all. Banana cultivation not only faces natural enemies such as wilt, but is subject to all the hazards of agriculture. Drought, flood, hurricane, or even a fairly high wind can wipe out whole sections, as I have just related, while plantations elsewhere go unscathed. So far it has never happened that all our crops have been destroyed in any one year.

I mention this because it has a bearing on the size of companies engaged in the banana industry of middle America. Limited to a single division such as Tiquisate, a producer would be wiped out by a blowdown like that of June 2. If disaster comes to one producing region, there must be others to make up the deficiency. If ships cannot load in one country or can obtain but a partial cargo, there must be others where they can load or fill out the cargo in order to maintain the economic flow of supplies.

Our fruit is consumed in the United States, Canada, the British Isles, and normally in continental Europe, as well as in middle and South America. Transportation to a world market of a tropical food product such as bananas requires a fleet of fast, specially designed, refrigerated ships. Distributing this fruit calls for an organization that can handle a perishable commodity in any kind of weather.

Some figures may be helpful at this point. In normal times we operate a fleet of about a hundred merchant ships plying between the important harbors of Middle America, 18 ports in the United States and Canada, and others in the British Isles and Europe. At the moment, of course, practically all these vessels are in Government war service.

Keeping our farms in effective operation requires the maintenance of 1,425 miles of railroad built and financed by the company. Our various operations require a quarter of a million acres of improved land, bearing the year around. The nomal complement of employees totals 70,000 persons, 90 percent of them residents of middle America. The greater part of the proceeds from the sale throughout the world of bananas, sugar, and cacao, returns to the countries of production, in the form of taxes, pay rolls, and the purchase of native commodities. In the past 10 years our operations have left for such purposes the total sum of $385,160,000 in the lands of middle America as compared with net earnings of $125,904,000 from all operations within the same period—an average return of approximately 5½ percent on amounts invested.

Such operations require extensive housing and a dozen hospitals to care for employees, their families, and other people living in the neighborhood of the plantations. Out of our medical activities have come important results in the field of tropical medicine. The incidence of malaria has been drastically reduced. In the year 1925 at our hospital at Banes, Cuba, a sugar-growing district, 2,924 patients were admitted after primary diagnosis of that fever, a ratio of 523 employees out of every 1,000. In 1942 the admission for malaria at Banes had dropped to 10 in the entire year, or 1 employee in each 1,000.

Just as our agricultural research staff and experiment stations work in constant cooperation with the United States Department of Agriculture and similar agencies of the middle American republics, so our medical organization works with other private and government agencies in the field of tropical medicine, including the medical staffs of the United States Army and Navy.

Modern tropical agriculture is a major undertaking. To conduct it on a scale adequate to grow and transport food products to great markets, to pay good wages, to banish deadly human disease, to conduct research in the never-ending war against plant enemies, to carve new land from jungles and swamps, to develop new crops for the betterment of farmers big and small, requires sizable enterprise.

VI

More than earnings are involved today when major business activities move back and forth across the boundary lines of nations. The time was when my thinking was concentrated mainly on United Fruit Co. profits and prosperity. Even though I believe in profits and prosperity, I nevertheless thought we were headed for trouble, but I did not see the answer then. I did not see it until war proved what should have been obvious all the time: that the great tropical crops that grow on the other side of the world can and must grow in our own tropics, to provide a balanced economy for middle America and to free the New World from dependence on the East for strategic materials.

The economic and social evils of a one- or two-crop economy must not be fastened on

middle America. The lessons of World War No. 2 point to the path of agricultural variety and abundance, not only in cash crops which the farmers of middle America can sell, but in subsistence crops for their own food, freeing them in considerable degree from the worst effects of fluctuations in world markets. Should the price of palm oil drop, those same plants can furnish rich edible fats which the farmer can eat until the market is restored. So it can be with other crops.

It is worth noting that the old crops of middle America and the new ones which can be introduced are not suited to the climate of the United States and Canada and therefore present no competition with agricultural production in the United States and Canada. Furthermore, where middle America is essentially agricultural, we of the north are in large measure industrial. Fortunately for relations between Middle and North America, each of us produces what the other needs and does not produce.

In the past, when Panama disease infested one of our plantations and wilted the bananas, we moved out. We tore up the railroads. Behind us we left fertile land clawed out of the jungle. We moved out, and the people left the land and followed us.

I felt guilty about it. We should have had the sense to say, "Hell, we're staying here," and to have replanted those fields in new crops for the New World. We are doing that now. To our employees who are interested and qualified we are prepared to say, "We will help you to become established as independent farmers. Here is land for you to cultivate while you are still in our employ. Because it takes capital and scientific training to grow crops well, we will get you established. It may take 5 to 10 years for you to make a go of it on your own, with mature crops to sell and with subsistence crops for your own family. We will buy your crops or you can sell them elsewhere."

Details of this plan have been entrusted to our department of new crops, which will determine how large these independent farms should be. Forty acres may prove to be the most advantageous size, or 30 or 50.

In 1942 the directors of the United Fruit Co. adopted a statement of policy which gave formal expression to the program of utilizing the company organization and tropical resources to assist the native population in growing diversified food products "without expectation other than good will from friendly neighbors" in the interest of a balanced Middle American economy based on a contented, prosperous agricultural population.

To recognize the necessity of growing new crops in the American Tropics is not to forget the East Asian Tropics, with whose peoples we must live and trade in this shrinking world. Surely no sane program of crop migration can envisage the enrichment of one hemisphere to the lasting injury of another, nor can it be permitted to foster demoralizing competition between agricultural regions. Actually, rigid limitation of crops to a few similar varieties can produce the most ravaging sort of competition, whereas a wider diversification reduces the chance of head-on collision.

It would be foolish to expect miracles in a program of new cropping. There will be set-backs and disappointments, and the overall progress may be slow. This sort of thing will not just happen; it requires work, thinking, planning, large-scale organization and small, and far-sighted cooperative effort between private companies and Government agencies. Granting the inevitable delays, a place is left for imagination; indeed, an essential place. It is a great thing, this that we are looking at, and it can be a historic thing. For it is nothing less than the deliberate intercontinental transfer of the great tropical crops, directed by man, for man.

Is the Profit Motive Immoral?

EXTENSION OF REMARKS

OF

HON. FRED L. CRAWFORD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. CRAWFORD. Mr. Speaker, our Government is today deeply involved in the future of the American system of freedom in competitive, private enterprise. The size of the direct interest-bearing Federal debt, and the return, or rate of interest, which shall govern original and refunding issues and private paper, all have a bearing on the number of people who will be employed and listed on private industry pay rolls, as against those citizens who will have to be supported by checks issued by the Federal Treasury.

Not only are high officials of government concerned about these matters, but all of the thinking portion of our adult population have questions in their minds as to what the future shall be as it relates to these problems. Economists, scientists, inventors, and others who contribute articles to leading magazines and publications which cover these fields are having their say. What is spoken over the radio, and the statements which appear in newspapers and professional magazines and publications of various natures, help to broaden the public's knowledge of such questions and contribute to the better understanding of what occurs behind the scenes. Without such understanding it will be difficult to meet modern problems by changes that will not destroy the principles of competitive industry so essential to economic justice and freedom.

Among such contributions I find one on A Theory of Interest, in the Commercial and Financial Chronicle for December 14, last year, which I feel calls for no little consideration because of its positive questioning of the widely accepted views of Lord Keynes, of England, on savings and investment, including his approval of the doctrine that the ideal state of capital development calls for a disappearing rate of return, that is, of interest on capital investments and loans. Being well acquainted with the author of this article, I know the great amount of time and energy which he has devoted to study and discussion of these problems.

In submitting this study to the readers of the RECORD it seems worth while to dwell briefly on the relation of its argument to international difficulties and permanent peace possibilities, for nations today can hardly be insulated from each other ideologically now that they cannot be isolated from each other geographically. We cannot afford to ignore the form of government which is established in other nations, however friendly we may feel toward them as a people and disposed to respect their right to choose their own political leaders. As plainly stated by the President in his recent message to Congress on the admittedly dubious Bretton Woods financial proposals, "international political relations will be friendly and constructive only if solutions are found to the difficult economic problems we face today." Political arrangements conceived in the isolation of nationalistic self-determination can be little more than power politics, attempting in vain to make right out of might. Nothing but disillusionment can await the organization of peace between nations who condemn each other's institutions as "bourgeois capitalism" and "totalitarian collectivism." International cooperation to promote trade can hardly be maintained for long between peoples who do and do not believe in private property and free, competitive enterprise.

Since the President has asserted that the cornerstone for international economic cooperation is in the field of monetary arrangements, it may be well to note how ancient man's money troubles are. The Greeks had long anticipated St. Paul's remark to Timothy that "the love of money is the root of all evil." Unfortunately, certain theologians have distorted this plain statement so as to condemn "greed" for wealth as the root of all evil; and even when the distinction between money and wealth is pointed out they cling to their notion by asserting that money may be involved in some evils but we need not worry about them if we will but follow these vicars into a utopia where there is abundance for all—"freedom from want"—because there is no "greed" and everyone is his "brother's keeper." It is such inept misconstruction of biblical wisdom that has laid the groundwork for the familiar Russian rejection of "religion" as an "opiate of the people" calculated to lull the masses into a false assurance as to the generous impulses of their ruling class. Hence the Marxian idea of the inevitability of a class war.

The falsity of the Russian position is simply that of substituting their own communistic utopia for that of our misguided theologians. That communism is just another pot full of illusions which is calling black our "bourgeois" kettle full of gold seems clear from recent revelations of the official teaching of Russia's economic ideology. We have had the translation of the article by Leontiev and others—see Teaching of Economics in the Soviet Union in the American Economic Review for September 1944; also the Dunayevskaya criticism of this New Revision of Marxian Economics in the same number. Of even greater interest to Americans, however, is the presence in our own Office of Strategic Services of Paul A. Baran, educated in Moscow and Breslau as a specialist, I am informed, in Russian and German "planning," who in the current—December 1944—issue of the Review, raises his Russian eyebrows at the idea that there are "New Trends in Russian Economic Thinking?"

Comrade Baran explains that—

> The impossibility * * * of providing members of the Soviet society at its present stage of development with goods and services in quantities which would satisfy all their needs is not an "economic law." It is a limitation resulting from a scarcity which may (and certainly will) be overcome in the future Communist society, but which has

to prevail under conditions of only inadequately developed productive resources. The compulsion, furthermore, to keep the standard of living of the masses on a rather low level in order to be able to devote a considerable share of the national product to purposes of investment is another case in which it is misleading to speak of an "economic law." It simply is a statement of the elementary physical fact that one cannot have one's cake and eat it too.

But is capital formed by saving, that is, by sacrifice of present for the sake of future consumption? Is this cake-eating alibi for the failure of communism to live up to its promises valid? Capital is a speculative, not an accumulative, value, says Mr. Potter, whose paper is offered here for consideration. Costs, it is held, cannot determine economic value at all, much less in the class of capital values which must be computed, not by addir g up the contributions of savers, but by "capitalizing" the net productivity of investment, regardless of cost. It is not when consumption is deferred, but rather when it can be and is increased under the stimulus of the private-profit-and-loss motive, that capital can be and is formed. Without profit—interest on investment—there can be no wealth; and the competitive distribution of wealth to those whose energy and intelligence have created it is essential to stability of incentive in any human society. This defense of capitalism and the competitive profit motive as essential to the moral and practical character of human society is the essence of the paper on interest theory which follows:

A THEORY OF INTEREST

(By Alden A. Potter)

I. A QUANDARY

In reviewing a report by W. W. Riefler and other economists of a League of Nations committee in 1938 on Statistics Relating to Capital Formation, John Maynard Keynes (now Lord Keynes) had this to say (Economic Journal, September 1939, p. 574): "We have been all of us brought up, like the members of this committee, in deep confusion of mind between the demand and supply of savings, and until we rid ourselves of it we cannot think correctly."

It is hard to see how this confusion over capital formation by savings can be separated from the problem of interest in which equal confusion has been widely acknowledged by competent students of the subject. Somers (Quarterly Journal of Economics, May 1941) has pointed out that while "Mr. Keynes • • • claimed that the rate of interest was a purely monetary phenomenon • • • the price paid for parting with liquidity," this is involved in what Hicks, a British authority, has called "a real dispute, in which one side must be right and the other wrong." Says Professor Somers, "Few topics in economics, in fact, have received as varied treatment as has the theory of interest. Few topics, moreover, have resulted in as many divisions of opinion, misunderstandings, vigorous attacks, and equally vigorous defenses." Among these is the sharp refutation of Marshallian theory by Ernst Dick in his book (1929) The Problem of Interest. In his treatise on interest theory (1930) Irving Fisher has called the problem "the great economic riddle."

"Pure" interest neglected

"Pure" interest, as distinguished by Fisher from the impurities injected by the business cycle, that is, by the influence of changes in the purchasing power of money (rising and falling prices) is too generally neglected in practical discussions of interest rates. This leads to the Keynesian notion that under ideal conditions, with risk eliminated and abundance of savings (capital), interest should be zero. Confusion derives from the fact that the rates under discussion are really bank rates and not at all what rates would be if loans were in fact dependent entirely upon savings. A current example of such a discussion is that of Prof. Ivan Wright (Commercial and Financial Chronicle, September 21, 1944) in which he says that "interest rates are a function of money reserves," and predicts, doubtless correctly, a post-war rise in rates due to sustained peacetime investment profits that must exceed the rate of return on Government bonds and so come into conflict with attempts to maintain bond values. Present banking practice does indeed dominate the money market and crowd out savings seeking investment, at times (like the present) forcing their rates down, even to zero in some banks' savings accounts.

Under the depression phase of the business cycle, that is, when there is too little money to sustain prices and so profits and employment, the banks are restrained in their loans and are thereby shrinking both the market for, and the supply of, money in the all-too familiar perversity of banking operations as now conducted. As they shrink the supply of funds, which but for this shrinkage would be on the money market as savings, these operations create the vicious spiral of "panic" conditions which eliminate all "demand" for money regardless of the need for it or the extent of bank reserves and the lowering of rates by the "excess" of these "loanable funds" (reserves). The relation of reserves to this process, though a pure legal fiction, determines the position of the bank as to liquidity relative to loans; so these "loans," which represent liquidity to every business except banking, put "liquidity" in banking assets (reserves, which are money only to bankers) into conflict with "liquidity" in banking liabilities (loans, which are money to nonbankers). Bank rates may then fall—proximately because of "excess reserves"; but if they do the change even to zero must be so small relative to the accompanying slump in capital values, that is, investment returns become so impure relative to pure interest[1] that no loan can be made with assurance of liquidity to either bank or client. So loans are not made; and there is no such spontaneity in the "recovery" as there was in the slump.

Quandary of capitalism

Advice to maintain liquidity with short-term securities guaranteed by the taxing power is therefore always "sound" advice relative to those operations governing "current" rates which are, indeed, a function of money reserves; and such advice is clearly a hedge against the irregularities—the impurities in interest—that are induced by the banking process itself and are deeply involved, particularly in time of war, in the issues surrounding the national debt (which Thomas Jefferson wanted to prohibit entirely by constitutional amendment). It is thus the highly impure and speculative bank rate of interest of which Professor Wright can truly say "it would be foolhardy to lay dawn any • • • working time table for interest rates and construct an inflexible (investment) policy to harmonize with it." Such uncertainty inevitably results from the conflict between the Government's involvement in keeping its chief creditors (the banks) liquid while also maintaining its own, conflicting liquidity as the chief debtor to those same banks. So the Government is "damned if it does, and damned if it doesn't" correct the status of whichever it has set awry by its latest action; and it (personified!) is always at hand to take the rap from political and other demagogues who obscure the real issues by alleging bad management, rather than a bad system, so they can "turn the rascals out" rather than eliminate the "racket" in politics and business. This, of course, is perennially "the life of the party." Meanwhile the quandary of capitalism remains unabated in perpetuity.

Social-security illusions

The way out of this dilemma certainly can lie only in a revolution in thinking based upon dismissal of every predilection. The solution will certainly involve heresy, deep-seated heresy, which is, nevertheless, conservative in its implications relative to the bureaucracy set to distribute largesse under the false assumption that "social security" can be thus assured because "the world can now produce enough to supply the people of all countries with the necessities and comforts (sic!) of life"—if only a "liberal" government (in alleged support of "private industry") is allowed to spend gloriously in "planning it that way." No; this is not the "globaloney" of Vice President Wallace. It is quoted from a general resolution adopted at the Tenth Biennial Congress of the International Chamber of Commerce at Copenhagen, July 1, 1939, just prior to the jolt which Germany handed the world in her bid for lebensraum. Are we to emerge from the war triumphant in such illusions, to plunge on into the futilities of socialism and autocracy ("democratically" controlled!) as against a realistic recognition of the inevitability of competition for that "place in the sun" that makes life possible? If we do, we shall surely perpetuate the confusion that cannot fail to lead on to another and more bitter war, this time involving not merely the decline of the presently fratricidal West as against Russia and the East, but the very continuance of civilization itself. (Opposing "globaloney," see Population Problems of a New World Order, reprinted from the Scientific Monthly in the CONGRESSIONAL RECORD, Friday, January 21, 1944.)

If human destiny could ever hinge on any social device it hinges now on a search for innovation; not for hasty acceptance but for prompt and searching, democratic consideration by every literate element so as to avoid continuance of a blind leading of the blind through the needless and repetitious disasters of the trial-and-error method in developing social institutions. Ancient and bitter controversies are involved which must be resolved in the intellectual sphere if we would avoid their development, into physical conflicts of today's disastrous proportions, over the issue of "capitalism" which in older times centered on the problem of interest and usury. A recent treatise on this subject by Fr. Bernard Dempsey, of St. Louis University, sharply revives the moralizing of scholastic thinkers regarding usury. Dr. Joseph Schumpeter, professor of economics at Harvard, has presented this study with an introduction of trenchant import.

Controversy renewed

"The time-honored controversy on the nature and functions of interest that had almost died out," says Professor Schumpeter, "has flared up again during the past decade. New points of view have emerged. Propositions diametrically opposed to some that used to command almost universal assent have been put forth. My impression is that, as a result, a majority of economists interested in the problem have modified their views. Needless to say, no agreement has been reached. The reason is not far to seek. Interest holds so central a position in the capitalist organism that it intrudes in practically every economic consideration or valuation. In consequence, the phenomenon of interest as such and any particular

[1] May we at this point define "pure" interest as that return which investments, apart from the risk of "freezing" by a fall or the chance of "windfall" profit by a rise in price level, must yield to maintain capital values.

rate of interest are the result of so many factors that it is easy to evolve a distinctive theory by the simple device of stressing one of them at the expense of the others. To illustrate by an example: in a sense it is correct to say that interest is the price paid for inducing someone to part with cash. If people's propensity to hold cash suddenly changed, then the market rate of interest would certainly change also. But this indicates just one of the many conditions to which the equilibrium rate of interest must conform and does not in itself provide sufficient ground on which to build a theory of interest. Understandable or not, however, that state of things is deplorable. For much of our outlook on economic life and on its most pressing practical problems depends upon the views about the nature and function of interest which we happen to hold.

"More often than was the case a hundred years ago, we today hear pronouncements by leaders of religious communities of all types not only upon general issues of social right or wrong but also upon economic questions of complex character. Admirable intention is practically always in evidence. But so is, also practically always, lack of familiarity with what the economic facts are and what they mean. This was not so with the great Jesuits of the sixteenth and seventeenth centuries. They were no doubt judges and directors of consciences. * * * But to put it bluntly, they always knew what they were talking about. Their pronouncements rested as much on a mastery of economic facts and of the relations between these facts—that is to say, of 'theory'—as they did on that hyperempirical system. This fact not only makes them interesting to the scientific economist. It also lends a weight to their pronouncements which those of modern ecclesiastics of all denominations very often fail to carry. * * *

"To the instance of interest and usury the above applies with particular force. Our time witnesses not only another revival of the theoretical controversy about interest but also another revival of the practical controversy about the reform of money and banking. Few people would be so foolish as to deny the existence of a moral aspect of it or the right of the churches to speak out about it. But those who wish to do so had better recognize in turn the rather technical nature of the subject. However far some of them may feel themselves removed from Father Dempsey in matters of theology, they might well be advised to peruse his book which, though with restraint proper to a scientific study, indicates clearly enough how analysis may implement moral principle."

What makes the subject "rather technical," in the sense of being complex in its difficulties, is a lack of simplicity—of that truth and clarity that constitutes the only realistic basis for morality. "Ye shall know the truth, and the truth shall make you free" implies the need for eternal vigilance in avoiding the confusion of tongues with which our economic Tower of Babel is fraught. We cannot be vigilant in a mental smokescreen. It is a struthionoidal (ostrich-like) vigilance that fatuously says there is no smoke getting in our eyes—that we are only puzzled by "the many conditions to which the equilibrium rate of interest must conform." If we bury our heads in the sands of empirical detail we cannot hope to see our circumstances in perspective—cannot orient the "many factors" and put first things first in the economic chain of events, so that we may know that which is to be rendered unto Caesar from that which is God's—from that which requires freedom from all governmental constraints.

II. A SOLUTION

First among the values of life is life itself—human beings, physically and individually alive. This plain fact serves to reduce the meaning of "general good" to its Darwinian definition (Descent of Man, p. 122) as "the rearing of the greatest number of individuals, in full vigor and health, with all their faculties perfect, under the conditions to which they are subjected." Also as morality has a social origin and meaning, we must, says Darwin, "take as the standard of morality the general good or welfare of the community" thus defined.

What man is or may become in any nonphysical sense is not a matter of concern to Caesar—to the science of political economy. Certainly, not even physical evolution has anything to do with morality when seen in the light of the simplicity of this Darwinian definition. We cannot "plan it that way"—cannot control human destiny politically, or even scientifically. We are not masters of our own fate in eternity. We are morally bound, therefore, to the "general good" only in properly "rearing the greatest number of individuals in full vigor and health." As living things, normally motivated, that is precisely what we are primarily and naturally—and morally—interested in: parenthood. "Reproduction is the first law of life."

A moral—a normal—society is, therefore, primarily a parental association. All human industry that is normal—and moral—in its controls must be subject to this biological norm in motivation. Its primary, its ultimate, business interest must be that of rearing another generation—of creating homes and families, not because of legal or social traditions or sanctions, but because of that elementally competitive and cosmic urge which is "the secret of it all; all the longing, seeking, striving, waiting, yearning, the burning hopes, the joys and idle tears that fall."

"Mother of necessity"

The simple "economic" truth concerned is that, in acquiring a living competitively, for the sake, that is, of reproduction, an elaborate system of valuation has been developed, involving numbers called "prices," in which capital values have become increasingly important as productive implements have multiplied. The pressure to acquire a surplus of a food supply for the sake of "security" in expanding the population at "full vigor and health" has been the necessity that has "mothered" these inventions, literally, because "the hand that rocks the cradle rules the world."

But a surplus so developed has required a complex system of diversions or "costs" which are not the source of the values developed but on the contrary are always set off against them as "debits" offset against "credits." It seems certain, however, that this system has yet to be developed correctly as to the elements involved. Among these beclouded elements have been interest, profit, depreciation, and obsolescence, all associated as factors in these "capital" values; and all with a moral context; that is, with an essential relation to the reproduction of the species. The problem before us is thus a problem in accountancy; that is, in accounting for this reproductive relationship in economic values as involved in "costs."

Certainly we are not engaging in these diversions—these costs which accumulate as "price" in trading during productive processes—for their own sake. The resulting capital values are therefore not "intrinsic." They are subject to continual risk of loss and chance of gain because of their changing relation to "productivity" in terms of the values that are intrinsic, ultimately because of their relation to food supply. Those who labor at the multiplicity of tasks involved are never sure of remaining productively employed. Directly or indirectly through "free enterprise" the utility of these diversionary costs is competitively displaced and made obsolete by innovations. They thus become costs that afford no value, since they can no longer contribute competitively to our cooperative cradle of productive capacity which is of "capital" value.

A real structure

A system of valuation, therefore, can have no realistic significance nor any moral standing if it does not put first things first and base its whole structure on the elemental facts of the physical processes of nutrition and reproduction. Obviously the rearing of the greatest number of individuals in full vigor and health is a process in which nutrition is primarily involved and in which, as a rule, there will not be enough food for potential population; i. e., there will be competition for it in the effort to fulfill the "cosmic urge"; and the "full vigor and health" of offspring will be brought into jeopardy "under the conditions to which they are subjected" by competition.

Reducing that jeopardy despite competition—indeed, by means of it—has been the task of science and its "innovations." Its successes have hinged upon mechanical implements, its failures upon a social structure that has been incapable of harmonizing, with a competition that cannot be either practically or morally eliminated, the community of effort involved in mechanization. Wishful attempts to harmonize them have signally failed, and failed because emotionally we are not cooperatively but rather competitively conditioned—because, in short, truth is knowable and usable only intellectually, not emotionally. Because, let us add, it is the human brain, not the human gland or hormone, that is of social significance.

With technological advance, however, there is a "kind of balance which is vital to economic progress and which may be ruined by overrapid innovation," said Lord Stamp. (See The Science of Social Adjustment, 1937, section on The Factor of Obsolescence, p. 34.) It is a balance "between obsolescence and depreciation. To be effective nearly all scientific advance for economic progress has to be embodied in capital forms, more and more elaborate, large, and costly. * * * The total satisfaction is continually produced with less and less human effort. * * * But if the expensive embodiment of the latest science can be outmoded and superseded long before it is worn out, there is waste of capital, loss of interest, and resulting insecurity of business and investment."

Loss in interest, in addition to costs already "invested" in physical form which are unreplaced (are not amortized), is involved. Yet scientists, says this British financier who was killed in the bombing blitz of London, "often look at the problem of practical application as if getting at it as rapidly as possible were the only factor to be considered in social advantages, and the difference in the position of monopoly or single management in their ability to 'hold up' new ideas is treated as a frustration in itself. Thus it has been said (J. D. Bernal, on Science and Industry in The Frustration of Science, p. 72): 'The danger of obsolescence is a great preventive of fundamental applications to science. * * *' Supposing that the obsolescence in question is a real factor of cost, it would fail to be reckoned with in the computation for transition, whatever the form of society, and even if the personal 'profit' incentive were inoperative. It cannot be spirited away * * *" (op. cit., p. 43).

Value of capital cost

How, then, can obsolescence be a "real factor of cost"? And just how is it related to interest or profit from property values?

Certainly, capital values are often evanescent; as already noted they bear no necessary relation to antecedent cost, for the ratio between cost and resulting income that is warranted by competitive conditions is being continually reduced by innovations that lower costs or raise productivity, or both. Such a ratio is, obviously, conditioned by time; that is, both costs and productivity must relate to the same period, say a year, in order to be expressive of comparable values

in productive equipment. Capital costs, in other words, can be related to value that is attributable to income, only as affected by durability or "life expectancy" in service on the one hand, and by total productive capacity during "life" on the other. To make value comparisons that are universal (as is done in the price system) it is necessary that there be a standard ratio involving net income, within a fixed time (year) as related to depreciation costs in the same period—for only depreciation can be charged against competitive values, never research or development costs except as these may be protected by patent, in which case they still do not control the value of the monopoly accorded to the invention. This standard ratio is interest, or the ratio of capitalization. How has such a ratio, or "natural" rate of interest, come about?

Function of investments

Competitively, all investments must, obviously, equate efficiency, i. e., any one investment must produce as effectively as any other, per unit of cost per unit of time, in order not to be obsolete. It must be equally obvious, however, that if productivity is to be the basis of numerical valuation it can only be as related to some invariant, some alternative opportunity in cost and income which is universally and naturally present; that is, a standard ratio must be comparable to "constants" in physics, which are always natural ratios determined by observations employing measurement by figures based on purely artificial units. While such a relation is a natural invariant, its numerical magnitude is determined by the size of units employed in measurements involved. Similarly, the ratio for capitalization (the reciprocal of the interest ratio) is a function of the unit of time employed in measuring the factors involved in productivity, otherwise it is a constant; and when the unit of time employed is a year, the ratio is approximately 20 to 1. That is, since there exists in human life an investment opportunity which is a norm, and which will "return" 5–6 percent per annum as against total cost, it can never be good business to invest income at a lesser rate of annual return. (Obviously, if that which is invested is borrowed the lender will be presumed to have sacrificed, and so be owed, the gain afforded by this standard opportunity in good business. If, however, he sacrificed nothing to make the loan, as by counterfeiting money, the transaction is usurious as to both lender and borrower, neither of whom can have moral claim to either principal or interest. Cf. Fr. Dempsey's analysis of "forced saving" in the treatise cited above.)

There is, indeed, one cost account in the human economy that is invaluable, and that is the account which would otherwise be insolvent (because productive of no income)—the account with our offspring. The Greeks used the same word (Tokos) for both offspring and interest. They must have been at least subconsciously aware that the rising generation is an investment without profit—because it is profit. Certainly its cost does not require amortization, by income contributed, in order to be afforded a motive; for new life is amortization for the procreating generation. It needs no ulterior motive, for it is the ultimate in motivation—"for 'tis love and love alone the world is seeking." If it is not an investment, that is because it is the investment from which, as the "opportunity cost," all other costs must derive their pattern and their "profit" motive.

Nor is this a mere matter of personal volition in determining whether to be or not to be—whether to Sangerize or not to Sangerize; for the difference between morality and immorality is the difference between mortality and immortality—between life and death—in making the choice between the cosmic urge and the competitive and other inherent difficulties in undertaking that free (?) enterprise which is the ultimate investment in happiness for ourselves and our posterity, "the rearing of the greatest number of individuals" consistent with "full vigor and health."

Reproduction as an investment involves an always current cost which must be available as a surplus and be incurred through the unproductive and self-centered period of immaturity up to the love-motivated period of productivity, or maturity. It is a cost which literally returns for reinvestment at maturity (after about 20 years) when the individual is detached from dependency. No other cost can be economical unless it returns a surplus, above its time-distributed cost as a maintenance reserve (or rate of amortization), at the same ratio to its undistributed or total cost as that determined by the length of our immaturity. If an investment cost returns more or less than this "interest" ratio, its value is altered accordingly in the multiple proportion of "capitalization," which is derived directly from the period of dependency in years and of which the interest ratio is the reciprocal. This ratio is therefore a controlling constant, not a controlled variable.

Importance of profit motive

We find, then, that it is not a system which does demand interest at a fixed (5–6 percent) rate on captial (borrowed or unborrowed) that is immoral. One which does not so provide is immoral! Incidentally, an immoral system is also an unworkable system, lacking the profit motive or any incentive at all such as competitive "capitalism" does afford as a cradle for the rising generation. A race which attempts to eliminate the competitive motive of the cosmic urge by an "unselfish," doctrinaire "golden rule" behavior that "loves thy neighbor" regardless of sex, is on the hypocritical road to suicide—to being displaced by a less "educated and refined" people who dare not or will not neglect their own, selfish amortization.

A civilized race which intends to survive, therefore, must have a good (yes, moral) business organization which forces the profit motive into all business and even nonbusiness behavior, automatically, by sound, interest-bearing finance with stable money which keeps the interest rate pure in its relation to distributed real costs, that is, as related to amortization of investments which are not obsolete in competition. No nation can be social—can reproduce and so endure—that does not know that "'tis love and love alone that can repay," even in business, and that therefore production for use and for profit must be the watchword for every moral, and normal, and social "ism."

Projects Listed in H. R. 2374, First Deficiency Appropriation Bill for 1945

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. PITTENGER. Mr. Speaker, earlier today I called to the attention of the Members of the House the fact that there were several items in the bill having to do with additional facilities for war plants. I referred to the project at Duluth, Minn., known as Minnesota project 21–139–N, Federal Works Agency. My testimony before the House Appropriations Committee appears on page 744 of the printed hearings and, in part, is as follows:

The CHAIRMAN. Mr. PITTENGER.

Mr. PITTENGER. Mr. Chairman and members of the committee, I am interested in what is known as Minnesota project 21–139–N, Federal Works Agency, before Subcommittee on Deficiency Appropriations. This is known as the Riverside sewage project and is made necessary because of developments at the shipyards at Duluth, Minn., which yards are engaged in producing ships for the Government in connection with the war effort.

It is my understanding that the Federal Works Administration recognizes the fact that sanitary conditions at the shipyards are very bad, and in the interest of the health of the people working in these yards this project should be undertaken and completed as soon as possible. I submit herewith certified copy of the resolution of the City Council of the city of Duluth, which bears date of January 31 and which explains in detail the need for this important development.

I trust that the committee will act favorably.

I then submitted certified copy of the resolution which was adopted by the city council, and which requests favorable action in connection with this project, so as to expedite the financing and completion of the same at the earliest possible date.

The resolution of the city council recites that the project which involves construction of sewage disposal facilities is necessary in order to protect the health, safety, and welfare of the people in this section, as well as persons engaged in national defense activity.

I am advised by the Government agency involved in this matter that unless there is an amendment to H. R. 2374 no funds will be available for the Riverside project. Attention is directed to page 8 of the bill which refers to an increased appropriation, but which provides practically all of the increased appropriation shall be reserved for projects subsequent to June 30, 1945. I think it necessary that this limitation be removed and I shall support an amendment for that purpose at the appropriate time.

Address by Hon. David I. Walsh, of Massachusetts, at Jackson Day Dinner in Boston

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 28 (legislative day of Monday, February 26), 1945

Mr. WALSH. Mr. President, I ask to have printed in the Appendix of the CONGRESSIONAL RECORD a speech delivered by me at the Jackson Day dinner held under the auspices of the Massachusetts Democratic State Committee in Boston on Saturday, February 24, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

From the viewpoint of political success we meet on this occasion under most favorable circumstances. The executive and

the legislative branches of the National Government are entirely under the control of our party. In the election held last November, in the midst of the present war, President Roosevelt, our honored party leader for 12 years, was given an emphatic and unprecedented endorsement notwithstanding the fact that no man since the establishment of the American Republic has heretofore held the Presidency for more than 8 years. Not only was President Roosevelt and his administration endorsed, but the Democratic Party was given increased numerical strength in the Congress.

Here in Massachusetts we are honored tonight by the presence for the first time in 7 years of a Democratic Governor. His outstanding achievement in the political life of the metropolitan city of Boston, as well as his long and devoted service to the Democratic Party, give every assurance of a successful and brilliant record as our chief executive. The Democrats of Massachusetts are behind you Governor Tobin and you have but to command us to render every assistance to make your administration the glorious page which we confidently expect it to be, in the history of Massachusetts.

This is also an occasion for us to take pride in the services rendered to our party by those who have, and will have in the immediate future, the difficult task of strengthening our party organization in order to make it an effective instrument for success in the future. Much of the credit for our party's success in Massachusetts is due to you who are here assembled, who represent the workers and leaders in the party organization—the lieutenants, and the captains who must organize, educate, and lead the large army of men and women who support our political principles and who look to you leaders for guidance in the performance of their civic duties. Preparation for battles in a political field have many features in common with military engagements. After each military conflict there must be realinement and reorganization of the participants in the next contest. A good general must never fail to measure the strength and power of the opposition and prepare to outnumber and outgeneral the enemy. Therefore, this occasion should be a source of encouragement to you, Chairman Cahill, and your coworkers, for this large and enthusiastic gathering indicates you and they deservedly possess the confidence and loyalty of the workers of our party.

It is most appropriate that we Democrats should yearly celebrate Andrew Jackson's anniversary and also that of Thomas Jefferson. They are the patron saints of our American democracy and of our political party. It is from them that we have inherited our political faith. It is to the fundamental principles that they enunciated that we must continue, in the trying days ahead, to turn to for guidance and direction.

The arbitrary power that has entrenched itself in recent years in Europe has risen largely because of the belief that people are not to be entrusted to shape their own lives, that they should be controlled and guided, and either patronized or exploited, by those who have the power to seize authority over them or to rob them of their resources. Jackson and Jefferson had explicit faith in popular government. The guiding principle of these two great leaders was the right of the people of the Nation to work out its life and destiny in its own way, to enjoy individual independence to the end that a man may think as his mind directs, believe as his heart desires, and worship as he sees fit.

It was those leaders that not only preached, but builded the Nation upon, and imbued our party with, the doctrine that all men are equal in the eyes of nature and the law; that life, liberty, and happiness are inalienable rights; that the function of Government is to safeguard and guarantee those rights; and that all authority and inspiration of Government are drawn from the consent of the governed. How inspiring are such utterances as this: "The whole art of government" thundered the great Virginian, "consists in the art of being honest. Only aim to do your duty and mankind will give you credit where you fail."

These founders of our party struck a death blow in their day at aristocracy and tyranny and the privileged groups, who sought to determine and control what the people should think, how they should be governed, and how they should live, as against the theory that people were created for the Government, which is at the root of many of the evils throughout the world today.

Yet today, many legislative proposals supported by strong and vigorous groups, some of them even within the Democratic fold, are pending in the Congress and State legislatures, seeking to control what the people should think, how they should be governed, and how they should live. One major experience we had with such proposals, namely prohibition, has evidently been forgotten.

It is the fundamental principles of these leaders of our party that must guide us in solving the stupendous, domestic, and international problems that are beginning to unfold as we approach the end of the war.

But what of the future?

First, and foremost, we must repay the debt we owe those who have been our shield against the enemy during this frightful holocaust. There is no higher or more solemn obligation than the proper recognition of the obligation we owe our war heroes, and the necessity of realizing that, though we cannot lessen the sacrifices, the grief, and the suffering that they and their dependents have and will continue to experience, we can and we must remove any and every physical and material hardship that will interfere with their future happiness. There must never be any hesitancy or question about generously providing for the safety and security of every war veteran and his dependents as long as they live.

Time does not permit more than a mere mention of the exceedingly large number of grave post-war problems that will immediately press for solution following the transition from the present war economy to a peacetime economy. Among them, however, may be mentioned the adoption of legislation to prevent the possible annihilation of small businesses; the providing of jobs for the millions who are now employed in war industries, employment for the millions returning from war service; the maintenance of the wage that will prevent any reduction in the standards of living of our workers; the unloading of the innumerable bureaucratic agencies and the decentralization of the functions of Government that have exercised an autocratic control of the lives and activities of our people during the war.

In the background of all our planning there is a still more gigantic task. How are we to deal with the national debt approaching $400,000,000,000, representing approximately a per capita debt of $3,000, a debt greater than that any country of the world ever had or ever dreamt of having—one that no American a few years ago would predict it was possible for our Nation to carry and survive.

I repeat, the problems of readjustment, social, economic and political, domestic and foreign, are of a magnitude that it is not possible to overestimate. We must avoid in the years following the war what has frequently been the aftermath evils of wars throughout the world—imperialism, monopoly, and dictatorship. These three are the eternal and impregnable enemies of liberty.

The aim of our foreign policy should be the security and defense of our Nation and the maintenance of its peace. Wide, sincere, and legitimate differences of opinion in regard to our foreign policy following the war seem to be inevitable. All Americans are for peace at home and abroad. The dissent will arise over the methods by which our own security, as well as world peace, is to be assured, such as the details of the terms of peace, the obligations assumed under international agreements, the extent of the use of our armed forces to police the world; the extent of peacetime lend-lease obligations, etc. It is recognized by many, and that is the basis of sharp differences, that international commitments, even when carefully safeguarded, may become the reverse of what they were intended for, namely instruments of war instead of instruments of peace. Such stupendously important decisions as our international relations are certain to lead to honest differences in our own party ranks and, indeed, the same diversities are bound to arise in connection with plans proposed for the transition from wartime to peacetime economy. However, let us remember that violent disagreements in regard to foreign and domestic policies are, and will continue to be, just as prevalent, if not more so, in the Republican Party as in our own. Neither one of the great political parties possesses any infallibility in its leadership for the solution, harmonious and unanimous, of the new, untried, and frightfully momentous issues of the future.

Whatever steps are agreed upon to promote world peace, for united action with other nations to prevent aggression and future war, we must not be lulled into the condition of weakness and unpreparedness that followed World War No. 1. We must insist that our country be so strong that no possible combination of powers would attempt to attack us. We must, in the future, provide America with an invincible air force and a navy strong enough to protect all our seacoast, and a fully equipped and mechanized army. We must supplement our armaments in order to promote peace throughout the nations of the world, by an unmistakable policy of good will among all nations, both large and small. We should foster economic collaboration, especially with the republics of the Western Hemisphere, but as well with all free nations to the end that peace and national good faith may triumph.

It is but natural that there should be in the solution of the momentous problems of the future sincere, strong, and legitimate differences of opinion as to what policies are most likely to preserve and protect our free institutions as to what principles are more conducive than others to promote the general welfare of all our people.

It is my opinion that the people believe that that political party and those political leaders who will apply principles of natural justice and truth to the great facts involved in any question or issue can best render the most useful service and thereby secure and preserve an abiding faith in the capacity of our form of government to serve society.

Something more than political platforms or party principles, or promises is of supreme importance. From the viewpoint of the average fair-sized citizen, the important consideration that confronts him is to know clearly the kind of political philosophy that leaders and candidates of political organizations represent. Fellow Democrats, because we believe the Democratic Party has been more responsive to the natural, inborn aspirations of the masses for the improvement of their lot, we have accepted its standards. It is the Democratic Party, we believe, that through the long years has been thinking most constantly of the needs of the lowly and the suffering and toil-worn people and when given the opportunity, has translated these thoughts into action.

We are Democrats also because it has given us the best opportunity to defend the rights and champion the causes that have brought hope and cheer into the lives of the underprivileged in their struggle for a reasonable

share in the wealth of the country that they have largely produced.

Our party must now, in the momentous days ahead, prove that it is still capable of performing the new tasks that are before us. We should do it with as much harmony and cohesion as possible, without asking any member of our party to surrender his individual and intellectual integrity for some particular phase of legislation or administration.

We should possess constructive ability to recognize that we may have made some mistakes in the past—any other attitude would indicate a claim to be superhuman—and that it is possible to make mistakes in the future. If we are capable of recognizing mistakes and correcting them, we may go forth with renewed vigor and confidence to future victories.

This is no time for cessation of effort, no time for sectional differences or racial hatred. Strong and vigorous constructive criticism and honest differences over policies for the Nation's welfare will not only help our party, but be of inestimable value to our country. Personal animosities and jealousies, and an unwillingness to recognize that those who differ with us are usually as sincerely and honest as ourselves, will keep us disunited.

Fellow Democrats, we cannot obliterate from our thoughts tonight that Americans are dying on land, sea, and under the seas in defense of our liberties and institutions. We cannot drive from our minds the thought that not only thousands of our youth who are in this war will never return, but that those who come back to us, after suffering from the debilitating heat of the tropics and the winter blizzards in lands far from their homes and loved ones, will have no future because they will be broken in body, some in mind. We can best show our gratitude for what they are doing, and for what they are still to do, by taking advantage on occasions like this to reexamine the principles upon which our Government was founded, to reappraise our national progress, and to decide what kind of a country and world we want to live in when this terrible cataclysm is ended.

More than ever, the great masses of people are calling for leadership, honest, courageous, and able; leadership which will carry the torch of democracy in helping to solve the complex problems ahead and dispel the gloom, grief, and discouragement that the war has brought. We of the Democratic Party must become the inspired leaders in all the great movements of the immediate future for the advancement and progress of our beloved country. Our voices must bring hope and confidence to the masses of men as no other voices in America. Inspired by the sacrifices of our war heroes, let us become crusaders to fight those forces that place material values, government by force, hatred, and selfishness above the spiritual values upon which our founders built this Republic. In a word, we must vigorously fight those false theories of government which have brought other democracies to ruin and which have destroyed progress and liberty everywhere.

In the days of peace our enemies will be those who permit any and every form of social and industrial injustice, racial and class hatred, religious prejudice, monopolistic combinations that enhance the cost of living, lessen the purchasing power of wages, and increase the already too great disparity in living conditions between the rich and the poor, the possession of the country's resources by a limited few—all these are enemies of democracy.

The conflict before us and in which we are engaged is to preserve the soul of America, the soul that Jefferson and Jackson breathed into our institutions—to preserve the truths and ideals which in the past have made our people the happiest and most contented in all the world, and our country, notwithstanding its temporary economic recessions and its yet unsolved social and economic problems, the best place in all the world in which to live, to work, and to die. At all hazards let our party exert every effort to safeguard American institutions, preserve our self-government, respect and maintain our best traditions, for these are the fundamental principles for which our sons and their loved ones have suffered, sacrificed, and died.

Further Manpower Bill Delays Foreseen Despite Army's Pleas—Two Bretton Woods Polls

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. GAMBLE. Mr. Speaker, under permission granted me by the House on February 23, 1945, to insert in the CONGRESSIONAL RECORD several newspaper articles and editorials, I submit an article by Mark Sullivan, Further Manpower Bill Delays Foreseen Despite Army's Pleas, and an editorial Two Bretton Woods Polls:

FURTHER MANPOWER BILL DELAYS FORESEEN DESPITE ARMY'S PLEAS—MARK SULLIVAN BELIEVES SENATE MAY WRITE A NEW MEASURE, DOUBTS FINAL PASSAGE UNTIL MARCH; FINAL SHAPE OF LAW STILL UNCERTAIN

(By Mark Sullivan)

During the present week the manpower bill will be in the Senate. This is about as much as can be said, for the situation is such as not to promise either early action or any particular kind of action.

If a measure is not passed by Thursday the Senate is scheduled on that date to take up the appointment of Henry A. Wallace to be Secretary of Commerce; and this, regardless of the outcome, may be attended by time-consuming discussion. Further, the manpower bill that goes before the Senate, from its Military Affairs Committee, is more or less frankly intended to be merely a starting point for discusison and amendment. This is suggested by the fact that several members of the committee, in voting to lay the bill before the Senate, reserved to themselves the right to oppose it on the Senate floor.

NEW MEASURE IS LIKELY

The visible likelihood is that in substance a new measure will be written in the Senate, that this will defer materially from the bill the House passed more than 3 weeks ago, that there must therefore follow conference between the House and the Senate, and, finally, passage by both House and Senate of whatever compromise the conference arrives at. The process will take well into March a measure which in early January was advocated as immediately urgent by the President and by the heads of the armed forces.

Why the delay and why the uncertainty about the nature of the final measure? This House was reasonably prompt and completely definite. It passed on February 1 a measure that met squarely the request of the President and of the armed forces. The House bill requires every worker in a war industry to remain on his job unless released by his draft board and requires every worker not now on a war job to take one. For failure to obey these requirements the same penalty is provided that the selective service law provides for failure to obey a draft into the armed forces.

In passing that forthright measure the House stuck strictly to the point. It rejected 19 proposed alternatives or amendments. Some of these, if they stood alone or were considered on merit, would have commanded a majority of the House. One such was an amendment which would have relieved a worker assigned to a war industry from having to join a union. Such amendments were voted down not because the House did not believe in them but in the interest of sticking to the issue, of not loading the measure down with amendments. The House course was a deference to the majority party's leadership.

REASONS FOR SENATE DELAY

For the delay in the Senate Military Affairs Committee there are many reasons. Most of them are good, provided you begin by departing from the central principle that animated the House, namely, that promptness and definiteness are more important than anything else. The method adopted by the House is that all men between 18 and 45 not already in the armed forces must work in a war industry under penalty of fine or imprisonment. That is the most direct method of getting maximum manpower into war industry and has been recognized as the most definite ever since the idea of total mobilization of manpower for war was first brought forward.

If time can be afforded for search for the ideal method some of the alternatives brought forward in the Senate Military Affairs Committee might be better at this stage of the war than the House bill. But the heads of the armed forces say that promptness and definiteness are all important. They make two points. One is that the need for war materials, to be produced by workers in war industry, will be greater during 1945 than in any previous stage of the war. The other is that during the first 6 months of 1945 some 900,000 additional draftees must be taken into the armed forces and that these must be found among men now working in war industry. In addition to these taken out of war industry, for whom substitutes must be found, a further 700,000 workers in war industry are needed in order to produce the excess of war materials needed during the present year.

TWO BRETTON WOODS POLLS

About a week ago a group calling itself "The Economists' Committee on Bretton Woods," published the results of what purported to be an objective poll of members of the American Economic Association on the so-called Bretton Woods program and which allegedly showed substantial unanimity of opinion in favor of that program.

It subsequently developed that the membership of this committee consisted preponderantly of economists who are, or at various times have been, members of the New Deal Administration and active in the formulation of its policies. It also developed that the statement indorsed by some 224 economists was so loosely worded that almost any economist believing in some form of post-war international currency co-operation, but with no very precise ideas as to what form it should take, would be inclinded to sign it.

Convinced that the results of the poll of the "Committee on Bretton Woods" gave a distorted picture of economic opinion, the Economist National Committee on Monetary Policy, of which Professor Kemmerer of Princeton, is president, make a telegraphic survey of its membership last week. Unlike the "Bretton Woods Committee" poll, this one recognized that there are several schools of opinion on the problem, and made a reasonable attempt to take that fact into account. The results, made public over the week end, show that of the 69 members who could be reached by telegrams, replies were

received from 61. Of these, 13 approved the monetary fund as proposed; 8 approved it with amendments, and 37 voted for its rejection. With respect to the International Bank for Reconstruction, the second of the two instruments provided for under the Treasury plan, only 5 voted for outright rejection, as against the 37 in the case of the fund; 13 approved without qualification, and 37 approved with reservations.

To say that the poll of the Committee on Bretton Woods was meaningless is not to say that the poll of the Economists National Committee necessarily represents an exact cross section of expert opinion. It is only fair to note that this committee, which has been in existence since 1934, was formed in protest against the New Deal's devaluation and silver policies of that time, and that its monetary philosophy leans as a whole to orthodoxy.

But when this has been said, two facts stand out in these polls. One of these is that there is a deep cleavage of opinion on the Bretton Woods program; the other is that the cleavage centers almost exclusively in the monetary fund. Here is another forceful argument, it seems to us, in favor of the policy urged by an increasing number of objective and informed students of the problem, here and in England. That is the policy of pushing legislation on the bank, which, as the London Economist notes, is "less controversial than the fund, and more urgently needed," and withholding action on the fund until there is more general agreement on its basic principles and until conditions have become sufficiently stable to provide a reasonable hope that it will achieve its objectives.

Address by Hon. Olin D. Johnston, of South Carolina, During Services Sponsored by the Forty-second Division

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 28 (legislative day of Monday, February 26), 1945

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by the Senator from South Carolina [Mr. JOHNSTON] during services sponsored by the Forty-second—Rainbow—Division veterans at Washington, D. C., February 22, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the radio audience, it is, indeed, a pleasure for me to take part in these services sponsored by the Forty-second (Rainbow) Division.

I am not unmindful of what our men and women—especially the boys on the battle fronts—are now undergoing to preserve the freedom and liberty which this Nation has enjoyed for so many years. Men and women who represent us on the battle fronts today have, in reality, said to this Nation: "Here is my life. Take it and use it that liberty and happiness may be assured for my loved ones whom I leave at home." They have said even more than this. They have in reality placed their lives upon the altar of sacrifice for their country. They have given up their jobs, their homes, their friends, and their loved ones and with faith in us, in their Nation and in their God they are today marching, advancing in far-flung battle fronts raising high the standard of Old Glory and proving themselves heroes and patriots in every task.

The boys who are today fighting in the South Pacific under Gen. Douglas MacArthur, our great leader of the Forty-second (Rainbow) Division of the First World War, are going through trials that we here at home can scarcely conceive of unless you have experienced the horrors on the battlefield.

In the short time allotted to me it is impossible to relate at length any of my experiences on the battlefield, but I recall to mind, especially in that Second Battle of the Marne and in the Argonne, where the dead were literally heaped on top of each other, and many a time I have seen my comrades lying there bleeding and dying upon the battlefields of France. The same is taking place upon the battlefields today.

One place not far from where my division was when the armistice was signed November 11, 1918, the boys in this present war have just passed that place, Sedan, and are now fighting in Germany not far from the Rhine where the old Forty-second (Rainbow) Division was stationed in the Army of Occupation. This naturally makes me feel close to the boys who are fighting this war.

We do not want to do anything that might make this war 1 day or 1 hour longer. I have ofttimes said there is no need for us here at home grumbling while our boys are dying. After the war we can grumble as much as we please, but now is the time to fight the Japs and Germans and stop fighting among ourselves.

I wish to quote from a speech of Benjamin Franklin. Though spoken more than 150 years ago, it still can be translated into present-day conditions:

"The eyes of Christendom are upon us, and our honor as a people is become a matter of the utmost consequence to be taken care of. If we give up our rights in this contest, a century to come will not restore to us the opinion of the world; we shall be stamped with the character of poltroons and fools. Present inconveniences are, therefore, to be borne with fortitude and better times expected."

I am also anxious that America should have the right kind of peace. This is as important as the winning of the war itself, for we won the last war and lost the peace. We owe it to our boys to help them win this war and then have the right kind of peace.

River and Valley Development

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 28 (legislative day of Monday, February 26), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by the well-known industrial engineer and administrator, Mr. Morris L. Cooke, on the subject of river and valley developments. The article was originally published in the New Republic, but because of its great value to the subject, the St. Louis Post-Dispatch reprinted it under date of December 15, 1944.

Mr. Cooke's authority in this field has been recognized in this country and all over the world. I feel that this article is an outstanding contribution to the proper understanding of the significance of developing our great river valleys as a unity, patterned after the T. V. A.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TENNESSEE VALLEY AUTHORITY TYPE RIVER DEVELOPMENT AND LAND USE HAILED AS ASSURANCE OF JOBS AND EXPANDING PROSPERITY

(By Morris L. Cooke)

(Reprinted from the New Republic by special arrangement)

(Morris L. Cooke, engineer and administrator, declares one river-one-problem program as dynamic as industrial revolution. It is "Democracy intimately nurtured by socially minded science—Process only in its infancy," says former head of R. E. A.)

Widespread acclaim for the 10-year accomplishments of the Tennessee Valley Authority is promoting at home and abroad the adoption of new types of river development and land use such as will make possible over great areas improved standards of living and intriguing opportunities for commercial and industrial activity. The generous support being accorded Senator MURRAY'S proposal for a Missouri Valley Authority—M. V. A.—is one telling bit of evidence as to the influence which T. V. A. is exerting.

All over the world—in India, China, Africa, Russia, Palestine, Brazil, and other parts of South America, and in the Balkans—comparable river-valley projects have been started or are being actively planned with T. V. A. usually as their acknowledged inspiration.

DEVELOPING SITUATION

Every such project necessarily involves engineering works—sometimes on a vast scale—and the acquisition of all kinds of paraphernalia required for the new and often novel types of activity, both agricultural and industrial, which are brought into fruitful being. The implications will hardly be overlooked by dynamic American business enterprise.

This developing situation opens up promising opportunities for employment in the years just ahead when the returning armies and workers released from war plants will have to be absorbed back into a peacetime economy. Fortunately this widening in our work outlook occurs at a time when progress in technology has been putting limits on employment as ordinarily conceived and thus threatening the whole social structure.

But, looking beyond these immediate objectives, we may be witnessing a synthesis of administration and science comparable in the life of the race to the industrial revolution, which came into being 150 years ago with the invention of the steam engine.

Note these occurrences—recent as history goes. Edison gave us light in 1883 with electricity generated by burning coal under a boiler. About 1890 this coal-generated electric energy began to be used for power and industry adjacent to the power plant. Then was developed the ability to transmit electricity increasing distances from the point of generation to the point of use. And finally, around the turn of the century, electricity began to be obtained in volume from falling waters. We can now generate electricity in any desired volume, with either coal or from falling water, and send it economically hundreds of miles to the point of use. This cycle is complete.

DEPLETION OF THE SOIL

Now witness developments in an entirely new field. About the time President Theodore Roosevelt held his 1907 conservation conference in the White House, the Department of Agriculture officially expressed the view that "the soil is the one indestructible, immutable asset that the Nation possesses. It

is the one resource that cannot be exhausted; that cannot be used up." In other words, there was nothing to worry about.

Since then, we have become convinced that, through gulley and sheet erosion and other types of depletion, the soil—the foundation of practically all life—over vast areas throughout the world, has been ruined. Everywhere the baneful process is actually being accelerated. In low moments we worry with Shaler as to whether "human culture can devise and enforce ways of dealing with the earth so that it may support men of the ages to come"—a statement made before the rise to power of mechanized agriculture.

However, beginning early in the present administration in the United States, a wide variety of steps have been taken in the line of soil conservation and improved land use. The sciences involved have grown by leaps and bounds. While the integration of the wide variety of specialization has hardly started it begins to look as if a solution of this appalling problem may be in sight or, at least, around the corner. It is generally agreed that if adequate remedies are to be found, the United States must discover them.

ALONG COMES T. V. A.

At this crisis in our dilemma along comes T. V. A. combining the advantages that go with abundant low-priced electricity and enlightened land use. It operates under legislation prohibiting politics and encouraging efficiency. Through a large measure of local autonomy, which has been wisely administered, the term "consent of the governed" has been given a new significance—startling in a "tired old" world because it operates constructively at the lower economic levels.

T. V. A. is democracy intimately nurtured by socially minded science and engineering. The process is only in its infancy. But the demonstration of gains has been so dramatic that we must hold the hope that a public continuously on guard will safeguard what is now vastly more than a social experiment carried on in what has been considered one of the less desirable sections of the United States. T. V. A. is already economically a symbol for a new and promising phrase in mankind's forward march.

The essence of the authority type of administration is "one river—one problem." All individual policy and managerial questions are balanced in the light of what is best for the watershed as a whole. The whole river and all its people are under the largest measure of local autonomy consistent with the controlling legislation.

NOT FOR ALL RIVERS

Many important rivers do not invite authority administration. They do not have the characteristics required for multiple-purpose use such as have been developed in the Tennessee Valley—navigation, power, industry development, recreation, potable water supply, soil conservation, flood control, higher standards of living, and all the rest.

For instance, it is hard to envision the Amazon, draining seven countries in northern South America, as anything but a transportation agency, an arm of the sea. Again, the Skagit, flowing from Canada into the State of Washington, equipped with a series of high dams, provides the city of Seattle with its electric supply and that is all.

In transmitting the T. V. A. bill to Congress, President Roosevelt said, "If we are successful here (in the Tennessee Valley) we can march on, step by step, in a like development of other great natural territorial units within our borders."

PRESIDENT'S PROPOSALS

Consistent therewith, at a news conference held just after the recent election, in endorsing the Missouri Valley Authority, the President said that, even if "blindfolded," he could outline the seven principal river valleys which would profit by the authority type of administration.

Hazarding a guess as the matter stands today, these might be—omitting T. V. A.—the valleys of the Missouri, Arkansas, Columbia, Colorado, Trinity, Sacramento-San Joaquin, and the Ohio. The Yazoo in Mississippi would be among the close seconds. My own Delaware should be included.

As we launch this epochal new scheme for the better internal organization of our country we should get away from the idea that every river development is different. They will vary, of course, as to engineering and other relatively minor details, but hardly at all as to their broad social, economic, political, and technological implications.

To emphasize similarities rather than to stress differences should be our aim. We have learned this lesson to advantage in so many other fields that it should not be too difficult here. The outcry, "but my business is different," is invariably an early obstacle to the development of modern scientific, industrial organizations. So what is admitted to be a thoroughly successful T. V. A. then becomes a carefully worked out pattern, not to be blindly copied, but rather used as a dependable guide to avoid unnecessary experimentation.

DISTINCTION TO BE MADE

One distinction to be made between T. V. A. and the proposed M. V. A. is found in the fact that in the upper parts of the Missouri Valley, because of the climate, water is very scarce, and agriculture difficult for the lack of it, while in the lower reaches of the river floods and navigation have been considered the major problems.

This simply means that the M. V. A. must make every endeavor possible to conserve and augment the available supply of water in the north, while dealing with the seasonal surpluses downstream. It may easily mean that the M. V. A. will rate irrigation a top first in deciding the several uses to which the available water may be put. But under Authority administration every such question will be discussed and decided in the light of the "total situation," as Mary Follett called it.

In recognizing differences between Authorities we must have in mind the distinction to be made between questions such as the one just mentioned, affected by unchangeable weather conditions, and those which are man-made, such as battles for prestige and power between departments or lobbies.

T. V. A. MIGHT HAVE FAILED

If for instance, the Corps of Engineers of the Army had won its strenuous fight to build the dams on the Tennessee, the T. V. A. might well have been a failure. The Army Engineers, with navigation as their chief responsibility, proposed a system of high dams for the Tennessee River, but only on the condition that they be built by private interests or by States or cities, with the Federal Government contributing only the cost of navigation facilities. This cost was to be measured by the estimated cost of a system of 32 low dams providing navigation only and proposed for construction in case utilities or the States were uninterested—as they proved to be, despite persuasive efforts—in building the high dams.

Had these low dams been built, they might have forestalled forever the construction of the system of nine high dams on the Tennessee which now produce large amounts of power as well as helping to control floods.

Likewise, if the Bureau of Reclamation all by its lonesome makes the decisions as to the location, size, and characteristics of irrigation projects in the Missouri Valley without regard to the interests and future of the watershed as a whole, unified control becomes impossible in the sense that under congressional direction it has been practiced by T. V. A.

The most effective relationship between the projected authorities and certain functional agencies of the Federal Government, such as Soil Conservation Service, Army engineers, Reclamation Service, of course, remains to be worked out. In the process local autonomy must not be sacrificed.

OF NATIONAL IMPORTANCE

If the agitation for an authority to control works and operations in the Sacramento-San Joaquin area, constituting two-thirds of the State of California, is successful, it will be the first such Federal agency to function wholly within the bounds of a single State. The authority type of administration for these particular valleys has very great national importance.

Certain suggested river-valley projects abroad are complicated by the fact that the streams to be developed cross national boundaries, and therefore might introduce difficulties growing out of differences in language, race, religion, and politically entrenched interests—age-old causes of strife. However, the promise of better living conditions growing out of river development may prove irresistible in such situation. "Ideologies separate; projects unite."

DIFFERENCES IRONED OUT

It will be recalled in this connection that in the debates over T. V. A., conflicts among the seven States in the region were anticipated. Such conflicts did develop—some of them of serious magnitude potentially. But through the consultation method all have been amicably adjusted.

Another handicap to be encountered in some of the foreign proposals is industrial backwardness especially noticeable in regions with most to gain from a coordinated river development. The best development of a river valley calls for a nice integration between industry and agriculture, such as is developing in the Tennessee watershed.

This sequence closely resembles that now current between some of the States of the Union—especially noticeable as they are grouped into regions.

For historical reasons, as well as because of the present-day balance of financial and political power, our northeastern section, where industry was first developed and where it still flourishes, fabricates a disproportionate share of the minerals and agricultural products of the South and West and then ships back the manufactured products at generally favorable freight rates to be sold frequently at protected prices.

As recently as 1905, 60 percent of cotton, a product grown exclusively in the South and Southwest, was fabricated in the North.

Today about 90 percent of American wool, mostly the product of the Ohio Valley and the Mountain States, is used in New England mills. Of the copper mined in the West two-thirds is refined and about the same percentage is manufactured along the northern sector of the Atlantic seaboard.

POWER CHANGES ALL THIS

As in the case between nations, the coming of electric power is changing all this. If and when a greater measure of local economic control can be achieved, region by region, as has already happened to a considerable extent in the Tennessee Valley, the local utilization and manufacture of resources will put an end to the uneconomic and antisocial regional dominance born of historical and other purely accidental causes.

The war has taught us that our capacity for production is almost without limit. But with the coming of peace there will arise the spectre of the unsolved distribution problem. A large part of the answer can be local processing and sale, and this whether on a national or an international scale. The garden truck now grown and frozen in New Jersey and shipped west and south can be

grown, packed, and sold in those regions. The rice formerly obtained from Burma for native use in French West Africa is now being harvested on the Niger River on a project of T. V. A. parentage under the French Colonial Administration.

TRADE POTENTIALITIES

Let us look at the trade potentialities for this class of undertakings at home and abroad. The following 30 concerns are among a long list of those from whom T. V. A. as a public agency has made its larger purchases:

Allis-Chalmers, Baldwin Locomotive Works, Newport News Shipbuilding Co., General Electric, Westinghouse Electric, Aluminum Co., American Steel & Wire, Anaconda Wire & Cable, Phelps-Dodge Corporation, Ohio Brass Co., Graybar Electric, American Bridge, Koppers Co., Bethlehem Steel, Ingalls Iron Works, Virginia Bridge Co., American Radiator, Crane, American Blower, Babcock & Wilcox, Fairbanks-Morse, Food Machinery Corporation, Ingersoll-Rand Co., Lehigh Portland Cement, Marquette Cement, Caterpillar Tractor, Dravo Corporation, Ford, International Harvester, and Marion Steam Shovel. These names give some idea of the spread by industries.

As a key to the volume of consumer sales of appliances, dealer reports in the T. V. A. power service area for 1941, the last year in which complete records were kept, show that 56,312 refrigerators, 19,286 ranges, and 8,310 water heaters were sold. The total dealer sales amounted to $18,985,505, representing annual sales per customer of $50.38. In 1940, the last year in which annual sales per customer in the Nation as a whole were estimated, the per capita sales were $7.21, and in the Southeast $6.43.

ONE FINAL OBSERVATION

As to our American projects, one final observation. An outstanding characteristic of the nineteenth century was the colonial economy through which Great Britain, and other nations to a lesser extent, waxed rich and powerful through importing the raw products of far-away lands, processing them, and then shipping the manufactured articles overseas to countries then unequipped to produce them. These articles were almost invariably sold at fancy prices.

For American business, in cooperation with the Government, labor, and agriculture, enthusiastically and successfully to promote river valley projects at home and abroad would seem to be an inviting task, and one which could indefinitely postpone the possibility of widespread unemployment. It seems entirely probable that some Government credit will be immediately available for domestic projects. Some of the Indian projects, that on the Godavaris River, for instance, and the one in French West Africa are being financed right at home by public authority. Presumably the Soviet Union knows where the rubles are coming from required for the largest hydro plant in the world, now building on the reconstructed Dnepropetrovsk site.

One American company has given to one foreign country a fabulous drawing account to be used for works including river projects. A long-term credit pool, supported by a dozen American industrial concerns such as those listed earlier in this article, could make a substantial start in eradicating that abject poverty and squalor which not only disgrace civilization but threaten the peace of the world.

Whatever the source of the financing, these developments must be permitted to stimulate, strengthen, and broaden the base for democratic ways and greater human freedom. In the face of such an opportunity we should abandon all thoughts of a shrinking economy.

A large part of the earth's surface is yearning to be made over T. V. A.-wise.

Farm Communications After the War

EXTENSION OF REMARKS

OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 28 (legislative day of Monday, February 26), 1945

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Farm Communications After the War," delivered by Commissioner Paul A. Walker, of the Federal Communications Commission, before the third annual meeting of the National Rural Electric Cooperative Association, San Antonio, Tex., January 16, 1945. The address deals to a considerable extent with the matter of rural telephone service.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a pleasure to be here today to meet with you who represent the farmers throughout the Nation. We salute the farmers of America in recognition of their splendid contribution to the war. According to official reports, total farm production increased more than 20 percent from 1940 to 1944. This was accomplished, notwithstanding the fact that during this time farm population dropped about 16 percent.

The war is not over. There is still much bloody fighting ahead. All of us at home will be called upon to make continued effort and sacrifice to see that our heroic men at the front have adequate food and fighting materials and that this war is prosecuted to a speedy and victorious conclusion.

Out of the horrors of this global struggle, have come many technological improvements. In the fields of medicine, transportation, agriculture, communications, etc., great advances have been made. Science has given us new methods of preventing malaria. We have achieved more effective control of infection through the use of sulfa drugs. The speed and efficiency of airplanes have almost revolutionized transportation. In agriculture, new methods of insect control have been developed. Better fertilizers are being used. More effective livestock breeding and feeding are being practiced.

In the electronics field, with which I am more familiar, almost phenomenal developments have taken place. War research has brought about striking improvements in radio, television, facsimile, and radar. New and challenging frontiers in communications beckon us.

If we are to reap the maximum social and economic benefits of these many technological advances when peace comes, we must make plans now. As President Roosevelt said in his recent message to Congress: "We must begin plans to transform an all-out war economy into a full-employment peace economy whenever demobilization becomes possible." We must be prepared to fill the huge production gap which will be left when the war ends by the production of peacetime goods and services in order to maintain the level of employment essential to prosperity. The choice we face is one of high production, full employment, and general prosperity; or low production, widespread unemployment, and depression.

This full production can mean improvement in our standards of living. It can mean better homes, better food and clothing, improved health, and wider educational opportunities. It can mean many new comforts and conveniences heretofore not enjoyed by the American people. It means that all of us must use more and produce more than we did before 1941 and that farmers must attain parity in comfort of living with that enjoyed by city dwellers.

One important service with which farmers have been inadequately supplied is communications. While no one denies that we have one of the finest broadcasting systems in the world, the fact is that about one-third of the United States is still outside the daytime primary service area of any station, and a large portion of those people not receiving adequate service are farmers. The problem is especially acute in the sparsely settled sections of the country where there are few radio stations.

In some sections where radio reception is satisfactory, there still is a lack of variety in programs and the farmer may find that few broadcasts are designed to arouse his interest or meet his needs. While, of course, our networks and many of our stations carry excellent farm programs, unfortunately many of our farmers are unable to hear them.

Moreover, the farmer's access to the microphone has been limited. Too often because he has been too far removed from the great broadcasting centers or does not live where adequate radio facilities are available, he has had little opportunity to broadcast. This has been a loss in two ways. The indigenous growth of farm communities has suffered and the Nation as a whole has lost by not having more opportunity to hear programs presented by those actively engaged in the agricultural industry.

There is reason to believe that with new technological developments, more complete and satisfactory radio communication will be available to farmers. Frequency modulation broadcasting, popularly known as FM, has been improved and will expand rapidly when the war is over. This new type of broadcasting has some advantages over standard radio. For one thing, it is better able to overcome static. Another advantage is that a number of stations can operate on the same frequency with less mileage separation than is possible with standard broadcasting. It also appears that FM stations can be constructed more economically. Already, there are 329 applications for such stations on file with the Federal Communications Commission, and some experts believe that we may have as many as four or five thousand FM stations operating in this country within 5 years after VE-day. There is reason to hope that FM may help solve the problem of providing good radio programs to farmers, particularly in those remote areas inadequately served now.

The science of television has rapidly developed since the beginning of the war. Excellent pictures with superior definition are now being shown. A great deal of successful experimentation has been done with color pictures. There is good reason to believe that television networks may span the Nation by 1954. The great masses of our people may be able to see as well as hear the finest programs in their homes. Without moving from the fireside, we shall be able to observe the important news events, televised from different sections of the country. We shall see in our homes the pictures of important educators, musical and dramatic stars, and leaders in government and industry.

There are now 101 applications for television stations on file with the Federal Communications Commission, further evidence of the increasing interest being manifested in this new medium.

Add to FM and television the possibilities of facsimile, with its presentation of the news in printed form as it is broadcast, and we have an even more attractive outlook for communications. The transmission of writing, printing, photographs, and other images by means of radio is now a well-established art. We are told that after the war, facsimile stations will be set up in various parts

of the country and that we may be able to buy FM receiving sets equipped with attachments on which images will be reproduced from the broadcasting studios.

The rancher in Texas, Oklahoma, or Montana who now may wait as long as a week to get his newspaper, could receive the news at frequent intervals, directly recorded in his home. The latest official information on crop production, soil conservation, and farm prices, could be available by facsimile broadcasting.

So far I have been discussing the needs of the farmer in terms of radio communication, but the most pronounced disparity as regards communications between rural and city people is in telephone service. In this respect, the farmers have been seriously neglected. In 1940, 3 out of 4 of the farms in the country were without telephones. In the State of Texas, where we are privileged to meet, more than 8 out of 10 farms did not have telephones. In some of the Southern States the percentage runs as high as 96 percent.

During the past two decades, while the number of telephones in the country was expanding, the number of telephones on farms was declining sharply. In 1920 there were 2,498,000 farms with telephones. In 1940 the figure had dropped to 1,527,000. There has been some claim that the number has increased since 1940. Even if this be true, still the vast majority of our farmers are without telephone service. This decline occurred in practically every region and in most States. The downward trend was most marked in the three southern regions—the South Atlantic, the East South Central, and the West South Central. During this 20-year period the number of farms in these three regions dropped 6.2 percent, whereas the number of farms with telephones was reduced by 53.6 percent. In 1920 there was 1 telephone to every 5 farms in these regions. In 1940 there was only 1 telephone to every 11 farms.

You may be interested to know that the largest number of farms without telephones in 1940 lie in one contiguous group. Texas, with more than one-third of a million farms, heads the list. Mississippi, North Carolina, Alabama, Tennessee, and Kentucky follow in that order, each of them containing between 200,000 and 300,000 farms without telephones. The others are Georgia, Arkansas, Missouri, Virginia, Louisiana, and Oklahoma. These 12 States contain 2,391,000 farms without telephones, or 57 percent of the total of such farms in the entire country in 1940.

It is almost incredible that a nation blessed with the abundance of material resources which we have and which boasts of the finest telephone system in the world, should have so many farms without any telephone service.

For the vast majority of our farmers, this means real inconvenience. It may mean a long trip to town or a neighbor's house to call the doctor when a member of the family is sick. Or it may mean inability or delay in getting market information which a telephone call might immediately provide. It means that farmers cannot exchange ideas as frequently as need feel on problems of production, etc., and are handicapped in promoting group programs helpful to community life.

Another discouraging aspect of this problem is the fact that too often those farmers who do have telephones find the service unsatisfactory. In some rural areas, it is not unusual to see telephone wires attached to tree trunks and fence posts because the poles have rotted and have not been replaced. Often the wires break down completely and service may be suspended for days at a time. Thousands of the smaller companies have been unable to keep up repairs and have, from this and other causes, been forced to discontinue operations.

From 1927 to 1937, the number of independent telephone companies dropped from 60,123 to 50,534 and many of those discontinuing operations were companies serving rural areas. Where big industry has taken an active interest, there has been some improvement but big industry too often has moved slowly because of the feeling that extension of rural service would be unprofitable; and it has been known to withdraw from such service when it could persuade others to take over the field.

The telephone industry has been giving thought to the problem of extending service to the farmers. I understand that studies have been made by the industry and the Rural Electrification Administration on the feasibility of superimposing carrier telephone channels on rural wires already installed for the distribution of electricity. Recently officials have shown renewed interest in this project and have indicated an intention to put it into operation as soon as materials and manpower are available. Perhaps this system can eventually be a partial answer to the problem of providing the farmers with effective and economical telephone service. However, with the presently available techniques, I believe that American farmers have a right to expect low cost, efficient telephone service as soon as materials and manpower are available.

For the type of telephone service available to the farmer, the costs have generally been higher than he could afford. According to the Department of Agriculture, from 1910 to 1914, the average telephone service charge was $1.39 per month. In 1935-36, it had increased to $1.80. In addition to the basic service charge, in many cases the farmer has had to buy his own telephone, pay for its installation, pay for line extension, and in many instances, pay mileage charges. These combined costs, no doubt, have prevented many farmers, who really want and need it, from getting or maintaining service.

It is significant to note that during the periods when rural telephone service has been declining and when the charges for this service have increased or remained stationary, long-distance toll-telephone rates have gradually decreased. For example, in 1934, the year of the beginning of the administration of the Federal Communications Commission, long-distance toll rates between New York and San Francisco, were $11.25 for person-to-person calls and $9 for station-to-station calls. Present rates from New York to San Francisco are $5 for person-to-person calls and $4 for station-to-station calls, or a reduction of more than 50 percent. And the end has not yet been reached in toll-rate reductions. My dream has been for a $2.50 rate from coast to coast, but I am advised that telephone officials believe that we may some day expect a rate of $1.50 for such calls. Surely new inventions and new techniques, if applied with the same earnestness to rural telephony, will make possible more widespread use of telephones by farmers at lower costs.

The same level of interstate toll rates now prevails over the entire Bell System. That is as I think it should be. Toll rates should be uniform in all localities regardless of the density of population in the area served. In the case of rural communities, however, I would prefer telephone rates which tend to favor rather than handicap those communities.

It is interesting to note that during the thirties while the number of telephones on farms decreased nearly 30 percent, the number of electrified farms increased more than 200 percent. In January 1935, only 744,000 out of nearly seven million farms in the United States were served by central electric stations. In January 1940, there were over 1,700,000 so served. More farms were electrified during that 5-year period than during the previous 50 years.

In addition to the wider availability of electric service, the cost to the farmer has progressively dropped since 1910. The reports show that the average cost to the farmer from 1910 to 1923, was 18 cents per kilowatt-hour. From 1923 to 1935, the average approximated 9 cents per kilowatt. During the period from 1935 to 1940, the cost of service dropped to 4½ cents per kilowatt-hour.

The most rapid extension of farm electrification, of course, has taken place since 1935. A large share of the responsibility for this rests squarely on the Rural Electrification Administration and those who have worked with it, a fact of which I am sure you are all aware. You know how the costs of poles, transformers, meters, etc., were reduced, and how lower costs for electric service were realized through the Rural Electrification Administration and those cooperating with it.

In looking further for the explanation of how and why this remarkable progress in rural electrification was achieved, it is necessary to recognize that you have organized to do this job in a way which utilized the tremendous potential of ingenuity, energy, and loyalty within the group of cooperating farmers.

In the field of interstate telephone communication, much progress has been made in improvement of service and reduction in costs. It is estimated that the total reductions in long distance interstate telephone rates during the past 9 years, has amounted to $200,000,000 per year, based on the present volume of business.

While this has been possible partly through new inventions and improved methods of operation, accompanied by a tremendous increase in volume of business, it probably would not have been accomplished in the absence of effective public regulation. It follows from what I have said that the solution of the farm telephone problem calls for the concerted efforts of the industry, the farmers themselves, and the regulatory bodies. However, if the telephone industry with all its resources cannot or will not provide rural telephone service promptly and at reasonable costs when materials and manpower become available, then the millions of farmers in America may well resort to their own collective efforts to secure it as they have secured electric service through the Rural Electrification Administration.

I have suggested certain ways in which farmers can seek to get the higher standard of living which it is our privilege and duty to achieve in these United States. Let me in closing remind you that the obligation will rest on all of us to plan for full employment and a higher standard of living in the post-war period. To bring to farmers the convenience, comfort and other benefits of the communications facilities not now available to them is at once the challenge and the privilege which I present to you.

If you achieve your objectives, you will benefit not only yourselves but the country as well. Greater access to the microphone and the telephone for both rural and city people will raise the cultural and educational level of the whole Nation. It also will stimulate the flow of intelligence which is indispensable to successful democracy.

New York State Merchant Marine Academy

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the

RECORD, I hereby insert Senate Resolution 47, which was adopted by the Senate of the State of New York on February 20, 1945, and concurred in by the assembly on February 21, 1945:

Whereas the proper training of officers for the American merchant marine is of recognized importance to the State of New York; and

Whereas the New York State Merchant Marine Academy, which was founded in 1875 by the New York City Board of Education and which became a State institution by chapter 322 of the laws of 1913, has over the years provided training and facilities for many hundreds of men who have served efficiently and honorably in the American merchant marine; and

Whereas said New York State Merchant Marine Academy is now located on lands known as Fort Schuyler Reservation, owned by the United States and leased under act of Congress, approved August 19, 1937 (Public, No. 316, 75th Cong.); and

Whereas in order that the State of New York may fully utilize such land now owned by the United States by providing such new construction as appears necessary and securing the most modern equipment for training purposes: Now, therefore, be it

Resolved (if the assembly concur), That the Legislature of the State of New York hereby respectfully requests the Congress of the United States to enact such legislation as may be necessary to accord to the State of New York title in fee to the land now owned by the United States and leased to the State of New York for the use of the New York State Merchant Marine Academy; and be it further

Resolved (if the assembly concur), That copies of this resolution be transmitted to the Secretary of War, the Secretary of the Navy, the Secretary of the Senate, and the Clerk of the House of Representatives of the United States, and to each Member of Congress of the United States from the State of New York.

By order of the senate,

WILLIAM S. KING, *Clerk*.

Interview With Hon. Joseph F. Guffey, of Pennsylvania, by Mary Morris

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 28 (legislative day of Monday, February 26), 1945

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an interview with the senior Senator from Pennsylvania [Mr. GUFFEY] by Mary Morris, published in the February 25 issue of PM. The interview is entitled "Joe Guffey."

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

JOE GUFFEY—THE BIG-SHOT POLITICAL BOSS WHO IS ALSO A SENATE LIBERAL TELLS MARY MORRIS WHAT MAKES HIM TICK, AND HOW THE SENATE IS LIKELY TO VOTE ON PEACE

(By Mary Morris)

One of the men I was most eager to meet when I went to Washington recently was the paunchy Democratic Senator from Pennsylvania, JOE GUFFEY.

I wanted to find out why, although he is reputed to be a pretty high-handed political boss in Pennsylvania, he has an almost perfect liberal voting record in the Senate; and why, although he is passionately loyal to Franklin D. Roosevelt, he fought against the President's appointment of Will Clayton and other nonliberals to the State Department.

Before I went to see him, I knew this much about JOE GUFFEY: That his importance as a national political figure stems as much from the fact that he bosses the Democratic machine in the second most populous State in the Union as from his position as a Senator. Before 1932 he was active in State politics and was a businessman who played with big-shot financiers. He made—and lost and made again—large sums in oil.

SOURCE OF HIS POWER

But it was his activity at the national convention in '32 and the subsequent Democratic victory that brought him the power he wields today. He went to that convention controlling two-thirds of the Pennsylvania delegates and was among the first to climb on the Roosevelt band-wagon.

When his man won, Boss GUFFEY had a tremendous claim on Federal patronage—in other words, he had the wherewithal to make his boss-ship secure.

I knew also that, unlike most bosses, he had not tied up with big business—he had fought the Pews, the Weirs, the Mellons—and that he had not tied up with the underworld. The powers behind his machine are unions, Negroes, mortgage-ridden farmers, Roosevelt social reforms helped put them behind GUFFEY—Washington newspapermen told me—but there wasn't much doubt they'd been welded there by his manipulation of Federal patronage.

Finally, I knew that many newspapermen and other persons interested in politics considered Guffey simply an opportunist riding a liberal wave. But why, then, in the case of the State Department appointments, had he been more of a liberal than his chief?

SAYS F. D. R. WAS WRONG

When I called on Joe Guffey, I had to wait only a few minutes in the outer office before one of his secretaries told me to go in. I walked through three rooms full of secretaries and clerks. In the fourth, I saw the Senator sitting behind his deck.

I was in my customary pack-horse condition, loaded down with photo paraphernalia, and he commented on it. People always do. I came around the side of the desk to put down the stuff and shake his hand. I saw that he was paunchy, white-haired with black and white tufted eyebrows—a stereotype of the affable politician.

But this affable politician was gazing at me pretty sternly. He said: "You're not going to take my picture!"

It sounded like a statement of fact—not a question—but I figured he was too smart a politician to start arguing with me the moment I stepped into his office.

"Why shouldn't I take your picture?"

"That one PM uses of me is terrible."

I told him I couldn't follow his logic. If he didn't like the picture, this was a good way to get a new one.

"How do I know you're a good photographer?" he said.

If he hadn't seen any of my pictures, there wasn't much I could say—except tell him to trust me and hope for the best.

"There are two questions I won't answer," he said, still stern, but I figured he must be joking. "One is about my age, the other is my religion."

I said that didn't bother me a bit. I'd noticed his age—70—in Who's Who. And I said I didn't have to know his religion—he probably didn't have any. I thought this might get a rise out of him but it didn't. He watched me like a happy cat and we were off to a good start.

I began: How had he felt about opposing the President on the State Department appointments? Wasn't this the first time he'd led a fight against Roosevelt?

"This is the first time he's ever been wrong," GUFFEY snapped. Then he turned down the corners of his mouth in a peculiar, amusing grimace and let out a barking laugh. "First big mistake he's made."

Had he seen the President since?

"Talked to him on the phone—told him I knew I was right. We're still friends."

How did he feel to hear people referring to him as a fighting liberal instead of a machine politician?

WHAT HIS PEOPLE WERE LIKE

"I object to being called a machine politician. Those newspapermen have peculiar ideas. When I'm a leader of a minority party [as he was in Pennsylvania before 1932] I'm a hero. As soon as we elect a Democratic President I'm a machine politician. Now they call me a fighting liberal because I opposed the President. I was born a liberal. The Guffeys have always been liberals. Even on my mother's side we were rebellious—regicides. We got Charles I out and brought Cromwell in. Ten years later, when Charles II ascended the throne, our ancestor was beheaded."

I asked how he had got into politics. All I had found about him in the Congressional Directory, where most men with GUFFEY's years of political activity fill half a page, was: "Democratic, Pittsburgh, Pa., unmarried." I told him a lot of newspapermen must cuss him out when they turn to that volume looking for a factual history of his career.

"It satisfies me," he said.

Then he got going on the story of his life: "We're Scotch-Irish—left Ireland in 1738, sailed to Philadelphia. Once I put in a speech that we left singing, 'We're off to Philadelphia in the morning.' Lucky I looked it up before I gave the speech. When do you think that song was written?"

I shook my head.

"In 1858. So I changed the speech to say, 'The Guffeys left Ireland in the spirit of that song.'" He smiled with the corners of his mouth down again—sign of a confidential joke.

"Family stayed in Philadelphia for a while, then followed Forbes over the Alleghenies into western Pennsylvania."

When had his interest in politics begun?

"Just old enough in 1896 to vote for Bryan. All the family were Jeffersonians. Father was owner of a gas company, county sheriff on the side. My Uncle Jim, a wealthy man, was State Democratic leader for many years."

I knew he'd left Princeton after 2 years. Why?

"Came home and said, 'Father, there are too many of us in school (three boys and three girls) for your income. When boys leave Princeton they say they're going into business—I want to leave Princeton and go to work. You want me to be a lawyer and I never will.'

"Thank God, I never became a lawyer."

Had he something against lawyers?

"Never mind about that—don't go into it."

Had he met Wilson at Princeton?

"Joined the Undergraduate Democratic Club in freshman year. Met Professor Wilson at the first meeting. Great man—most profound political thinker since Jefferson.

"Later—in 1912—went back to Princeton for a football game and dropped in at Prospect House to see Wilson. Told him I would be a delegate to the convention and would vote for his nomination for President. Came back home and found my Uncle Jim in the other camp—he was for Champ Clark. We fought. After the convention the Wilsonians held the party power in the State. Uncle Jim was out."

What happened?

"We're good fighters in our family," he said. He was quiet for a moment, think-

ing, with a smile across his face. Then he continued, "On election day I handed out $2,500 to my campaign manager. I like to tell this story. At the end of the day he gave me back $1,500. Now doesn't that prove there are some honest politicians?"

I sat there a trifle stunned—trying to get the point of the story. Why had he given out the money at all? Was it quite honest?

"Somebody's got to get out the vote," he went on. "That Hatch Act and the Civil Service—they make the accomplishment of our work very difficult."

"People who sponsored it said the Hatch Act would help clean up politics," I said.

DOES NOT LIKE CIVIL SERVICE

"Who's to pay the costs of running a political party but the people who benefit from it?" he asked. "Now they hide and don't contribute. I've made speeches to them—they've got something at stake worth fighting for. What's wrong with contributing to the campaign fund of a party that works for you?"

In turn, I asked him what he found wrong with civil service.

"Let me tell you," said the Senator, "once I thought civil service would be the millennium but it turned out a delusion and a snare. It develops inefficiency, protects incompetence and promotes extravagance. Young lady," he rose to finish this thought with emphasis, "through civil service in this country we are developing a race of people with nothing for a backbone but a bath towel."

I laughed and asked what he wanted done about it.

"Want the laws improved. Something done about the rules for advancement. It is automatic, you go ahead regardless of whether you are competent.

"Why those people have a lobby down here that beats any other, including the National Association of Manufacturers."

PREFERS POLITICAL MACHINES

I said some people thought Government jobs were handled better through civil service than through political machines.

"You can always change a political machine—weed out the chaff by throwing out the party leaders," he said.

"Since Roosevelt we've rebuilt Pennsylvania as a Democratic State—we've fought for the right things. We saved it from a one-party system. Both parties—Republican and Democratic—were run by big businessmen who cooperated to cheat the common man. We seized the party machinery from the economic royalists and rehabilitated our ranks with members of the working class. Roosevelt got a break for the common man when he set up W. P. A. and P. W. A. Guess it sounds kind of crude, but we removed the wrinkles from the workingman's belly."

I asked if he approved of party machines controlling jobs in schools, post offices, relief projects.

He answered with a story: "Once we appointed an able man to be superintendent of schools. He said he didn't think it should be a political appointment. I told him to wait till the Republicans came in again, and he'd see that politics controlled school jobs whether he liked it or not. He took the job, and a few years later we lost to a Republican governor. My man was swept out."

Maybe, I said, they'd appointed a better man.

"Republicans, in our State, don't consider competent people. They will appoint Republicans. Democrats do a better job by 50 or 60 percent." He watched me write this down. "Make it 75 percent," he said.

WHY HE'S FOR WALLACE

"But remember, young lady," he went on, "no government is 100 percent. There are dishonest men in every branch of life. But the Republican Party, in our State, was conceived in sin and born in corruption." He was standing now behind his desk leaning his elbows on the mantel. He was rather short and his figure reminded me of a duck—dressed in a well-made brown suit, of course.

He continued, "History of this country tells us there can be only two parties—one liberal, the other conservative. The Democrats can't win without the support of industrial laborers and farmers."

I interrupted to ask why, if the Democratic Party knew that, it had not nominated Wallace, the common man's candidate?

"If I'd known about it sooner I'd have won that fight," he said. "Wallace is the most liberal man in the country today. He's the white hope of the liberals. I prefer to vote for a cause rather than a man—with Wallace you've got both."

He walked around the room quickly, restlessly. "The Republican Party has no cause and no candidates to fight for—all they have is money."

He was getting impatient—he had talked swiftly from the start. "Fire on, Gridley—what else do you want to know?"

I said a Democratic Congressman had told me that 80 percent of his work consisted in doing trivial things for his constituents. So long as he tended to their requests, he had said, they didn't care how he voted on such issues as the Dies committee, or on international problems.

"I want to see more internationally minded men in the Congress and the Senate," GUFFEY said, before I could frame a question. "There are too few. Of course, you've got to tend to the people back home. I'll tell you my philosophy, young lady—unless a person likes service he shouldn't go into politics. We get a big mail but I have seven clerks who attend to that. Should have seen the letters that came in when we were opposing the State Department appointments—Maine to California; Portland, Oreg., to Florida. Wasn't a State in the Union we didn't hear from.

"It was the biggest mail we got in here," he said, "since the fight over the holding company bill (an F. D. R. measure outlawing holding companies). That time got ten or twelve thousand in one day from the State of Pennsylvania—obvious propaganda—paid no attention to it.

HE TALLIES THE SENATE

"I used to be in the public-utilities business, you know, greatest of all holding companies. But I was for the bill." He smiled proudly. "I wanta say this: I appreciate the fact that my former friends never tried to buttonhole me and change my views. They knew damn well it wouldn't do any good."

I asked how he knew the mail was organized propaganda. He said it came all in one day, 100 in a bundle, same wording, same ideas. "Straight and to the point," he said. "Letters from real, honest, interested citizens don't sound like that."

I said I supposed the next big fight in the Senate would be over setting up effective machinery for a world organization to make and keep the peace. Was he as fearful as many liberals that the Senate isolationists would cause trouble?

"Listen, young lady, I fought for a world organization last time and I've been fightin' ever since. I've learned a thing or two. We're going to put it over this time. Franklin Roosevelt will avoid the mistakes of Wilson."

But mightn't the isolationists block him if he made international commitments?

He reached across the desk and opened the Congressional Directory. "Let's have a look—don't think there are so many contrary ones." For the next 10 minutes he read off the names of his colleagues saying, "He's all right" or "He isn't." Sometimes he amplified the tag with a comment like, "Can't tell about ——— ———, he's so damned contrary he turns on himself occasionally." Or, "——— ——— is all right, he just doesn't talk. Like GUFFEY he's a voter." The final tally was about 75 percent "all rights" and the rest doubtful.

WHY HE DIDN'T MARRY

I said I hoped he was right; then I asked if it was true he didn't make many speeches on the Senate floor.

"I'm a voting Member. Once in awhile when I have something to say I write it down and get up and read it off. There's too much debate, gabble-gabble going on over there."

He paced around again and said, "Where are we now? Suppose you want to know why I never got married." He smiled his foxiest smile, "I'm not going to tell you." A moment later Mr. Bailey, the Senator's man Friday, came in and I asked him why his boss hadn't married. He smiled, too, and said, "Guess the Senator never fell in love. And he wouldn't marry for money."

We all laughed.

Then GUFFEY picked up the phone and put in a call for Sam Rosenman at the White House. While he waited for it to get through, I suggested he ask Judge Rosenman for references on my photography. When the Senator rang off he said the judge had given me a build-up. "Said you like to come to the house. Wanta come to my house?"

I said I would like to. I wanted especially to meet his three sisters, who live with him. "Come tomorrow [Saturday] for lunch. One o'clock." He gave me the address and I left.

Next day I taxied out Massachusetts Avenue to Rock Creek Park, where we turned right to Benton Place. At 1, sharp, I was on the steps of the handsome red-brick Georgian house, admiring the shiny-leafed magnolia in the front yard and the two old carriage lamps on either side of the door. My ring was answered by a Filipino butler in a white jacket. As I entered, the Senator was coming down the stairs at the end of the hall. We shook hands, and then, just as in a well-directed stage play, his two maiden sisters made their entrances, each coming into the hallway from a different room, one at a time. First the elder. "May I present my sister, Ida?" said the Senator. She was most gracious, said she was happy I had come. Then came Miss Pauletta, who said the same thing. She looked more like the Senator—Miss Ida was taller and thinner, reminded me of the late Sarah Delano Roosevelt, the President's mother.

We walked through the handsomely decorated living room—fine old furniture—to the sun porch. There we were joined by Emma Guffey Miller, Democratic National Committeewoman from Pennsylvania, who came in with a burst and shook my hand stoutly.

HIS FATHER'S BEST ADVICE

Conversation flew, all the girls talking like mad. Once in a while I'd shoot a glance at the Senator, who was sitting next to me. He watched his sisters like a man following the ball at a tennis match; he didn't have a chance. Finally our eyes met. "Have to wait," he said. "I'll get my say when they're tired."

While the conversation was not brilliant, it was lively—about problems of the hour and the Washington personalities involved. For me there was a certain wonder and amusement in finding in one house three leisure-class women so full of ideas and information about matters outside their household.

Old-fashioneds were served but the Senator had tomato juice. "Trying to take off some weight," he said. Then he recalled the best advice his father had given him. "Before I left for Princeton, father said, 'Never drink on an empty stomach and remember we're Scotch-Irish: no champagne—whisky is our drink.'"

With this Mrs. Miller shot off on stories about her work for repeal and about other battles she's had in her day. "First I was a suffragette—now I campaign for equal

rights. Women have only the vote; they still haven't equality before the law."

HOW IT WAS AT HOME

At lunch, when the soup had been served, I asked the question that had been in the front of my mind. How had the Guffey girls become so interested in politics?

"Why, we've been talking politics as long as we can remember," piped up Miss Pauletta. "Our family's been political minded since they landed in Philadelphia in 1736."

"But where'd you get your liberalism from—your father?"

All four soup spoons paused in the air. The Guffeys were shocked. They replied in unison with an ascending inflection, "Thomas Jefferson!"

"We were Jeffersonians from the begining," said the Senator. "In Andrew Jackson's time we became militant—just as we have under Franklin Roosevelt."

"Our mother's family may have been Republicans. But further back," said Miss Ida, "they were regicides. When mother married father she became a Democrat."

"Our grandmother was very independent," said Miss Pauletta.

"They used to tell the story about grandmother," said Mrs. Miller. "She took her bridal trip on horseback and when they came to a stream grandfather hesitated, saying, 'Martha, I'm afraid to have you cross the water.' Grandmother just kicked her horse and said, 'Come on, Paul.' "

"Grandmother used to go outdoors and enjoy herself," said Miss Ida. "Women in our family didn't knit."

"We had the first stone house west of the Alleghenies," put in Miss Pauletta.

"Mother was a conservationist," said Mrs. Miller. "Know what that is?"

"Saving trees," I said.

"Yes; but also to prevent erosion and floods."

"How did your father feel about suffrage?" I asked.

"He was for it," said Mrs. Miller. "In our family he didn't make any difference between the boys and the girls. We all always talked affairs at the table."

"Remember when Miss Kate McKnight ran for school director in Pittsburgh?" said Miss Ida. "He was for her."

"Of course, you can't get liberal ideas," said the Senator, "unless you've seen something. I saw what happened to the miners, I saw H. C. Frick wreck the Knights of Labor. In 1892, I watched the Homestead strike—150 to 200 strikers killed."

"How'd your father feel about strikes?"

"He didn't like to see property destroyed but he was for human rights above property rights."

HE CONSIDERS AN EPITAPH

After lunch I pulled out my camera, longing to take a picture of this extraordinary family but the Senator put his foot down. "Only Mrs. Miller and I will pose—we are the politicians."

I am sorry to report I did not get the kind of pictures I wanted even with the Senator. He posed with that very polite impatience that is plain murder to good portraiture. There are almost no good pictures of him though he is often photographed and is very photogenic.

When I left at 3 o'clock, he came to the door with me. We were talking about his battle for a workable Federal soldiers' vote law. During the fight he had read a strong statement on the floor of the Senate and there had been a flare-up. He was lashed even by some Democrats. "They sold the party down the river."

"But the fight you put up," I said "was good work."

"Well," he said, "we've got the Guffey burying ground in West Newton, Pennsylvania—three or four generations planted there. When they bury me they can say, He kept the faith." He smiled and looked at me thoughtfully. "Nope," he said, "that's too sentimental for a practical fella like me."

The Army's Furlough Rotation Policy

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. CANFIELD. Mr. Speaker, I have just received a letter from a Paterson, N. J., G. I. in the South Pacific commenting on the War Department's rotation furlough policy.

Some of us—

He writes—

could not wait for a definite policy so we have prepared one of our own. With all our difficulties it serves to emphasize that even here the good old American sense of humor still prevails.

The G. I. rotation policy, described as "W. D. Circular 10739, Rotation of Personnel, dated 5 November 1944," reads as follows:

Under WD Circular No. 10739, minimum periods of eligibility for relief via rotation have been established for the S. W. P. A. Selection of home-bound contingents is strictly up to the theater commander, and it must be kept in mind that eligibility does not bestow the right to be relieved, but only establishes a basis for selection. In accordance with USAFFE Regulation No. 11–12, Homesickness and Nostalgia in Isolated Regions, the following eligibility rules will govern the rotation of troops in this area:

I. Enlisted men, officers, and second lieutenants eligible:

Must have spent 7 or more years in the S. W. P. A., at least 4 of which were in regions north of the Philippine Islands. He is ineligible, however, if his name has been entered on the sick book during that period. The following are the qualifications for men declared eligible:

A. Must have at least 3 broken limbs at the time of application. Compound or linear fractures, strains, sprains, or ruptures will not be accepted, the break must be clean. The condition of each injured limb must be authenticated on MD Form No. 212p, Minor Mishaps and Abrasions, in triplicate.

B. Must have been awarded the Order of the Purple Heart with at least two (2) Oak Leaf Clusters. In addition, he must have in his possession at least five (5) of the following medals: Silver Star, Distinguished Flying Cross, Air Medal, Iron Cross, Order of the Knights of the Bath, Navy Cross, Legion of Merit, Order of the Soviet Union, Order of the Rising Sun, or the D. O. F. Documentary proof must accompany each decoration.

II. The following men, even though they may possess the above qualifications, will not, repeat not, be eligible for return to the continental limits of the United States:

A. Men who during the course of their Army tenure have contracted any of the following diseases: Athlete's foot, scurvy, beriberi, ringworm, malaria, St. Vitus dance, bubonic plague, common cold, sore throat, B. O., or halitosis.

B. Men who have been in New Guinea for a period in excess of 30 days. Exceptions to this rule will be those men who may be considered inured to the climate by reason of having spent at least 12 years in either the Panama jungles, Tibet, Burma, Texas, Georgia, or Utah. In this case the man will present a written request to his first sergeant asking that WD AGO Form No. 0–212j, Previous Record of Uncivilized Habitants, be obtained from Washington, D. C. This form will be filled out in quadruplicate and the following documents appended thereto:

1. Photostatic copies of graduate degrees from not less than four accredited universities or colleges.

2. Civilian driver's license in duplicate.

3. Financial statement of earnings for the fiscal year ending December 10, 1943, in triplicate, if any.

4. Clinical history of family, friends, previous employer, and associated pool hall proprietors, entered on WD AGO Form No. 225b.

III. Among those eligible for rotation, the following precedence has been established:

A. Men over 55 years of age who have completed 44 consecutive years of faithful overseas service.

B. Married men with 12 or more children. Must have been formally engaged prior to December 7, 1941, midnight.

C. Men who have become deceased, providing the fatality was incurred in line of duty and his name has been properly registered with the Graves Registration Office. In no case will a deceased man be repatriated to the mother country if he has been deceased over 3 months unless WD AGO Form No. 363p, Authorized Mortality, has been accomplished in triplicate. If a man dies while waiting to be rotated, it will be interpreted to mean that he does not wish to return to the United States, and his application will be automatically canceled. Furthermore, if it is established that he has accepted mortality without authorization, his corpse is subject to disciplinary action under AW 96, Deliberately Circumvention of Authorized Dying Procedure.

D. Men in lower ranks, or EM, who formerly held the rank of major general or over, providing the reduction in grade was not the result of his own misconduct.

IV. If a man possesses all the above qualifications, he may then obtain IG Form No. 27730, Application to the Interviewed and Preparation for Packing "B" Barracks Bag, and having filled out the required 23 copies, will await further instructions. Men who violate the foregoing instructions by questioning competent authorities on matters pertaining to their status will be remanded to the custody of the officer in charge, base stockade, to await a general court-martial in conformance with USAFFE Regulation No. 7–9681, Impertinent Overtures.

V. No troops will be rotated before 1947, and a 2-year statute of limitations will be imposed on all applications. This does not prevent anyone from reapplying after the 2-year period has elapsed, providing AF Form No. 7768p, Reasons for Establishment of Priority to Regain Citizenship, is executed in quintuplicate.

No applications will be accepted until further notice, as all troops are at present frozen.

Bon voyage.

Four Hundred Million Tons of Soil

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. COCHRAN. Mr. Speaker, a timely editorial appeared in the Washington News yesterday in reference to the Missouri Valley Authority. Under the per-

mission granted me, I include it as part of my remarks:

Soil students say the Missouri River carries 400,000,000 tons of farm soil from the basin into the Gulf of Mexico every 12 months. That's too extravagant, not only for Missouri Basin dwellers, but also for every American who likes dinner.

It means bright youngsters quit the basin and go elsewhere to earn a living. It means those who remain face an unnecessarily restricted existence. It means a vast area which could prosper is backsliding along its own sort of "Tobacco Road."

The Tennessee River Valley was like that. But in 1933 the American people created the T. V. A. Now look at the place: Jobs, light bulbs, for barns, youngsters winning niches of contentment right where they grew up. The community is becoming a dream spot of the world.

It can happen to the Missouri Basin. The Missouri River can be dammed to produce electricity and to provide irrigation as needed. The river is willing. But it has to be harnessed.

An M. V. A. will mean an end to carrying loam from farm to ocean. It's a post-war must.

The Juke-Box Curfew

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks I include therewith an editorial from the Toledo Blade of February 26, 1945, directing our attention to the dangers of falling into totalitarianism when we are fighting against it. The Toledo Blade is that great newspaper founded by the philosopher and humorist, David R. Locke, better known as "Petroleum" V. Nasby. This editorial was written by his residuary-legatee, Grove Patterson, outstanding philosopher, journalist, and a man who in moral character is, like Caesar's wife, above reproach.

THE JUKE-BOX CURFEW

We find it a little amusing to assume the role of advocate for the juke-box. It happens that we don't care much for the sort of music which most such boxes emit. When some hot jive fan drops a nickel in the slot to bring forth the strains of "One O'clock Jump" we wish there were a slot where we could drop a second nickel to restore peace and quiet. It would be cheap at half the price.

But the juke-box has become a symbol, thanks to a stupid, senseless, arbitrary order by the War Manpower Commission implementing Director Byrnes' request for a midnight curfew in all entertainment places, including private clubs.

To maintain the proper perspective on the issue, let's not forget that when Mr. Byrnes announced his "request" last Monday, it was stated that its purpose was to save gas and coal. We expressed doubt at the time as to whether that was the real purpose and suggested that somebody in Washington had sold a bill of puritanism to the Government. The W. M. C. directive bears out that suspicion beyond the possibility of challenge.

How much gas or coal is consumed operating a juke box? Suppose the owner turned off the fancy lights and used just enough current to revolve the record and amplify the music. You might as well order every owner of a radio set to turn it off at midnight. Perhaps the next thing will be an order to housewives to disconnect their electric refrigerators before retiring.

The whole business, insofar as saving gas and coal is concerned, is a farce. It applies to sunny Florida as well as snow-bound Maine. It is of indefinite duration, not for a week or two until winter-stalled freight yards can be cleared. Light company officials laugh at the possible saving involved. Night clubs will open a couple hours earlier and burn just as much electricity as on the old schedule—which is quite all right with W. M. C. and Mr. Byrnes so long as the doors close at midnight.

The regulations are a preposterous abuse of power granted for wholly different purposes. That is the crux of the matter, which should concern every citizen—including those who don't know what the inside of a bar or a skating rink or a circus or a country club looks like. If administration agencies can twist measures designed to help the war into strait-laced restrictions to govern the manners, morals, or personal habits of every man and woman in the country—without any chance for them to say yes, no, or maybe—it is time to call a halt.

The philosophy back of this regulation is that the state knows best. That is totalitarian philosophy and we thought we were fighting against it.

Signal to the House

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of February 28, 1945:

SIGNAL TO THE HOUSE

The Senate Judiciary Committee should not suppose for a moment that the public will fail to see through the flimsy barricade it has thrown up against current demands for repeal of the two-thirds rule for approval of treaties. The only excuse it can find for refusing to consider any proposed constitutional amendment during the war is that soldiers who are out of the country might not like it. There are many indications that an overwhelming majority of our men in uniform would warmly approve the amendment designed to take from one-third plus one of the Senate control over major segments of our foreign policy.

We think the Senate ought to have the courage to translate this demand of soldiers and civilians alike into legislative action. This is no time for statesmen to be hiding behind the pretense that preparation for peace must await the return of our defenders from the battle lines. Soldiers are men of action. They expect Congress to do its duty here at home as they are doing theirs on the firing line.

This timorous maneuver on the part of the Senate should not impede the House in its determination to go forward with a resolution repealing the two-thirds rule. In fact, the Senate committee's reactionary attitude is the signal for the House to move forward. Apparently the Senate will have to be blasted out of its foxhole of entrenched power from which a minority can thwart the majority will on peace. Let the House lead the attack on this indefensible position and the people will quickly rally to its support.

Full Employment After the War—The Murray Bill

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 28 (legislative day of Monday, February 26), 1945

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Charles Darlington, containing an interview with Beardsley Ruml, published in the Des Moines (Iowa) Tribune of February 8, 1945, relating to the full employment bill which is now pending in the Senate, and also an editorial entitled "The Murray Bill," published in the last issue of the Commonweal.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

[From the Des Moines (Iowa) Tribune of February 8, 1945]

WOULD ADOPT THREE MEASURES

(By Charles Darlington)

Beardsley Ruml, nationally known author of the Ruml pay-as-you-go Federal income-tax plan, addressed a combined meeting of the chamber of commerce and Rotary Club Thursday noon at Hotel Fort Des Moines.

Ruml, a native of Cedar Rapids, is treasurer of R. H. Macy & Co., and chairman of the New York Federal Reserve Bank. He is 6 feet tall and weighs more than 200 pounds. He is a graduate of Dartmouth College, but admitted Thursday that he did not do much with football.

Ruml in an interview praised the Murray full employment bill, just introduced in the United States Senate to provide post-war jobs.

He said that, briefly, it provides that every man in the country able and willing to work is to have a job after reconversion is accomplished. These jobs are to be furnished by private enterprise on private projects, and by letting contracts for public works to private enterprise to piece out the program if necessary.

BACKING

He said the bill has the backing of Senators MURRAY, WAGNER, O'MAHONEY, and THOMAS, and predicted that it will receive strong support in the Senate.

"The Murray bill has an intellectual history which began back in the 1920's," he said. "The idea of using public works to piece out the business cycle is not new.

"It is the American expression of a world-wide tendency to make sure that the powers of the people are used to eliminate mass unemployment.

"In my opinion, the objectives of the bill can be more surely obtained if three measures are adopted that will tend automatically to stabilize prosperity at a high level."

MEASURES

These measures are:

1. The tax rate should be reduced to a point where it will balance the Budget at a high level of employment.

2. Public works should be planned and administered to stabilize the construction industry at around $15,000,000,000 a year.

3. We should get the inflation out of social security by putting it on a pay-as-you-go basis.

"If these three policies are adopted, the tasks to be performed under the Murray bill will be of much more manageable proportions."

INCOME

Ruml was definitely of the opinion that the United States must have a post-war annual income of $140,000,000,000 or must face the only alternative—mass unemployment. He said the standard of living must be from 40 to 50 percent higher after the war.

"That's no New Deal propaganda," he said, with his quick smile," but just plain arithmetic."

Discussing the problem of employment in his address, Ruml said along this same line: "High employment requires a standard of living nearly a generation in advance of where we are today. We face a compelling situation of unprecedented magnitude, and our social, political, and economic ideas must be adapted to the realities as they exist in fact.

"We must guard ourselves from dangers from two quarters—on the one side, from the regimenters and on the other, from the economic appeasers. The regimenters would attack the employment problem by over-all regimentation of supply and demand, wages, prices, and profits, forgetting that the end result would be regimented employment.

"The economic appeasers would get rid of the problem by saying that mass unemployment is inevitable and that we might as well make the best of it. To them, 8,000,000 unemployed is the statistical consequence of a private, free enterprise system. They forget that the unemployed and their families are not willing to be the statistical consequence of anything, and that there are more of them than there are of the appeasers."

The speaker emphasized that the primary post-war objective is high employment under a democratic private enterprise system, and that the national fiscal and monetary policies should contribute to that end.

He expressed opposition to a general sales tax as a "burden on the standard of living," and advocated abolition of all excise taxes except those on tobacco, alcohol, and perhaps gasoline. He advocated also abolition of the corporation income tax, pointing out that "after sales and excise taxes, the corporation income tax weighs heavily on the standard of living of the people, and at the same time, obstructs the flow of savings to investment."

He added that another unfortunate consequence of the corporation income tax is that the same earnings are taxed twice—once when they are earned, and again when they are distributed.

[From the Commonweal]

THE MURRAY BILL

Senator JAMES E. MURRAY, of Montana, has introduced a bill of monumental consequences. It is significant less for what it proposes to do than for its declaration of principles. Section 2 of this bill reads in part as follows: "The Congress hereby declares that—(a) It is the policy of the United States to foster free competitive enterprise and the investment of private capital in trade and commerce and in the development of the natural resources of the United States; (b) All Americans able to work and seeking work have the right to useful, remunerative, regular, and full-time employment, and it is the policy of the United States to assure the existence at all times of sufficient employment opportunities to enable all Americans who have finished their schooling and who do not have full-time housekeeping responsibilities freely to exercise this right; (c) In order to carry out the policies set forth in subsections (a) and (b) of this section, and in order to (1) promote the general welfare of the Nation; (2) foster and protect the American home and the American family as the foundation of the American way of life; (3) raise the standard of living of the American people; (4) provide adequate employment opportunities for returning veterans; (5) contribute to the full utilization of our national resources; (6) develop trade and commerce among the several States and with foreign nations; (7) preserve and strengthen competitive private enterprise, particularly small business enterprise; (8) strengthen the national defense and security; and (9) contribute to the establishment and maintenance of lasting peace among nations, it is essential that continuing full employment be maintained in the United States."

This proposal to acknowledge juridically the citizen's right to a job is extraordinarily significant and completely sound morally. From the point of view of a hard-boiled economist, such a juridical principle may seem absurd because impractical. But we have no proof from experience that it is impractical, and since the end it seeks to accomplish is obviously desirable, the proposed legislation, we believe, represents one of those gambles which our society must make.

The Murray bill will be attacked both from the right and from the left. The disciples of Marx will accuse it of not going far enough and of placing too much reliance upon free enterprise. Conservatives will call it visionary and will see in it a dire threat to liberty and an increase in the power of government over the daily lives of its citizens. It will be labeled totalitarian by some and weakly conservative by others. Yet it is certainly a notable proposal in its bold juridical novelty, and all but the most die-hard of old fashioned capitalists will probably have to grant that it is a step in the right direction. The means whereby the bill proposes to implement its preamble are debatable; the preamble itself comes like a breath of fresh air in our legislative thinking.

Hawaii's Debt to New England

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. REED of New York. Mr. Speaker, the Society of Mayflower Descendants in the District of Columbia each year commemorates the anniversary of the signing of the famous Mayflower Compact on board the *Mayflower*, in Cape Cod waters, on November 21, 1620, with a Compact Day dinner, and appropriate attendant features. Thus, the three hundred and twenty-fourth anniversary of the signing was celebrated by the society on the 21st of last November, at Hotel 2400, Sixteenth Street, Washington. The occasion was a notable one. Music was furnished by the United States Marine Band Orchestra, and two distinguished speakers addressed the gathering—the Netherlands Ambassador to the United States, Dr. Alexander Loudon; and the able Delegate in Congress from Hawaii, Hon. JOSEPH R. FARRINGTON. Our former colleague in the House, Hon. Maurice H. Thatcher, of Kentucky and Washington, governor of the society, presided.

Delegate FARRINGTON's address was of such an interesting and informative character that, under leave granted, I include it herewith:

NEW ENGLAND GAVE HAWAII CHRISTIANITY

One author describes the New England missionaries who went to Hawaii as the pilgrims of Hawaii. They sprang from the same hardy stock of people, were fired by the same religious zeal, traveled even further than the original Pilgrims to accomplish their mission, and despite enormous differences in environment achieved results of remarkable similarity.

The New England missionaries arrived in Hawaii on March 30, 1820, 200 years after their forebears reached New England. The latter traveled to American in search of religious freedom for themselves. The New England missionaries traveled to Hawaii to carry the word of God to the native people of those islands.

And this they did most effectively. They left Boston on October 23, 1819. At that time they did not know that within 2 weeks of their departure the kapu system of idolatrous worship had been overthrown by the native people of the islands. This was subsequently accepted by them as evidence of the favor of God. In any event, it paved the way for the rapid introduction of Christianity.

The ruling chiefs readily embraced this new religion. By 1840 there were missions on all the islands. And some years before that time, the missionaries in Hawaii were being advised from Boston to be more lenient in admitting the native people to membership in the church, so eager were the latter to join. And thus Christianity was firmly established among the people of these islands.

NEW ENGLAND GAVE HAWAII ITS WRITTEN LANGUAGE IN CONVERTING THE NATIVE PEOPLE TO CHRISTIANITY

In the process it was necessary to reduce the language of the native people to writing. By 1826, 6 years after the arrival of the missionaries, the alphabet had been perfected. By 1832 the printing of the New Testament in Hawaiian had been completed and by 1839, the printing of the entire Bible in the native tongue had been finished. The missionaries had been thoughtful enough to include among their original number a printer. So even before the Bible had been reproduced in the native language, many tracts and pamphlets appropriate to the work of converting and educating the Hawaiian people had been produced.

NEW ENGLAND GAVE HAWAII THE COMMON SCHOOL

As an essential counterpart of this work was the introduction of educational training. The enthusiasm of the ruling chiefs for the training of the New England missionaries was so great that it was only on the insistence of the latter that they be allowed time to extend their work to the common people. The ruling chiefs were taught the English language in the first classes. The text books were Webster's spelling book, Watts' catechism, and the English Bible.

In the meantime the people were rapidly mastering the ability to read their own language as it had been reduced to writing by the missionaries. There was developing a strong appetite for education. Recognizing this development, the queen regent, prime minister, and chief met in 1824 in Honolulu and "declared their determination to adhere to the instructions of the missionaries, to attend to learning, observe the Sabbath, worship God, and obey his law, and have all their people instructed." Common schools sprang up all over the Islands.

NEW ENGLAND GAVE HAWAII PUBLIC-SCHOOL EDUCATION

By 1840 public education was established by law as the result of these influences.

These laws were corollary to the first Hawaiian Constitution, which was likewise the work of these New England missionaries who saw the necessity of stabilizing political practices if the results of their efforts were to be successfully maintained. Within slightly more than 10 years the foundation had been laid for a thoroughly American type of education with hundreds of small schools welded into a well-organized system on a tax-supported basis. Not the least interesting fact of this development is that it was carried out under the direction of Richard Armstrong, whose son, Samuel A. Armstrong, was to found, after the Civil War, the Hampton Institute in Virginia. It was Richard Armstrong who introduced English as a medium of instruction in public education, and who gave to the curriculum a vocational education emphasis long before it was the common practice elsewhere.

The development of a school system in Hawaii along American lines is well described by Dr. Benjamin O. Wist, dean of the teachers' college of the University of Hawaii, who writes:

"In every particular the Hawaiian public school system became American in practice before it became American in fact. With the very first school laws of 1840, the propriety of the state to control public education was established. Legal enactments which followed from time to time served to strengthen and to fix this principle in Hawaiian educational philosophy. With the reorganization effected in 1855, the board-control concept was adopted. Changes later effected brought about a standard-sized board and one that was lay in its composition. Even more than is typical in American practice, the board of educational control in Hawaii has established general educational policy and has exercised direct administrative jurisdiction. Before annexation Hawaii was exercising its right to establish and maintain state institutions, in the establishment of the Honolulu Normal School."

"Since the year 1852, public education in Hawaii has received part of its support from public lands realizations. Perhaps the most interesting development in Hawaiian educational history was the change from the Hawaiian to the English language. Its use became almost universal before the end of the monarchy. By legal enactment the English language was made the sole medium of instruction in the public schools during the period of the Republic."

NEW ENGLAND GAVE HAWAII DEMOCRACY

The devotion to the principles and the spirit of democracy that ruled the attitudes of these New England missionaries was evident from the outset of their work in Hawaii. The Pilgrims who had come from Holland and England to America organized in a meeting held in the cabin of the Mayflower before landing on Plymouth Rock. The pilgrims who set out for Hawaii met in the mission on February 23, 1823 and in a single sentence perfected what has been called their Organic Act. It said:

"We, the undersigned ministers and missionaries of the Lord Jesus Christ in the Sandwich Islands being sent for the defence of the truth and for the enlightening of the Gentiles, agree to unite in an association for mutual improvement and mutual aid in laying the foundation, maintaining the order, and building up the house of the Lord in these islands of the sea."

The Reverend and Mrs. Orramel Hinckley Gulick, in describing the operation of this mission, said:

"This mission was a democracy, a small but a true one, where the majority ruled and where no dictator prevailed. Every vital question was fully and frankly discussed until a decision was reached in a vote of the majority."

NEW ENGLAND GAVE HAWAII MODERN GOVERNMENT

It was to the New England missionaries that the native rulers turned for advice as the needs for modernizing their government became pressing. William Richards was released from the mission to enter the service of the king as an advisor and instructor. His first service was to deliver a course of lectures to the chiefs on political economy and the general science of government. He used as the basis for his lectures the Waylands system set forth in the Elements of Political Economy by Francis Wayland, the president of Brown University.

Out of these influences evolved a bill of rights for the native people, constitutional government in which the absolute rule of the native monarchs was gradually displaced by a more modern pattern of government; private ownership of land once the exclusive right of the native monarchs, an adequate system of financial management that was largely the work of another missionary, a judicial system patterned along American lines and a form of government whose stability won for the island kingdom recognition of its right to independence.

NEW ENGLAND GAVE HAWAII MODERN INDUSTRY

Thus was laid the groundwork for the industrial development that followed the treaty of reciprocity of 1876 between the Hawaiian monarchy and the United States. The genius for organization and the industry of New England began then to express itself in the development of the Hawaiian Islands along agricultural lines. The importation of labor from many parts of the world followed. The evolution of the islands from an isolated and primitive Polynesian community into an industrialized American commonwealth was entering its final stages.

NEW ENGLAND GAVE HAWAII AMERICA

It was only natural, therefore, that in the course of another generation these islands which had been so thoroughly nurtured and developed in the religious, educational, governmental, and industrial traditions of New England should achieve annexation as an integral part of this country by the mutual agreement of the people of the islands and the people of this country.

Through almost a century they had been prepared in the school of New England training to take their place as a Territory in the American scheme of things. They became, by law of Congress enacted in 1900, American citizens with a large measure of local control that was the result of the recognition that much progress along American lines had already been achieved under the influences that took hold in Hawaii in 1820.

Today the Territory of Hawaii is an American community in all the essential features of its life and thinking despite its Polynesian background, the great diversity in the racial origin of its people, and its thoroughly tropical environment.

It lives and thinks in the same pattern as the people of New England with the sons and daughters of native Hawaiians holding their American citizenship as the source of their greatest pride, the sons and daughters of oriental immigrants declaiming in oratorical contests their devotion to the principles of our forefathers who landed at Plymouth Rock, and the sons and daughters of New England pioneers the first and most aggressive in attesting to the thorough loyalty to the highest American traditions of all the American citizens of these islands.

The New England church steeple is a familiar landmark in almost every community of Hawaii. But even more impressive are the results of the philanthropy of the descendants of those who came to establish these churches. Their philanthropies include a remarkably diverse group of institutions for religious worship and training, education in many fields to meet the special needs of virtually every group of people who have come to the islands; libraries, academies of art, museums and hospitals, and homes for the care of the sick, the aged and the friendless. The names that they carry in their list of benefactors, directors, buildings, and rooms sound like a roster of the original visitors from New England.

It was the little grass shack that originally performed the functions of the little red schoolhouse, but the difference in housing material altered in none of its essential spirit the functioning of this fundamental New England institution in Hawaii. From this humble beginning has emerged a system of free public school education for which the government of the Territory spends almost half of all its funds, employs more than 3,000 teachers, and provides a high standard of training for about 100,000 boys and girls, or almost a fourth of the entire population. One of the private schools that came into being soon after the missionaries arrived is today among the leading institutions of its kind in the country, and operates as thoroughly in the tradition of New England's preparatory schools as it did more than 100 years ago. The special needs of virtually every racial and religious group have brought into being appropriate schools in consequence of the conviction, early established in these islands by the New England missionaries, that in education is to be found not only the solution of most of the problems of human life, but the means for successfully maintaining the democratic and American way of life.

The territorial form of government very readily met the needs of the people of these islands when by annexation they became an integral part of the country.

The citizens of the Republic of Hawaii became citizens of the United States by act of Congress. By long training in the traditions of New England, the Hawaiians were well prepared to assume this responsibility as the record of some 44 years will well testify. They carry today virtually all the responsibilities of a State government, and look forward to becoming a State in the near future.

The development of the cultural, social, political, and industrial life of these islands in the pattern of the New England tradition has long passed the state where it can still be described as an experiment. This term was popular with those who were in doubt as to whether these methods were best adapted to a population which, unlike that of New England or any other part of the country, had been drawn for the most part from the Pacific, from Polynesian, and Asiatic stock. Certainly there can be no question of the deep devotion of the people of these islands to the idea of American democracy so thoroughly implanted by their New England training.

They have found in these principles the basis upon which they can live together in harmony to their mutual advancement and profit. They have been happy. They have prospered. They have achieved a measure of racial tolerance refreshing and unique to people more accustomed to the attitudes that prevail in many parts of the States.

Their devotion to the best traditions and customs of this country are always particularly evident at this time of the year as the children in all the schools and the families in most of the island homes prepare for the observance of Thanksgiving Day with all the traditional detail of New England. Few of them have ever been in New England. More likely than not their ancestors originated in the islands of the Pacific, in the Far East, and in recent generations in Europe. But this will not alter the enthusiasm, and may indeed add a certain measure of extra zeal in a celebration that will be marked by a deep sense of obligation and great pride in the

New England background, in the contribution of the New England missionaries to making these islands a typically American commonwealth, and to give thanks anew to divine providence for the abundant life that they enjoy.

The U. S. S. "Amherst Victory", Mrs. Edith Mayer Goetz, Sponsor

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. COCHRAN. Mr. Speaker, another Victory ship, the U. S. S. *Amherst Victory*, was launched today at the yards of the California Ship Building Corporation, Wilmington, Calif.

It is teamwork that will win this war for the United States and one of the most valuable assets of the team is the program of the Maritime Commission. When history is written great credit will be given not only to the Maritime Commission but to the men and women employed in the shipyards throughout the United States.

Naming cargo ships is no easy task. In connection with the Victory ships, 62 names of old American colleges and universities have been assigned to this type of vessel. I have been advised by the Maritime Commission that the Victory ship has been designed by the Maritime Commission as a fast, modern cargo ship, supplanting the slower Liberty type, and adaptable for post-war service in the American merchant marine. The hull of the first Victory ship was laid November 19, 1943, at the Oregon Shipbuilding Corporation, Portland, Oreg. This vessel, the *United Victory*, was launched on January 12, 1944, and delivered February 29. At this time, Liberty ships, of which the Commission has built and delivered 2,620 to date, were still being launched from 10 shipyards. During the following months, 6 yards were turned over to Victory ship production, 5 on the west coast and 1 in the East.

To date contracts have been let for the construction of 668 Victory type ships. As of February 1, 1945, 287 Victory hulls have been launched, including 113 of a special military type delivered to the Navy. The first 35 in the Victory cargo series were named for the United Nations. The following 165 were named for small cities and towns in the United States. Those delivered to the Navy have been named for counties. A current series is being named in honor of American colleges and universities.

Under the program honoring educational institutions, the name of the ship consists of the name of the college followed by the word "victory," such as *Harvard Victory, Yale Victory*. The list from which names are selected is made up of all colleges and universities in the United States having a student body of more than 500. The order of assignment follows as closely as possible the chronological order of the dates of founding. Names which duplicate names already assigned to naval or merchant vessels cannot be used. In most cases, names of more than two words have also been eliminated because of undue length in combination with the word "victory." For both these reasons the names of State universities have not been included in the program.

Greatest advantage of the Victory ship over the Liberty is her increased speed. The Liberty has a speed of a little more than 11 knots, while the Victory is designed for 15 knots or more.

The increased speed of the Victory ship has been made possible by installing a turbine-gear power plant of 6,000 horsepower or more. The reciprocating engine of the Liberty has 2,500 horsepower.

Another difference between the two types of ships is the design of finer bow and stern lines for the Victory to conform to its greater propulsion power.

The new Victory ship also has slightly greater length—455 feet, compared with 441.5 feet for the Liberty. The Victory has a beam of 62 feet, while that of the Liberty is 57 feet.

The *Amherst Victory* is named for Amherst College, Amherst, Mass., founded in 1821, and is the seventh of the college-named Victory ships to be launched by the California Ship Building Corporation at Wilmington, Calif. This vessel is the eighty-fourth in the Victory-type series built by this yard.

There is no doubt in my mind that Admiral Emory S. Land, Chairman of the United States Maritime Commission, was thinking of his own college days when the decision was reached to honor the colleges and universities. "Jerry Land," as he is known, not only made a great record during the period that he was at Annapolis but he was a great athlete and participated in many a victory in connection with the Naval Academy's athletic program. Next to ships and shipbuilding he knows as much about football, baseball, and other sports as any graduate of the Naval Academy. There are few men in the world who have a more thorough knowledge of ships and shipbuilding than Admiral Land. He was a retired naval officer when called upon to head the Maritime Commission and many will be surprised to know that the great service he rendered has cost the Government but a small amount of money. As a retired naval officer he received retired pay but under the law when he accepted the position as head of the Maritime Commission his increase in pay was only that between what he was receiving as a retired officer and the statutory salary allowed the Chairman of the Commission, a few thousand dollars a year. There is not a shipbuilding corporation in the world that would not be overanxious to secure his services at a salary many times above that which he is paid by his Government. Too advanced in years to serve on the high seas he makes his contribution to his Government toward winning the war by being the head of the Maritime Commission.

The men at the battle front are in the front line but the cargo vessels are in the back field. Without the cargo vessels we could never win this war. They must take to Europe and the Far East not only the munitions of war but the food and other supplies that are so necessary for the upkeep of our Army and Navy.

Mr. Speaker, I come from St. Louis, in the center of the country. Thousands of skilled mechanics, too old to serve with the Army or Navy, are contributing toward the success of the Maritime Commission by accepting employment in the various shipbuilding yards on the Atlantic, Pacific, and the Gulf. The great majority of them never saw the ocean nor an oceangoing ship before they accepted this employment. They not only are contributing their skill but their sons and daughters are members of the armed forces.

The sponsor for the U. S. S. *Amherst Victory* was Mrs. Edith Mayer Goetz, charming wife of Mr. William Goetz, founder and owner of the International Picture, Inc. She is the daughter of Mr. Louis B. Mayer, the motion picture magnate. Mr. Mayer and other outstanding officials of the motion-picture industry have made great contributions during the period of this war, which has helped materially to improve the morale of those in our armed forces. Their films are sent throughout the world and the outstanding actors and actresses, under contract to the industry, have covered the globe entertaining our armed forces in foreign countries.

Having had letters from residents of my city who are employed by the California Ship Building Corporation, I sent a message of congratulations to Mrs. Goetz and through her to those who are responsible for the construction of the ship. That message follows:

DEAR MRS. GOETZ: The launching of the U. S. S. *Amherst Victory* is an additional contribution toward ultimate victory. Your sponsorship of this outstanding vessel will be an inspiration to those who will carry out the important part that it will play in future war operations.

My congratulations to you and through you to those who were responsible for the construction of this great vessel.

With best wishes for its success.

Sincerely yours,

JOHN J. COCHRAN.

From the Maritime Commission I secured a copy of the message sent to Mrs. Goetz by Admiral Land. It follows:

Congratulations and every good wish for the successful launching of the good ship *Amherst Victory*. The combination of a charming sponsor and a splendid ship at Calship speaks well for her success on her important war mission. Godspeed to the *Amherst Victory* and congratulations to all hands.

E. S. LAND, *Chairman*.

Mr. Speaker, what a vast difference there is between our ship-building program during the First World War and our present ship-building program. As we all remember, many wooden vessels were constructed during the First World War. They were slow, costly to operate, and at the conclusion of the war were destroyed. But, Mr. Speaker, there is a different story this time because at the conclusion of this war we will be in a position to have the greatest merchant marine that any nation of the world has

ever known. We must see to it that the best of these ships will forever fly the American flag, not to be turned over to foreign nations to compete with us on the high seas.

We owe a debt of gratitude to the great shipbuilding corporations and their employees for the contribution that they are making toward winning the war.

What Can the Negro Press Do To Contribute to the Cause of Right and Justice?

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered last Monday:

I take this opportunity of greeting my fellow members of the Negro press during the national observance of Negro Newspaper Week.

The Negro press is still a bawling infant when compared with the rest of the press of this democracy. However, when measured in terms of its own advancement it is coming of age and maturing rapidly. The Negro press sprang from the womb of protest. One of the most significant papers in the early period was edited by that stalwart champion of a people's democracy, Frederick Douglass in Rochester, N. Y., under the masthead The North Star. From that moment until now the Negro press has served as a specialized organ of protest. It cannot in anyway be conceived as a competitor of those papers owned by whites because, except for one newspaper, the Atlanta Daily World, it is a weekly.

The policy of the Negro press is forced upon it by the white press. It, therefore, succeeds by compulsion. When people of my race perform acts that are illegal and antisocial they receive more than their share of space in the daily press. We are the only race in America who in connection with crime are labeled according to race. On the other hand when Negroes perform deeds of importance and make contributions to the development of our Nation and the world the columns of newspapers are either closed to us or the news item is small and printed in an obscure place. The Negro press, therefore, has to continually keep before the eyes of the Negro people their deeds and their contributions.

As regards editorials the same is true. During this war period we of the Negro press have had to constantly champion our own cause. Through the great voice of over 200 Negro papers with a circulation of several million, we have been able to obtain jobs of all classifications for Negro workers in war industries; Negro men now fly in our Air Corps, fight with the Marines and serve as commissioned officers in the Navy; Negro women can be found not only in the ranks of the WAC's but also in the WAVES and SPARS. We are fighting for the abolition of the white primary, the abolition of the poll tax, the passage of an antilynching bill, to make the F. E. P. C. a permanent commission and the passage of a bill prohibiting trains and busses discriminating on interstate commerce. In other words, we are out to win the war at home and abroad and to defeat not only the Fascists in Italy, the Nazis in Germany, and the Japs but also those Americans on the home front who are un-American and undemocratic.

There is much more that the Negro press can do and must do. In the first place, we must be more objective in reporting news. Regardless of what our personal feelings may be, we must know that there is no stronger weapon in the world than truth accurately stated and objectively presented.

Second, we must learn to constructively criticize not only enemies without but enemies within the race, and to ever forthrightly and militantly lead the Negro people into broader channels of service.

Third. We must stop thinking of ourselves as a press for Negroes only, and start being more concerned with the problems of all peoples who are suffering from the common enemies—prejudice, discrimination, and exploitation. The Negro press must fight for the rights of Catholics and Protestants, black and white, Jew and gentile—because prejudice and group hatred are things that cannot be confined to any one people. Where it's a Catholic today it will be a Negro tomorrow, and where it's the Jew today it will be an Italian tomorrow. In other words, the hour has come for the Negro press to become a people's press.

Fourth. We must take a forthright stand with labor. The Negro is a working-class race. Within the ranks of the labor movement we are finding day by day more allies than we have found in any other movement in America, including the Christian church.

And lastly, we must envision ourselves as a people who are no longer a minority. We are living in one world and in this one world we must take our place with hundreds of millions of people of the darker races, with the laboring class in general, with the whole people's movement. These people are marching today. The world is on the move. This is the century of the common man. We must take our rightful place in bringing about a permanent people's victory, a people's peace and, thereby, guaranteeing a people's world.

France and De Gaulle

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. SPARKMAN. Mr. Speaker, France has, in the past, been one of the great nations of the world. She is needed and wanted again among the great nations in the making and keeping of the peace that is to come.

Unfortunately, relations between France and the United States now are not all that could be desired. The explanation for this situation lies partly in the conditions that have followed the liberation of France and partly in what is generally regarded as blundering on the part of General de Gaulle.

There have recently appeared in various newspapers, editorials and columns by some of our best writers dealing with this situation. I am including some of those articles because I feel that they have dealt with this problem in an interesting and informative manner:

[From the Washington Post of February 20, 1945]

FRENCH RESENTMENT

(By Marquis Childs)

PARIS.—Rumors which appear to have been baseless have had President Roosevelt paying an official visit to Paris. If he had driven down the Champs Elysees he would have been given a demonstration of fervent approval. Paris would have lined the streets to shout for Monsieur le President.

Those who follow trends closely here say there can be no doubt of that. But at the same time they say that if Roosevelt comes several months from now his welcome may be considerably cooler.

Inside the government there is deep resentment of the failure to help France through the bitter winter. Whether rightly or wrongly, the blame is put on America. That same resentment, however, has only begun to spread to the general public. They have not directly connected their hunger and cold with the American policy, nor has the general public here been aware of Roosevelt's resistance to Gen. Charles de Gaulle and the ill will that grew up between them.

The contest between the two men took place for the most part before the liberation of France, when almost no news from the outside world came in. The reception of De Gaulle inside France, together with the political skill with which he maneuvered, made recognition of his provisional government by America inevitable, regardless of what anyone thought of him personally.

To a certain degree it is true that he has used American opposition to solidify his position in this country. In his speeches De Gaulle stresses the desperate transportation picture in France—the fact that under German occupation 47,000 cars were used to haul fuel for civilians and even at the worst period this never fell below 11,000, while on January 21 of this year it was only 7,000 cars. He does not say, however, that Americans have brought in hundreds of new locomotives, which made it possible to turn others back to the French for civilian use.

One factor in the French attitude toward Americans is our bombing before the liberation. Frenchmen in the government have told me that we are getting the blame we do not deserve and that if we made a real effort we could get across to the French people the true story of bombings and our part in them.

This, incidentally, is likely to color the attitude throughout Europe. By one of those curious coincidences always occurring, I shared a compartment on the Paris-to-Brussels train with Walter Farr, whom I had known in Washington as correspondent for the London Daily Mail. Coming from 8 months in Stockholm, he told me that many Swedes are now beginning to say that the American bombing is responsible for the destruction of the Continent.

That, of course, is an easy out for Europeans. They forgot it was the Fascist countries that originated the mass bombing technique, while Americans have made every effort with precision instruments to limit it. But for those who have seen it from the beginning, the appraisal of influence of the American military might in France is difficult.

The agreement De Gaulle signed with General Eisenhower on August 27 gave the Allied military leaders great powers—greater, perhaps, than the French people have ever understood. For the military it was supremely important to have a stable France at the back of the fighting forces. For example, a strike on the railroads of France simply could not have been tolerated. Our influence as a result of military preponderance here has, therefore, inevitably been on the side of conservatism, just as the weight of the Russian influence has been thrown in different fashion on the side of order and repression

of the more fiery elements in the underground.

To an overwhelming majority of Frenchmen I should guess that Roosevelt still stands as the symbol of liberation. That is why they would cheer him if he moved down the broad avenue toward the Arc de Triomphe.

No matter what our faults of omission or commission, we always have a contrast with the German behavior in our favor. The ordinary middle-class Frenchmen have told me of shocking things they saw during the German occupation, which Germans made no effort to conceal. This was particularly true of brutalities against the Jews, who won widespread sympathy and aid from the French.

The De Gaulle government would hardly have welcomed Roosevelt, but the people would have. That may still be true in early summer, but it will depend on whether the French have had to hitch their belts even tighter than they are today.

[From the Washington Post of February 21, 1945]

FRENCH LIFE RUNNING IN LOW GEAR

(By Marquis Childs)

PARIS.—Paris, once called the city of light, is today a city of darkness and misery. A pretense of the old Paris is kept up but it is a rather pathetic gilding on what is an empty shell.

Shops on the Rue de la Paix and the Place de l'Opera still have smart things in the windows, but these articles are merely window dressing. Nothing like them is for sale inside the shops. Similarly, perfume bottles are displayed in windows, but the American Army has long since cleaned out the supply.

It is a little like the huge peach-basket hats worn by women who still try to look fashionable. They are pretentious in a sad sort of way and very, very expensive. An American tripper who wanted to take a Paris hat back to his wife found that the minimum price at a lesser-known establishment was $100.

Prices on the black market are fantastic, somewhat reminiscent of the German inflation of the early twenties. Butter, if you can find it, costs $16 a pound. Automobile tires—and they are scarcer than butter—cost $125 or more. A woman's suit in a shop window in a provincial town, though shoddy looking, was priced at $80.

A meal of horse meat and poor macaroni in a working-class restaurant costs just under $2. In the few black market restaurants you see hard-faced men and women—undoubtedly operators in one phase or another of the black bourse—who pay $100 or $150 for a dinner for three or four persons. In these restaurants, patronized only by hated profiteers or foreigners, the food is up to the old Parisian standards, and vintage champagnes are obtainable at $25 or $30 per bottle. While heavy fines are putting a stop to some of this, the black market still flourishes.

Resentment against profiteers, some of whom were on the border line of collaboration, is growing throughout France. Some people feel that De Gaulle is not proceeding rapidly enough with the liquidation of collaborationists. Former collaborationists say cynically, "You're not dead until you're shot."

On the other hand, many housewives admit frankly they could not feed their families without the black market. Minimum rations simply are not obtainable without behind-door meals. During the recent severe cold spell the food crisis was so acute that the United States Army was persuaded to turn over a small amount of its stores to relieve the situation at least temporarily.

A marked rise in infant mortality and deaths of older persons is a sure indication of near famine. Likewise a sharp increase in cases of tuberculosis, as shown by recent U. N. R. R. A. studies, is a sign of what is happening.

With the machinery of living barely functioning, existence is full of annoyances and frustrations. The French telephone system, never very efficient, now hardly works at all. One reason is that cams and switches were frozen in unheated office buildings and apartments.

Almost no transportation exists outside of the subway system. Near the Place de l'Opera shabby horse-drawn cabs wait for fares, but they are only for the very rich. For $3 or $4 you can hire a bicyclist with a side car. That is, you can hire him if you're lucky enough to find him.

One of the strange phenomena of this now somber city is the separation of the English-speaking world and the French-speaking world. Or I should say the American-speaking world, since the responsibility is ours and you rarely see a Britisher. This has its advantages for the British, who can put off on us any blame for the friction growing out of the minimum association between the two spheres.

Comparatively few American officers speak French. Very few French speak English. The difference in language makes for a barrier that is hard to cross.

The American-speaking world has facilities—heat and transportation—beyond the reach of the French-speaking sphere. Barriers make for misunderstandings. It is so easy to misunderstand.

A recent American visitor commented that the children in the parks all had fur coats. The implication was that no nation could be very badly off that could provide fur coats for its children, but the truth is something quite different. France has had almost no wool for the past 5 years. Warm clothing for children is one of the gravest scarcities. If you can find $150 or $200, you can buy a rabbit-skin coat for your small daughter. Trapping of rabbits has gone on regardless of the war.

Official sources here have confirmed reports that food from America is on the way to relieve the civilian food shortage, but this can be only a stopgap. Somehow, and quickly, French productive capacity must be restored.

[From the Washington Post of February 20, 1945]

DE GAULLE'S ERROR

General de Gaulle's reported refusal to confer with President Roosevelt in Algiers is understandable but unfortunate, even though it was apparently accompanied by an invitation to the President to go to Paris. The general's attitude reflects a falling off from the magnanimity and high statesmanship which has characterized him until now. That he has construed the fact that he was not asked to the Crimea Conference as a slight is fairly obvious—a slight, however, less to himself than to France. In this he probably reflects the present hypersensitive mood of his compatriots, rendered acute not only by a conscious or subconscious sense of national guilt for the disaster of 1940, but also by the terrible material privations which the liberation has aggravated rather than relieved. The recollection by the French of former power and grandeur joined to the vivid awareness of their recent humiliations and of their present political dependence makes the problem of aiding the work of French rehabilitation enormously delicate and difficult, and it has not been rendered any less so by certain apparent Allied blunders in the matter of promised relief supplies.

The present French attitude is familiar enough to us as it shows itself in individuals. Compensation for a sense of national inadequacy takes the form of extreme national self-assertion. Also, as Mr. Howard Callender has pointed out in a sympathetic and illuminating analysis in the New York Times Magazine, prolonged hardships and the sense of economic insecurity which now pervades all classes is reflected in great internal unrest and has intensified the desire for revolutionary solutions, which, coming at this phase of the war might have grave and tremendous consequences for the Allies' cause.

But apart from this it is altogether unlikely the spiritual, material, and historical energies of France can be revived by any process so simple and heroic as a revolution. What France needs most is external help, and the task of providing it will become enormously more difficult if the French Nation should assume an attitude of touchiness and resentment toward its Allies. Mr. Callender says truly that in an identical situation Americans would exhibit the same jealous hypersensitiveness now characteristic of the French. It is well for us to understand this, but mere understanding is not enough. What is needed now is cooperative effort and for real cooperation two wills are necessary.

[From the Washington Post, February 22, 1945]

POLLYANNA IN PARIS

As a rather choice example of the ineptitude of the military mind in dealing with civilian problems, we submit the statement recently issued at Paris by the Army communication zone headquarters concerning material relief for the people of France. Some inkling of conditions in France after 6 months of liberation is now beginning to break through the welter of bureaucratic obfuscation, and has caused much indignation and more anxiety on this side of the water. The truth seems to be that the material hardships of the French under the liberation are considerably greater than under the Germans and that even those French industries which the Germans permitted to function are now being paralyzed for lack of raw material.

This situation has certainly not been created through any lack of American good will toward the French people, or any lack of desire to relieve their present hardships. It has been created because the military have diverted to war making the shipping that was intended for the transport of relief supplies and raw materials to France, Belgium, and Holland. The position of the military is that the movement of strictly military supplies must have priority over all others, no matter what promises may have been made by political representatives.

It is curious, however, that the military should choose the moment when resentment in France and apprehension at home over the breakdown of the relief program have grown acute to preen themselves on having already accomplished in France a relief job so magnificent that "there has probably been no parallel in previous history." Actually, all that the Army claims to have delivered is 400,000 tons of supplies since the liberation, which is to say about 2 percent of France's normal requirements for such a period. This is what Brigadier General Stearns, of the Communications Zone, considers rehabilitation on such a scale that "France is rapidly being placed on an operational basis."

Some indication of how far French industry really is from being on "an operational basis" may be gleaned from a glance at the textile situation. The French cotton textile industry, it is said, is capable of absorbing nearly a half million workers, of greatly alleviating the severe shortages of clothing in all the liberated countries, and to that extent reducing the demand for shipping space for relief supplies. Even under the German occupation these factories were kept in operation and supplied with synthetic materials. The normal requirements of the French textile mills for a 6-month period would be about 650,000 bales. Actually only a few thousand bales from the United States have been delivered, although upward of 50,000 bales, purchased through the Commodity Credit Corporation, have been set aside for

France and are awaiting shipment. French cotton stocks are now down to about 300 tons and unless these are soon replenished the industry may have to close down entirely. It seems fair to infer that a similar situation exists in many other French industries.

To some typewriter strategists on this side of the water it might seem that any materials which might be calculated to prevent a situation of general privation, unemployment, and revolutionary ferment from developing in the rear of an embattled army could be essential and urgent war materials. But that, we suppose, is for the military to decide. What we object to is the tendency of the military to suppose that a bad state of affairs can be improved by extravagant rhetoric.

War Record of the Hollywood Victory Committee

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the third annual report of the Hollywood Victory Committee:

Without detracting from any other worthy civilian war activity, nevertheless with a desire to call to the attention of the Members of the House of Representatives the outstanding job that has been done by the Hollywood Victory Committee which was organized 3 days after the Pearl Harbor attack, I would like to recount briefly a few of the services they have rendered to our armed forces on all battle fronts of the world.

Members of the Hollywood Victory Committee have—

Traveled 4,000,000 miles.

Made 37,979 free appearances.

Sent 139 guest stars to appear on the fighting fronts.

Provided 341 actor players for 324 camp and hospital shows.

Given 1,510 1-night stands at embarkation points.

Helped the War Department Armed Forces Radio Service by making 1,574 entertainment transcriptions.

Volunteered the services of 233 actors and musicians in six War-loan bond selling drives.

Made 100 broadcasts and transcriptions for inter-American affairs.

Cooperated with the War Activities Committee of the motion-picture industry in producing 37 film shorts for distribution in 16,000 theaters.

Assisted the Red Cross, Infantile Paralysis Foundation, War Chest, Army Emergency Relief Fund, Navy Relief Society.

Kept up this show every day for 3 years.

Their services have brought smiles and happiness to the boys at the front when keeping up morale was a tough job for their commanding officers.

They all deserve credit and applause for their work. They are good American citizens and have done their best by lending their talents to help win the war.

In doing this creditable job, the Hollywood Victory Committee has had the wholehearted cooperation of the following organizations:

Actors Equity Association.

American Federation of Radio Artists.

American Guild of Musical Artists, Inc.

American Guild of Variety Artists.

American Society of Composers, Authors and Publishers.

Artists' Managers Guild.

Association of Motion Picture Producers, Inc.

Hollywood Writers Mobilization.

Independent Motion Picture Producers Association.

Independent Publicists Association.

Public Information Committee of the Motion Picture Industry.

Motion Picture Producers and Distributors of America, Inc.

The Radio Networks.

Musicians Mutual Protective Association.

Radio Writers Guild.

Screen Actors Guild.

Screen Directors Guild.

Screen Publicists Guild.

Screen Writers Guild.

Society of Independent Motion Picture Producers.

Southern California Broadcasters Association.

Theater Authority, Inc.

Credit is due where it has been earned. Here is one group that has earned recognition.

Democracy at the Crossroads

EXTENSION OF REMARKS

OF

HON. FRANK P. BRIGGS

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. BRIGGS. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by Missouri's most illustrious son, Hon. HARRY S. TRUMAN, Vice President of the United States, at Jefferson City, on February 22. The title of the address is Democracy at the Crossroads.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As a son of Missouri, I am especially grateful to the people of my State for giving me this opportunity to come home. I know that apart from any partisan practices every citizen of Missouri subscribes to the sound principle of our State motto: "Let the welfare of the people be the supreme law."

We of Missouri are especially fortunate in our geographical position near the great heart of America. Situated at the crossroads of the North and the South, as well as of the East and the West, we have acquired a more tolerant understanding of the viewpoints and problems of each section of the country.

National commentators carefully watch Missouri as a political weathervane. We are not merely a border State. We are a sort of political barometer, reflecting the rapid changes in the social climate of America. With the benefits of our favored position come grave responsibilities. For every right there is always a corresponding duty.

While we draw upon all sections of the country for the blessings which come to our State, Missourians have the duty to repay America by being the binding link between these different sections. I like to think of our State of Missouri as situated near the heart of America, and politically—like its physical counterpart—as leaning toward neither extreme. Bitter experience has taught Missourians that it is disastrous to permit either radicals or reactionaries to obtain control of our political affairs.

In these times of violent partisanship there is a great need for tolerance. The world requires statesmen with understanding of the many shortcomings of human nature. All lasting progress has been the product of evolution. Sound social advancements require time and tolerance.

Today we celebrate the two hundred and thirteenth birthday of the father of our country—George Washington. A man without political ambition, George Washington became one of the moving spirits who made possible the Constitutional Convention, the convention which gave us our Constitution and the form of government under which we have become the world's greatest Republic. Contrary to his personal desires, Washington served as our first President. It became evident early that he was the only leader who would command sufficient support for a united nation of 13 States, then more diverse than our 48 States of today. From July 1775 until his retirement from the Presidency in March 1797 Washington served our country almost continuously for 20 years. Few men have rendered equal service in time or lasting value.

Between the victory over Cornwallis at Yorktown in October 1781 and the Constitutional Convention at Philadelphia in May 1787, America faced its first and most trying emergency. The basic test was whether the thirteen separate and sovereign States were willing to give up a part of their unquestioned power for the benefit of all.

Urging a stronger union, George Washington warned America it must choose unity or disunion. Today, more than 150 years later, America must choose—common sense world organization for peace—or disunion. We must decide if we are willing to sacrifice our own temporary advantages for ultimate world benefit. It is not an easy decision to make. The independence of our ancestors makes us answer that Americans do not need the aid of others, and do not propose to become involved in foreign quarrels. Mere prudence requires, however, that we Americans take a good look at modern maps. By air, no place on the globe is more than 60 hours away from our comfortable homes—we know this time is steadily decreasing. We must, therefore, alter our former views on national security. Americans can no longer sit behind any mental Maginot line. Too much is at stake for us to shut our eyes to facts. Either we must be ready to repel alone all and any attacks from the rest of the world—or we must be willing to cooperate with friendly States to check the first sign of aggression on the part of any nation. The choice is ours. I am confident that the average American can use his most precious heritage—common sense—in the solution of the pressing problems of the day.

In this exercise of hard common sense in the search for peace and good will among nations, we, the United States and her two chief allies, have made a magnificent beginning. A few days ago, from Yalta on the Black Sea coast, we received good news. Another long stride had just been made not only toward victory, but toward a lasting peace. The agreement, like those reached before, is a product of good common sense. By all but a few, it was immediately accepted. It promises another exercise of common sense cooperation among all nations in the conference that is to follow in April in San Francisco.

We can recall how a minority, lacking in vision or in the will to use what vision they had, cried out against lend-lease. Today we hear no more from those alarmists. We know that the lives of many thousands of our own American boys have been saved through the shortening of the war as a result of lend-lease. Lend-lease was cooperation among nations to put down aggressors. Now we propose to go beyond that, to keep down aggressors. The policy which we believe

will emerge from the San Francisco Conference—and others to follow—will embody cooperation among all nations for peace.

In Washington's time the Thirteen States were reluctant to give up some of their powers for the benefit of all. Today, there is a temptation to declare that no state, or group of states, can dictate to us in any matter which we consider essential. It is this same political philosophy which has caused the trouble in international relations. Common sense, of the Missouri "show me" brand, should warn us that obviously all states cannot remain supreme in all they choose to do, unless we are willing to accept the cynical view that "might makes right." The only alternative to world-wide anarchy lies in some reasonable form of international organization. This means a happy balance between the rights of individual nations and their obligations to others. This is merely an extension of our local and national practices to the international plane. The way to lasting peace is not easy, nor is the way to personal security easy. As the American philoscpher, Emerson, well stated, "Nothing can bring you peace but yourself. Nothing can bring you peace but the triumph of principles."

In the long run, the same basic philosophy applies to the nations. America must live up to its highest principles, otherwise peace and security become impossible. It is not something we can rationalize. We cannot place this in a test tube and record scientific results. It is in the heart and spirit of our people. It is among those things which made America great.

I wonder if it may not be such wholesome characters as Tom Sawyer and Huckleberry Finn who will, as symbols, show the world our undying contribution to civilization. I do not refer entirely to the literary genius of Sam Clemens but rather to the type of Americans he portrayed so understandingly. They are our people and our lives. I feel that his healthy American characters, with their tolerance, energy, and ambitions, really represent the citizens of our state—frank, industrious, and sympathetic, but, above all, Americans.

Today, American democracy is again at the crossroads. I feel that Americans fully intend to have their say as to the future destiny of mankind on this shrinking planet. Americans never did follow others meekly, but usually were found among the leaders, especially when the public welfare was involved. No matter how grave the post-war problems may be, I am sure that our American sense of proportion and—yes—our sense of humor will see us through to victory. Like the living characters of Mark Twain, we shall continue to do our job with characteristic American energy and enthusiasm. The most pressing problem before us remains the winning of the war at the earliest possible moment. That requires a mighty national effort and a united home front. Surely this is no time for petty, partisan politics. This is a time for greater national unity—for greater sacrifice to our national interests.

Both winning of the war and winning of the peace are not partisan objectives; they are the all-essential American objectives, which must be attained if our country is to continue to exist and prosper.

Let us, therefore, all close ranks and remain closely united.

When the last gun is fired on some remote enemy stronghold, we must still continue the ceaseless crusade for a just and durable peace.

We must dedicate our lives, our fortunes, and our sacred honor to the cause of lasting peace.

This requires patience and persistence, time and tolerance.

When the people of the world fully realize that the public welfare really is the supreme law, we may at last have real peace on earth, and good will toward all mankind.

The Crimea Conference

EXTENSION OF REMARKS

OF

HON. BURTON K. WHEELER

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. WHEELER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Crimea Conference," delivered by me February 27, 1945, and broadcast over the Columbia Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Fellow Americans, in the more than 2 weeks that have elapsed since the declaration of the Crimea Conference was flashed across the world, it has become perfectly clear that this echo of some of the mysteries that were recited within the secret chambers of a Yaltr palace has not stampeded the American people into an unconditional surrender to the results.

In spite of the fact that the press and the radio have barraged the Nation with hysterical hallelujahs of praise, inspired by our playboys and poets in the State Department, it now appears that Mr. and Mrs. America have become so apprehensive as a result of past promises—unfulfilled—that they are now looking over the performances on the international stage with a "you-have-to-show-me" look in their eyes. The American people now know such grave decisions are in the making—both openly and secretly—that what we as a people have got to get straight, and quickly, is what future policies are still possible that will be to America's highest interest and to the hopes of humanity in the years ahead.

This growing uneasiness over the international situation which is reflected in the rapidly growing volume of my mail is only intensified by the violent contradiction in the Crimea report between the lyric splendor of the beautiful and noble words in which it is couched and the ugly impudence of its decisions.

Let us recall for just a moment what was actually decided at Yalta. There was the cynical partition of Poland and what in fact amounts to the recognition of the Moscow-spawned Lublin Government. There was the betrayal of Yugoslavia—and we can only guess at what has happened to Latvia, Lithuania, and Estonia—when we read in the New York Times dispatch of February 25 that only 3 days ago "large groups of armed Communists attempted to overthrow the Rumanian Government and install a Rumanian Soviet." Free elections were promised—but what is a free election without free speech, free press, a free radio—just a mockery—and even these elections obtain only where in the judgment of the Big Three conditions require. There was the determination to partition, dismember, de-industrialize, and enslave the German nation, all in the sweet name of peace. There was final agreement to permit any member of the Big Three to veto action against its own aggression. We are told there was agreement on the principle of trusteeship to be applied to over 600,000,000 colonial peoples. However, in lieu of any specific solution to the war-breeding problem of the British, French, and Dutch imperialism, it simply means that we are going to turn over the subject peoples of Africa, India, and Asia to their old masters. It has been further revealed that at Yalta an agreement was reached which, in effect, established a three-power—I should say one-power—control of the Old World in which we are supposed to be committed to enforcing, policing, and guaranteeing jointly with Rusisa and Britain the post-war settlements in Europe—whatever they may be. All of which provides a shocking violation of the principles of the Atlantic Charter. There are those who believe that the only solution of Europe's troubles is to turn them over to Russia. If that is the object, then we should do it with our eyes open.

Surely we need no more facts now to trace the old pattern of power politics around the world all shined up in new paraphernalia. Surely, we need no more proof than these decisions of the Yalta Conference to conclude that the principle of brute force has now become the criterion of what is right and the basis of all future action in international affairs. For these Yalta decisions are the incredible proofs that the Big Three have agreed to impose their collective will not only on the nations of Europe, but on the nations of Africa and Asia.

Despite attempts to suppress news of the resentment these decisions aroused in Europe, we now know that our own apprehensions are widely shared abroad. For instance, Raymond Daniell, the head of the New York Times' London Bureau, said in his first report on British reaction: "Whatever satisfaction there is tonight or tomorrow in the continued agreement of the major powers will be dissipated in the coming weeks." Concerning the reactions of the small nations of Europe, Mr. Daniell went on to say, "What it all amounts to, in the view of the several small governments in London, is that the big powers have usurped sovereignty over all Europe and have accepted jointly the responsibility of running it, at least until they fall out among themselves." The reaction in France is clearly revealed in General de Gaulle's lamentable snub of President Roosevelt and in a United Press dispatch that "the French press displayed a distinct coolness toward the Big Three decisions." In Italy the reaction was much the same. The United Press stated that "Italian Government quarters were disappointed," and the same source went on to say that "authoritative Vatican quarters expressed anxiety lest the seeds of a future war were sown at Yalta." The premier of the Polish government-in-exile bitterly denounced the Polish decision saying, "The method adopted in the case of Poland was a contradiction of the elementary principles binding the Allies, and constitutes a violation of the letter and spirit of the Atlantic Charter and the right of every nation to defend its own interest."

We do not need to wait for any more crumbs of information to fall from another diplomatic love feast for us to see clearly what these Yalta decisions and reactions mean to us as a people. In the case of Poland it means that for the first time we are a party to a betrayal of one of our allies, and yet Mr. Dean Acheson, Assistant Secretary of State, has recently remarked that, "for the immediate future, the decision on the Polish question was a great achievement," yet this decision is almost identical with the treacherous Molotov-Ribbentrop agreement of 1939 which both England and America so bitterly denounced and over which Britain eventually went to war.

But what concerns me most is that our formal recognition of such an immoral outrage can only contribute further to the bankruptcy of our moral and political credit in Europe and throughout the world. For instance, in Rumania, we have given Russia authority to act directly in our behalf. In Bulgaria our representative on the Allied Commission is an unwilling but helpless stooge of Russian policies which—according to eyewitness accounts—are liquidating, deporting, or terrorizing the helpless population, regardless of whether they were friends

or enemies of the Axis Powers. It must have been to just such a predicament as this that Mr. Stettinius referred when he is reported to have said, "We are virtually the prisoners of our allies."

The British Government has just published a white paper on the Situation in Greece from which I quote: "Ever since the Germans left, the small but well-armed Communist Party has been practicing a reign of terror all over the country. Men, women, and children were murdered here in large numbers and thousands of hostages were taken. * * * Red terror soon leads to white terror." When we realize that at Yalta the decisions that were reached were the result of an abject appeasement of Stalin, we can better picture the grim nature of the struggle that is already going on between Russia and Britain in every country in Europe, toward which we will never be permitted to remain neutral. Furthermore, we now see the Nazi officials and the Nazi press using the Yalta decisions to try to stiffen German resistance, just as they used the Morgenthau proposals, at the cost of thousands of American lives. Even now, we are told by the press that Goebbels and company are engaged in telling the German people, "We told you so. It is far better that we died on the battlefields." While I am sure we all agree with the laudable decision of the Big Three to stand united "to destroy German militarism and nazi-ism" such a declaration becomes nothing but a costly psychological blunder when the Big Three continue to refuse the offer of a democratic and decent alternative to those Germans who are ready and willing to risk their lives to destroy the Hitler tyranny.

These are just some of the decisions we are now being urged to underwrite by accepting the present Dumbarton Oaks proposals. I am now and I have been at all times in favor of a genuinely democratic and international world organization to keep the peace and to prevent future wars. But the agreement at Yalta by the Big Three that their decisions will not even be permitted discussion at the United Nations Conference in San Francisco, compels me to warn the American people that the Dumbarton Oaks proposals—as they now stand—represent nothing more than an international straitjacket—the blueprint of which was drawn up behind the scenes at Moscow, Teheran, and Yalta.

Whatever happens we must never be a party to the enslavement of free peoples by a dictatorship which Mr. Churchill has said, in speaking of communism, "rots the soul of a nation," and which President Roosevelt has declared to be a "dictatorship as absolute as any in the world." I am sure the American people will never commit themselves to suppress, by force of arms, and with the blood of our youth, every future rebellion against such a tyranny.

I am further convinced there are still certain steps the American people can take to arrest and alter the present fatal trends in international affairs. First, if we are to have a genuine spirit of international collaboration there could be no simpler way to obtain it than for our allies immediately to accord our diplomatic, military, and press representatives the same courtesies and privileges we accord to theirs.

Secondly, a United Nations political council should immediately be set up in Europe to include representatives of the peoples whose destinies are now directly involved, with power not merely to talk but to act in the interest of humanity. I know of no other alternative to the domination of Europe by Russia.

Third, this council must be guided and implemented by policies that are directed towards the establishment of a United States of Europe. Again I see no other alternative to a Europe divided against itself and a return to its ancient power politics—this time with England and Russia pitted against each other in a struggle that cannot help but result in another bloody conflict—in which American boys will again be called to give up their lives.

In conclusion, we must throw the full weight of our influence behind a demand that the principles of the Atlantic Charter be incorporated into any future plans for world organization. We must make certain that at least our American representatives at the coming United Nations conference insist upon the alteration and amendment of the present Dumbarton Oaks proposals to bring about the changes that are imperative, if this world is not to be run on the basis of brute force in the hands of a few. If we do not want to see our American way of life and the ideals for which we have fought dragged down into the muck and mire of the Old World's ancient evils and hatreds, and if we do not want our boys to have fought and suffered and died in vain, we must act now in the name of humanity.

The Primacy of the Spiritual

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an address entitled "The Primacy of the Spiritual," delivered by Mr. George E. Stringfellow, vice president of Thomas A. Edison Industries, Inc., on the occasion of his retiring as president of the Kiwanis Club of New York City on January 3, 1945.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today I complete 4 consecutive years of executive work in our club: 2 years as program chairman and 2 years as president. You have been most patient, considerate, and cooperative. It was a pleasure and a rare honor to serve you.

We have with us a relatively large number of new members, whose attention I should like to focus on a few of the fundamental objectives of Kiwanis.

To my mind, the first objective of Kiwanis is to "develop by precept and example a more intelligent, aggressive, and serviceable citizenship." This we are attempting to do through the medium of balanced programs, presenting many sides of controversial subjects.

For example, the Honorable Hamilton Fish, Member of Congress from New York, told us that any aid we might give to the allies meant war; while the Honorable Ernest W. Gibson, United States Senator from Vermont, urged all possible aid to the allies.

Thomas Roy Jones, industry member of the War Labor Board, president of the New Jersey State Chamber of Commerce and president of American Type Founders, Inc., presented management's view of labor and labor organizations. Lew Herrmann, widely known editor and publisher of the New Jersey Labor Herald, told us what labor thinks of management. The Honorable Raymond E. Baldwin, Governor of Connecticut, told us how labor and management could maintain peace in industry.

The Honorable LEVERETT SALTONSTALL, Governor of the Commonwealth of Massachusetts, now Member of the United States Senate, took to task the reactionaries in both parties. The Honorable ERNEST MCFARLAND, United States Senator from Arizona, acknowledged New Dealer, in general gave us the New Deal viewpoint.

Dr. Norman Thomas, well-known advocate of state socialism, presented the reasons why we should support that philosophy of government. Hon. ALBERT W. HAWKES, former president of the United States Chamber of Commerce and now senior United States Senator from New Jersey, outlined the advantages of our capitalistic system and free enterprise.

Sir Norman Angell, widely recognized as a liberal, and recipient of the Nobel peace award, outlined what America must do to help win a lasting peace.

Jewish rabbis, Catholic priests, and Protestant ministers have enriched us by their views on religion.

May I tell you of an experience I had with that great scientific genius of our century, Thomas Alva Edison, of whom it was my good fortune to have been a daily business associate during the last decade of his long and productive life. I once laid before this profound thinker a problem which I could have solved had I applied myself to thinking it through. Having heard my story, the Wizard of Menlo Park pointed to a motto by Sir Joshua Reynolds: "There is no expedient to which a man will not resort to avoid the real labor of thinking."

If our programs have made you think, even though one or more of them may have riled you, they have served a worth-while purpose.

A second objective of Kiwanis is to "provide practical means to form enduring friendships."

One of the important reasons why our Kiwanis Club has grown so rapidly in recent years is to be found in the friendly atmosphere of our meetings. I was impressed 2 years ago by the results of a questionnaire sent to our club members. The answers to this questionnaire indicated that our members rate this friendly atmosphere as more important even than our program activities.

A third objective of Kiwanis is to "render altruistic service to build a better humanity."

Our club has operated a boys' camp for more than 20 years. We Kiwanians have undertaken to build a better tomorrow by giving our boys a better opportunity today. Every summer we give underprivileged boys from the sidewalks of New York a vacation in the country in a fine environment.

In order to improve and increase our facilities, we decided to rebuild that camp. To date, we have raised more than $25,000. To you and to my distinguished and gracious successor, I commend the task of reaching the goal of $50,000.

May I present another objective which ought to receive our attention—that is, cooperation with other service clubs and the American Legion.

I know that members of Rotary and other service organizations rejoice as much as you and I over the improvement in relationships that has developed over the past few years. Now we are in the midst of a cruel war that threatened the very foundation of democracy, which is so precious to all of us. With the problems of post-war reconstruction looming every day, the service clubs of America are beginning to prepare, as they should, for the great challenge that faces us.

Particularly vital are the problems involved in the rehabilitation of the returning veteran. His future is largely in our hands. Our people are determined to be decent, honorable, and generous in helping him integrate himself into our society. And let us not forget that if his future is in our hands tomorrow, our future is in his hands today.

In all of our activities, there is one high purpose which every Kiwanis club must ob-

serve. It is the very atmosphere we breathe—the spirit of Kiwanis—to "encourage the daily living of the Golden Rule in all human relationships; to cooperate in creating and maintaining that sound public opinion and high idealism which makes possible the increase of righteousness, justice, patriotism, and good will."

Indeed, the summary of our objectives is to "give primacy to the human and spiritual rather than to the material values of life." This, I believe, is the heart of every religion. Kiwanis and other service clubs are made up of Catholics, Jews, and Protestants, because these clubs represent segments of America. All three religions are devoted to those objectives which are so precious to Kiwanis.

History shows that every tyrant, in his lust for power recognizes the influence of the church as one of his principal enemies, and therefore sets out to destroy it.

For years, I have felt that one of the great needs of our time is better financial support of our religious institutions, for these are the institutions which give the stamp of character and decency to civilization. I don't see how it is possible for a good Kiwanian to be a poor member of his church.

Because of the hatreds engendered by the cruelties inflicted upon innocent men, women, and children by the ruthless war lords, I believe that the influence of God, the power of religion, and the work of the churches of all faiths will be more necessary in the post-war period than ever before.

If the ideals of Rotary and Kiwanis were universally practiced, this would indeed be a happy world—free from war, free from strife, free from greed and selfishness. In the furtherance of these objectives, I pledge my support to the new administration.

True Facts Regarding Use of Federal Ballot in November 1944 General Election

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. BONNER. Mr. Speaker, since the United States War Ballot Commission filed its report with the Congress, there has been considerable editorial interpretation through the country of the significance of the relatively small number of Federal ballots cast in the November 1944 general election. Some of these interpretations have been wrong, because they were based on a failure to understand the applicable provisions of the Federal Serviceman's Voting Law—Public Law 712, Seventy-seventh Congress, as amended by Public Laws 277 and 418, Seventy-eighth Congress.

It appears that, in the recent election, about 2,700,000 absent servicemen voted by State absentee ballot and about 100,000 absent servicemen voted by Federal ballot.

The most common misapprehensions, based on these figures, have been:

First. That the servicemen, having a free choice between the State absentee ballot and the Federal ballot, preferred to vote by the former; and

Second. That the effective use of State absentee ballots in the November election proved that the claimed need for a Federal ballot, which was so strongly argued in congressional debates last winter, was without foundation.

The facts make abundantly plain that neither of these positions is correct.

SERVICEMEN DID NOT HAVE A FREE CHOICE BETWEEN USING A STATE ABSENTEE BALLOT AND USING A FEDERAL BALLOT

In the recent election, a serviceman could not choose whether he would vote by Federal ballot or by State absentee ballot.

Under the Federal servicemen's voting law, voting by Federal ballot was not an alternative to voting by State absentee ballot. The Federal balloting procedure was a supplementary means of voting. That is to say, a serviceman could not be furnished and vote a Federal ballot, unless he had first tried to obtain and vote a State absentee ballot.

Furthermore, whereas all of the 48 States provided State absentee ballots for use by servicemen of voting age, only 20 States—California, Connecticut, Florida, Georgia, Maine, Maryland, Massachusetts, Michigan, Nebraska, New Hampshire, New Jersey, New Mexico, North Carolina, Oklahoma, Oregon, Rhode Island, Texas, Utah, Vermont, Washington—authorized the use by their absent servicemen of Federal ballots as a supplementary voting procedure. In addition, whereas State absentee ballots were available to servicemen from all 48 States, both inside and outside the United States, Federal ballots were available only to servicemen from these 20 States who were physically outside the United States at the time of voting. Because of these restrictions on the use of the Federal ballot, only about one-fifth of the armed forces of voting age were legally entitled, subject to their prior application for and nonreceipt of a State absentee ballot, to be furnished and vote a Federal ballot.

It is, therefore, an obvious misstatement to say that the relatively small use of the Federal ballot in the recent election demonstrated any preference for State absentee ballots over Federal ballots.

FACTS AS TO VOTING BY STATE AND FEDERAL BALLOT IN THE NOVEMBER 1944 GENERAL ELECTION

In giving the facts as to the number of State absentee ballots and Federal ballots used in the last election, it is necessary to point out that only about half the States have reported a separate count of State absentee ballots cast by servicemen. Ten of these separately reporting States authorized the use of the Federal ballot. It has, therefore, been necessary to estimate the number of State absentee ballots cast in the States which make no separate report. On this basis, it has been widely estimated that about 2,700,000 servicemen from all 48 States voted by State absentee ballot.

With regard to the Federal ballot, which was authorized by 20 States, the United States War Ballot Commission reports that a total of 98,823 Federal ballots were transmitted by the secretaries of state of these States to local election officials for canvassing and counting. The figures for both State—about 2,700,000—and Federal—98,823—ballots include some ballots cast by members of the merchant marine, the exact number of which is not known but is so relatively small that it may be disregarded.

The following estimated figures graphically set forth the basic facts with reference to voting by members of the Army and Navy in the recent election:

A. Servicemen of voting age, at time for voting in election

(1) From all 48 States, located inside and outside United States (100 percent)	9,000,000
(2) From all 48 States, located outside United States (53.5 percent)	4,820,000
(3) From 20 States authorizing Federal ballot, located inside and outside United States (39.3 percent)	3,540,000
(4) From 20 States authorizing Federal ballot, located outside United States (21 percent)	1,890,000

B. Voting by State absentee ballot

(1) By servicemen from all 48 States, located inside and outside United States:	
20 States authorizing Federal ballot	1,012,000
28 States not authorizing Federal ballot	1,674,000
Total	2,686,000
(2) By servicemen from 20 States authorizing Federal ballot, located outside United States	[1] 506,000

[1] No exact figures are available as to how many State ballots were cast by servicemen overseas. This figure (506,000) is 50 percent of the total State ballots cast by absentee servicemen, wherever located, from these 20 States (1,012,000). Actually 53.5 percent of the servicemen from these 20 States are estimated to have been overseas at the time for voting.

C. Voting by Federal ballot

(1) Total Federal ballots received by Secretaries of State of all 48 States	108,962
Less: ballots received in non-authorizing States, ballots prematurely executed, ballots received too late for transmission, or otherwise invalid	9,869
(2) Total F deral ballots transmitted to local election officials in 20 authorizing States	98,823

As shown in the above table, State absentee ballots were available to 9,000,000 servicemen of voting age from 48 States, located inside and outside the United States at the time of voting. A total of 2,686,000, or just under 30 percent, voted by State absentee ballot.

As shown in the above table, Federal ballots were available to 1,890,000 servicemen of voting age from 20 States, located outside the United States at the time of voting. A total of 98,823, or just over 5 percent, voted by Federal ballot. It will be recalled that none of these servicemen could be furnished or vote a Federal ballot, unless they first made oath that they had applied for a State absentee ballot prior to September 1, but had not received it by October 1.

Of this group of 1,890,000 servicemen of voting age from the 20 authorizing

States, located outside the United States, 506,000 voted by State absentee ballot and 98,823 voted by Federal ballot. In other words, one out of each 6 servicemen in this group, who chose to vote in the election, executed and sent in a Federal ballot.

Of course, no one knows how many of these 98,823 Federal ballots were effective as votes. In accordance with section 311 (b) (1) of the Federal serviceman's voting law, no Federal ballot may be counted if a State ballot from the voter arrives in time to be counted, and it is believed that many State ballots executed after Federal ballots were voted did arrive in such time. In accordance with the intent of section 307 (b) (2) of the Federal serviceman's voting law, most servicemen's voting by Federal ballot took place outside the United States before the middle of October.

It is apparent, however, that where the Federal ballot was available for use by servicemen who had not received their State absentee ballots, it had utility as a supplementary means of voting.

RELATIVELY SMALL USE OF FEDERAL BALLOT IS EVIDENCE OF THE COMPLEX RESTRICTIONS UPON THE USE OF THE FEDERAL BALLOT

It is apparent that the Federal ballot was comparatively little used in the recent election, not necessarily because servicemen "preferred the State ballot," but because the Federal ballot's availability for use was greatly restricted and because of the complexity of these restrictions.

In the November election, a serviceman could be furnished a Federal ballot only if he met these conditions:

First. That he had a voting residence in 1 of the 20 authorizing States.

Second. That he was physically outside the United States.

Third. That he made oath that he had applied before September 1 for a State ballot and had not received it by October 1.

The first 2 conditions reduced the potential voters by Federal ballots from 9,000,000 to 1,890,000, 21 percent of the members of the armed forces of voting age.

The third condition further reduced the potential voters by Federal ballot—1,890,000 persons—in accordance with their lack of diligence in making due application for State absentee ballots.

In this last-mentioned regard, many servicemen citizens of the State of Texas were at a particular disadvantage in the recent election. Payment of poll tax in January is a prerequisite to obtaining a Texas State absentee ballot for the general election in November. Many absentee servicemen, not having paid their poll taxes, did not bother to apply for a State absentee ballot, knowing that none would be sent pursuant to such application. Accordingly, they were later not able to meet the condition upon which they could be furnished a Federal ballot; that is, that they had applied to Texas for but had not received a State absentee ballot. Yet Texas was prepared to accept Federal ballots, regardless of nonpayment of poll tax. As a result of this situation, out of 450,000 Texas servicemen of voting age, only about 5,000, or 1.1 percent, voted by State absentee ballot and 17,975—4 percent of all Texas servicemen of voting age, or 7.5 percent of those of voting age overseas—voted by Federal ballot. Had the right of Texas servicemen to vote by Federal ballot not been conditioned upon their making useless application for State absentee ballots, it seems probable that many thousand more would have requested and voted by Federal ballot.

In his statutory report to the United States War Ballot Commission, the Secretary of War commented upon this compexity of the Federal ballot—paragraphs 25b and 26:

> The Federal ballotting procedure provided in title III is excessively complex. The use of the Federal ballot is restricted to certain persons from certain States, and the Army is specifically prohibited from furnishing the Federal ballot to any other persons. To appreciate the complexity of these restrictions, it is only necessary to read section 302 of the statute. The mere statement of the restrictions requires 32 printed lines. Yet even as thus fully stated, the restrictions must be implemented by certifications of the Governors of 48 States. It is not possible, with accuracy, to make a simple statement to soldiers of the applicability of title III. Accordingly, despite detailed instructions * * *, confusion resulted in 1944 in the minds of soldiers and soldier-voting officers. Furthermore, many soldiers were not sufficiently interested in voting, particularly in far distant or in static theaters, to make any particular effort to vote.
>
> Because of its complexity, title III laid upon the services, while engaged in military and naval operations of the first magnitude, administrative burdens which appear disproportionate to any resulting utility. In addition to having to provide sufficient Federal balloting units to company levels all over the world to meet an estimated potential of voters in each organization, it was necessary to print and similarly distribute three soldier-voting posters in 140,000 copies each. Furthermore, half of each soldier-voting manual was devoted to the Federal procedure. The time and effort employed by already busy officers and men overseas in the global distribution of these units, posters, manuals, etc., to every company, detachment, and vessel outside of the United States, and in the actual administration of title III cannot be readily measured. Perhaps as much as 75 percent of the time employed by overseas soldier-voting personnel in voting administration was of necessity spent on the Federal ballot, which was used by less than 2 percent of the soldiers overseas of voting age. It was estimated by the second largest overseas theater that about 30,000 man-hours were devoted, in addition to regular full-time military duties, to administering the Federal balloting procedure; and in this theater only 7,154 Federal ballots were executed. And, as stated above, a large percentage of those who voted by Federal ballot later received, voted, and sent in their State absentee ballots, further reducing the effective use of the Federal ballot.

For these reasons, the Secretary of War in his report raised question whether the Federal ballot, as now provided under title III of the statute, was of sufficient utility to justify its continuance as a voting procedure in time of war.

CHANGES MADE IN STATE VOTING LAWS SINCE THE CONGRESSIONAL DEBATES IN 1944 RENDERED STATE BALLOTS CAPABLE OF EFFECTIVE USE BY ABSENTEE SERVICEMEN IN THE NOVEMBER ELECTION

The second mistaken conclusion drawn from the relatively small number of Federal ballots cast in the November election has been that the effective use of State absentee ballots in that election demonstrated that the claim for a need of a Federal ballot, which was so strongly argued in congressional debate last winter, was unfounded. This conclusion entirely disregards the fact that 38 State legislatures in sessions during the winter and spring of 1944 modified their State absentee voting laws so as to make them more readily utilizable by servicemen voters.

In his statutory report to the United States War Ballot Commission, the Secretary of War commented on these beneficial changes in State absentee voting laws—paragraph 25a:

> Most servicemen who desired to vote were able to obtain, vote, and return their State absentee ballots, leaving relatively few who needed to (or legally could) use the supplementary Federal procedure. At the time when Congress was debating the measures which led to Public Law 277 such a result would not have been possible under then existing State laws. But during and after January 1944 those State laws were radically changed in 38 State legislative sessions so as to make them in the main capable of being effectively used by servicemen.

Two principal difficulties with the effective use by absentee servicemen of State absentee ballots under State laws as they existed in January 1944, when the congressional debates were occurring, concerned: first, State law requirements that the absentee serviceman make application for a State absentee ballot on a specially supplied State form rather than on the Federal post-card application supplied to servicemen by the services; and second, insufficient time interval under State law for the absentee serviceman to obtain, execute, and return his State absentee ballot.

First. Under State laws in effect in January 1944, 18 States required the soldier to make application for a State-absentee ballot on a special State-supplied form, and 4 States made no provision for absentee voting in the general election. This meant that servicemen from these 18 States were involved in 5 steps in obtaining and voting a State ballot—request for form; transmission of form; return of executed form; transmission of blank ballot; return of executed ballot. After the State legislatures had met, the laws of 47 States authorized the use by absent servicemen of the Federal post-card application as an application for a State-absentee ballot. In these 47 States, accordingly, the serviceman was thereafter involved in only 3 steps in obtaining and voting by State ballot—application for ballot; transmission of blank ballot; return of evacuted ballot. It was still true, of course, that the several States fixed different dates on or before which they would receive such applications, on which they would first mail out State-absentee ballots, and on or before which the executed State-absentee ballots must be received back within the State in order to be eligible to be counted.

Second. Under State laws in effect in January 1944, the so-called critical time interval was too short in numerous

States to permit many absentee servicemen overseas to obtain, execute, and return their State-absentee ballots in time to be eligible to be counted, even assuming the most expeditious air carriage. The critical time interval is the number of days between the earliest date the ballot will be sent out by a State to an applicant and the last date the executed ballot must be received back in the State to be eligible to be counted. The following table graphically illustrates the striking changes made after January 1944 by the State legislatures in the length of the critical time intervals under their respective laws:

"Critical time interval"	State laws in effect at Jan. 7, 1944	State laws in effect at date of voting in general election
1 to 19 days	7	1
20 to 24 days	7	1
25 to 34 days	13	1
35 to 44 days	6	4
Under 45 days	32	7
45 days and over		41
No provision for absentee voting or uncertain	7	0
Total	48	48

Without reviewing other changes made by the States in their absentee-voting laws, after the date of the congressional debates and prior to the time for voting in the November 1944 general election, it is apparent at once that the changes above referred to radically changed the utility of State absentee-voting procedures to very many servicemen overseas and rendered voting by State absentee ballot a feasible procedure where in many instances it had been impossible of use.

It is obvious that as the States cooperatively improved their absentee-voting laws, as a result of the congressional debates in January and February 1944, and in accordance with the recommendations of the Congress set forth in title II of Public Law 277, the need for the Federal ballot as originally proposed, and even as later modified, progressively diminished.

However, it is equally obvious that a simple Federal ballot, available to servicemen from States authorizing its use who have for one reason or another not received their State absentee ballots, has utility as a supplementary voting procedure.

Utilization of Manpower Resources and Strikes

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD three short editorials from North Carolina newspapers dealing with the work-or-fight bill and strikes in essential war industries. These represent the thought of the American people with reference to the vital issues now before the Congress.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From Charlotte Observer of February 25, 1945]

THIS IS BASIC

Senator BURNETT MAYBANK, of South Carolina, has dared to make the remark in connection with the proposed work-or-else bill that employees who violate its terms should be held by law to be equally guilty with employers who disregard its proposed provisions.

"All Americans," said Senator MAYBANK, "should be treated alike."

We had rather been taught to believe that treating everybody alike was basic and fundamental in a democracy.

"Equal rights to all, special privileges to none," is a classic expression of the core and meaning of democratic action and of democratic government.

But, unhappily, we seem to have gotten other notions in our heads.

Lots of Federal laws have been written the last 10 years which are clearly designed to give certain groups rights and privileges which are denied other groups.

The Senate Military Affairs Committee has produced a milk-and-water hodgepodge of a work bill which would impose upon employers all the punishment for its violation, but no punishment at all upon employees who may be equally guilty under this same law.

Senator MAYBANK doesn't like that sort of discrimination. No American who has any love for the democracy of his country or hope for its survival should like it.

[From Greensboro News of February 26, 1945]

BIG VOID STILL THERE

If the Senate Military Affairs Committee had been deliberately trying to draft a work-or-fight bill most likely to draw opposition from all sides and deserving of defeat accordingly, it could not have done better than bring out the version of this measure which it has brought out.

First off, the Senate measure is one-sided and discriminatory, legislation of the sort that the country already has too much of. And in that one-sidedness it moves over into the realm of ineffectuality. In marked contrast to the House bill, which penalizes workers who leave essential jobs without their draft board's permission or who refuse to leave their present jobs for more essential work, the Senate version would shift these penalties to the employers who disregarded War Manpower Commission employment ceilings or hired new workers in defiance of W. M. C. orders.

The weakness of that change of emphasis is immediately seen. Employers are already on the spot and can be handled by imposition of sanctions by W. P. B., O. D. T., W. M. C., and what-not. But there is nothing that can be done about employees who quit, or who refuse to transfer; and the Senate bill leaves that void just as big as it ever was. Now, if conferees from House and Senate should get together and decide that punitive provisions of the statute should apply to both groups, employers and employees, that would be something else.

The biggest industrial issue before the country right now is the annual show-down between John L. Lewis and the Government of the United States, as the existing contract between Lewis' United Mine Workers and the Nation's coal producers expires April 1 and already the preliminaries for a first-class scrap are clearly discernible.

Where in the Senate work-or-fight bill is anything that will keep the mines going along about April 1 and John L. Lewis from thumbing his nose at any such directives as employers are ordered to obey upon penalty of stiff fine and/or imprisonment?

[From Wilmington Star-News of February 25, 1945]

SERVICEMEN AND STRIKES

The views of American soldiers and sailors on industrial strikes are pretty well known. They've been expressed often but seldom as well as in the following story and poem which appeared recently in the Seattle Post-Intelligencer:

Right after Pearl Harbor, two buddies in navy blues out there in the South Pacific saw only "Strikes, strikes, strikes for more pay, shorter hours, or some darn thing" when they read the newspapers from home.

One of the buddies—Ship's Cook (2d cl.) Fred E. Truman, of somewhere in Wyoming—in one of his free moments, dashed off a poem that told his reaction.

The other buddy—Chief Commissary Steward C. Lotti, of San Bernardino, Calif.—who felt the same way about the strikes "back home in the States" folded the clipping (after the poem was printed) in his wallet.

A year later, in 1942, Truman, the author of the poem, was killed in action on a destroyer when he was manning a gun.

Yesterday, Lotti, who is temporarily stationed in Seattle, read of the shipyard strike.

"It made me mad," he said last night, when he brought the copy of his buddy's poem to the Post-Intelligencer.

"Out there in the Pacific, we didn't have time to think about wages or hours. We had other things to worry about. Our lives, for instance, and the lives of those around us. We were lucky, sometimes, if we could find time to eat."

He tenderly refolded the clipping and placed it back in his wallet.

"Thank you for reading it," he said, "I just had to bring it in."

FOR THOSE WHO STRIKE

It seems so childish and so cruel, too,
To call a strike, while life's blood drains away
From veins of some young boy, whose lips turn blue
Along red fringes of an acrid day.
Who are these puny gnats with twisted souls,
That drop their tools of toil, while some lad bleeds
Upon a reef of jagged coral shoals,
Or in a jungle muck among tall reeds.

Our boys are dying there, yet human worms,
Who shape the destiny of toiling hands,
Dictate a strike, while in some foxhole squirms
The lad who keeps war distant from our lands.
A safe and well-fed picket walks the street—
Unfit to kiss some boy's war-shattered feet.

—*Fred E. Truman.*

Speech of Winston Churchill on the Yalta Conference

EXTENSION OF REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. RANKIN. Mr. Speaker, under permission granted me to extend my re-

marks in the RECORD, I am inserting an address on the Yalta Conference delivered by Prime Minister Winston Churchill before the British House of Commons on Tuesday, February 27, 1945.

The address referred to follows:

The recent conference in the Crimea faced realities and difficulties in so exceptional a manner that the results constitute an act of state on which Parliament should formally express its opinion.

The Government feel that they have the right to know where they stand with the House of Commons. A strong expression of support by the House will strengthen our position among the Allies. The intimate and sensitive connection between the executive government and the House of Commons will thereby be made plain, thus showing the liveliness of our democratic institutions and the subordination of ministers to parliamentary authority.

The House should not shrink from its duty of pronouncing. We live in a time when the quality of decision is required from all who take part in our public affairs. In this we also see the firm, tenacious character of the present Parliament and generally of our parliamentary institutions, emerging as they do fortified from storms of wars, and they will be made manifest.

We have therefore thought it right and necessary to place a positive motion on paper in support of which I should like to submit facts and arguments to the House as the opening of this 3 days of debate.

The difficulties of bringing about a conference of the three heads of government of the principal allies are only too obvious. The fact that, in spite of all modern methods of communication, 14 months elapsed between Teheran and Yalta, is a measure of those difficulties. It is well known that the British Government greatly desired a triple meeting in the autumn. We rejoiced when at last Yalta was fixed.

UNITED STATES-BRITISH MEETING EN ROUTE

On the way there the British and United States delegations met at Malta to discuss the wide range of our joint military and political affairs. The Combined Chiefs of Staff of the two countries were for 3 days in conference upon the great operations now developing on the western front and upon plans against Japan that it was appropriate to discuss together.

The Foreign Secretary, accompanied by high officials and assistants—some of whom unfortunately perished on the way—also met Mr. Stettinius there. On the morning of the 2d a cruiser which bore the President steamed majestically into the battle-scarred harbor.

The meeting of the Combined Chiefs of Staffs was held in the afternoon, at which the President and I approved proposals which had been so carefully worked out in the preceding day for carrying out joint war efforts to the highest pitch and for the shaping and timing of military operations.

Meanwhile the Ministry of War Transport and American authorities concerned had been laboring on a vessel all to themselves at the problems of shipping which govern our efforts at the present time and which affect employment and the reserve of oil, food, munitions, and troops.

On all of these matters complete agreement was reached—very difficult complicated matters, like making an international Bradshaw in which the times of all trains have to be varied if half a dozen unforeseen contingencies arise.

No hard and fast agreements were made on any of the political issues. Those naturally were to form the subject of the triple conference and they were carefully kept open for the full meeting.

The reason why shipping is so tight at present is because the peak period of the war in Europe has been prolonged for a good many months beyond what was hoped for last autumn and meanwhile the peak period against Japan had been brought forward by American victories in the Pacific.

But instead of one peak period fading out or dovetailing into another, there is an overlap or double-peak period in two wars which we are waging together on opposite sides of the globe.

SHIPPING SHORTAGE GREAT

Though for a couple of years our joint losses by U-boats have ceased to be an appreciable factor in our main business and although the shipbuilding output of the United States flows on gigantically and although the Allies have today far more shipping than they ever had at any time previously during the war, we are, in fact, more hard pressed by shipping shortages than ever before in the war.

The same double peak of war effort, of course, affects all of our preparations for a turnover to peace, including housing and much needed supplies for civilians.

All of these facts call for most stringent and searching economies on the military side, where indulgence or miscalculation or extravagance of any kind is grave injury to the common cause.

They also lamentably hamper our power to provide for the dire needs of liberated territories. I am not prepared to have this island cut below its immediate safety reserves of food and oil except in cases where sure and speedy replacement can be made. Subject to this, we shall do everything in our power to help the liberated countries.

It is easy to see the rigorous character of discussions which Lord Leathers, who is highly competent in these matters, has conducted on our behalf, and we may be satisfied today with a fair and friendly distribution of the burden and hardship which has been agreed upon between Great Britain and the United States over the whole field of the interallied shipping pool.

There were diplomatic conferences proceeding on one vessel, military discussions proceeding on another, and there was this long business of shipping going forward on a third vessel. Then, at the end, the President arrived and the results were submitted to him and to me.

I kept in touch with what was going on and we jointly approved all these matters, on which action is immediately being taken. After that we all flew safely from Malta to airfields in the Crimea and motored over the mountains, about which very alarming accounts had been given but which proved to be greatly exaggerated.

We found shelter on the southern shores of Crimea, which, protected by mountains behind them, form the beautiful Black Sea Riviera and where there still remain undestroyed by the Nazis a few of the villas and palaces of the vanished imperial and aristocratic regime.

By extreme exertions and every form of thoughtfulness and ingenuity our Russian hosts restored these dwellings to good order and had provided for our accommodation and comfort in the true style of Russian hospitality.

In the background were precipices of mountains and beyond them devastated fields and shattered buildings of Crimea, twice crossed by armies which surged in deadly combat. Here on this shore we labored for 9 days and grappled with many problems, while friendship grew.

WHY FRANCE WAS LEFT OUT

I have seen criticisms in this country that France was not invited to participate in the conference at Yalta. The first principle of British policy in western Europe is a strong France and a strong French Army. It was, however, felt by all three great powers assembled in the Crimea that while they were responsible for bearing to an overwhelming degree the main brunt and burden of the conduct of the war and the policy intimately connected with the operations, they could not allow any restriction to be placed on their right to meet together as they deemed necessary in order that they might effectively discharge their duties to the common cause.

This view does not, of course, exclude meetings on the highest level to which other powers will be invited. France may, therefore, find many reasons for contentment with the Crimea decisions. Under these decisions France is to be invited to take over a zone of occupation in Germany which we will immediately proceed to delimit with her, and to sit on the Allied Control Commission in Germany, which will regulate the whole affairs of the country after unconditional surrender has been obtained.

France is to be invited to join the United States, the United Kingdom, the Union of Socialist Soviet Republics, and China in sponsoring invitations to the San Francisco Conference, which has been arranged for April 25 this year. She is invited to join the United States, the United Kingdom, and the Soviet Union in operating the procedure laid down in the declaration of liberated Europe.

She is also a member of the European Advisory Commission, to which most of the important tasks have been relegated—including advice to the governments upon the most important matters connected with the treatment of Germany—and which with French assistance has already completed in great detail all the terms upon which unconditional surrender will be received and accepted. Everything is provided for in that sphere.

FOE'S COLLAPSE PREPARED FOR

If we were confronted tomorrow with the collapse of German power there is nothing which has not been foreseen and arranged beforehand by this important European Advisory Commission, consisting of Mr. Winant, Ambassador Gousev, and Sir William Strang of the Foreign Office, which is also to advise us on various matters connected with Germany apart from the actual taking over by our military authorities.

All these arrangements show clearly the importance of the role which France is called upon to play in the settlement of Europe and how fully it is realized she must be intimately associated with the other great powers in this task.

In order to give a further explanation of the proceedings of the conference, we invited M. Bidault, French Minister of Foreign Affairs, to visit London at the earliest opportunity. He was good enough to come, and during the last few days we have had the pleasure of a series of clarifying talks with him in which he has been able to become fully informed of the whole position and to express in the most effective manner the views and wishes of France upon it.

Of the world organization there is little I can say beyond what is contained in the report of the conference and, of course, in the earlier reports which emanated from Dumbarton Oaks. At the Crimea the three great powers agreed on the solution of a difficult question of voting procedure to which no answer had been found at Dumbarton Oaks.

Agreement on this vital matter has enabled us to take the next step forward in the setting up of a new world organization, and arrangements are in hand for the issue of invitations to the United Nations conference, which, as I have said, will meet in a couple of months at San Francisco.

I wish I could give the House the full particulars of the solution of this question of voting procedure to which representatives of the three great powers, formerly in disagreement, have now wholeheartedly agreed to. We thought it right, however, that we should consult both France and China and should endeavor to secure their acceptance before the formula was published. For the moment, therefore, I can only deal with the matter in general terms.

DIFFICULTY TO BE FACED

Here is the difficulty which has to be faced. It is on the great powers that the chief burden of maintaining peace and security will fall. A new world organization must be so framed as not to compromise their unity or their capacity for effective action if it is called for at short notice. At the same time a world organization cannot be based on a dictatorship of the great powers.

It is their duty to serve the world and not to rule it. We trust that the voting procedure on which we agreed at Yalta meets these two essential points and provides a system which is fair and acceptable, having regard to the evident difficulties which will meet anyone who gives prolonged thought to the subject.

The conference at San Francisco will bring together upon the invitation of the United States, of Great Britain, of the British Commonwealth, of the Union of Soviet Republics, of the Provisional Government of the French Republic and the Republic of China, all those representatives of the United Nations who have declared war upon Germany and Japan by the first of March 1945, and who have signed the United Nations Conference declaration.

Many are declaring war or have done so since Yalta and their act should be treated with respect and satisfaction by those who have borne the heat and burden of the day. Our future will be consolidated and enriched by the participation of these powers together as founder members. We should all take the opening steps to form a world organization to which it is hoped ultimately and in due course all states will belong.

It is to this strongly armed body we look to prevent wars of aggression, or preparation of such wars, and to enable disputes between states, both great and small, to be adjusted by peaceful and lawful means, by persuasion, by pressure of public opinion, by legal methods and eventually by another category of methods which constitute principles of this new organization.

UNITED STATES IN NEW LEAGUE

The former League of Nations, which was so hardly used and found to be inadequate for the tasks it attempted, will be replaced by a far stronger body in which the United States will play a vitally important part. It will embody much of the structure of the characteristics of its predecessor. All the work that was done in the past, all the experience that has been gathered by the working of the League of Nations, will not be cast away; but the new body will differ from it in the essential point that it will not shrink from establishing its will against the evil doer or the evil planner in good time and by the force of arms.

This organization, which will be capable of continuous progress and development, is at any rate appropriate to the phase into which the world will enter after the present enemies have been beaten down, and we may have good hopes—and more than hopes, a resolute determination—that it shall shield humanity from the third renewal of its agony.

We have all been made aware in the interval between the two world wars of weaknesses of international bodies whose work is seriously complicated by the misfortune which occurred in building the Tower of Babel. Taught by bitter experience, we hope now to make the world conscious of the strength of the new instrument and of the protection which it will be able to afford to all who wish to dwell in peace within their habitations.

This new world structure will, from the outset and in all parts of its work, be aided to the utmost by the ordinary channels of friendly diplomatic relations, which it in no way supersedes. We are determined to do all in our power to insure the success of the conference.

On such an occasion it is clearly right that the two leading parties of His Majesty's Government and the British Nation should be represented and, as all parties are bound for the future in this decision, I am glad to inform the House that His Majesty's chief representatives at this conference will be the Secretary for Foreign Affairs and the Lord President of the Council and leader of the Labor Party.

I, myself, am anxious that this principle should be established even in what are perhaps the closing stages of this memorable coalition. I am anxious that all parties should be united in this new instrument so that this supreme force should be, in Mr. Gladstone's words, high and dry above the ebb and flow of party politics—I have not verified that quotation and I ask for indulgence if I should prove to have made any slip.

WHAT IMPENDS FOR GERMANY

The Crimea Conference finds the Allies more closely united than ever before, both in the military and political sphere. Let Germany recognize that it is futile to hope for divisions among the Allies and that nothing can avert her utter defeat. Further resistance will only be cause of needless suffering.

The Allies are resolved that Germany shall be totally disarmed; that nazi-ism and militarism in Germany shall be destroyed; that war criminals shall be tried justly and quickly punished; that all German industries capable of military production shall be eliminated or controlled; and that Germany shall make compensation in kind to the utmost of her ability for damage done to Allied Nations.

On the other hand it is not the purpose of the Allies to destroy the people of Germany or to leave them without the necessary means of subsistence. Our policy is not revenge, but to take such measures as may be necessary to secure the future peace and safety of the world. There will be a place one day for Germans in the community of nations, but only when all traces of nazi-ism and the military have been effectively and finally extirpated.

In the general plan there is complete agreement. As to measures to give effect to it, there is much which still remains to be done. Plans for the Allied Control Commission will come into operation immediately on the defeat of Germany. On the longer-term measures there are many points of great importance on which detailed plans have yet to be worked out between the Allies.

It would be a great mistake to suppose that questions of this kind can be thrashed out and solutions found for all the many intractable and complex problems involved while the armies are still on the march, and to hurry and press matters of this kind might well be to risk causing disunity between the Allies.

Many of these matters must await the time when the leaders of the Allies, freed from the burdens of direction of the war, can turn their whole or main attention to the making of wise and far-seeing peace, which will, I trust, become the foundation for greatly facilitating the work of the world organization.

QUESTION OF POLAND

I now come to the most difficult and agitated part of the statement I have to make to the House—the question of Poland.

For more than a year past and since the tide of war has turned so strongly against Germany the Polish problem has been divided into two main issues—frontiers of Poland and the freedom of Poland. The House is well aware from the speeches I have made to them that freedom, independence, integrity, and sovereignty of Poland have always seemed to His Majesty's Government more important than the actual frontiers.

To establish a free Polish Nation with a good home to live in has always far outweighed in my mind the actual tracing of a frontier line or whether those boundaries should be shifted on both sides of Poland farther to the west.

The Russian claim, first advanced at Teheran in November 1943, has always been unchanged for the Curzon line in the east, and the Russian offer has always been that ample compensation should be gained for Poland at the expense of Germany in the north and west.

All these aspects are tolerably well known. The foreign secretary explained in detail last December the story of the Curzon line. I have never concealed from the House that, personally, I think the Russian claim to it is just and right.

If I champion this frontier for Russia it is not because I bow to force; it is because I have believed in the fairest division of territory that can in all circumstances be made between two countries whose history has been so checkered and intermingled.

The Curzon line was drawn in 1919 by an expert commission on which one of our most distinguished foreign representatives of those days, Sir Eyre Crowe, was a member. It was drawn at a time when Russia had few friends among the Allies. Indeed, I may say she was extremely unpopular. One cannot feel that either circumstances or personalities concerned would have given undue favor to Soviet Russia. They just tried to find out what was the right and proper line to draw. The British Government of those days approved this line, including of course, the exclusion of Lwow from Poland.

TWO THINGS TO REMEMBER

Apart from all that has happened I cannot conceive we should not regard it as a well-informed and fair proposal. There are two things to be remembered in justice to our great ally. First, I can look back to August 1914, when Germany first declared war against Russia under the Czar. In those days Russia's frontiers on the west were far more spacious than those Soviet Russia is now asking after all her sufferings and after all her victories.

The Russian frontiers included all Finland and the Warsaw salient stretching to within 60 miles of Breslau. Russia is, in fact, accepting a frontier which over immense distances is 200 or 300 miles farther to the east of that which was Russian territory and had been for many generations under the Czarist regime.

Marshal Stalin told me one day that Lenin objected to the Curzon Line because Bialystok and regions around it were taken from Russia. Marshal Stalin and the modern Soviet Government make no such claim and freely agree to that view taken by the Allied Commission in 1919, that the Bialystok region should go to Poland because of the Polish population predominating there.

A line is not a frontier. If it is a frontier it has to be surveyed and traced on the ground and not merely cut in on a map by pencil and ruler. When we were at Moscow in October Marshal Stalin made this point to me and told me he thought there might be deviations of 8 to 10 kilometers in either direction to follow the course of streams or hills or actual sites of particular villages. It seems to me this was an eminently sensible way of looking at the problem.

However, when we met at Yalta the Russian proposal was changed. It was made clear that all such minor alterations would be at the expense of Russia and not at the expense of Poland in order that the Poles might have their minds set at rest once and for all and that there should be no further discussion about that part of the business. We welcomed the Soviet proposal.

We must regard these things as part of one story. I have been through the whole story since 1911, when I was sent to the Admiralty to prepare the fleet for the impending German war. In its main essentials it seems to be one story of a 30-year war in which the British, Russians, Amer-

icans, and French have struggled to their utmost to resist German aggression, which caused the most grievous sacrifices to all of us, but none more frightful than to the Russian people, whose country has been twice ravaged over whole areas and whose blood has been poured out in tens of millions of lives in the common cause now reaching its final accomplishment.

POLAND SAVED BY RUSSIA

There is a second reason which appears to be apart from this sense of continuity which I feel. But for the prodigious exertions and sacrifices of Russia, Poland was doomed to utter destruction at the hands of the Germans. Not only Poland as a state and nation, but the Poles as a race were doomed by Hitler to be destroyed or reduced to a servile state.

Three and a half million Polish Jews are said to have been actually slaughtered. It is certain that enormous numbers have perished in one of the most horrifying acts of cruelty—presumably the most horrifying act of cruelty—which have ever darkened the passage of man.

When the Germans clearly avowed their intention of making the Poles a subject and lower-grade race under the Herrenvolk, suddenly, by a superb effort of military force and skill, Russian armies in little more than 3 weeks—since in fact we spoke on these matters here—have advanced from the Vistula to the Oder, driving the Germans in ruins before them and freeing the whole of Poland from the foul cruelty and oppression under which the Poles were writhing.

In supporting the Russian claim for the Curzon line I repudiate and repulse any suggestion that we are making a questionable compromise or yielding to force or fear, and I assert with the utmost conviction the broad justice of the policy upon which, for the first time, all the three great allies have now taken their stand.

Moreover, the three powers have now agreed that Poland should receive a substantial accession of territory both in the north and west. In the north she will certainly receive in place of the precarious corridor the great city of Danzig and the greater part of East Prussia west of Koenigsberg and south, and a long wide sea front on the Baltic.

In the west she will receive the important industrial province of Upper Silesia and in addition such other territories to the east of the Oder as may be decided at the peace settlement to detach from Germany after the views of a broadly based Polish Government have been ascertained.

Thus it seems to me that this talk of cutting half of Poland off is very misleading. In fact, the part which is to be east of the Curzon line cannot in any case be measured by its size. It includes the enormous dismal region of the Pripet Marshes which Poland held between two wars and it exchanges for that far more fertile and developed land in the west from which a very large proportion of the German population have already departed.

NO SEED OF FUTURE WARS

We need not feel that the task of holding these new lands will be too heavy for Poland, or that it will bring about another German revenge, or that it will—to use a conventional phrase—lay the seed of future wars. We intend to take steps far more drastic and effective than those which followed the last war, because we know much more about this business so as to render all offensive action by Germany impossible for generations to come. Finally under a world organization of nations great and small, victors or vanquished will be secure against aggression by indisputable law and overwhelming international force.

The published Crimea agreement is not a ready-made plan imposed by the great powers on the Polish people. It sets out the agreed view of the three major allies on means whereby their common desire to see established a strong, free, independent Poland may be fulfilled in cooperation with the Poles themselves and whereby a Polish Government which all the United Nations can recognize may be set up in Poland, which will become for the first time a possibility now that practically the whole country has been liberated by the Soviet armies.

The fulfillment of the plan will depend upon the willingness of all sections of democratic Polish opinion in Poland or abroad to work together to give it effect. But the plan should be studied as a whole and with the main common objective always in view. The three powers are agreed that the acceptance by the Poles of the provisions of the eastern frontiers, and so far as now can be ascertained on the western frontiers, is an essential condition of the establishment and future welfare of a strong, independent, homogeneous Polish state.

The proposals on the frontiers are in complete accordance, as the House will remember, with the views expressed by me in Parliament on behalf of the British Government many times during the past year. I ventured to make announcements upon this subject at a time when a great measure of agreement was not expressed by other important parties to the affair.

The eastern frontier must be settled now if the new Polish administration is to be able to carry on its work in its own territory and to do this in unity with the Russians who are behind their fighting front.

The western frontiers, which will involve substantial accession of German territory to Poland, cannot be fixed as part of the whole German settlement until after the Allies have occupied German territory and until after a fully representative Polish Government has been able to make its wishes known.

It would be a great mistake to press Poland to take a larger portion of these lands than is considered by her and her friends and allies to be within her compass to man, to develop, and, with the aid of the Allies and the world organization, to maintain.

CASE PUT UP TO THE COMMONS

I have now dealt with the frontiers of Poland. I must say I think it is a case which I can confide with the greatest of confidence to the House of Commons—to take an impartial line drawn long ago in which the British commission took a leading part, the moderation with which the Russians have strictly confined themselves to this line, the enormous sacrifices they have made and the sufferings they have undergone, the contribution they have made to our present victory, the great victory in which Poland has a vital interest to have complete agreement with her powerful neighbor to the east—when you consider all these matters and the way they have been put forward and the temperate, patient manner in which they have been put forward and discussed, I have rarely put a case in this House which I could commend more confidently to the good sense of members of all parties.

Even more important than the frontier of Poland within limits now disclosed is the freedom of Poland. The home of the Poles is settled. Are they to be masters in their own house? Are they to be free, as we in Britain or the United States or France are free? Is their sovereignty and independence to be untrammeled, or are they to come to the mere protection of the Soviet state, forced against their will by an armed majority to adopt a Communist or totalitarian system? I am putting the whole case now. This is a touchstone far more sensitive and vital than the drawing of frontier lines. Where does Poland stand and where do we all stand on this?

A most sovereign declaration has been made by Marshal Stalin and the Soviet Union that the sovereign independence of Poland is to be maintained, and this decision is now joined in by Great Britain and the United States. Here also a world organization will in due course assume a measure of responsibility. Poles will have their future in their own hands with the single limitation that they must honestly follow in harmony with their allies a policy friendly to Russia.

The procedure which the three great powers have united to adopt to achieve this vital aim is set forth in unmistakable terms in the Crimea declarations. The agreement provides for consultations with a view to the establishment in Poland of a new provisional government of national unity, with which the three major powers can all enter into diplomatic relations instead of some recognizing one Polish government and the rest another—a situation which, if it had survived the Yalta Conference, would have proclaimed to the world disunity and confusion. We had to settle it, and we settled it there.

NO BINDING RESTRICTIONS

No binding restrictions have been imposed on the scope and method of these consultations. The British Government intend to do all in their power to insure that they shall be as wide as possible, and representative Poles of all democratic parties are given full freedom to come and make their views known.

Arrangements for this are now being made in Moscow by a commission of three, comprising Mr. Molotov and Mr. Harriman and Sir Archibald Clark-Kerr, representing the U. S. S. R., the United States, and Great Britain, respectively.

It will be for the Poles themselves, with such assistance as the Allies are able to give them, to agree upon the composition and constitution of the new Polish Government of national unity. Thereafter His Majesty's Government, through their representatives in Poland, will use all their influence to insure that the free election to which the new Polish Government will be pledged shall be fairly carried out under all proper democratic safeguards. Our two guiding principles in dealing with all these problems on the Continent and with liberated countries have been clear.

While the war is on we will give aid to anyone who can kill a Hun. When the war is over we will look to the solution of free, unfettered, democratic elections. These are the two principles which this coalition government has applied to the best of its ability to the circumstances in this infinitely tangled and varied situation.

[At this point Lord Dunglass, Conservative, interposed: "Very much depends on the interpretation which the Prime Minister is now putting on these words. Can he perhaps develop this a little more? For instance, is there going to be for some time some kind of international supervision? His interpretation will make a great difference in many places."]

We will have to wait until the new Polish Government is set up and see what are the proposals they will make for the carrying out of this free, unfettered election to which they will be pledged and to which we are pledged by the responsibility we assume. But I have not finished yet on this point and it may be that some further words of mine may give comfort to the noble lord. I should be sorry if I cannot persuade him that the course we have adopted is simple, direct, and trustworthy.

The agreement does not so far affect the recognition of His Majesty's Government of the Polish Government in London. This will be maintained until such time as His Majesty's Government considers that the new provisional government has been properly formed in Poland in accordance with the agreed provision. Nor does it involve a previous or immediate recognition by His Majesty's Government of the present provisional government which is now functioning in Poland.

LONDON POLES DEAF TO ADVICE

But let me remind the House and those honorable Members who undertake the honorable task of being careful that our affairs

in Poland are regulated in accordance with the honor and dignity of this country, that I have no quarrel with them. We ought to make known all the facts, which I hope will clear away any difference that there is between us. But there would have been no Lublin committee or Lublin provisional government if the Polish Government in London had accepted our faithful counsel of a year ago.

They would have entered into Poland as its actual government. They would have entered with the liberating armies of Russia. Even in October, when the foreign secretary and I toiled day and night in Moscow, Monsieur Mikolajczyk could have entered Poland with Marshal Stalin's friendship and become prime minister of a more broadly constructed government which could now be set up at Warsaw, or wherever, in view of the ruins of Warsaw, the center of government is placed. But these opportunities were cast aside and meanwhile complete expulsion of Germans from Poland has taken place.

Of course, the Lublin government advanced with the victorious Russian armies, who were received with great joy in large areas of Poland. Many of its great cities changed hands without a shot being fired, and none of that terrible business of underground armies being shot by both sides which we feared. So much has actually in fact taken place during the great forward advance.

But these opportunities were cast aside. Russians who are executing and preparing military operations on the largest scale against the heart of Germany have a right to have their communications, the communications of their armies, protected by an orderly countryside under a government acting in accordance with their needs.

It was not, therefore, possible, so far as recognition was concerned, to procure dissolution of the Lublin government simultaneously and to start from a swept table. To do that would have been to endanger the success of the Russian offensive and consequently to prolong the war, with increased loss of Russian, British, and American blood.

The House should read carefully again and again—those Members who have doubts—the terms of the declaration, every word of which was the subject of the most profound and searching attention by the heads of the three states and by their foreign secretaries and their experts.

AS TO ELECTIONS IN POLAND

How will this declaration be carried out? How will phrases like "Free and unfettered elections on the basis of universal suffrage and secret ballot" be interpreted?

Will the new government be properly constituted with a fair representation of the Polish people as far as can be made practicable at the moment and as soon as possible? Will the elections be free and unfettered? Will candidates of all democratic parties be able to present themselves to the electors and conduct their campaigns?

What are democratic parties? People always take different views on that. Even in our own country there have been from time to time feeble efforts by one party or the other to claim that they are the true democratic party and the rest are either Bolsheviks or Tory landlords.

What are democratic parties? Obviously that is capable of being settled. Will the elections be what we should say was free and fair in this country, making some allowance for the great disorder and confusion which prevail?

Here a Member asked, "Will there be any caucuses?"

We cannot entirely avoid some nucleus of party inspiration being formed, even in this country, and no doubt sometimes very able Members find themselves a little out of joint with party arrangements. But there are a great number of parties in Poland and we have agreed that all those who are democratic parties—not Nazi or Fascist parties or collaborators with the enemy—will be able to take their part.

These are questions upon which we have the clearest views in accordance with the principles of the declaration on liberated Europe to which all three Governments have subscribed. It is on that basis that the Moscow Commission of three was intended to work, and it is on that basis that it has already begun to work.

HAS FAITH IN RUSSIA

The impression that I brought back from the Crimea, and from all my other contacts is that Marshal Stalin and the other Soviet leaders wish to live in honorable friendship and democracy with the western democracies. I also feel that no government stands more to its obligations than the Russian Soviet Government.

I decline absolutely to embark here upon a discussion about Russian good faith. It is quite evident that these matters touch the whole future of the world. Terrible, indeed, would be the fortunes of mankind if some awful schism arose between the western democracies and the Russian people, if all future world organizations were rent asunder and a new cataclysm of inconceivable violence destroyed what is left of the treasures and liberties of mankind.

His Majesty's government recognize that large forces of Polish troops, sailors, and airmen now fighting gallantly, as they have fought during the whole of the war under British command, owe allegiance to the Polish Government in London. We have every confidence that once a new government more fully representative of the will of the Polish people than either the government in London or the provisional government in Poland can be established and recognized by the Great Powers, means will be found to overcome these difficulties in the wide interests of the people of Poland.

Above all, His Majesty's Government are resolved that as many as possible of the troops shall be enabled to return in due course to Poland of their own free will and under every safeguard to play their part in the future life of their country.

In any event His Majesty's Government will never forget the debt they owe to the Polish troops who fought so valiantly and for all those who fought under our command. I earnestly hope it will be possible for them to have citizenship and freedom of the British Empire if they so desire. I am not able to make a declaration on that subject today because all matters respecting citizenship are required to be discussed between this country and its Dominions, and that takes time. So far as we are concerned, we should think it an honor to have such faithful and valiant warriors dwelling among us as if they were men of our own blood.

[Here Churchill asked for the indulgence of his audience and suggested adjournment until 2:15 p. m. The House then adjourned until that time. The Prime Minister's speech was resumed at 2:17 p. m.]

The brief interval which has separated us enables me to carry the House through altogether differing fields. We leave the Crimean shores and travel southward to warmer winter climes in which also we find many matters where British interests are important and where we are involved.

President Roosevelt invited the Emperor of Ethiopia, King Farouk, of Egypt, and the King of Saudi Arabia to meet him at Ismailia before sailing for home, and conferences upon his cruiser were accordingly arranged by him.

LAST TALK WITH PRESIDENT

I myself took leave of the President on the 15th of this month in Alexandria Harbor after long and most agreeable talks about the state of our affairs in the light of the Crimea Conference and also talk about our special business in the Far East, in which, as the Japanese are aware, we both take some interest.

We also spoke of our joint occupation of Italy and of our policy there. Upon this, as the House is aware, there was a great deal of misunderstanding in large sections of the American press some weeks ago. During our recent talks I have repeatedly asked both the President and Mr. Stettinius to state whether there are any and, if so, what complaints by the United States Government against us for any steps we have taken in Italy or not taken in Italy, and I have received categorical assurances that there are none.

Moreover I must place it on record that when I visited Italy in August last I made a series of proposals to the British Government, of which I informed the President, for mitigating the severity of Allied occupation of Italy and generally for alleviating the hard lot of the Italian people.

These matters were discussed at our Second Quebec Conference and it was at Hyde Park, the President's private country home, that he and I drafted the declaration of September 28, which was and is intended to make very definite mitigation in the attitude of the victorious powers toward the Italian people and to show our desire to help them in due course to resume their place among the leading nations of Europe.

DECISIONS ON ITALY

Last Saturday Mr. MacMillan (Harold MacMillan), acting president of the Allied Commission (for Italy) and Admiral Stone (Commodore Ellery Stone), who is its chief commissioner, were received by the Prime Minister and Foreign Secretary, and announced to them the new measures decided upon in favor of the Italian Government in fulfillment of this September declaration.

As I myself had taken the lead in bringing these proposals forward and eventually in securing their adoption, I am not prepared to accept suggestions from any quarter that, although we had suffered so much injury and ill usage at Italy's hands in the days of Mussolini's power, Great Britain has fallen behind other victorious powers in taking a generous view toward Italy or that we nourish any design of power politics which involve Italy. (Churchill referred to a sentence he had used in a recent speech that we had no need of Italy and said this was wrested from its context.)

As a matter of fact, it was merely a reply which I was bound to make to suggestions in some quarters of the United States press that we were embarking on some power politics, whatever they may be, in the Mediterranean. I am glad to say that the facts I am now setting forth have been explicitly accepted by the United States, or at any rate in all responsible quarters, and that this view was thoroughly endorsed by the President and by Mr. Stettinius and I received quite definite assurances that no complaints of any kind were or are professed against us which would call for any reply on my part such as certainly would be forthcoming.

Our two nations can therefore proceed on their joint task in Italy, which in the future will be burdened with many new complications and difficulties, but at any rate we can proceed in closest confidence and unity.

We look forward to Italy's return under a truly democratic regime to a community of industrious and peace-loving people. In her efforts to help herself Italy can count on British good will and on Allied good will. She can count also upon such material aid as is at our disposal and she will certainly continue to receive her fair share.

I said some time ago that Italy would have to work her passage home. She has some way to go yet. It would be less than just if I did not pay tribute to the invaluable services, the full tale of which cannot be told, of the Italian men and women in the armed forces, on the seas, in the countryside, and behind the enemy lines in

the north which are being rendered steadfastly to the common cause.

New difficulties may be cast upon us when the great districts in the north are cleared and when the problem of feeding the great masses for whom we shall then become responsible is cast upon us, and the provisional government itself may be called upon to undergo changes as a consequence of the greatly increased constituency to which it will become responsible as a result of that liberation.

The Foreign Secretary and I thought it would be becoming as well as convenient and agreeable that we should also see the two rulers who had made long journeys to come to Egypt at the President's invitation and that we should pass under friendly review with them the many matters with which we have common concern.

It was our duty also to pay our respects to King Farouk of Egypt and we thought it right to seek a talk with the President of Syria in order to calm things down as much as possible in the Levant. It should not be supposed that anything in the nature of general conference on Middle East affairs took place. The mere fact that the Regent of Iraq and the Amir Abdullah of Transjordania were not upon the spot should make this perfectly clear.

Any conference would naturally include such authorities. There was no question of shaping a new policy for the Middle East but rather to make those friendly, personal contacts by which public business between various states is often helped.

I must at once express our grief and horror at the assassination of the Egyptian Prime Minister, with whom the Foreign Secretary had a long and cordial interview only a few days before he fell victim of the foul blow.

His death is a serious loss to his Government and country. The sympathy of Great Britain for the widow and family of the late Prime Minister of Egypt has, of course, been expressed, not only in telegrams from the Foreign Office but also by various personal visits of our Ambassador. I am sure the House will associate itself with those expressions.

There is little doubt that security measures in Egypt require considerable tightening and above all that the execution of justice upon the men proved guilty of this political murder should be swift and exemplary.

EGYPT'S ATTITUDE HELD CORRECT

The Egyptian Government have, we feel, acted rightly and wisely in declaring war upon Germany and Japan and to sign unanimous declarations. We did not press the Egyptian Government at any time to come into the war and indeed on more than one occasion in the past our advice had been to the contrary. There were evident advantages in sparing the populous and famous cities of Egypt from wholesale bombardment.

The Egyptian troops have during the war played an important part. They have maintained order throughout the Delta and guarded many strong points and depots and in all kinds of ways have been of assistance to our war effort, which has once again proven successful in sheltering the fertile lands of the Delta from all assaults by foreign invaders.

We have had every facility from the Egyptians under our treaty of alliance, and successive Egyptian Prime Ministers and governments have given us support in a manner which we deemed most effective. Egypt is an associate power and she should take her rightful place as a future member of the world organization and as one of its founders when the occasion is reached at San Francisco at the end of April.

We are also glad to welcome Turkey into the ranks of the United Nations. Turkey declared herself firmly on our side by the Treaty of Alliance in 1939 at a time when gathering dangers were only too apparent.

As I explained to the House on a former occasion, Turkey became conscious of unexpected military weaknesses after war had started in earnest on account of the decisive influence of new weapons with which she was quite unprovided and which we were not in a position to supply.

As these weapons exercised a dominating effect upon the modern battlefield the Turks felt that they could no longer confide their safety to their renowned infantry and artillery of the last war. We did not, therefore, for a long time press for a Turkish declaration of war. It was not until after the Teheran Conference that we felt the moment had come when Turkey could enter the struggle without great imprudence.

The Turkish Government did not feel able to do so at that time, but they have aided us in various ways which it would not be profitable to recount and we have never had the slightest doubt where their hearts lay. They also will be welcomed by Great Britain into the ranks of the United Nations and I do not consider that the tie renewed between our two countries after the disaster of the last war has been in any way impaired.

INTERESTED IN MEETING IBN SAUD

I was greatly interested in meeting King Ibn Saud, famous ruler of Saudi Arabia. I had the honor of entertaining this most remarkable man at luncheon at the Fayoum Oasis. I expressed to him the thanks of Great Britain for his steadfast, unswerving and unflinching loyalty to our country and to the common cause which never shone more brightly than in the darkest hours of the day of mortal peril.

Although we did not reach a solution of the problems of the Arab world and of the Jewish people in Palestine, I have hopes that when the war is over good arrangements can be made for securing the peace and progress of the Arab world and generally of the Middle East and that Great Britain and visitors who are taking an increasing interest in those regions will be able to play a valuable part in proving the well known maxim of the old free trader, "All legitimate interests are in harmony."

My discussions with the Emperor of Ethiopia raised no serious difficulty because agreement for the next 2 years had already been reached as a result of the mission to Ethiopia which Lord de La Warr had just completed with much patience and address.

It was satisfaction for me to see for the first time in the flesh Haile Selassie, that historic figure who pleaded the cause of his country amid the storms of the League of Nations. He was the first victim of Mussolini's thirst for power and conquest and he was also the first to have restored his ancient throne by the heavy exertions of our British and Indian Armies in the far-off days of 1940–41.

Finally, we had the pleasure of a long discussion with President Shukri of Syria in which we did the utmost to enjoin a friendly attitude toward the French and to encourage the negotiation of a suitable settlement with the French, affecting not only Syria but also Lebanon.

SYRIA-LEBANON PROBLEM STATED

I must make clear the position of His Majesty's Government in respect of Syria and Lebanon and in relation to our French Allies. The position is governed by a settlement made in 1941 in which the independence of these Levant states was definitely declared by Great Britain and France. At that time and ever since His Majesty's Government have made it clear that they would never seek to supplant French influence by British influence in the Levant states.

We trust these States will be firmly established by the authority of a world organization and that French privilege will also be recognized. However, I must make it clear that it is not for us alone to defend by force either Syrian and Lebanon independence or French privilege. We seek both and do not believe they are incompatible.

Too much must not be placed, however, upon the shoulders of Great Britain alone, and we have to take note of the fact that Russia and the United States have recognized and favor Syrian and Lebanon independence but do not favor any special positions for any foreign countries.

All these and many other matters affecting the Middle East are necessary subjects for a peace conference at which we must resolutely strive for a final settlement and a lasting peace between all states and races comprised in the Middle East and the eastern basin of the Mediterranean.

ATHENS VISIT CALLED HIGH SPOT

On my way back from the Crimea to say good-bye to the President at Alexandria the Foreign Secretary and I stopped at Athens. I must say, from my point of view, this was the high spot of the whole journey.

I cannot help recalling the grim conditions of our visit only 7 weeks before, when guns were firing and bullets continually struck the wall, and people were killed and wounded in streets not far away.

The contrast between these violent scenes and the really rapturous welcome we received from vast crowds of delighted citizens was one of the most vivid and impressive and agreeable experiences of my life. [Cheers.] Peace reigned over this beautiful, immortal city. Its citizens were wild with joy. His Beatitude the Archbishop was seated in the regency firmly grasping the reins of power.

Together we drove through crowds on the streets lined by the first installment of the new national Greek Army until I found myself called upon to address what was incomparably the largest and most enthusiastic gathering that in my very long experience of such demonstrations I have ever seen.

There is no subject in which the policy of His Majesty's Government has received more complete vindications. [Cheers.] Nor has there been any on which greater prejudice and misrepresentation have been poured out against them in the United States.

[Replying to an interjection Mr. Churchill said, "And with some assistance from this side."]

All this was done with a wanton disregard of ill effects produced on the spot and encouragement given to the resistance of terrorists in Greece. I am sure we rescued Athens from a horrible fate and I believe the Greek people will long acclaim our actions, both military and political.

PEACE WITHOUT VENGEANCE

Peace without vengeance has been achieved. A great mass of arms has been surrendered. Most of the prisoners and hostages have been restored. The great work of bringing in food and supplies has resumed its former activity. Public order and security are so established that U. N. R. R. A. is about to resume its functions. [Laughter.]

The popularity of British troops and those who have guided the course of policy, such as Mr. Leeper and General Scobie, is unbounded, and their conduct continues to receive the approbation of His Majesty's coalition government. I could, however, by no means lead the House to suppose our difficulties are over. The Greek National Army has still to be formed and to be effective to maintain impartial order. The Greek budget has to be balanced in some way or other.

The drachma has to be restrained within reasonable limits. Raw materials have to be provided to enable industries of various kinds to get to work in Athens, where there are considerably more than 1,000,000 people. The sense of unity and responsibility has to grow stronger with the Greek people. Here I must remark that the future of Greece is in their own hands. The Greeks must not expect that the whole process of their restoration

can be accomplished by British labors or American assistance.

The Foreign Secretary remained a day longer in Athens than I did and he was at pains to bring home to Greek authorities the fact that, now that political stability had been achieved, financial and economic problems must take first place and that the burden and responsibility are upon the Greek ministers and that they must on no account sit back and leave these tasks to foreigners.

I am sorry if those remarks should in any way detract from the great kindness and enthusiasm with which I was received a little time ago, and if my words cause pain I'm not entirely sorry for it.

The intense political activity of the Greek mind must continue to give way to practical problems. As soon as possible they must reach that election, fair, free, and unfettered, in a secret ballot on the basis of universal suffrage, to which everyone is looking forward and which alone can regulate and adjust all that has been done.

I look forward in the greatest confidence and particularly welcome with the Greek Government that Russian, British, and American observers shall be free on the spot to make sure the will of the people will find complete and sincere expression. So much for that episode, on which we have had so many exciting, even momentarily heated, debates in recent times.

I thank the House very much for their courtesy and attention. I refer, before sitting down for a moment or two, to the conference as a whole and in relation to the grave matters which I mentioned before the interval wherein the House indulged me.

It was the custom of the Conference at Yalta to hold its meetings of the heads of the three Governments and their Foreign Secretaries in the late afternoon and sit for several hours each day. Here important issues were deployed, and measures, both in agreement and on which there were differences, were clearly revealed.

I remember particularly one moment when a prolonged silence fell upon our small body and was maintained for 2 or 3 minutes, but it was immediately found very convenient to remit measures of agreement, or of difference, wherever our discussion had carried them to morning meetings of Foreign Secretaries.

Each Foreign Secretary was president over the meetings in rotation. So excellent was the combined work of the Foreign Secretaries that our problems were returned nearly every day for the combined meeting in a form in which final agreement could be reached and lasting decisions taken.

There was a proposal on the agenda for institution during the present anxious period of regulation of the meetings of the Foreign Secretaries. Improvement of combined and collective work has been often asked for here in order to prevent avoidable divergencies of view and to concert actions of the three great powers.

This was to me a felt want and one to serve to bridge the inevitable gap in the meetings of the three Foreign Secretaries showed itself to be so valuable, efficient, and indispensable that its continuing collective activity was acclaimed by all.

It is, of course, only a temporary arrangement appropriate to these times of special stress when so heavy a burden—military burden—is resting on three great powers, and we may expect it eventually to merge in a larger and permanent organization which will be set up in San Francisco once that organization is in full working order and the peace conference has finished its labors. In the intervening period these meetings of the three Foreign Secretaries, to whom from time to time the Foreign Secretaries of other countries will be added, will prove of undoubted advantage.

HIGH PRAISE FOR EDEN

Here is a moment when the House should pay tribute to the work of the Foreign Secretary. I cannot describe to the House the aid and comfort he has been to me in all our difficulties.

A hard life when quite young, in the last war in the infantry, in constant self-preparation for the task which has fallen to him, his unequaled experience as Minister of the Foreign Office, his knowledge of foreign affairs and its past history, his experience of conferences of all kinds, his breadth of view, his power of exposition, his moral courage, have gained for him a position second to none among the foreign secretaries of the Grand Alliance.

It is not only my personal debt but that of the House to him which I now acknowledge.

I suppose that during these last 3 winter months the human race all the world over have undergone more physical agony and misery than at any other period through which this planet has passed.

In the Stone Age numbers were fewer and primitive creatures little removed from animal origin knew no better. We suffer more. We feel more. I must admit in this war I never felt so grave a sense of responsibility as I did at Yalta. In 1940 and 1941, when we in this island were all alone and invasion was so near, the actual steps we ought to take and our attitude toward them seemed plain and simple. If a man is coming across the sea to kill you, you do everything in your power to make sure he dies before he finishes his journey. That may be difficult and it may be painful, but at least it is simple. [Laughter.]

Now we enter into a world of imponderables, and at every stage self-questioning arises. It is a mistake to look too far ahead. Only one link in the chain of destiny can be handled at will.

I trust that the House will feel that hope has been powerfully strengthened by our meeting in the Crimea. The ties that bind the three Great Powers together and their mutual comprehension of each other have grown.

The United States has entered deeply and constructively into the life and salvation of Europe. We all three set our hands to far-reaching engagements, at once practical and solemn.

The United Nations are an unchallengeable power to lead the world to prosperity, freedom, and happiness. The Great Powers must seek to serve and not to rule. Joined with other states, both large and small, we may found a large world organization which, armed with ample power, will guard the rights of all states, great and small, from aggression or from the gathering of the means of aggression.

I am sure that a fairer choice is open to mankind than they have known in recorded ages. Lights burn brighter and shine more broadly than before. Let us walk forward together.

The 60,000,000-Job Program

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD an article from the Indianapolis Star, Sunday, February 18, entitled "Willis Calls 60,000,000-Job Plan 'Political Propaganda,'" written by Jack Reed, head of the Washington bureau of the Indianapolis Star and the Yankee News Service.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WILLIS CALLS 60,000,000 JOB PLAN "POLITICAL PROPAGANDA"—ADOPTION WOULD MEAN DESTRUCTION OF POLITICAL SYSTEM, SENATOR DECLARES

(By Jack Reed)

WASHINGTON, February 17.—Senator RAYMOND E. WILLIS tonight labeled as "political propaganda, intended to mislead and misinform, perhaps with vicious purposes," the proposal that the Government now plan to create a 60,000,000-job international economy for the post-war United States.

"The proposal is either political propaganda, sugar coated to conceal its effect of regimenting the Nation," he added, "or it is the product of gross ignorance and fantastic disregard for the fact."

Senator WILLIS said that 60,000,000 jobs for America is a possible goal. He thinks it could be attained. But in the doing, he concludes, the Nation would involve itself in a program of complete regimentation which would destroy the American political system and disrupt the traditional home life of the Nation.

"SOCIALLY UNEMPLOYABLE"

"Third-grade arithmetic," he continued, shows that if President Roosevelt and Henry Wallace succeeded in forcing the development of 60,000,000 jobs by regimental process, they will have to force employment upon children, housewives, the aged, the ill, the incompetent. The plan which would develop 60,000,000 jobs will require the performance of 60,000,000 jobs and a commitment for their performance. So a proposal to provide them stands revealed as idle and immature thinking, or a deep plot to control the lives of Americans through control of their incomes."

Senator WILLIS says certain elements of the population are "socially unemployable."

"They are the children under 16; the men over 65, and the women over 60; the young men and women over 18 who are going to colleges and universities and the unfortunates who are institutionalized by reason of mental, physical, or social handicap or shortcoming; the inmates of penal institutions and the matured, physically fit women of two groups—those who are expectant mothers and those who are the mothers of very young children."

CENSUS FIGURES CITED

"Certainly, we do not want these people employed in mills, mines, and factories, or working the roads and building dams. In general, we have sought to support the Nation's economy without their labor."

The Senator submitted the following compilation of census figures from the last exact census, taken in 1940:

Socially unemployable:	
Youth and children under 18	40,300,000
Men over 65, women over 60	11,475,000
Confined in social institutions	1,175,000
Confined in United States penitentiaries	170,000
Mothers of babies in first year	1,900,000
Unemployable expectant mothers	950,000
College enrollment	2,435,000
Total	58,400,000

"Of these figures," he said, "only those on mothers and expectant mothers are estimates. The others are from the records of

the Census Bureau, which then calculated the total population at 131,000,000."

ONE HUNDRED AND THIRTY-SIX MILLION POPULATION

"It estimated that by this year the population would have increased to 136,000,000. Applying the increase factor to the total number of unemployables, there now are 60,500,000 in what is normally the socially unemployable group.

"That leaves us, then, a total working force of 75,500,000 people in the United States if we include every woman in the Nation between 18 and 60, except those who are expectant, or the mothers of yearling children.

"If we push 60,000,000 of that number into jobs, there will be 15,500,000 left. They will comprise the force which has the job of running the American home.

"There will be, at the end of the war, close to 40,000,000 homes in the Nation.

"The case stands proved.

"PRODUCTION FOR WORLD

"If you have 60,000,000 jobs, you have nobody left to do the cooking, to maintain the homes, to guide the children and to function in that most important employment in the world, the job of being an American housewife.

"The plan," he said, "means production of American goods for the whole world, goods for which the rest of the world cannot pay except in kind. Therefore the sixty-million job proposal means the cessation of profitable world commerce and the substitution of world philanthropy—or it means the reduction of the American standard of living to the world average. It means that our economic progress must lag while all others in the world—the Hottentots, the Hindus, the Chinese, the Arabs and the rest of them—acquire shoes and electric refrigeration.

"All employables in America can be given jobs in the post-war world if we lift the excessive taxation, unnecessary restriction and regimentation from the workers and the employers of the land."

The Bretton Woods Agreement

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. WAGNER. Mr. President, I ask unanimous consent to have printed in the RECORD a very interesting and instructive editorial recently published in the St. Louis Globe-Democrat on the subject of the Bretton Woods agreement.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BRETTON WOODS AGREEMENT

Congress should endorse both the International Monetary Fund and the International Bank for Reconstruction and Development embodied in the Bretton Woods agreement. It should do so without undue hedging or delay.

The Globe-Democrat advocates this course in full knowledge that the plan is not perfect and that it contains some weaknesses which, without wise and courageous administration, could produce some discouraging results. But it is an available vehicle which shows promise of reaching, with probable minor repairs en route, its avowed goal.

Some of the criticisms, emanating from a group in the American Bankers Association, are that the program could be better operated as a single institution, that stabilization loans would not be properly safeguarded, that easy access to the fund would tend to make nations over-borrow, and that the United States is called upon for too great a portion of the quotas. Numerous other more technical objections have been raised.

It should be remembered that the fund and bank, speaking simply, have a single purpose each: The former to stabilize currencies and prevent another disastrous outbreak of economic warfare; the latter to provide damaged countries with loans for such reconstruction projects as utilities, industrial repair, irrigation projects, and the like.

The fund's personnel, then, must keep a daily check on the values of 50 or 60 currencies in relation to the dollar and to each other. This obviously calls for the highest-type specialized management. And no less technical skill will be required to investigate and supervise the dozens of long-term loans made by the bank to war-damaged nations. This difference in functions and required skills would appear to demand separate institutions in the interest of efficiency.

The question of safeguards is one most of us are willing to leave to the experts in view of the agreement's general provisions for disciplinary action against recalcitrant members. Over-borrowing, for example, would seem, even if permitted by a majority vote, to create a self-correcting disequilibrium, while any nation devaluing its currency beyond prescribed limits would risk suspension from the fund, which also would automatically close bank loans to it.

On the issue of our subscription, realism forces us to admit that we, as the world's most prosperous nation, must foot a good part of the reconstruction bill whether it is under the Bretton Woods agreement or some other device. United States quotas will be roughly one-third of the totals—$5,925,000,000 out of $17,900,000,000. That, however, is the maximum and likely will never be called for.

It is possible, perhaps even probable, the operations in the long run may cost us next to nothing—certainly far less than the $2,000,000,000 in the Government's present stabilization fund—for at the beginning we will pay in only about 10 percent of our fund quota and 20 percent of our bank commitment, the rest to be demanded only when and if needed.

This is by virtue of the fact that neither the bank nor the fund swings into action until such time as private-investment capital fails to come in through normal investment channels in sufficient quantity to do the job. At this point, the institutions perform their function by guaranteeing, for a fee, private loans. Only in case of a borrowing nation defaulting will the institutions be obliged to pay out money. And since the debtor will be defaulting against an organization of 44 nations instead of 1, it is expected the resulting adverse credit reputation will encourage such prompt repayment that the bank's cash disbursements in the long run will not exceed the reserves accumulated from fees.

It has been stated the United States will not get a return from the plan in proportion to its investment—an attitude which overlooks entirely our greatest return. For what we will receive is an agreement from those nations vital to our commerce that they will not use the tactics of economic warfare which crushed world trade in the 1930's; a sort of economic nonaggression pact. This is a return of dollars-and-cents benefit to every worker in America.

Another important consideration is that the Bretton Woods program is the work of 44 nations—not just the Big Three. Financial experts from all these countries labored more than 2 years to make it as nearly perfect as possible, and the product represents compromises by all. They admit imperfections but point out with logic that the operational details of such a new and bold plan present problems which can be best met by the institutions' governors and staffs as they arise. They present this draft only as a means of doing something—rather than nothing—to forestall another world-wide economic disaster.

Certainly we cannot afford to do nothing. There can be no full employment for us without foreign trade, for on our 10-percent margin of that trade depends our high standard of wages. And there can be no foreign trade without world monetary stability. The fund proposes to insure that stability while the bank's purpose is to see that needy nations get the loans by which alone they can rebuild their capacity to trade with us.

At the conference there was a remarkable sincerity of purpose, a unity which seems to justify faith that the participants now perceive that world interest and self-interest are inseparable. If this sincerity really exists, we are bound to concede that any reasonable plan can be made to work. If it doesn't exist, we can hold little hope that any economic plan, however perfect, can be made successful. In that case we may as well go our isolationist way and await inevitable economic chaos and World War No. 3.

We can hold Dumbarton Oaks peace conferences until doomsday, but they will not prevent war unless some economic formula is accepted by all under which each nation has a fair opportunity to survive and prosper.

Bluntly the Bretton Woods agreement is a challenge to the United States to put up or shut up on its pose as the great and good neighbor in the world community. If Congress approves it speedily and without crippling amendments, it is regarded as certain a majority of the other countries will do likewise by the December 31 deadline. If it refuses or delays too long, it is laying itself open to proper suspicion of hypocrisy, with the probability that neither the Bretton Woods nor any similar pact will ever go into effect.

Government Regulation of Business

EXTENSION OF REMARKS

OF

HON. ALBERT W. HAWKES

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. HAWKES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial taken from the Wall Street Journal, of New York, under date of February 13, 1945, entitled "The Compulsory State, The Men of Business Who Build Booby Traps for Themselves."

I believe this editorial contains thoughts which should be interesting to all who read it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE COMPULSORY STATE—THE MEN OF BUSINESS WHO BUILD BOOBY TRAPS FOR THEMSELVES

No people ever entered the compulsory state through a door on which the price of admission was plainly posted. Not even the

Germans, who seem to like regimentation more than they value freedom, did that.

There are other entrances well camouflaged, sometimes with one pretty theory and sometimes with another. But underneath the glitter of slogan and economic scrollwork they are the same. Those who pass through them have a sense of carefree well-being, of having deposited their burdens outside. They seem to be traveling a smooth and sunlit road and they proceed under a peculiar enchantment, for while they can see where the road has taken others, they are blind as to their own destination.

The road we look at now is paved with things labeled subsidies, Government guaranties, floors under this, ceiling over that, Government partnership. Traveling the road are three caravans: agriculture, labor, and business.

Agriculture has been on the way for a long time. Many of the caravan already see the smooth highway leading into the jagged rocks of compulsion. Some would like to turn back, but when they look the pleasant road seems to have closed in behind them.

In the labor caravan there are fewer misgivings. Mostly its members are bedazzled with some pretty new baubles of power. Perhaps, they think, there are more of these ahead and they want to push on.

The business caravan lectures its fellow travelers. It tells them about "free enterprise" and it warns them gravely that their yearnings for security will bring them to a bad end. But the other two look puzzled and say, "Then what are you doing here?"

Well, as a cold practical matter, business has less reason to be there than either labor or agriculture. Those two constitute numerous and comparatively cohesive groups, which control votes and so have political power. At least in the compulsory state they might be represented on the committee.

Business is not cohesive. By its very nature it is as diverse as the American landscape. Its political power is represented by no more than zero and it is probably a minus quantity.

So what is it doing there?

And the question becomes more puzzling when we recollect that business once before started down this road but was turned back by wholly fortuitous circumstances.

That original excursion was the N. R. A., conceived and proposed by business groups. Under Government sponsorship, business was to draw up codes, agreements to do or not to do certain things. Competition was not to be lessened, of course, but just the same there were provisions covering expansion, installation of new machinery, and like subjects. What we saw was a budding experiment in cartelization.

The experiment failed because it was put in charge of a sincere and honest man. Believing in what he was doing, failing to see the results, Gen. Hugh Johnson went ahead at breakneck speed and he had not gone far before a pants presser was brought to court for working too cheap. Had General Johnson been a crafty man, able to bide his time, that grisly set-up that appeared in the early New Deal days might well have taken a hold that not even the Supreme Court would have broken. And if it had, the production machine that is winning this war would have been rusty and antiquated.

Now what is the evidence that a good many businessmen again want to crawl under the Government umbrella?

Here is a quotation from Charles P. Taft, son of an ex-President, brother of a leading Senator, and himself director of the Office of Wartime Economic Affairs in the State Department:

"It seems to me high time that private business got away from its liking, perhaps unadmitted, for the security of Government distribution of business under a quota system and began to justify the descriptive term 'enterprise.' The only reason I mention that is that, within the past few months, we in the State Department who have been pushing with all our ability for the reduction of trade controls have been startled on at least two occasions to have delegations from the trade coming in to insist with us on the continuance of public purchase or other Government intervention, because they were not prepared to take the kind of chances which I have always assumed were part of normal business risks."

Within the past few days we have seen the head of the Federal Deposit Insurance Corporation, the president of the American Bankers Association, and the former president of that body battling against Government guaranties of loans. They know that many bankers want such guaranties and are so telling their Congressmen. Such men are afraid of risks. They don't want to be bankers. They want to handle Government funds on a commission basis. How long do they suppose the Government will pay them for such a parasitical performance?

It was not long ago that there was a drive on Congress to get a huge appropriation for Government advertising in newspapers, which fortunately was defeated. But in a country which should prize its free press, some of the custodians were looking for a Government subsidy.

There has recently been an unusual amount of literature setting forth the benefits of cartels—and those booklets don't just happen. Someone pays to print and distribute them. Now one simple fact about cartels is that there must be some power to enforce the agreements that bind them. Either directly or indirectly, that hand is a government. There probably never has been a cartel of any pretensions or prestige which did not involve government power openly or secretly.

Talk to some of our so-called bureaucrats about "free enterprise" and see the smug look. If they will unloosen their tongues, they can tell a great deal about how this business group thinks perhaps one government control is permanently good and how that group likes another. So there it is again, the flight from risk.

How much good do solemn lectures on the illusion of "security" do when the wage earners to whom they are addressed can read the financial pages and see how some executives are being given annuities and pensions on top of sizable salaries? Stockholders read of these and complain with just cause. Some propose action, but not always the action that lies within their power as stockholders and investors. Some suggest that this or that Government agency take a hand. Could it be that they are under the delusion that Government will manage their affairs and still allow them dividends?

The vast majority of those in business and finance in this country do not, we believe, desire the Government in their affairs. They want the situation which put the Government there ended as soon as possible. But there are far too many who want the Government to build them shelters from the risks without which free enterprise is not free.

A good many German industrialists and financiers thought that Adolf Hitler was not so bad. They gave him money. He came to power and for a time they had pleasant sailing with the government the main partner in their cartels.

But there came a day when they went to Herr Hitler and he was no longer so agreeable. He is reputed to have remarked that he "hoped these gentlemen were under no delusion that he had built this structure for their benefit."

Those German businessmen must have left that conference with the sickly feeling of a man who is the victim of his own booby trap.

What a tragedy if history recorded that business in America was as stupid.

Address of the Assistant Secretary of the Navy

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Assistant Secretary of the Navy:

The custom of requiring a graduating class to listen to an address before receiving the tokens of their hard work has always seemed to me to be semibarbaric—a refined method of tantalization. I have sat in your places many times, both as prospective graduate and as guest. With all deference to men here on the platform who may have talked at me in the past, I long ago resolved never to inflict myself on any other groups. But here I am—bowing to custom and circumstances. My thoughts as to the barbarism of the custom have not changed. The only consolation I can offer you is that I am just as sensitive as you.

I wish I knew the origin of this custom. I cannot believe it is based solely on the human propensity to talk and attract attention. I would like to think that it was intended to mark a pause between the successful conclusion of a period of study and the application of that study—a pause for reflection on the past and speculation as to the future. I would like to think that when I graduated from Princeton some years ago, I thought back on the 4 years of study and tried to see that past in its proper perspective as a part of my life. I know I never did any such thing, but I know now that it would have been helpful.

I know very little of pedagogy. I was exposed to 4 years of college and 3 years of law school. I assume that I was an ordinary student treated to orthodox education. My recollection of the courses here in science, economics, and history is extremely blurred. I am confident I could not today pass any of the examinations. Yet I received here something far more important than the knowledge of facts and formulas—far more important than the remembrance of a chain of events. I received a background and the inspiration to continue to study on my own. An intellectual curiosity was developed. I did not realize that until many years later. Then I discovered that I had been given a foundation upon which I could build.

Today you are completing a concentrated course in which you have learned a military trade—a trade most important to the combat troops. You will soon move into devastated areas seemingly incapable of supporting any form of life. You must bring order out of chaos. It will be imperative to turn rubbish heaps into communities. You will have no time for fine theories of government. You will work with your sleeves rolled up. You will combat disease, starvation, and shattered nerves. It will not be any easy task and will probably often make you scornful of theories and philosophies and respectful only of hard facts—life, death, food, sleep, and shelter. In that, I can help you little. You know more about your work than I do. I have not been where you are going.

All I can do is to speculate on the niche into which your study and work in this war may fit as a part of your life and this country's history. What I hope I see ahead is that your study and work will engender in you the desire to continue to study and think about government—our Government—its forms and procedures, its successes and its

failures. I hope you will provide a force which will impel us all to test government and our theories. In that your background and your experiences will be important factors. I hope you represent the start of a group which will not let us forget that whether we survive will be determined by the way we govern ourselves.

As a matter of fact, the art or science of government is an extremely broad philosophy. It involves more than a study of organizational forms and the memorizing of maxims and procedures. It requires more than the knowledge of political theories and of the natural rights of man. Today it covers the whole field of economics, finance, geography, labor relations, trade movements, industrial forms, and a host of other subjects. The politician in the true sense of the word should be the most comprehensively educated and experienced man in the world.

Such facts have obviously been recognized by your instructors. As I ran through an outline of your curriculum, I was impressed with the time devoted to the study of economics and finance, physical geography, public health, public welfare, and labor problems. You were being introduced to substance.

Your course provides some contrast with our preparation for governing ourselves. Before you are permitted to bring government to the islands of the Pacific, you are subjected to a concentrated course of study. Too often in governing ourselves we forget the need for preparation, training, and study. We seem too often to proceed on the theory that political intelligence is a matter of divine inspiration—always coincident with choice by the people.

We demand that our lawyers and doctors pass rigid examinations. Then we would not think of employing any who did not make those professions a lifetime work. We do not seem to be so exacting with respect to the profession of government. Few except by accident—and then at the risk of being derogatorily called politicians—make government a career. At elections we do not always weigh the backgrounds and training of the candidates. There is a Federal civil service, but few of the highest administrative positions are filled by civil servants. There is no part of the civil service with the standards of a profession. There is no program under which men may enter the administrative work at the bottom and proceed to the top by orderly and expected steps.

On the legislative side I have also been struck with the lack of analytical assistance furnished to our legislators. The mess of detail with which they are expected to familiarize themselves and at the same time maintain close contact with their constituents is staggering. They are expected to be experts in finance, taxation, economics, labor matters, appropriations, and many other complicated problems without special training, informed analyses, or adequate help. They are continually bombarded with communications from special pressure groups. They are expected to separate the wheat from the chaff. The job they do is a back-breaking and a stupendous one. They are continually criticized, but I marvel at their high standard of achievement.

We are extremely proud of our achievements in industry, business, and the professions. We feel our best men reach their heights in such endeavors. But those best men seem to me to exhibit a too restrained interest in good government. It is true that careful attention is paid to specific statutes and practices by those affected by such statutes and practices. Few, however, stray into fields which affect others. The over-all problems of our country—the fundamental issues of our place on the globe—are more for dinner-table conversation. Even the legal profession seems mostly attentive to the interests of their clients or to the specialty fields in which they work. Nearly everyone seems to be relying on someone else. We are hoping that somehow the whole field will be covered. But it is no one's job to see that it is. I sometimes wonder why we do as well as we do. It must be a tremendous tribute to the vitality of our democratic form of government.

In the period to come after this war we will need experienced men in Government. Think for a few moments of the facets of our domestic problems—ranging from currency and finance to flood control. Think of the problems in foreign relations. It will not be enough to believe in justice and fair play. We will have to know—and know familiarly—the geography, economy, and cultures of many nations. The men now in Government who have the experience to deal with such matters are all too few. How can we attract more? How can our men achieve the essential knowledge and experience? Can we really expect successfully to cross the post-war period unless we strengthen our public service?

It is to a solution to these problems that I would like you to turn your reflective moments. I cannot offer you any conclusions. I have been thinking of two possible methods of insuring trained and experienced men in the Government service. The first is fairly obvious and yet difficult to carry out. It is the creation of a trained corps of career men and women, resembling the officers in our Regular Army and Navy, who will devote their lives to the business and science of government—our Government. The second method has been followed—somewhat unconsciously, perhaps, in this war. It has not, however, flourished in peacetime. Today, in wartime, men with special skills and experiences are devoting months and years to the Government service. They are serving without regard to political faiths and theories in capacities for which they are best fitted. Today I feel our Government is better equipped than in many decades—but that condition does not promise to be permanent.

Both methods have their own particular advantages and disadvantages. Other approaches may occur to you. I shall be pleased if I do no more than stimulate thinking on the subject.

The creation of a trained career staff of civil servants in this country will not be easy. It will be opposed as bureaucratic. It will be said to lead to a surrender of our liberties—to the creation of a class not responsible to the people. To some extent such attacks will be fair. The argument will be made that liberty and freedom breed vitality and that considerable efficiency can be sacrificed to preserve vitality. Our history furnishes some solid support for that argument.

The people making such arguments, however, must face reality. How else can a trained government staff be produced? How else can our administrators gain the knowledge to measure up to the men of other nations? Is not government today so intricate that it demands a professional group? Is not our democracy firmly enough imbedded that we can overcome any tendency toward restricted liberties?

If this method is adopted, we cannot take half measures. If we are to establish an American career service, it must be on a firm foundation. Entrance into the service must be by competitive examination. I would also establish a rather youthful age as a ceiling and permit no one older to enter the service. In that way the men arriving at the top administrative positions will have their competence and qualifications tested over many years. Promotion within the service must be in the hands of the service itself. It is also axiomatic that adequate pay must be provided. The compensation for public service need not, perhaps, be commensuate with the standards of the commercial world, but it must be sufficent to assure a respectable and comfortable living. National recognition and tokens of respect will also be helpful. I think we should offer more than inward satisfaction to a career of public service.

Perhaps such system is impracticable in this country. If we reach that decision, we are not through with the problem. We still need experience and capable men in Government service. As I mentioned, in wartime the Government has found it practicable to attract, for limited periods, men who have made their mark in the business and professional world. Why could this not be put on a regular and established basis—with some period of Government service recognized as the hallmark of success? There is a mutual advantage in this approach. Not only will Government be well served but as the men return to the commercial world, business will obtain a broader horizon of great value to itself. After a period of interchange, business would become fully aware of the problems of government—and Government would become familiar with the problems of the commercial world. Furthermore, the men will know each other. We have no problems that mutual confidence and respect cannot solve.

If such approach seems too idealistic, I think a few years in Government service will constitute an asset, almost measurable in cash. Business will be much closer to government over the next decade. Business must know more about government. The aura of mystery must be dispelled. I came to the Government service in 1941 for what I thought was to be 60 days. I was astounded at my lack of appreciation of many factors. I cannot now compute the fair price of my education. The Government owes me nothing. As one businessman who had spent some time in Washington put it, "If a firm were offered the opportunity to send men free of charge to the Harvard Business School for just 1 year, the firm would jump at the chance, send its best men with alacrity, and consider itself fortunate. It is a pity so few are aware that the Government offers even greater education at less cost."

It can be argued that this approach is more in accord with what we have come to consider "our democratic principles." The creation of a bureaucratic class is avoided. No man is set apart from his fellows as a career civil servant to be supported by the state and to labor for the state. Additional vitality will be imparted to our institutions by the frequent interchange of views and the varied expressions of opinion. Some continuity and efficiency may be lost but there should be full compensation for that loss in an increase in force and unity.

In the years to come our form of government will be severely tested. For generations we have been sure that we had the best form of government. We still think so—and for us I think the demonstration has been conclusive. There is no doubt that our particular brand of democracy works in our country with our people. We are, however, about to encounter new problems. We cannot be complacent. We must be ready to change whenever desirable. Eternal vigilance is the price not only of liberty but of survival.

For the sake of our future, I hope this marks a commencement for you. I do not have any doubt that you will do your part in the war with courage, force, and intelligence. I would urge upon you, however, that you never permit your interest in the science of government to lag. I hope you will consider that you have acquired a serious hobby—that this group will be a nucleus to arouse the public consciousness.

You have ahead of you an unusual opportunity. You will test the form and substance of government. You will start from the grass roots. You will come in contact with people who have entirely different ideas as to the purposes and ends of satisfactory government. You will meet with people who have never heard of democracy; who will not understand it when explained; and who will not like it even when it is understood. You

will return better able not only to understand the real fabric of our methods but also to understand the foreign nations with whom we must live and deal.

If your study here and the work to which you are going can inspire you to further thought and effort, all with a view not only to speeding the victory but also with a view to bringing back to this country fresh ideas and fresh vigor, we will more than win the war. Your ideas will spread. We will be victorious in the peace to come.

I envy you your coming experiences. You will be in the attack. You will see and feel contact with the enemy. May God speed you in your service of our country.

The Life of the Enlisted Man

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over radio station WJAR, Providence, R. I., on Saturday evening, February 17, 1945:

I wish I had the ability of an Ernie Pyle, so that I might paint for you a word picture of the life an enlisted man lives out in the islands of the Pacific. However, the area is so vast, the obstacles being overcome so great, the undertaking itself of such huge proportions, it is my belief even the great Ernie Pyle will find his gifts sorely taxed in trying to tell you what those young men go through day in and day out.

A great deal has already been written about the life of the enlisted man, both in the course of this war and the last one. But no one can possibly know what he must contend with until he has lived and worked with enlisted men.

As you know, I am a member of the House Committee on Naval Affairs. For over 2 years now, a portion of every day has been taken up with problems arising through the operations of our Navy in the Pacific theater of war. In addition to the work involved as a committee member, there are a great many of my personal friends who are out there—almost all of them enlisted men. Too, there were the letters and wires and phone calls I received from many of you good people, asking for information, advice, help—in trying to solve some of the problems of your own boys who were out there.

Many times I was bitterly disappointed in my efforts to work out a solution to some of these problems. Many of you know there were times when we had to be satisfied with far less than we had hoped to accomplish.

I decided I must see for myself what the conditions were. I resolved to go out there, any way I could get there, except in the comfort of a committee assignment, and learn for myself what I could do to resolve the difficulties which beset my mind.

During the first days of December the Naval Affairs Committee was planning its tour of the Pacific theater of war. I decided then, as I am sure you will agree, I could not learn what I wanted to know, by meeting the top-ranking officers of the fleets. While I admire the admirals and members of their staffs—Lord knows too much praise can't possibly be given them—my interest is in the enlisted man, and I decided there was but one way to understand his problem. That was to live with enlisted men, to eat with then, to work with them—in short, to be one of them.

I took advantage of an opportunity to do just this, knowing full well there would be criticism from a certain quarter, but knowing too that nothing I could ever do would meet with anything but criticism from that quarter. And let me add this, if the experience I have gained will enable me to help the enlisted men, if but one man is benefited thereby, then a thousand times as much criticism would be welcome.

Perhaps I entertain a unique conception of the responsibilities which go with the office I have the honor of holding. But I don't think those responsibilities justify my being glued to my chair when there is work to be done. I have learned since my return home, that I have been charged with false motives. Let me assure you, so long as I am your Representative, no fear of such attacks will ever deter me from doing what I deem is my duty in order that I may more ably serve you in Congress. My time in uniform entitles me to nothing but mustering-out pay. That has already gone to Navy Relief.

I have to admit I haven't solved everything. On some things a solution seems as far away as ever. However, I can say with confidence that I have accomplished a great deal. I have obtained experience and information which would never have been mine had I spent the next 10 years in my office in Washington. One thing above all else—when I speak to the military authorities about conditions I dislike it must be admitted that I know what I'm talking about.

I know there is bound to be a certain amount of "griping," as it is termed.

I am conscious of the fact that it is a dangerous thing to appear to be interfering with the military authorities in the prosecution of the war. All this I have taken into consideration. Yet I am certain there is an area within which disagreement is possible, in which differences of opinion can and do exist, even among officers. Within this area some questioning is a good and healthy thing, and I intend to do considerable questioning.

Admitting that many of the so-called "gripes" can be disregarded as the natural result of men living together for long periods of time, under worse than trying conditions, it is my opinion, when a complaint becomes general throughout a large sector of the armed forces, it is time for superior officers to investigate the matter, conscientiously, and do something promptly to alleviate the conditions complained of.

I know there are a lot of obstacles in the way. I have heard—over and over again—the much abused phrase, "there's a war on." There are a lot of enlisted men, and it is not easy to accommodate all their needs. However, I have seen some extraordinary measures taken to satisfy the convenience and comfort of officers. So, I insist, some extraordinary measures should be taken—not to accommodate the comfort of enlisted men, but to meet their essential requirements.

I have already expressed myself on the subject of the length of service overseas for enlisted men. I assure you I did not arrive at this decision hastily. My conclusion was reached only after living with the men and seeing them in action. After a man has been on active duty overseas for 18 months he should be returned home. Let me tell you why I say that.

In time of actual warfare it is impossible to consider a man's personal comfort. It is folly to think time can be devoted to carrying on life as near normal as is possible, that the military authorities should consider the enlisted man's personal desires. I know that is so, and my reason for asking that these men be returned is not based on any thought of their comfort at all. It is a matter of efficiency and of getting the best out of every man who is available for duty.

I talked with a great many men out there. The places where I worked were, I have been assured, fairly representative of all the islands in the forward area. I can tell you, in all honesty, the first thought of these men on waking in the morning is of home. The thoughts that linger as they lie in their bunks at night, or as they travel silent patrols, the thought that pursues them through dreams is home. Every man who leaves these shores takes with him a powerful desire to go back home. And despite the valiant efforts of mothers and fathers, of brave wives and children, to paint a rosy picture of life back home, they soon begin to worry. One Seabee from Rhode Island told me about his wife and kids. His wife was doing her best to convince him the kids were well and happy, but he was worried sick because he had read about the terrible winter we were having. One wife, in the course of telling her man all the news of home, mentioned their little girl had fallen—a minor accident—but the Seabee had worried so about it he was convinced his wife wasn't telling him all the truth, and made me swear I'd go and see her as soon as I got home.

Such men eventually pass the peak of their efficiency and are in danger of becoming a problem. Their own morale deteriorates and what is of greater consequence—they interfere with the maximum efficiency of younger men—men more recently sent into the forward areas.

There are two stock answers to this request—lack of replacements and lack of shipping space. The first could be met, I am positive, by a more efficient use of men in the camps in the United States and in some of the bases far removed from the combat areas.

On the matter of shipping, the problem is difficult, I admit. But it is not insurmountable. Less emphasis on material and equipment for officers' clubs and officers' quarters would release some very valuable space. Less concern with whether to give our merchant ships away or sink them—and more concentration on getting a lot of them out into the Pacific—would provide additional space. There is more on this I could tell you, but, in fairness, I think it should wait upon a conscientious effort to work out a solution. I am confident a solution can be found.

There is altogether too much slavishness in the matter of red tape. There is too much thinking of the men as if they were machines. From a decision which they feel is unjust they have no recourse. What meager appeal procedure there is—is not explained to them. For all practical purposes such appeals are impossible or fraught with so much danger to the enlisted man—he almost never tries one. Writing to a Member of Congress is the worst sin in the book. It reminded me of Agrippa who said, speaking of Saint Paul, "This man might have been set at liberty had he not appealed to Caesar." Such things must cease.

I know you will understand many of the things I'd like to tell you must go unsaid. A lot can be done, I am convinced, and I intend to direct myself to the job.

I met some splendid officers in the Navy—men sincerely concerned for the welfare of the men under their command. They are the type of men who inspire in us that great pride we all feel for our Navy.

The chaplains are really God's noblemen. There must be a special corner of heaven reserved for them. Their patience and kindness have become bywords, and it is common to hear a Navy man say, "You be the chaplain," as he pours out his heart to a friend.

There should be more doctors. Most of the doctors now serving are men of integrity and skill, who try valiantly to do all that must be done—often at the cost of destroying their own health.

The legal-assistance program should be expanded at once. Every command should have a competent, sympathetic legal-assistance officer to whom an enlisted man could

go for advice and help. Steps in this direction have already been taken. This will be a great factor in building and preserving the morale of an enlisted man. No one can appreciate the importance of this kind of assistance until he sees it with his own eyes. Thousands of men breathe easier and feel better after consultation with these men who are equipped to give sound and kindly advice in all kinds of problems.

I have received hundreds of letters. It will take me a long time to answer them, and I trust you will bear with me. I am deeply grateful for the interest you have shown. I promise you I shall try to carry out the wishes you have conveyed to me and to help achieve the hopes to which you have given expression.

I have seen the tremendous might and power of our Navy. A people who can resurrect and rebuild the bleeding, battered hulk that was left at Pearl Harbor into the most powerful fighting force on all the seas surely can accomplish some little things for its ordinary fighting men. The welfare of the enlisted men should be of primary concern to all of us. They are not able to speak, but I serve notice that every day I serve in Congress I will apply what I have learned so that I may contribute something toward making their lot a little easier.

Railroads Are Doing a Marvelous Wartime Job

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. HAGEN. Mr. Speaker, having at one time been engaged in railroad work in one capacity or another, I have maintained a great deal of interest in the welfare of the "rails" and have watched with admiration the manner in which both railroad management and labor has successfully coped with critical wartime situations and problems from time to time.

One of the dramatic episodes on the home front is the miracle of wartime railroad transportation.

In spite of the loss of experienced personnel and the tremendously increased demands made upon railroad facilities by the military and civilian population, the American railroads have more than met the test with flying colors.

Of interest to the readers of the CONGRESSIONAL RECORD will be an article written by Mr. Levitt F. Morris, entitled "The Victory of the Rails," which was published in a recent issue of the Christian Science Monitor. The article follows:

THE VICTORY OF THE RAILS

(By Leavitt F. Morris)

If any major industry in this Nation has a right to toot its own whistle for a war job well done—then it is the railroads. And what a to-do there would be in the old Nation tonight if engineers of the some 42,000-odd locomotives now in operation should decide to pull that cord simultaneously!

But right now the railroads are setting their wheels closer to the rails in the continued determination to get the big job finished at the quickest possible moment. They are saving their "toots" for grade crossings—and for V-day.

Now, take Conductor Sam Jones, standing by that commuter train to Brookville, U. S. A. See, he's fingering that big, gold watch preparing to cry "Board" for the 5:05 p. m. crowd returning to their homes from war jobs, offices, and civilian tasks. We haven't noticed that he's wearing any "E" award. But Sam told us the other day that if this war hadn't come along he'd have given up railroading and retired to his little poultry farm.

"But somebody's got to make these trains roll," he grinned. "Doesn't make much difference whether it's a little local like this or the crack coast special or the long string of freight cars carrying war materials. I'm glad to do my part. Got a couple of boys out there myself and I'm mighty glad to be helping on this end."

Sam sort of admitted that it is harder taking tickets than it used to be, the trains being crowded the way they are. But the folks are pretty understanding these days and you get to know more people.

"Maybe I'll have a lot more customers for my fresh eggs when this is over," he said.

There are hundreds of Sam Jonses doing their bit for their country's railroads today. They, along with the thousands of new workers, are responsible for successfully meeting one of the greatest transportation challenges in the history of the world. Ever since the first Japanese bomb exploded at Pearl Harbor these railroad men began breaking transportation records. And, what's more, they are still doing it!

Listen to this: In 1944 every previous transportation record established went out the window—"by the board," as a railroad man would say. The railroads handled the greatest volume of freight and passenger traffic in their history. Such is the statement of J. J. Pelley, president of the Association of American Railroads. And, he modestly adds, all this was accomplished without serious transportation difficulties.

The amazing and interesting fact to note in this remarkable achievement is that the 1944 traffic load, far heavier than that of the preceding year, was handled with virtually the same number of locomotives and with hardly more than a nominal increase in freight cars compared with 1939. There was a slight increase in the number of passenger cars.

Perhaps you were one of the many railroad passengers that contributed to the astronomical figure of 96,000,000,000 passenger-miles which the railroads piled up in 1944. This is an increase of 9.3 percent above the number of passenger-miles recorded in 1943. This nine-cipher figure goes down as the greatest passenger traffic year in the history of the railroads.

And, mind you, this does not include troop movements of more than 10,700,000 men. It does not, if you please, include the millions on furlough who traveled during the year or individuals moving on order, Navy and Marine Corps movements, nor prisoners of war.

The railroads believe that, so far as passenger travel is concerned, the peak has been reached. In other words, passenger travel is over the hump and should not be so heavy in 1945.

This doesn't mean, railroad officials are quick to point out, that civilians can now make that long-desired rail journey to visit Aunt Sue in Oshkosh; a trip which the Office of Defense Transportation definitely labels as unnecessary travel. The railroads still have a big job to do, carrying troops, military and Government officials, workers to their jobs in war plants, offices, and civilian activities, and, most important of all, speeding returning wounded soldiers to rehabilitation centers.

From a freight standpoint the railroads have even a bigger task ahead of them for 1945. More and more war materials must be kept moving to the fighting fronts. It is going to take thousands of freight cars to carry the essentials of a modern war from factory to embarkation point. Food crops must be moved in season. The railroads indeed have their work cut out for them during the coming year. Are they going to be equal to it? You can't get any railroad man to say anything but "We've done it once; we can do it again."

Nevertheless, the railroads are facing a serious problem in the shortage of labor to maintain their rolling stock and keep rights-of-way repaired. When considering how important the railroads are to the successful prosecution of this war remember they have not received their share of new equipment—equipment badly needed to replace worn-out cars and engines. What has trickled through has barely met the needs. Lack of experienced help has handicapped the railroads, but even in the face of all this, somehow they have maintained a high rate of efficiency through sheer perseverance. With the Army needing more men, the railroads look for further losses in manpower but, come what may, they fully intend to keep 'em rolling at the same rate of efficiency during 1945.

One of the trials of the past year confronting most of the Nation's major lines has been feeding thousands of passengers. Yes, there have been long lines for breakfast and dinner. Most western lines serve only 2 meals a day. But try getting, say, 175,000 meals a month in a little two-by-four kitchen. This figure, picked at random, happened to be what 1 railroad did during the first 10 months of 1944.

When the war is over the railroads certainly are not going to rest on their laurels. Already alert eyes are focused on the future. Already it has been said that the standard that enabled carriers to do their wartime work would be set even higher when peace comes, because railroad research has been expanded and intensified during the conflict to keep pace with urgent demands.

Plans are on the drawing boards for faster, more comfortable and commodious trains. Schedules are in the making for faster and smoother service to all parts of the Nation. Lower travel costs are a certainty.

So, our hats are off to American railroads. Especially to those men, yes, and women, that make them roll on toward victory and a glorious peace.

Alaska, the Last Frontier, Calls for New Pioneers

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. ANGELL. Mr. Speaker, as a member of the House Committee on Territories, which has jurisdiction over the Territory of Alaska, I am deeply interested in the post-war development of this great territorial possession as a frontier which will afford opportunities to our returning soldiers and war workers. Factual presentation of the possibilities of Alaska were set forth in an article by Capt. Richard L. Neuberger

which appeared in the St. Louis Post-Dispatch February 18, 1945. The article follows:

ALASKA NOW LAST FRONTIER—CALLS TO NEW PIONEERS—THOUSANDS OF SOLDIERS ARE LOOKING NORTHWARD TO LAND THAT OFFERS GREAT OPPORTUNITIES ALONG WITH ITS HARDSHIPS

(By Capt. Richard L. Neuberger)

After every war there has been a frontier to settle. George Washington's soldiers took up land in the Ohio Valley. The men of the Lewis and Clark Expedition got 640 acres each in the Louisiana Purchase. The veterans of 1812 settled the lower Missouri country. Soldiers in Union blue and Confederate gray moved beyond the Rockies. Many veterans of World War No. 1 looked to the valley and lowlands along the Pacific seaboard.

Now the frontier is Alaska.

The eyes of thousands of soldiers of World War No. 2 are gazing northward in the direction of the vast rampart which the United States purchased from Russia more than three-fourths of a century ago.

"I was told," said President Roosevelt on his return from Alaska last summer, "that a number of officers and men are considering settling in Alaska after the war is over. I do hope that this is so, because the development of Alaska has only been scratched and it is still the country of the pioneers, and in one sense every American is a descendant of pioneers."

"On my return to Washington," the President added, "I am going to set up a study of Alaska as a place to which many veterans of this war, especially those who do not have strong home roots, can go to become pioneers. Alaska is a land with a very small population, but I am convinced it has great opportunities for those who are willing to work and to help build up all kinds of new things in new lands."

Will these hopes of the President be realized?

PRACTICALLY ALL LAND STILL IN PUBLIC DOMAIN

Since the days of the gold rush—and those days were almost half a century ago—Alaska has developed comparatively little from the standpoint of population. In 1898 there were 30,493 white people in Alaska. In 1940, there were not many more than that—39,170. The total population of Alaska in 1940 was 72,524, nearly half of whom were Indians and Eskimos. Practically all the land in Alaska is still public domain, as it was in 1867 when Secretary of State William H. Seward paid Czar Alexander II the sum of $7,200,000 for America's largest Territorial possession.

But since 1940 a new development has occurred in Alaska. That development has been the construction of a vast system of defenses by the American Army and Navy. Five years ago there was only one military post in Alaska, the ancient and outmoded garrison at Chilkoot Barracks on the shores of the Inside Passage. Today, Alaska is dotted with vast airfields, harbor installations, and guns and artillery of all caliber. Where primeval wilderness locked the land in 1940, an airport as large as that at Seattle or Minneapolis is now spread out across the terrain. The Alaska Military Highway threads for more than 1,600 miles through the mountain fastnesses of Alaska, British Columbia, and through the Yukon Territory of Canada.

"During the past few years," said Congressman HOMER D. ANGELL, of Oregon, after a recent Alaskan journey, "Alaska has attained its greatest advances. This huge Territory of 586,400 square miles is on the threshold of its most important development. More than 100,000 American soldiers have been serving in Alaska. These are healthy, vigorous, young men. Many of them will be the Alaskan frontiersmen of the future."

COUNTRY COMPARED WITH SCANDINAVIA

This was what President Roosevelt was looking to when, in a speech at Puget Sound Navy Yard, he compared Alaska with the Scandinavian countries. In Norway, Sweden, and Finland, the President pointed out, "the people have brought their civilization to a very high and prosperous level, despite the cold and winter darkness."

Alaska has many similarities to Scandinavia. I remember standing on the bridge of an American Coast Guard cutter commanded by a lieutenant who was a naturalized Norwegian. Our boat poked into the towering fiords of southeastern Alaska's long "panhandle." It stood beneath cliffs which loomed like skyscrapers above the sea. The shrill echoes of its whistle shivered off splinters of ice from glaciers which guarded the heads of these immense coves. It cruised into lonely harbors where spruce forests swept up like aprons from the blue North Pacific.

The lieutenant shaded his eyes and looked at the summits of the fiords. "This is like Norway, where I was born," he said. "I do not see why this part of Alaska could not have all the economic activities of Norway. There are woods here for lumber where dairy cattle can graze. There are fish off the shore. There are minerals in the mountains. There are streams which can be dammed up for water power. Yet Trondheim, in Norway, has 55,000 people, and how many has Juneau, the capital of Alaska?"

I looked in the World Almanac in the bottom of my musette bag, Juneau's population was listed as only 5,729. Why, I wondered?

E. L. (BOB) BARTLETT, Delegate in Congress from Alaska, and Ernest Gruening, Alaska's Governor, are agreed that lack of adequate transportation has held back Alaska more than any other factor. Where Sweden has had 7,000 miles of railways, Alaska, three times the size of Sweden, has had 509 miles—and not all of that standard gauge. In 1940 Sweden had 38,830 miles of automobile roads, Alaska 1,978. And where the Scandinavian lands are hard by such great European centers as Antwerp, Leningrad, Brussels, and Berlin, Alaska is a minimum of 1,000 miles from Vancouver and Seattle.

WAR DEVELOPMENTS IMPORTANT

This is why developments of the war have been so important to Alaska. The United States Army Air Corps has pioneered a remarkable new air ferry route to Fairbanks, Nome, and Soviet Russia. Ports and docks now stud many of Alaska's coves. A telephone line threads along the Alaska Highway, and for the first time Alaskans can converse with continental United States. Innumerable airfields and flight strips have made travel possible by air, where the only transportation was on foot, dog sled, or canoe.

Few Americans realize how favorably Alaska compares in resources to the Scandinavian nations.

Delegate BARTLETT has pointed out that Sweden has a reindeer pasturage of 40,000 square miles, as contrasted with 240,000 square miles in Alaska. Alaska and Sweden are not far apart in available hydroelectric power. Sweden has less than half the potential farm and grazing land of Alaska, yet its agricultural population comprises 2,700,000 people. Alaska's total civilian population is barely one-thirtieth of this figure.

Summer flowers thrive in the seacoast settlements of Skagway, Anchorage, and Valdez, but Alaska has not been a region of homes. Women make homes, and Alaska's population has been primarily male—more than three white men to every white woman. In the gold-rush days of 1898 the Yukon poet Robert Service wrote of "the hunger that's not banished by bacon and beans," the hunger for a woman and a home. Four decades after Service penned his poem at Whitehorse American soldiers serving there stood on the airfield and cheered ringingly as the first C-47 bringing Army nurses winged in from the South.

Many soldiers who have been on duty in Alaska hope to return with their families. The principal objection to service in the Arctic has been the absence of feminine companionship. "There's nothing the matter with this ol' island that a babe wouldn't fix," said a soldier in the Aleutians who later fell at Attu.

SOLDIER WANTS TO RETURN

Flying across the Continental Divide from St. John to Whitehorse in a plane bound for the Soviet Union, an Air Corps lieutenant from Michigan told me that he intended to come back to Alaska with his wife and run a silver fox farm.

"Having my wife with me," the lieutenant said, "will make the difference between this being a prison and a great place to live."

Hunting and fishing in Alaska are incomparable. There are lakes where an angler's fly has never rested. Moose and caribou roam the wilderness. When we of the Army went north in 1942 our diet of canned meat was varied when sharpshooters brought down Alaskan big game. Lake trout in Alaska often measure more than 24 inches. Governor Gruening believes that Alaska has a future as one of the world's greatest tourist centers, a rival to Switzerland.

The war has created a newsprint shortage, and the woodlands of Alaska may alleviate this shortage in the not distant future. Lyle F. Watts, chief of the United States Forest Service, has pointed out that the national forests of Alaska can support an industry employing more than 8,000 men in the production of pulp and paper. Hemlock and Sitka spruce in the Tongass National Forest, according to Watts, would provide the foundations for this new industry.

Soldiers first coming to Alaska do not enjoy the experience. I remember seeing Ketchikan from the deck of the transport *Aleutian* in the late summer of 1942. The little Alaskan town seemed dingy and primitive after the bright lights of Portland and Seattle.

I recall the queer feeling of thinking that this was one of Alaska's larger settlements.

I wondered what the smaller ones would be like.

I saw Ketchikan a year later on a trip down the inside passage on the S. S. *Prince Rupert*. The little Alaskan community looked little no longer. Its girls, its neon signs, its attenuated bus system, its two drug stores, its shops with real plate-glass windows, its pavement—these things symbolized the epitome of civilization. After a long period up in the far-flung fastness of the Yukon and Mackenzie watersheds, our first glimpse of Alaska's port of entry brought quite a different reaction.

Many soldiers will return to Alaska after the war if they can obtain a reasonable means of livelihood. Governor Gruening's office at Juneau receives many inquiries from servicemen requesting information on how to acquire land in Alaska. Most of them hope to establish farms. For example, the Forest Service estimates that approximately 1,000,000 acres on the timbered Kenai Peninsula will maintain livestock grazing comparable with eastern Oregon and Montana.

FARMING POSSIBLE IN NORTH

The frozen soil of the Alaskan interior offers a grave obstacle to farming in the Tanana and Yukon Valleys, where winter temperatures often crowd 70 degrees below zero. I have seen Scotch whisky freeze near the Donjek River on the Alaska Highway. However, experiments recently conducted in Siberia may increase vastly the growing potentialities of the northern latitudes.

Successful farming is possible in the North. I have eaten potatoes as big as baseballs which were grown in the shadow of the Arctic Circle. Dr. Charles Camsell, veteran commissioner of Canada's northwest territories, says that beets, carrots, and cauliflower thrive at Fort Good Hope and that a dairy herd flourishes at Akilvik. These places are near the shores of the Arctic Ocean. More than 200 families in Alaska's mountain-barricaded Matanuska Valley are operating farms which produce grain, milk, beef, and other commodities.

Many advocates of Alaskan development hope that a Government corporation, known as the Alaska Development Authority, will be established. They want this agency to have both power and funds to help soldiers settle in Alaska—power to clear land, build fences, erect barns, string telephone lines, construct roads and survey railways. Exponents of such a step point out that in the past the Government has subsidized railroads through land grants and irrigation farmers through dams and canals. Why not, they ask, assist men desiring to settle in Alaska?

The Alaska Military Highway, first land route in history to America's largest territorial possession, threads through Canada's Yukon Territory and Province of British Columbia. Some soldiers have picked out lodge, inn, and tourist-camp sites along the 1,600-mile road. Governor Gruening, of Alaska, proudly cites the story of the Army couple, a sergeant and his nufse wife, who have opened and maintained a successul lodge on the Richardson Highway, the Alaskan road which connects with the Alaska Military Highway. Starting out in debt, the couple now owns the entire establishment and the soldier and his wife have raised a whopping baby boy to boot.

Brig. Gen. James A. O'Connor, Army engineer officer who built the Alaska Highway, thinks that many soldiers who are "sold" on hunting and fishing will want to come back to Alaska after the war. "They will bring their families with them," the general predicts, "and will become the nucleus of a new civilization in the north country. Despite all the difficulties, the north lays claim to a man's allegiance and never lets go."

Alaska is the final frontier. It has the hardships and perils of a frontier. Yet it also offers the opportunities which go hand in hand with a new country. What Oregon was half a century ago, what the Louisiana Purchase was 100 years ago, the Territory of Alaska is today—the promised land, the new Canaan beyond the next horizon.

Planting of the Flag on Iwo Jima

EXTENSION OF REMARKS

OF

HON. JOE HENDRICKS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. HENDRICKS. Mr. Speaker, I am sure that every Member of the House must have observed the photograph of the four marines of the Twenty-eighth Regiment, Fifth Division, planting the flag of the United States atop Mount Suribachi, the volcanic fort on Iwo Jima Island. This picture, copy of which I hold in my hand, appeared in the Washington Post Sunday, February 25, and on page 3 of the same paper Wednesday, February 28. Never have I seen a more striking photograph than the one made by Joe Rosenthal, Associated Press photographer on assignment with the wartime still-picture pool.

I have today introduced a bill authorizing the Secretary of the Navy to erect a monument in the District of Columbia to the heroic action of the Marine Corps as typified by the four marines of the Twenty-eighth Regiment, Fifth Division, in this photograph.

I have provided in the bill that this picture be a model for the monument because I do not believe any product of the mind of the artist could equal this photograph on actual action.

The photograph is extremely typical when analyzed. The base of the flag is the crown of Mount Suribachi, which typifies the crowning success of the sacrifices made to plant it there. The base on which the feet of the four marines are planted is of the most rugged terrain. The action of the men is symbolic of the efforts of the Nation to crush the despicable enemy, Japan. Even while three of the marines grasp the flag pole the fourth is making every effort to help finish the job, and his upstretched hands are indicative of the fact that he had already raised the flag to his greatest height. The right leg of each man is bent in the same direction and each body leans forward, typifying concerted action and forward movement. Their backs are to the camera as though they were baring their breasts to the enemy and protecting their homeland and loved ones who are far behind them.

Even the half-unfurled flag has a message. With a bit of imagination one can hear it say: "I have not completely unfurled, but soon I will reach my destination and in the God-given air shall wave in full length over a free world."

The almost extinct volcano of Suribachi is, within itself, very symbolic. It is symbolic of the nation which erupted forth with great stench and violence, soon to recede and be conquered.

I am proud that a Florida boy, Sgt. Ernest I. Thomas, of 112 East First Avenue, Tallahassee, Fla., was one of those who helped to plant our flag on Suribachi.

The Need for War Housing

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. MILLER of California. Mr. Speaker, we are facing a critical shortage of housing on the Pacific coast.

With the upswing of the war in the Pacific, there will be a concentration of workers on the Pacific coast that will tax our housing, transportation, and community facilities beyond any conditions we have so far experienced in areas that are already recognized as critical.

As the theater of operations moves further to the west more shipping is needed to supply our Army and Navy fighting the fanatical Jap. With victory assured in Europe, men and materials engaged in the west will be made available to the Orient, requiring more and more supplies to pass through Pacific coast ports.

The San Francisco Bay area, with its army and naval installations distributed on all sides of California's great inland water system, is now one of the congested areas in our country, it needs housing, transportation, hospitals, and other community facilities to meet the demands made upon it because of its geographical and strategic importance in the all-out war against Japan.

The primary necessity of the moment is additional housing. This crying need is best represented by the following teletype from the International Longshoremen and Warehousemen Union, from which I quote:

The longshore industry here faces a critical housing problem which seriously handicaps recruiting of adequate manpower to handle vital war cargoes. The situation is becoming progressively worse with the accentuation of the Nation's war effort to the Pacific area. The Pacific Coast Maritime Industry Board, official Government agency charged with the responsibility of securing maximum production and efficiency in the west coast longshore industry, has long recognized longshore housing as a serious impediment to securing sufficient manpower. With the approval of the National Housing Authority the Maritime Board conducted an extensive survey in July 1944 to establish facts and figures as to the extent of the longshore housing problem. The survey was conducted by personal contact and examination by questionnaires of individual cases. The survey disclosed the following:

1. Five hundred and forty-seven longshoremen faced critical housing problems, 402 of whom were colored.

2. Overcrowding is the most acute phase of the problem. In many cases large families are living in one or two hotel rooms. Wives and children of longshoremen are living in close proximity to prostitutes and other disreputable characters. Large families are living in unhealthy basement rooms with no ventilation and no bathing or cooking facilities. The quarters are dirty and infested with vermin and rats. There are several cases of 11 and 12 members of a family living in one room. Some families were found sleeping in shifts or relays. Night workers are sleeping in the same beds day workers have just vacated. Some are forced to sleep in railway stations and picture shows as a result of evictions by public-health officers because of condemnation and overcrowding. Public health officers state quarters are unfit for human occupancy.

Employers of waterfront labor are equally concerned with the Maritime Board and the International Longshoremen's and Warehousemen's Union in remedying this situation.

A letter from employers to John Collins, National Housing Authority, dated May 8, 1944, stated:

"At the present time all shipping is under the control of the Federal Government through the Army, Navy, War Shipping Administration, and Lend-Lease. Ninety percent of the cargo handled consists of military supplies and munitions. Recruiting at the present time varies from 50 to 100 men per week, although efforts have been made

to increase the rate. Approximately 50 percent of the new recruits are Negroes. Approximately 90 percent of the Negro recruits are married, although some do not have their families with them because of the lack of suitable housing. Our labor turn-over of all new employees has been adversely affected by lack of housing. We are requesting your continued assistance in meeting housing problems for our longshoremen."

The Maritime Board has held numerous conferences with local housing authorities and has exchanged letters and wires with the National Housing Authority and others in an attempt to get more Government housing constructed and allocated to longshoremen.

The following excerpt from a report from Paul Eliel, Chairman of the Maritime Board, to John Cushing, Assistant Deputy War Shipping Administrator, summarizes the situation prevailing July 1944, which situation has grown progressively worse with the continuous and unremitting recruitment of additional workers for the industry:

"Attached please find a memo covering results of the housing questionnaire which we filled out last week at the longshore hiring hall. It indicates something of the deplorable conditions that prevail in re to housing, particularly of Negroes at this time. It shows, among other things, that 235 families have only one room in which to live and that over half of these families consist of a married couple with children, with children running up to families of seven."

The following teletype message from Mr. Cushing to Mr. Helmbold, War Shipping Administration, under date July 17, 1944, further underscores the serious nature of the problem:

"Pacific Coast Maritime Industry Board is making strenuous effort to improve longshore housing situation in San Francisco which is definitely in deplorable shape, particularly with respect to our colored labor. It is so bad that it is unquestionably affecting the efficiency of a substantial number of the men."

The following is an excerpt from a report by the Administrative Assistant to the Maritime Board:

"From observations made in this office, the general tension, loss of working hours, labor turn-over and low morale is increased by aggravated personal and family problems and relationship springing from intolerable housing, overcrowding, fear of eviction, and actual eviction, profiteering and general maladjustment."

Following the survey of the Maritime Board, authorities were requested to allocate 500 family units for exclusive use of longshoremen. Housing authorities recognized the seriousness of the problem but it was impossible to get substantial relief because of general housing shortage and because of the large majority of critical cases among colored longshoremen. A few units were made available in outlying districts so far removed that unsolvable transportation problems developed.

The only effective solution to the problem is the construction of additional Government housing and specific allocation, in large measure, to Negro longshoremen.

The Maritime Board recently conferred with Admiral Greenslade, coordinator for western sea frontier, on the matter of manpower to handle future cargo movement. Based on this and other information received through contacts with the War Shipping Administration, Maritime Board has undertaken a program to increase the working force by the addition of 1,750 men. This will bring the total of longshoremen and closely related workers close to 12,000 men, which is a significant contrast to pre-war manpower pool of four to five thousand men.

The situation is so serious that Joint Employer-Union Longshore Recruiting Agency agreed recently no more men would be recruited unless they could be adequately housed. This action which was taken as a last resort resulted in 107 suitable longshore recruits turned down between January 5 and 31, 1945. Since Maritime Board survey in July 1944 there has been an approximate net increase of 800 men to the working force, a large percentage of which are inadequately housed when recruited.

The efficiency and production of a vital war industry is jeopardized by this situation. Night workers spend days searching for housing, thereby losing sleep. Day workers become absentees while searching for housing during the day. Defense Plant Corporation recently made available $675,000 to be used to construct central kitchen and four cafeterias on the water front as they realized longshoremen must be provided with proper food. That being the case, housing authorities should be provided with funds to erect the required housing. The facts set forth above are official records in the files of the Pacific Coast Maritime Industry Board, an adjunct of the War Shipping Administration, with offices at 220 Bush Street, San Francisco, Calif. The Pacific Coast Maritime Industry Board joins with the union and employers of the west coast longshore industry in urging that action be taken to meet and overcome the housing problem in the port of San Francisco.

Our recommendations are as follows:

1. A minimum of 1,100 family units of Government housing be immediately constructed and assigned for exclusive use by longshoremen and 1,000 units for Negro longshoremen.

2. The establishment of necessary funds, as determined by the National Housing Authority in submitting its budget for the next fiscal period, be appropriated and specifically earmarked for this construction.

The situation in housing is the same in the major port areas of San Pedro, Calif., and Seattle, but a study of the conditions there have not yet been made. The International Longshoremen's and Warehousemen's Union recommends further that a study be made of housing in these areas and necessary funds be appropriated to solve the housing problem in these areas.

The International Longshoremen's and Warehousemen's Union has also just received from its San Francisco office the following wire:

"Navy presently making survey of residents at Hunters Point housing project with an intention to evict all who are not employees at Hunters Point. Several tenants, namely, longshoremen, have doubled up there with employees of Hunters Point. Longshoremen considered residing there illegally and are receiving eviction notices signed by the sheriff. Absolutely no housing available for these Negro longshoremen in San Francisco or Eastbay town or projects. One couple and two children are now sitting in board office demanding that something be done. We anticipate office will soon be crowded with evictees."

The International Longshoremen's and Warehousemen's Union believes that the foregoing facts demonstrate the urgent need for action and respectfully request that immediate action be taken to solve this critical housing problem.

Respectfully submitted.

EXECUTIVE BOARD,
INTERNATIONAL LONGSHOREMEN'S AND WAREHOUSEMEN'S UNION.

Mr. Speaker, while housing is not the only shortage that besets this area, it is the critical one of the moment and the one that must be solved now.

To meet the demands of our all-out war effort to crush Japan, we must solve the problems of housing, transportation, and community facilities in the order of their importance, accepting the principle of first things first.

Effect of Smoke Ordinances on Coal Production

EXTENSION OF REMARKS
OF
HON. EVAN HOWELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. HOWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter to the Honorable James F. Byrnes, Director of the Office of War Mobilization, from the Honorable Calvin T. Johnson, former Congressman from the Twenty-second District of Illinois, regarding smoke ordinances of midwestern cities, and their effect on the production of coal in the State of Illinois:

WASHINGTON, D. C., *February 23, 1945.*
Hon. JAMES F. BYRNES,
Director Office of War Mobilization,
Washington, D. C.

DEAR SIR: Noting the intensive drive initiated by your office to conserve both manpower and facilities, may I call to your attention the smoke ordinances of midwestern cities.

May I cite, as an example, the city of St. Louis, Mo., which for more than a century obtained her fuel supply from Illinois coal fields lying within radii of 20 to 50 miles. In 1939, a rigid smoke ordinance was enacted which forces the importation of more than 1,500,000 tons each year from West Virginia and Arkansas coal fields which are 400 to 600 miles distant from St. Louis, thus wasting approximately 25,000,000 car miles annually.

The importation of this coal not only caused idleness among miners but also forced dozens of Illinois mines to be closed and junked, that formerly produced coal for the St. Louis market. Illinois coal is permitted in St. Louis today for use in mechanically fired equipment, but approximately a 2,000,000-ton market has been lost to Illinois mines through the restrictions which force the small home owner and renter to purchase high grade fuels for all hand-fired equipment.

I am enclosing a clipping from the Granite City Press Record which states that coal production in Madison County, Ill., declined in 1944 from 1943, and that where some years ago 4,000,000 tons of coal were produced annually, only 2,114,632 tons were produced in 1944. It further states that 10 mines are now idle and that those operating worked only an average of 232 days in 1944. A similar situation exists in adjoining St. Clair County where dozens of mines have been closed and junked in recent years. These two counties lie directly across the Mississippi River from St. Louis, Mo.

Geologists estimate that Illinois fuel beds contain approximately 200,000,000,000 tons of bituminous coal, and although it has been mined commercially since 1828, only 6 percent of the total has been removed. Illinois mines experience difficulty in disposing of lump coal during the summer months, and as a result, miners do not have full-time employment during that period. This coal could be stored in dealers' yards and used to meet fuel emergencies, if existing smoke ordinances were eliminated and Illinois coal accepted for use in hand-fired equipment. Illinois coal sells in St. Louis for approximately $5 per ton, compared to $9 per ton for eastern bituminous and Arkansas semi-anthracite coal.

I am informed that owners of the Radium Coal Mine, located at Belleville, Ill., 14 miles from St. Louis, are contemplating junking that property because of their inability to reopen and operate at a profit. This mine is

known as one of the best in southern Illinois but has not been operated in recent years because of the inability to find a market. This condition is due largely to the St. Louis smoke ordinance.

Trusting you will investigate this matter thoroughly, and that this ordinance can be set aside during the emergency, thus utilizing to the fullest, the existing manpower and facilities of the Illinois coal fields, I am,

Sincerely,

CALVIN D. JOHNSON,
Former Congressman from the Twenty-second District of Illinois.

Army Backs London Poles

EXTENSION OF REMARKS
OF
HON. THAD F. WASIELEWSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Milwaukee Journal, of February 27, 1945:

ARMY BACKS LONDON POLES—SHOCKED BY YALTA PACT

(By L. S. B. Shapiro)

WITH THE POLISH FORCES WITH CANADIAN FIRST ARMY, February 22.—The Polish formation under Gen. Maczek fighting with the Canadian army remain bound by voluntary loyalty and solemn oath to the Polish emigre government in London. Under no conditions will they take direction from Lublin, and the troops are determined never to return to Poland as long as the Lublinites retain power. No matter how the Allied powers dispose of the London government, these troops will follow its direction to the end, even if it means a lifetime of exile.

It is this correspondent's unmistakable impression that if the London government is bankrupted, the Polish troops will seek their release from the armed forces of the Allies.

Though their hatred of the Germans is unflagged, they have no wish to continue as mercenaries which is what they would consider themselves if they fought under any auspices other than the London government. They say they now are fighting for Poland and they consider the Lublin government bears no relation to true Polish interests. Shocked at first to the point of despair by what they had read of the decisions made at the Crimea meeting of the Big Three, their attitudes now are hardened into firm determination to stand by the London government no matter how bitter the consequences to them.

I was told the attitude of the Polish forces in the Mediterranean is even more uncompromising than that of Maczek's formations—if this be possible. It was pointed out that only 25 percent of Maczek's troops come from the territory east of the Curzon line.

In Italy, 65 percent of the Polish troops have their homes in annexed portions. Gen. Maczek's home town, Lwow, now is in Russian territory. Thus the world is faced with an emigre population of 300,000 Poles, which is the approximate number of soldiers, sailors and airmen fighting with the western Allies. They will be, they said, like Jews—a wandering race everywhere in the world.

The principal reason for the determination of these men not to return to Poland seems to be fear. They unashamedly admit this.

Pvt. (1st cl.) Felix B. Mestas, Jr., of La Veta, Colo.

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. CHENOWETH. Mr. Speaker, when the heroes of this war are tabulated the name of Pvt. (1st cl.) Felix B. Mestas, Jr., of La Veta, Colo., will be high on the list. Private Mestas was killed in action on the Italian front on September 29, 1944. However, before he met his death he gave one of the greatest exhibitions of courage under fire that will be recorded in the entire war.

Private Mestas was a member of the Three Hundred and Fiftieth Regiment, known as the Battle Mountain Regiment. For its valor during the battle of Battle Mountain his battalion was awarded a Distinguished Unit Citation. It was also during this battle that Private Mestas distinguished himself when the Nazis made a fanatical charge on Montebattaglia.

Members of the battalion took up positions on the mountain 2 days before the attack and stood off a number of counterattacks on September 29. During one particular vicious attack the official record contains the following notation:

One unknown hero was seen standing on the crest of the hill in full view of a charging group of fanatical Germans, and firing his Browning automatic rifle from the hip in order to get a better field of fire down the slope. With the heavy rifle he killed 24 of the advancing Germans and accounted for two more with grenades.

The name of this hero was not at first learned. His accomplishments became the talk of the regiment. It was Sgt. Cleo Peek of Arvin, Calif., who finally established his identity. He was with Private Mestas just before he was killed.

Peek and Mestas were at an advanced post on the height. They were almost out of ammunition and knew they would have to leave. Standing up in his position and starting to fire Mestas insisted that Peek leave first. Peek says that the Germans were charging up the hill like wild men, and that Mestas killed at least 24 with his last clip. Peek crawled back, stiff and lame, after 2 days of exposure. He and two riflemen were the only survivors of their entire squad. Peek referred to Mestas as Cowboy, and states:

The cowboy was never scared. Why just 10 minutes before I left he was singing a little song.

Pvt. (1st cl.) L. C. Burnett, of Floral, Ark., one of the surviving riflemen, was in a place where he could observe the final stand of Mestas. His version of the incident follows:

After Peek left the entrenchment I saw Cowboy stand up again and fire that last clip. Then I saw his steel helmet fall back and he stooped to pick it up. That's the last I saw of him. I have never seen a better man with a B. A. R.

The parents of this brave soldier are Mr. and Mrs. Felix Mestas, of La Veta, Colo. I have a letter from Mr. Mestas and wish to quote therefrom:

Felix made the supreme sacrifice for his country and his buddies. We are proud of his unselfish deed. The kind expressions we receive from friends help ease the ache in our sorrowing hearts, but as you can appreciate, to us he was our little boy.

He died as he lived, with a smile and a song, as that was his nature. The last time we saw him I told him since you are to be a soldier I want you to be a good one, and he answered, "I will, Dad," and he was.

Yes, Mr. Speaker, Private Mestas was a real soldier, and I am proud to relate his accomplishments to the House. I am sure his heroism will be duly and appropriately recognized by the War Department.

The Farmer Faces a Tough Year

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post of March 3, 1945:

THE FARMER FACES ANOTHER TOUGH YEAR

That record buster, the American farmer, is being asked for a repeat performance with this year's output of food. Livestock and crop-production quotas, set by the War Food Administration, are based on a continued heavy war and relief demand. They ask for a 363,635,000 crop acreage, 3 percent more than was planted last year. "Better to have too much than too little," is the view expressed by one official.

It is a justifiable precaution. But in the light of contradictory policies, many people in the farm areas wonder if the Government really means it. For the farmer is having to tackle the job with still less to do it with than before.

The farm population has continued to drop until its proportion to the Nation's total is the lowest in our history. This decline reflects a further departure for war jobs and the drafting of young farmers. Confusion over Selective Service policies and the necessity local boards face in filling draft quotas have led to such effects as this farm-sales ad in the Archbold (Ohio) Buckeye, beginning "Due to tenant being called into military service——" In the list of items to be sold were 18 head of registered Jersey cows and a bull. This followed the War Food Administration's request to increase milk production to more than 120,000,000,000 pounds in 1945.

Farm work along American lines calls not only for physical stamina but experience and training in a variety of skills. One possessing these abilities is an almost irreplaceable man. What the lack of such men means is indicated by a recent official Nebraska farm-crop report, which said: "Reduction in the output of livestock products reflects, among other things, the shortage of labor. Most farms are large enough to require two men to produce and harvest crops and to raise and finish livestock. Many farm units cannot maintain livestock raising and finishing

for market unless they can depend on getting help that will remain until all operations are finished."

Some of the quotas for new farm machinery will not be filled. Power machinery is as indispensable as manpower because it increases the capacity of the man, and thus helps to offset the shortage of labor. This is the third year farmers have operated under restricted implement schedules and the proportion of old and repaired machinery has increased. The danger in this combination of thinned labor supply and machinery uncertainties is that it leaves farmers more vulnerable to weather hazards. We have had a longer cycle of generally favorable weather than usual and it has contributed materially to the large food production. Even with these handicaps and risks, it does not necessarily follow that the American people will have less to eat. For three successive years, farmers have crossed up the prophets of scarcity and, by dint of ingenuity and hard work, have produced more food than the same number of people ever did before in history. The one big crop in the growing stage, winter wheat, looks even more promising than usual. In all the six hard-winter-wheat States of the lower plains there is a deep penetration of subsoil moisture that ordinarily foretokens a large yield.

But, with an eye to the doubtful factors, the Government is asking the public to hedge its bets on the food supply by planting another 18,500,000 Victory gardens. Forty percent of the fresh vegetables came from this source last year, and home canners are estimated to have put up 3,400,000,000 quarts of food. To lend further incentive, it is officially stated that the armed forces will require an even larger percentage of this year's commercial-canning production.

The headlines offer no occasion to relax. Knock-out of Germany, food experts say, will make no difference in requirements for 3 months afterward, little in 6.

Statement by the American Labor Party on the Punishment of War Criminals

EXTENSION OF REMARKS

OF

HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein the statement of the American Labor Party on the punishment of war criminals:

Full and complete punishment must be imposed on all war criminals. The mistakes of the last war must be avoided.

This is not merely a matter of elemantary human justice. It is a matter which is tied up indivisibly with the problem of achieving a secure and lasting peace. If any of the men who were responsible for unloosing this war against mankind and perpetrating the monstrous crimes which attended it, should go unpunished, they would constitue a continuing threat to the security of the world and be a source of disunity among the United Nations.

The punishment of war criminals, therefore, goes to the heart of our war policy.

The United Nations Commission for Investigation of War Crimes was created (a) "with a view to establishing responsibility of the guilty individuals through the collection and assessment of all available evidence," and (b) "to take concrete steps looking to the punishment of agents of the Axis Powers who have perpetrated atrocious crimes against their innocent victims."

The establishment of this Commission with such avowed purposes is an improvement over policies followed in the last war. The Commission, however, is in grave default in the discharge of its responsibilities, because—

(a) The Moscow Declaration contemplated punishment of all war criminals. Yet the Commission has adopted no positive definition of war criminals, has ignored treasonous acts not involving physical atrocities, and has refused to consider atrocities against persons who are not nationals of the United Nations.

(b) Former Secretary Hull has stated that "Hitler and other top Nazi officials" are included in the Moscow Declaration. Yet the United Nations Commission has announced no plans for the punishment of heads of state and has neither established nor proposed machinery for the punishment of any war criminals.

The danger that history may repeat itself is real and imminent: To assure that all war criminals shall receive full punishment, we propose the following:

1. DEFINITION OF WAR CRIMINALS

The term "war criminals" shall include:

(a) All persons who launched this war or who engaged in acts of aggression.

(b) All persons responsible for or who participated in mass executions, slaughter of civilians and hostages, deportation of slave labor, violence against women and children, starvation and extermination of racial groups, acts of treason, looting, theft, and destruction of property, violence upon prisoners of war, and the like, including crimes of such character against their own nationals.

(c) All persons who aided or abetted in any of the foregoing, including heads of state, militarists, politicians, and industrialists.

2. JURISDICTION AND TRIAL

(a) Supermalefactors, such as Hitler and other heads of state responsible for launching the war or for widespread crimes in several countries, or against stateless persons, or whose crimes have no particular localization, or whom an offended nation may prefer not to try, should be brought to justice through an international tribunal, acting as the agent of all of the United Nations.

(b) All other war criminals should be tried and punished as soon as possible after their apprehension by tribunals of the country in or against which their abominable deeds were done.

(c) Under no circumstances, should German and Japanese war criminals be left to trial by tribunals of their own countries.

3. MACHINERY FOR PROSECUTION

Each of the United Nations should forthwith instruct its representative to the War Crimes Commission:

(a) To extend investigations by the Commission to all war crimes, whether or not the victims are nationals of the United Nations.

(b) To forthwith establish an adequate prosecuting staff charged with the duty of compiling lists of all persons accused as war criminals as above defined and of at once proceeding with the assembling of all pertinent evidence and testimony with the view toward expediting prompt trials of such criminals.

(c) To immediately take all other concrete steps necessary to provide machinery for the punishment of those war criminals triable by an international tribunal and to proceed with the trial and punishment of such criminals as soon as apprehended.

4. NO ASYLUM

The United Nations have promised that war criminals will be pursued to the uttermost ends of the earth. This obligation must be implemented with the formulation of a concrete program of sanctions to be applied to those neutral countries which have not yet undertaken to close their frontiers to war criminals, to the end that protection or asylum in any country for any war criminal shall be rendered impossible.

Distribution of Surplus Government Property

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. ROONEY. Mr. Speaker, recently a businessman in my district in Brooklyn who conducts a well known and reputable 5-cents-to-$5 department-store business established a half century ago, sent me a communication in connection with the very important problem of equitable distribution of Government surplus property. The contents of this letter so accurately describes the problems of purchasing surplus Government property insofar as so-called small business is concerned, that I insert it in the Appendix of the RECORD for the consideration of my colleagues.

The body of this letter is as follows:

Suggestions seem to be in order with reference to the disposal of surplus property and this letter is offered in a completely constructive vein to help effectuate the Government's policies in surplus merchandise disposal.

For purposes of clarity, may I say that this is being written with the recognition that the following are the general policy of the Government:

To dispose of surpluses—

(a) Quickly.

(b) Fairly.

(c) With the least loss to the Government.

(d) With as little red tape as possible.

(e) With as little disturbance to the commercial and economic structure of the country as possible.

We are not a very small store. We are in what might be known as the junior class but as far as our ability to avail ourselves of the opportunity to purchase surplus merchandise is concerned we are just out of the running.

The reasons are obvious but for the purposes of clarity may we enumerate them.

1. Surplus merchandise is located all over the country. We cannot afford nor, because of the help situation, are we able to have any one travel around to inspect the merchandise.

2. Most lots of desirable merchandise are too large for us to think of purchasing.

3. As small merchants, we have a natural fear of buying merchandise in condition "as is" without the opportunity of thoroughly inspecting the goods.

4. The amount of paper work necessary to enter bids, make deposits, etc., would involve an expense which we cannot afford and help which we do not have and cannot obtain.

5. Our purchases would not be for speculative resale but for sale direct to the consumer, which means that we have to be more careful than speculative buyers.

For the above reasons we find it impossible, therefore, to participate in any of the Gov-

ernment's offerings of merchandise as reported through the Surplus Reporter. (Please don't take us off the list. We would like to receive it in order to be informed.)

We therefore wish to offer the following constructive suggestion which would be a great help to us and would effectuate the Government's program.

Can't the Government publish, periodically, a list of surplus merchandise sales made during the previous month, giving the name of the purchaser, the quantity purchased, a short description of the item purchased, and the price paid?

We would then be able to contact this private buyer and negotiate a deal with him for the amount of merchandise at a price and terms that would be satisfactory to us.

We do not believe that this would be violating any ethics since all such transactions are public information. The price paid need not be secret because there is an O. P. A. ceiling and competition will take care of the rest.

If it would be possible for the Treasury, or whatever branch of the Government would have this method in their care, to issue these lists every 2 weeks or on the 1st and 15th of the month instead of every month, it would be still better.

We hope that this suggestion may receive consideration as it seems that this is the only practical way in which the smaller business people of the country (not only retail but also industrial, farming, etc.) will be able to obtain any real advantage out of the Government program of surplus merchandise disposal.

Respectfully yours,

GERMAIN STORES, INC.,
By ALLEN GERMAIN, *Comptroller.*
BROOKLYN, N. Y.

Norway, Europe's Forgotten Country?

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. **HAGEN.** Mr. Speaker, Norway was the birthplace of my parents. Both of them came to this country when they were young people and both of them were proud of their citizenship secured shortly after their arrival in Minnesota and North Dakota.

My father, a journalist, edited a Norwegian-language newspaper, the Vesterheimen, and became known throughout Minnesota and North Dakota for his unwavering adherence to the principles of righteous living. He became an important factor in political circles in northwestern Minnesota.

Through him and my mother I have learned to know something of the social, cultural, and political history of Norway. I have grown to respect the stable, down-to-earth philosophy that characterizes Norwegian thinking.

Norway was a peaceful nation. She wanted war with no one. When Hitler invaded Norway I, like all good Americans, acquired a deep hatred for the ugly things for which nazi-ism stood. I knew from news that filtered out of Norway what those good people were suffering greatly. On many occasions my messages of hope and encouragement were short-waved by the O. W. I. toward Norway and to the listening underground.

But hope is not enough. Promises of liberation are not a substitute for food and freedom.

Norway must not be the forgotten nation, left to starve in the midst of the growing brutality of the cornered Nazis.

Marquis W. Childs, well-known columnist, has the following to say about conditions in Norway, in his article entitled "Norway Almost Europe's Forgotten Country," published January 15, 1945, in many American newspapers.

The article follows:

THE STATE OF THE NATION—NORWAY ALMOST EUROPE'S FORGOTTEN COUNTRY

(By Marquis W. Childs)

WASHINGTON.—For all the Allied world, the postponement of victory in Europe has been a crushing blow.

But if we feel it here in America, especially the prolongation of the tension which is the state of mind of millions with sons and fathers and husbands in the fighting, consider the plight of one small country that for nearly 5 years has known no surcease from suffering.

Virtually outside the orbit of the Allied victories of 1944, Norway is almost a forgotten country. Yet Norway was among the first of the western democracies to come under the tyranny of the Nazis. Not long ago, the Norwegian government-in-exile asked the Allies to invade Norway, and that appeal had in it a note of desperation.

When I was in Sweden a year and a half ago, Norwegians who came out of their country via the underground took a grave view of what another winter of Nazi occupation would do. The Norwegian people had not starved, but they were close to the line.

Inside Norway, they were pinning their hope on liberation in the spring of 1944. The theory—and it certainly was not confined to Norway—was that Germany could not last through another winter. Lacking any real hope, the Norwegians lived on rumors of hope which went in waves via the underground.

Now they are enduring still another winter of Nazi occupation. The reluctant sun sheds a thin light for a little while in the middle of the day. The rest is darkness and raw, numbing cold knifing into bodies long in want of sustaining foods.

BRUTALITY INCREASED

Recent reports coming out of Norway show that the occupation has become more savage and brutal during the past 6 months. While there was even a slim chance of a negotiated peace which would not sacrifice everything, the Nazi troops maintained some moderation. They even resisted the worst excesses of the Gestapo.

Today there are no restraints. The arrogance of victory has been replaced by the hatred and frustration of defeat.

Latest estimates put about 200,000 Germans in Norway. The army of occupation is comprised of more than 100,000 troops—about 10 to 11 divisions of about 10,000 each. For the most part, these are young boys or middle-aged men. The German civilian organization, the Gestapo, and the Todt, slave labor battalions under the German lash, make up the rest. And many Nazis have their wives with them.

The invaders live almost entirely off the country. For a time, the Germans sent in some food. That has now stopped. They have said they have no interest in what happens to the Norwegian population. Obviously, this is part of the calculated policy to weaken all peoples as much as possible.

In the Arctic north, the Russians have driven the Nazis out of several hundred square miles of Norwegian territory. As the Russians came in, the Germans burned the villages, turning families out of their little wooden houses to almost certain death in the Arctic winter. The saga of the wanderings of the dispossessed women and children of Kirkenes and the smaller communities is one more chapter in the record of Nazi ruthlessness.

RUSSIAN RELATIONS GOOD

According to reports out of Norway, relations with the invading Russians have been good. Administration of civil affairs has been left to Norwegians. But the Russians can do little to alleviate the suffering, since they have only their own rations.

In fact, recent dispatches from London reveal that Russia has requested her western allies to relieve her even of the task of garrisoning the territory her armies have liberated. But the United States and Britain had to refuse on the grounds that, because of the demands of the western front, they could not yet spare the necessary troops and supplies.

The Norwegians are a strong proud people. But hunger is a cruel despot. When total liberation of Norway finally comes, the machinery of relief and reconstruction must be ready to move immediately. There must be no delay.

The President's Speech

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. BENDER. Mr. Speaker, the President's report to the Nation added little to our knowledge of the Yalta Conference. What was left unsaid must give us deep concern. There was no reference to the Atlantic Charter, and the revelation from the President on his return to Washington that secret commitments have been made is most disturbing. One of the major sources of dissatisfaction with our conduct of foreign affairs has been the widespread belief that America is being bound to courses of action without previous knowledge or approval of Congress. Nothing was said by the President to dispel this belief. In my judgment, the Nation is entitled to know every commitment undertaken by our Government without any exceptions whatever.

How Much Can We Carry?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. HOFFMAN. Mr. Speaker, already, before either war has been won,

those who wish to remake America, reform the world, are planning our contributions to the rebuilding of the world. They not only wish to rehabilitate, to rebuild industries in other lands, to feed, clothe, and shelter the peoples of other nations, but they wish to make America carry the major portion of the burden.

Every farmer knows that a two-bottom plow cannot be pulled with a 2-horse team; every truck driver knows that a 2-ton truck cannot successfully move a 10-ton load. Every effort has its limitations.

No matter what the administration tells us, for our own good we must shortly determine how great a burden our people can successfully assume, how much of a load our taxpayers can carry, without destroying our own economic machinery, our own manpower.

The war has already cost us $250,000,000,000. Before it is over, the cost will certainly exceed $300,000,000,000. That means an annual interest charge of at least $6,000,000,000 — approximately $500,000,000 per month, or $3.70 each month from every man, woman, and child in the country. The Government now takes 20 percent of your pay check. Will you be able to pay $3.70 each month for interest? In addition, can you pay your share of what children and others cannot pay? That $3.70 per month will be due for interest alone and, in addition, there will be payments to be made upon the principal and payment of the current expenses of operating the Government.

In addition to all that, we are now being asked to put up as much as $6,000,000,000 for additional post-war machinery to help other nations. It is proposed to create a world bank—contributions to the capital of that bank are to be made as follows:

United States	$3,175,000,000
Britain	1,300,000,000
Russia	1,200,000,000
Rest of the world	3,425,000,000
Total	9,100,000,000

The world bank would make loans to other countries for all sorts of purposes and it would be controlled not by the United States but by a board of international directors, on which we would have a minor representation.

In addition to this world bank, we are advised that a monetary fund of $8,800,000,000, made up of a pool of currency and gold, is to be established. Contributions to that fund are to be made in the following sums:

United States	$2,750,000,000
Britain	1,300,000,000
Russia	1,200,000,000
Rest of the world	3,550,000,000
Total	8,800,000,000

You will note that to the bank we contribute more than one-third; to the fund we contribute more than one-fourth, and in the administration of neither the bank nor the fund will we have a controlling voice, though our contributions to the fund will be $250,000,000 more than the combined contributions of Great Britain and Russia. Our kick-in to the bank will be $675,000,000 more than the combined contributions of the British Empire and Russia.

Our contribution to the Bank is within $250,000,000 of what all the rest of the nations, other than Russia and Great Britain, will contribute, and to the fund within $800,000,000 of what all other nations, other than Great Britain and Russia, contribute.

To all intent and purposes, the $5,925,000,000 which our taxpayers contribute to this world plan will be used, in part at least, to rebuild in other lands industry and agriculture which will come in competition with our own farmers, industrial workers, and industrialists.

War is always destructive; millions of tons of supplies of all kinds will, before this war ends, have been shipped out of this country; little, if any, will ever be returned; most of it will have been destroyed. Our dollars by the tens of billions have gone into the war; our young men and our young women have been sacrificed by the millions; our country will be poorer in resources of all kinds. The best of its young manhood will have been destroyed; gone forever. In sweat and in toil, future generations for 100 years will be paying the cost of this war.

It is well that the people of America awaken to what is proposed, face the facts, and pass sound judgment upon just how much help they can give to the rest of the world without destroying here in America the power to help, to carry on for our own preservation. How much of an additional load can we assume, permit to be piled upon us, without breaking down our ability to produce?

Do You Know Your Congressman?

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks, I include a recent editorial by Bill Cahn, United States News staff writer:

DO YOU KNOW YOUR CONGRESSMAN?

(By Bill Cahn)

From a big eastern city comes the interesting news that 82 percent of the people of that city do not know the names of their Congressmen.

A daily newspaper has made a survey of what is described as a "carefully selected cross section of the city's voters." Seemingly, there were no tricks involved. Just a question: "Will you tell me the name of your Congressman?"

According to the newspaper, 82 percent frankly confessed they didn't know. Ten percent more hazarded a guess, but were wrong.

Well, it isn't our intention to give encouragement to the notion that because something is printed in a newspaper, it is necessarily true. Nor is there anything about the history of newspaper polls which makes for extreme confidence in their dependability.

But the chances are that this particular poll is fairly accurate and not only for this big eastern city but for other cities as well. Most people don't know the name of their Congressman even though they may have waited an hour or two to vote for him along with President Roosevelt, just a few months ago.

Can it be that the American people are a forgetful people? Or that they just have no head for remembering names? The answer is an emphatic "No."

Millions of American baseball fans memorizes scores of names and batting averages each year, and millions more know names, weights, and records of football teams from one end of the Nation to the other. Millions of housewives turn out fine meals, remembering recipes without research in a cookbook. Millions of G. I.'s remember their serial number, rifle number, bayonet number, general orders, and plenty more—without undue strain.

Therefore, the only conclusion to be reached is that about 82 percent of the people haven't been convinced that remembering the name of their Congressman—much less writing to him regularly—is personally important to them.

Of course, the newspapers we read don't help much. If the press were interested in keeping people informed, most of us would be as familiar with the batting averages of our Congressman as we are with our favorite ballplayer.

If most voters had the chance of studying box scores of congressional sessions like they have of big-league ball games, probably 82 percent of the voters would not only remember the names of their Congressman but also let him know in no uncertain terms what they think of his actions.

But that doesn't explain it all either. The crude fact remains that most people don't yet savvy the blunt fact that knowing the name, address, telephone number, and record of their Congressman is as important to them as life itself.

True, we are beginning to catch on to this. The mail bag of the average Congressman is getting heavier. But the victory the United Nations are carving out of human lives won't be safe for us until the name of our Congressman is as common a word in our household as Joe DiMaggio's or Lana Turner's.

Drafting of Nurses

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 22, 1945.

To the EDITOR OF THE NEW YORK TIMES.

DEAR SIR: A draft of nurses, or to use the more specific language, the Nurses Selective Service Act is no doubt the one way to distribute equitably the vital professional services in which there is a real shortage. I believe a law should be put into effect immediately because there should be no delay in providing skilled nursing care for the war wounded. It is equally important, however, that such legislation should be written in a form that will bring about desirable results. The bill which the Times of February 20 reports as approved by the House Military Affairs Committee, should be revised now to avoid future difficulty. The public should

be well enough informed to request such revision in the best interests of all concerned.

First, a compulsory registration of all nurses is imperative, since a major difficulty in the current nursing crisis is that no one actually knows how many nurses there are in the United States. The bill as approved by the committee applies only to nurses between 20 and 45 years of age who are unmarried.

The Army should be interested in getting a comprehensive picture of the nursing resources of the Nation, since it is using approximately 1,000 civilian nurses in military hospitals in this country, many of them over the age to enter military service.

A high proportion of nurses marry soon after graduation from nursing school. They make excellent wives and mothers and liberal exemptions should be granted to bona fide home makers. The military services do not now accept nurses with dependents under 14 years of age. It would, however, be a mistake to overlook those nurses without real home responsibilities who choose to find in marriage an excuse for not devoting their needed professional skills to helping win the war. Nurses who wish to avoid induction could marry immediately and it would be shortsighted if such a group were not included in a registration of our total nursing resources.

The House Military Affairs Committee is to be commended for seeing that all graduate nurses should be subjected to draft. The original May bill applied only to registered nurses, which would have made it possible for those wishing to avoid induction simply to let their nurses' registration lapse. But there should be no loopholes. It has been estimated that there may be as many as 400,000 graduates of accredited schools of nursing in the country able to give at least part-time service if need be, as compared with about 275,000 nurses now active in their profession (the number includes approximately 53,000 already in military service.) It will cost the Government very little more to register them all. Then wise and liberal regulations should be set up, with the help of nurses themselves, to be administered by draft boards on which nurses are serving and exemptions granted on the basis of essentiality of service on the home front.

The situation in civilian hospitals is already so desperate that during the recent committee hearings in Washington, Dr. Donald C. Smelzer, president of the American Hospital Association said "We accept any nurse of any age, just so she has two arms and two legs."

Our nursing staff at the Visiting Nurse Service of New York is 30 percent below its pre-war figure, and most health agencies have an equally serious shortage of staff. A recent study of all public health nursing resources in greater New York, which includes both health department and private agency staff, revealed that there is approximately one public health nurse to 9,000 population. Revised wartime standards for public health practice state that one public health nurse to 5,000 population should be the absolute minimum.

Every citizen should know the potential dangers in the seriously reduced nursing forces on the home front. When we thought there were dangers to our country from enemy action, citizens in all walks of life were anxious to have their abilities and willingness registered for call. I had an opportunity to know what this meant from the national standpoint when I was chief nurse in the Medical Division of the United States Office of Civilian Defense. If properly informed, the public will be equally willing now to have all resources duly registered to be called upon as needed.

Second. I am glad to see that nurses (other than cadets) classified as essential by the Procurement and Assignment Service of the War Manpower Commission will not be inducted, and that nurses employed by the Veterans' Administration will be considered essential. As a member of the National Committee on allocation of Medical Personnel of the Procurement and Assignment Service, I know of the work that has been done in estimating State quotas for military service and the careful attention given to the criteria for classification of all nurses. Nearly 900 procurement and assignment service committees all over the country have classified about 235,000 nurses during the past year and a half, and in so doing have secured the greatest body of information about nurses to be had anywhere. This information should be used.

Third. The worst feature of the committee-approved bill is that it seems to exempt all other nurses until all United States Cadet Nurse Corps graduates have been inducted. To be sure, a high percentage of service should be expected of the cadets, who are educated at public expense. The number of cadets now available will not begin to fill the immediate need, however, and those already graduated have received Government funds only during their senior year, since the corps was organized in July 1943. The immediate effect of such a regulation would be to stop the volunteering of noncadet eligible nurses, even those who may be doing no essential work and should have answered the call to military service long ago. It cannot be emphasized too strongly that volunteering must continue while a draft law is being shaped and put into operation, if our wounded are not to suffer for lack of nursing care.

The long-range effect of such a regulation will be to dry up the supply of nursing services at the source. The cadet nurses were promised a choice between military service and essential work at home upon graduation. If the law is changed now, many of those now in school may drop out. This must not happen. But think of the difficulty of recruiting incoming students for new classes. It will be hard enough if nurses are the only women to be drafted, but if cadets are inevitably to be the first nurses taken, regardless of how many other nurses should be serving the situation will be impossible.

The Cadet Corps, members of which receive only school expenses and a modest stipend of $15 or $20 a month from the Government, was set up for the dual purpose of supplying both military and civilian nursing needs. It is estimated that student nurses are giving 80 percent of the actual care to patients in the hospitals with which their school's are connected and which, like most other civilian services, now operate with extremely depleted graduate nurse staffs.

Civilian nursing needs have expanded during the war years while military needs were mounting rapidly. The Cadet Corps was set up at the request of the nursing profession because they saw no other way to guarantee continued acceleration of admissions to schools—no 76 percent above those in 1940—for education in a profession that is relatively underpaid, in the face of growing competition in other fields.

We must play fair with these students. Draft regulations can be so written as to place greater obligations upon cadets than upon other nurses without giving a blanket excuse from military service to all other nurses, and without dragnetting in the cadet graduate who should perhaps teach in a school of nursing (some schools are actually refusing new students because of teacher shortages) or do other specialized work.

Fourth. It is regrettable that the House Committee on Military Affairs is attempting to break down standards set up by the Army and Navy Nurse Corps by specifying that no nurse shall be disqualified because the school from which she received her training was affiliated with a hospital not having a specified number of beds or patients. Obviously, a nurse who has worked only in a very small hospital may never have seen types of injury and illness including communicable disease, that are prevalent in military hospitals. Obviously too, the Navy nurse, who is essentially a teacher of hospital corpsmen, and the Army nurse, who has any number of corpsmen working under her direction, must be a genuinely versatile person, highly skilled in nursing technique.

While there has been a great hue and cry from the nurses trained in schools that do not meet standards set up by the military services, their numbers are not large. Only 90 out of 1,300 schools in the country do not qualify and since they are small, they average only about 10 graduates each a year. Both Army and Navy have modified rules to admit nurses from these schools who have, subsequent to graduation, had adequate supplemental training in large hospitals.

The Army and Navy should certainly decide what standards their nurses must meet. If the Congress insists upon making that decision, it must take the responsibility for inadequate care that our wounded may receive in consequence.

Five, and finally, I would like the public to say that even a comprehensive draft of nurses will be inadequate without a national service act. It is not a question of discrimination. Nurses are proud that their skills are needed first. It is a question of use of those skills. Too many nurses are now washing dishes and scrubbing floors to keep civilian services in operation. Their entire time could be given to nursing duties if it was possible to secure adequate auxiliary help.

A great many matters should be taken into consideration that might better be left to regulations than written into the text itself. For example, the Navy Nurse Corps should admit Negro nurses, and the Army Nurse Corps, which now has 330, should use more of the estimated 2,000 Negro nurses who are qualified. I would urge that the simplest sort of law be passed, and then selective service and the War Manpower Commission work closely with the nurses in setting up wise and fair regulations for carrying out the law. When over a third of all those active in a profession and of military age have already volunteered for military service—a remarkable record, by the way—we can safely trust the profession to guide a selective-service procedure.

We cannot afford delay in getting nurses to the war wounded while we struggle with the inevitably tough job of passing a National Service Act for all women and men. But nurses want it clearly understood that they know a draft of nurses alone is only piecemeal legislation, and that the whole problem should be tackled as soon as possible.

Sincerely,

MARIAN G. RANDALL,
Executive Director, Visiting Nurse Service of New York, formerly Henry Street Visiting Nurse Service.

These Chickens Are Coming Home To Roost

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. MURRAY of Wisconsin. Mr. Speaker, the following news article from the Washington Post of March 1 should

be of interest to every Member of Congress:

NEW UNITED STATES POLICY FOR IMPORTS PRESENTED AT MEXICO CITY

(By Herbert B. Elliston)

MEXICO CITY.—Assistant Secretary of State William H. Clayton unfolded yesterday in the name of the United States delegation to the Inter-American Conference a new import policy for the Federal Government.

This policy would direct buying abroad both to accumulate and to consume goods needed here. The program is based upon two needs which, it is hoped, will appeal to the American people: security and conservation. Legislation would be required to put this program into effect, as some doubt exists in the minds of members of the United States delegation whether the Government legally can keep or stock-pile imports which have no relation to our war requirements.

MUTUAL BENEFITS SEEN

It is the contention of the American delegation that the program would have the double purpose of serving the interests of the United States and of Latin America alike.

National security is held to be virtually the price of this import program from the United States' standpoint. What is contemplated is the hoarding of all those critical and strategic materials, procured with such difficulty as to have imposed great strain upon Allied war-making. In getting these materials for war purposes the United States had to scour the world, paying huge prices in competition with Germany. Most of the alloys, such as tungsten, manganese, and chrome, used by America's steel industry are cited in this category. It is felt that a stock-pile of these materials is necessary in assuming new responsibilities in the post-war world.

AID TO CONSERVATION

Another benefit flowing from this important policy, according to Clayton, would be that it would help the United States to conserve its own resources. War has taken a drastic toll of American raw materials, he pointed out.

Soaring copper ore needs were mentioned by Clayton as an illustration of the ravages of war. At the present rate of consumption America faces exhaustion of copper, and of other resources within a generation. American delegates here feel that the only way to make supplies last is to eke out domestic production with foreign buying. According to this view, the emphasis on conservation will make the new import program more palatable to the American people.

FUNDAMENTAL APPROACH

America's interest is likewise served, it is argued, in the aid that would accrue to Latin American economics from such an important program. It is fundamental in the approach of the American delegation to this conference that the political solidarity of the Americas depends upon what contribution the United States makes to maintenance of economic stability when war buying is over.

Nineteen revolutions occurred in the Latin-American countries during the transition to peace after the last war. If similar upheavals are to be avoided this time, the United States delegation here agrees, this import program's adoption is imperative. In other words, peace buying in the Americas must cushion the shock of the abrupt loss to Latin America of our war buying. It so happens that most of the critical and strategic materials which the United States lacks, or which are in short supply, are to be found in this rich, and relatively virgin continent.

GREETED WITH AVID INTEREST

Clayton's program has been greeted with avid interest by Latin-American nations' delegates. On no other matter are they more worried than on the problem of their economic adjustment when war contracts have been canceled. There seems to be more faith in the United States' performance in this conference than fear of the lack of it. So far as can be made out, this faith rests primarily on the new world situation of the United States.

"The Crimea Conference makes this conference a success," said one delegate, "because it was apparent there that the United States was going to live up to its responsibilities as one of the world's predominant powers."

However, the fear obtrudes itself in one or two of the hundred or more resolutions which have been poured into the conference hopper, notably in the antidumping resolutions proffered by Brazil and Uruguay. This resolution is aimed at the cotton export subsidy voted last year by Congress. Brazil, which is seeking a cotton agreement with the United States, considers this subsidy a violation of the spirit, if not of the letter, of its trade agreement with the United States.

Here we have Mr. Clayton taking upon himself the responsibility of doing considerable talking about something that Congress itself should have the voice. I heard Mr. Clayton on the radio a few nights before election telling about the inequities of the Smoot-Hawley Tariff Act. However, he did not tell the radio audience that the Smoot-Hawley Act is still on the statute books after 12 years of the present administration. Nor did he tell them that the Smoot-Hawley Act has been made still more severe by the embargo on exports such as tobacco seed, which was passed in 1940, after Marvin Jones had been chairman of the Agriculture Committee for 9 years and Henry Wallace had been Secretary of Agriculture for 8 years. Nor did he relate how the present administration continued the high duty on wheat as provided by the Smoot-Hawley Act and then in addition put on a near embargo on wheat imports.

Have not thinking people in our own country begun to realize the deceit and deception of these new dealers that run around and talk about a good-neighbor policy when they are really passing legislation to jeopardize the good-neighbor policy? I am still waiting to hear some new dealer justify, first, export embargoes, and, second, subsidized exports. If he cannot he better introduce legislation to repeal the legislation, or at least quit running around the country deceiving women's organizations and others and let them see the real color of the New Deal banner.

You will observe in the last paragraph of the article that Brazil and Uruguay have made note and protest to the subsidized exports as practiced by the present administration.

War Department Policy Regarding 18-Year-Old Youths in Military Service

EXTENSION OF REMARKS

OF

HON. R. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. THOMASON. Mr. Speaker, the Secretary of War, Hon. Henry L. Stimson, today was asked the following question at his press and radio conference: "Congressional and some popular comment has indicated that youths of 18 are being sent to combat with no more than 15 weeks of basic training and in well less than 8 months in the service. Can you say whether this indicates any change in policy in this regard?"

He made the followed reply:

Subsequent battle emergencies have forced considerable variations from the policy you mention.

In discussing this matter I wish to make several points clear. These young men are being trained more intensively and effectively than American soldiers have ever been trained heretofore.

Some Members of the Congress and the public have confused the training of a division with the training of an individual. The former requires a minimum of a year, preferably longer. The training of an individual to go into a veteran unit is an entirely different matter.

So long as there were numerous divisions in this country the practice was followed of drawing from the ranks of those divisions the majority of Infantry privates who had been in training from a year to 2 years and sending them overseas. Their places were then filled by transfers of the young men from the replacement training camps. This procedure was very hard on the divisional teams. Nevertheless the War Department followed this practice so long as it was practicable. The movement of divisions out of the United States has progressed to such a point that such a procedure has not been possible for a considerable period of months.

The impression apparently has grown that the Army is maintaining men of great experience and training in the United States who might well have been sent overseas; and that if we had sent these older men overseas, the younger men could have been continued longer in training before actually committed to combat. This is not the case. During the past year practically every man under 35 who was physically qualified and for whose job a replacement could be found—either in the form of a physically disqualified man who had been returned from overseas or a civilian—has been ordered overseas. This process is continuing. Furthermore, the same procedure is being followed in regard to the men in the rear areas overseas.

Men recently inducted into the Army are given a minimum of 15 weeks of the most rigorous training which the Army has been able to devise after 4 years experience. Most of the replacements since July 1943 have received 17 weeks in the basic camps. All have received additional training in staging camps en route to the ports in this country or in replacement receiving pools overseas where they are under veteran tutelage.

Before any man is sent overseas he is submitted to a thorough test to insure that he has assimilated his training and is in fact prepared for combat duty. As I have just mentioned this training continues to the maximum extent practicable from the time he leaves the United States until he actually joins his division. There, if the division is not in the line a still more intensive period of training follows.

It is my opinion that never before have American soldiers been so thoroughly prepared for their duty in battle. Probably the best testimony regarding this matter has been given by a captive German officer who complained that no matter how heavily our units might suffer on a given day they were always back in full strength the next morning and as tough as ever. That represents a very great advance over our training practice and results in any former wars.

Finally, I would say this: Considering the fact that the majority of our inductees dur-

ing the past few months have been in the lowest age brackets, including a large number of 18-year-olds, a policy which prevented the use of such men would have imposed the necessity of delaying the entire campaign in Europe, and probably also in the Pacific. This, of course, would mean a tremendous additional loss of life, not to mention the other attending tragic results. Such a procedure would be wholly inexcusable.

The Hottest Story in the World Today

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1945

Mrs. DOUGLAS of California. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a speech which I made at the Overseas Press Club annual banquet on March 1, 1945:

To get to the point of what I want to say tonight, I must first make some statements that may seem like polishing an apple for the teacher. Believe me, this is not so. My statements will be made to remind you of your power and your responsibility. It is a responsibility you cannot escape, and I know you will not try to.

In a very real sense, news correspondents are teachers. They inform. The great ones lead. It is our fault, ours, your readers, the public, the Members of Congress, and administrators, not yours, that in the past we have not always paid enough attention, have not heeded, have not acted often, quickly, and decisively enough upon the reports of our correspondents, particularly our foreign correspondents. I recall a few of many who told us the facts—and their meaning—while they were white hot on the smoking anvil of the present, and not years after: Mowrer, Shirer, Murrow, Gunther, Jay Allen, Leland Stowe, and a score of others—all of whom told the meaning of fascism for us.

All of those I have mentioned and most of you, I hope, know one fact:

This is one world. No place is as far away from any other place as Washington was from New York in 1776. We are all neighbors—all nations, all peoples, all races.

Either we, the peoples of the world, will organize ourselves as good neighbors, or this war will be only another in a series that can end our civilization.

Here, and in other countries, plain people have seen how science and the spirit of man can produce for war. Here, and all over the world, the people are asking, "If for war, why not for peace?"

Wendell Willkie said it. Harold Stassen said it. Franklin D. Roosevelt said it. And Henry A. Wallace has said it.

One of your colleagues, William Philip Simms, telegraphed what I thought was an eloquent and hopeful report from the Inter-American Conference on War and Peace at Mexico City. Mr. Simms said, and I quote:

"I have been present at most of the great international conferences since Versailles, but this is the first to place the rights of man ahead of the rights of nations."

This is testimony that we are making progress.

Ezequiel Padilla, Mexico's intelligent and extremely well informed foreign minister, said:

"Peace is not enough; there must be jobs for all. The only thing the world needs to fear is poverty."

Listen to Simms' comment. I quote him again:

"This is something new in the world. Mexico's remarkable Padilla takes the position that if each country sets about improving the lot of its workers and raising their purchasing power by providing jobs, national contentment will predispose such a country to peace * * *.

"A world that can spend hundreds of billions to win a war can well afford to spend a fraction of that amount in order to win the peace * * * the remedy can be found only by uniting the energies and the resources of all the Americas and the rest of the democratic world.

"Whenever Padilla, Stettinius, or any other delegate here touches on this subject they win instant applause. At previous conferences the human equation has never lacked a certain perfunctory lip-service. In Mexico City it comes close to being put first."

This is certainly eloquent testimony to the fact that we are making progress.

All over Washington and from, frankly, what I may say are the most unexpected quarters, I have discovered a rise on every hand, men and women of good will, people struggling to find the answer to the problems of this country and this world.

They are warm, human people, like yourselves, struggling to make democracy work.

Washington today is witnessing some very crucial tests for democracy. However, under the magnificent leadership of our great President, Franklin D. Roosevelt, Congress and the people have arisen to the occasion again, and again, and again.

Two great tests came today. The first was the enthusiastic response to our President's magnificent report on historic decisions reached by himself, Prime Minister Churchill, and Premier Stalin through the momentous conference at the Crimea. The next came a few hours later in the Senate, where that distinguished body acted at last to elevate a great American to another place in the Cabinet as Secretary of Commerce. I refer to that champion of the common man, Henry A. Wallace.

The next month will see much more crucial legislation. There will be the problem of implementing the historic agreements which will be reached at the San Francisco United Nations Conference with the sinus to make a just and last peace work. If we fail to achieve full employment there will be no just and lasting peace.

But full employment is not going to be achieved merely by resolutions adopted at Mexico City, or at San Francisco, or at later meetings of the United Nations and the world organization when established. You know and I know that it is often easier to be progressive and bold in our words and actions a thousand or five thousand miles from home, from Main Street, or either end of Pennsylvania Avenue. We are not going to have full employment in the Americas, or anywhere else in the world, we are not going to have lasting world peace, unless we here in the United States stop walking around the problem and get down to the business of insuring full employment here at home—the same production and employment level in peace that we have achieved in war.

This is what I came here to say. You, who know that the economy of the world is today one seamless web, have a responsibility which, it seems to me, you cannot and should not try to avoid. That responsibility is to help us, all of us, Members of Congress, business men, labor, farmers, professional people, face up to this problem of getting full employment here at home after the war, and at the same time keeping both the form and spirit of true democracy.

A beginning has been made in the full employment bill introduced in the Senate by Senators MURRAY, O'MAHONEY, THOMAS, and WAGNER, and in the House of Representatives by WRIGHT PATMAN, chairman of the House Small Business Committee. It is not offered as a complete solution. Perhaps it has many imperfections. Perhaps it does not go far enough. In offering it, Senator MURRAY invited those who disagreed with it to offer alternatives. Others have denounced it, talked of regimentation, totalitarianism, and the road to serfdom. Senator TAFT has boldly announced that 50,000,000 jobs are about enough, and has assumed a national income of $120,000,000,000 is about the best we can do. He thinks a great many women should go back into the home. That would be all right, if they have homes and if they want to do that. He and other critics of the bill say nothing of the regimentation of unemployment, of evictions, of bread lines and the serfdom of chronic insecurity or, to put it plainly, the chronic fear of tomorrow in a Nation and world that for the first time can produce enough for all. To date, no one has offered an alternative.

As correspondents, as reporters, as teachers, as men and women, you know with your own eyes and ears and minds that this is one world and that, this time, we must not only take part but must lead, first in rehabilitation of a shattered world and, second, in the establishment of decent and rising standards of living throughout this great new neighborhood. You can realize, more quickly and profoundly than most persons, the vital importance of getting some such bill enacted into law before the war ends and the gigantic problems and opportunities of reconversion and peace are upon us.

Let me quote from Senator MURRAY'S statement in offering the full employment bill. After describing the grave dangers that post-war mass unemployment would present within the Nation, he continued:

"An unemployment crisis in America would spread like wildfire throughout the world. It would give us dumping, higher tariffs, export subsidies, blocked currencies, and every other new and old type of economic warfare. And this, I submit, would inevitably wreck our plans for an effective international security organization, turn back the clock of progress, and plunge us into another holocaust of blood, suffering, and chaos."

Full employment is not just a domestic matter. It is related to inter-American stability, to world peace. To achieve it, we need your attention, your help. In a very real sense, insurance of full employment in the United States is today the hottest story in the world. If we achieve it, our children and their children can know peace, security, opportunity, and happiness—we can finally win a people's peace—the peace about which the President spoke so simply and beautifully today to liberty-loving people of this Nation who do not want to see their sons in another war.

Poland's Plight

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, March 2, 1945

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter

from the Jersey Journal of February 27, 1945:

POLAND'S PLIGHT

EDITOR, JERSEY JOURNAL:

Now that the Yalta Conference is over and the Big Three are on the way home, Poland once again looks to the world for help. She looks for help from those who believe in justice and freedom and this help to come from the people whose voices can be raised to defend righteousness. Both in this country and in England the so-called Fifth Partition of Poland is on the lips of everyone. We are not forgetting the 12,000,000 boys of ours who are also in there fighting the enemy, when we speak for Poland. Of these close to 1,000,000 are Poles who fight twice as hard because the enemy of their ancestors is also the enemy of their homeland. Our American boys, in my opinion, would settle the political aspects in the same manner as they master the military issues.

Since September 1939, Poland has fought on against terrific odds. She was promised help from England and France, but never received it. Has England forgotten the part played by the Polish Air Force in the defense of London? Has she forgotten the Polish merchant marine, which has almost been completely sunk carrying supplies to her shores? Does she remember how the Poles fought at Tobruk for 4 long months holding on and drawing heavy fire from Medauer Hill? Those who fought there know. During the entire campaign only a few Poles were taken prisoners. When the French withdrew to England, the Poles covered the French troops and were the last to leave France. They suffered 45 percent casualties. The Polish Army was the first to land in Narvik, Norway, and push the Nazis back. The Polish Navy has taken part in almost every major naval engagement against the Nazis. The records of the American and English Fleets show that. That all seems to be forgotten now.

Remember how the underground held out for 63 days in Warsaw and no help came from Russia?

Out of a total population of 35,000,000 the records show that 7,000,000 have been slaughtered by the "master (dumb) race." Will their deaths be in vain? If people have anything to say in the matter they will see that justice comes to Poland. We of Polish descent appeal to all of you to raise your voices and be heard in helping to bring a peace to this world so that another war shall not sow its seeds in this one.

FELIX F. HRYNKIEWICZ.

Tideland Oil Grab

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. HINSHAW. Mr. Speaker, it is reported on apparently good authority that the Federal Government, through the Secretary of the Interior, is ready at last to launch its long threatened attack on State ownership of the tide and submerged lands of the coastal United States.

Although California will have the dubious honor of being singled out as the proving ground for Mr. Ickes' theory that the United States owns her several billion dollars' worth of submerged oil deposits, harbor developments, and lands filled in below the low-water mark of the Pacific Ocean, this is a matter affecting every State bordering on navigable water.

In the strongest words I must protest against any action, during a period when we are at war, designed to disrupt the unity existing between the United States of America and the several States.

Whether the issue of tidelands ownership is taken into court—which is Mr. Ickes' stated intention—or whether Congress decides to settle the question by legislation, a fight over State versus Federal title to the lands will result, with its consequent effect upon our war unity.

This will not be a fight confined solely to the State of California and the Interior Department, as several of my colleagues already have learned. The fact that Mr. Ickes has inquired about Mississippi's stand on the ownership question—through a letter sent to Governor Bailey of that State—and that there have been other indications of a desire on his part to apply the test of ownership in other coastal States with offshore oil deposits already has caused consternation in those localities.

The port authorities of all States, including the great State of New York, are vitally interested in the eventual disposition of the tidelands; municipalities with staggering harbor investments and with uncounted billions of dollars in revenues from tidelands property at stake are equally concerned.

The Secretary of the Interior Department is not a man who does things by half measures. Since he has stated his determination to go through with the granting of one or more applications for drilling permits in the Long Beach-Seal Beach area of southern California, and since he is making inquiry into the stand taken by the State of Mississippi on the ownership of valuable tidelands in that State, it would appear the "test" will apply throughout all the coastal regions of this country.

Many Members present here today and many of our colleagues in the Senate recall the bitter battle that occurred in 1939, when the bill introduced by former Senator Nye, of North Dakota, was up for hearings in both Houses of Congress. Briefly, this legislation would have declared title in the tidelands to rest in the United States and not in the several States.

Mr. Speaker, I do not want at this time to take up more than the few minutes sufficient to call this matter to the attention of the House. I want, simply, to point out that issues of this character almost invariably attract little attention until it is very nearly too late.

Any action affecting the States' rights of any individual State is wont to go unnoticed, until it becomes evident a precedent would be established which would apply to many other States—in this instance, all the coastal States.

I earnestly urge all Members of this House, and especially those from States fronting on the Atlantic, the Pacific, and the Gulf of Mexico, to study the testimony taken by the House Judiciary Committee and the Senate Public Lands Committee a few years ago when California, Texas, Mississippi, Louisiana, and some other States were battling for their rights against the Nye resolution.

This legislation was defeated, but only after long arguments and at considerable cost, when the weight of public opinion and the sense of fair play backed up the contention of Members from coastal States that the Federal Government has no just claim to submerged and filled-in lands.

[From the Los Angeles Times of February 6, 1945]

ICKES AGAIN

Reports in Washington that Secretary of the Interior Ickes is about to test the ownership of tidal lands by granting an oil lease in the California coastal strip indicate that the threat to this State's possessions has not disappeared with the forced retirement of Senator Nye.

Ickes and other foes of the various States have sought for a number of years to gain control of tidal acreage for the Federal Government, in spite of the uniform court decisions which hold that the title to such lands is vested in the respective States. Senator Nye introduced bills at several sessions directing the Federal Government to seize the tidal lands, his last attempts singling out California. Nye finally dropped his efforts, but apparently Ickes has not abandoned the notion. If the reports are correct, he means to proceed despite the refusal of Congress to take a stand for his point of view.

California probably has little to fear from a court test, but should not be put to the expense of defending its rights. To head Ickes off, Congress should adopt some such legislation as the bill introduced by Oregon's Representative Angell specifically renouncing any Federal interest in tidal lands and declaring them the property of the States, as they have invariably been considered from the foundation of the Republic up to a few years ago.

PETTY'S OIL LETTER

WASHINGTON, D. C., *February 10, 1945.*

Industry representatives here feel that if Secretary Ickes grants a public lands oil and gas lease on California tidelands—as it is persistently rumored he is planning to do—it would be definite indication that his New Deal advisers in the Interior Department are gaining the ascendancy on oil matters.

Mississippi tidelands: Checking on reports that Interior Department was interested in a December 30 advertisement by the State of Mississippi to lease submerged lands for oil and gas exploration, I telephoned Jackson, Miss., the State capital, and learned:

Secretary Ickes recently wrote to Governor Bailey asking about Mississippi's claim of title to these submerged lands.

Governor Bailey replied that Mississippi had always claimed title. He referred Ickes to hearings on Senator Nye's tidelands bill several years ago, adding he thought the Federal Government had dropped its claim.

This would indicate Ickes is eyeing Gulf coast tidelands as well as those off the California coast.

Mississippi has leased 400,000 acres of submerged lands in Mississippi Sound to the Kerlyn Oil Co., Oklahoma City. This company is owned by Robert S. Kerr who is not without political influence here as Governor of Oklahoma and keynoter of the Democratic National Convention last year.

[From the California Oil World of February 1945]

Years of waiting for the blow-off on the issue of tidelands ownership will be ended shortly, when Secretary of the Interior Ickes accepts a California filing for drilling privileges in the oil-rich strip of land extending from the line of mean high tide into the Pacific Ocean.

This precedent-breaking action—which responsible authorities agree is imminent—will raise the curtain on a show which will make the Senate hearings on the Nye bill (1939–40) look like tank-town circuit.

The State of California is poised for an aggressive battle in the courts—providing Congress does not take things into its own hands by rushing legislation to declare ownership of the disputed tidelands is vested solely in the several States. High State officials express supreme confidence in the outcome, whether the issue has to grind its way up to the United States Supreme Court, or whether the House and Senate pitch in to decide, once and for all, the right of the States to the coveted strip of half-submerged land that virtually encircles the United States.

While the second Nye bill—seeking to hand over to the United States the billion-dollar-plus oil deposits off the shore of southern California—affected only one State, granting by the Interior Department of an application to drill on property whose title has remained clouded for generations will open to question the ownership of docks, harbor improvements, and shore installations of every variety, up and down the Pacific and Atlantic coasts and along the Gulf coast. Vast and costly port installations in States far removed from oil-producing areas will be threatened by such Federal action, and port authorities, and municipal and State officials from every State bounded by salt water can be counted on to jump into the State versus Federal ownership battle.

Secretary Ickes, for a long time, has been hankering to put the tidelands matter to issue, and—unless publicity scares him off—this appears to be the golden opportunity for a test of strength.

Already reposing in the pigeonholes of the House Judiciary Committee is a resolution, sponsored by Representative HOMER D. ANGELL (Republican, of Oregon), calling upon Congress to reaffirm the doctrine that title to the tidelands is vested in the States and not in the Federal Government. There is a good likelihood that this legislation will be trotted out as the opening gun in a congressional drive to block the Interior Department in its designs upon the richly productive oil deposits underlying the shores of California and Texas (and to a lesser degree Louisiana and other States which have not yet found the means nor the incentive for intensive exploratory activities on offshore properties).

The Angell resolution (introduced last year, without any fanfare, but dropped in the hopper for a second time by ANGELL, who is concerned over Federal threats against Oregon harbor developments, rather than oil) states that the accepted policy of the United States has been, for over a century that the States had title to the lands within their boundary "as an incident of sovereignty." This rule was first disturbed by the introduction of the Nye bill, the measure points out, and—more recently—by the Justice Department's condemnation action against the 330-acre Terminal Island tract in Los Angeles and Long Beach harbors.

War Destroying Europe's Middle Classes

EXTENSION OF REMARKS

OF

HON. HOWARD H. BUFFETT

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am enclosing the following article taken from Barron's National Business and Financial Weekly February 26, 1945:

WAR DESTROYING EUROPE'S MIDDLE CLASSES—INFLATIONARY LOSS IN VALUE OF GOVERNMENT BONDS SEEN LEADING TO SOCIALISM

(By Franz Pick)

Perhaps as great as any other factor in the political and social orientation of future Europe is what the war has done to impoverish the middle classes through inflationary destruction of their most trusted investments. The effects of food shortages, bombings, maimings, and killings are well-understood and have been given much sympathetic attention. But what is little understood is the degree of destruction of savings in the form of bondholdings and insurance, on which millions of the thrifty had been counting for future security.

We know the German inflation of 1919 to 1922, by destroying the assets of the middle classes of that country, made the children of the new poor ideal material for national socialism. In Italy, Hungary, Austria, and Spain the Fascist movements recruited their best fighters from the ranks of inflation-ruined families.

TURN TO THE LEFT INDICATED

Where will Europe's population turn when this war is over? No one knows. We can only state the fact that this time the Leftists—as the development of the underground movements all over the continent show—have a great attraction for people who know they owe their ruin to Nazi-fascism.

The number of the populations affected by inflation and the total to which their investment losses may climb is hardly at all appreciated as yet. Approximately 400,000,000 people were living in the capitalistic countries of Europe before September 1, 1939. And throughout those nations government bonds furnished the chief medium of investment, totaling more than all other securities combined, as has become the case in this country, too.

With the outbreak of World War No. 2 private capitalism in every one of the warring European nations was replaced by more or less complete government control of all phases of economic and industrial life. After June 1940 only three neutral countries, plus nonbelligerent Spain, could boast of having maintained some remnants of pre-war capitalistic methods and of bringing their respective budgets nearly into balance.

All other countries had to face the task of financing the war and handling enormous budgetary losses. In the European democracies, as well as in the Axis and Axis satellite countries, the means adopted to achieve this task followed the same pattern—an increase in the public debt and in the circulation of paper currency.

In July 1940 Germany and Italy seemed to be nearing victory, but it soon became evident that the touted finance methods of the Axis lacked the efficiency which distinguished its armies. Quantities of booty, ranging from gold hoards seized from bank vaults, to famous art treasures which had a sales value in neutral places, were being transferred to Berlin and Rome. In Paris, Amsterdam, and Zurich, people began to worry about the dangers of the "second German inflation."

CONQUERED COUNTRIES LOOTED

These worries soon were extended to include the economies of all the German-occupied countries. From Norway to Greece, and from Poland to France, the Nazi governors were removing to Germany all transportable assets, including rolling stock, machinery, food, and entire crops. In addition, billions of francs (or other currencies, depending upon the country), were taken from the subjected peoples as "contributions." Conquered countries had only one method for financing these occupation taxes, namely, the printing of new bank notes. Poland and Norway did this. Greece was forced to do it, and the Netherlands, Denmark, Belgium, and France followed.

No one knows the total amount of these contributions to the German war effort. But we do know that the currency systems of all countries occupied by German troops were skillfully ruined before the Allies landed. Hand in hand with the destruction of these monetary systems went an increase in the general price level, and with this an increase in the number of black markets. The combination toppled the value of government bonds.

The most serious financial problems were faced by the new Governments of France, Belgium, Greece, and Yugoslavia when they began the enormous task of rebuilding their countries. None of these nations has yet been able to reestablish a sound currency and healthy economic conditions. As long as inflation and diminishing purchasing power of money prevail, the whole European Continent will remain an economic danger zone.

Obviously, the destruction of currency through inflation implies the destruction of assets of savings banks, and it destroys also the purchasing power of government, State, and municipal bonds. From Norway to Yugoslavia, such bonds are the major asset of all insurance companies, and it is easy to imagine how far-reaching a quasi-general collapse of most of the European private insurance systems would become. All the Scandinavian countries, Great Britain, Holland, Belgium, France, Italy, Germany, Austria, Hungary, Czechoslovakia, Poland, and especially Switzerland have or did have highly successful insurance organizations. Many of these countries also had excellent social-security systems, whose strength was maintained by the stability of government bonds.

Investments based on government bonds not only enjoyed legal protection but were compulsory in the care of every minor's estate, for all banks and charity organizations, and for a certain percentage of the assets of every European corporation. Their destruction poses many important questions which cannot be enumerated in full but which will handicap the economic and social reconstruction of Europe.

Aside from the direct losses each private investor will sustain when he writes down the value of his bonds, he will, in most countries of the Continent, lose part or all of the value of his life-insurance policies and annuities.

Retired middle class families in France, Belgium, Italy, and England, who lived modestly on the interest from their government bonds, are already, or will be, hard hit by the reduction of the purchasing power of their income. Former purchasers of annuities, which nearly all of the larger insurance concerns sold in western Europe, may well increase the growing ranks of the "new poor."

Complete destruction of the value of government bonds and currency already has contributed to civil war in Greece, and in Belgium clashes between "new poor" and police troops occurred in large part because of inefficient handling of currency problems by the government. Nor is it any secret that the financial situation of France is far from good and contains elements of social dynamite. Hungary, Poland, Yugoslavia, Italy, and Bulgaria too, face large or complete annihilation of the value of their government bonds. In Spain the situation may be somewhat better, although it is far from satisfactory. The real value of the famous British Consols is not, and probably will not, be any greater than it was in August 1939, if as great.

ONLY 6 PERCENT PRESERVING SAVINGS

The figures in the table herewith may be altered before the end of the war, but any changes should not be important. We face the unprecedented possibility that less than

6 percent of Europe's post-war population will have conserved its investment in government, state, and municipal bonds, as well as in life insurance. The remaining 94 percent will have to take losses ranging from 25 percent to 100 percent of their savings.

The question which is uppermost is: Can something be done now to change the trend of investment destruction in Europe? The answer, unfortunately, is no.

Inflation holds to its course in most of Europe, and about 70 percent of the Old World's population is faced with the possibility of nearly complete loss of its currency.

France, at today's official exchange rate, has lost a minimum of forty to fifty billions of actual dollars. We may expect that Germany will finally lose at least twice this amount, and that Italy, Belgium, the Netherlands, and the United Kingdom will have to consider losses of many dozens of billions of actual dollars. The Balkans and the Scandinavian states will join the general write-off action once peace comes again to Europe, and it is quite possible that the final amount of investment destruction will reach a size making impossible every attempt of important help from abroad. The $8,000,000,000 fund of the proposed world bank may well be too small to work, and it is doubtful if the United States, considered to be the only country in the world which could really give credits, will do it to the needed extent of at least $50,000,000,000.

FOR MANY IT IS THE THIRD LIQUIDATION

For many European countries, and especially for the central European population, it will be the second or third time within one generation that life insurance and government, state, and municipal bonds have become nearly worthless. There should be very little doubt about the political repercussions of such events. The victorious Allies will have liberated Europe. With whatever transportation is available they will provide necessary raw materials, food, medications, and pharmaceutical products, but they cannot take complete care of between 280,000,000 and 300,000,000 people of some 15 countries.

Europe itself must provide for most of her own reconstruction. For this reason the social initiative of the various European governments will tend to increase, as demonstrated already by the nationalization of the French coal mines, which may be followed by nationalization of the banks and public utilities. England doubtless will also become more socialistic as well as Italy, Belgium, Holland, and many other countries in eastern Europe. Whether this war-born socialism will give full satisfaction to the more than 280,000,000 ruined Europeans is a question no one can answer.

Wage Readjustment

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., March 2, 1945.

Hon. FRED M. VINSON,
Chairman, Economic Stabilization Board,
Federal Reserve Building,
Washington, D. C.

DEAR JUDGE VINSON: With regard to the application of certain labor organizations, particularly the United Steel Workers, C. I. O., for revision and readjustment of wages under or outside of provisions of the Little Steel formula, I would like to urge upon you the immediate necessity for consideration of these proposals, entailing equitable readjustment of the entire wage-price structure.

It is common knowledge that since the freezing of certain prices and the establishment of purported wage ceilings many variations have occurred in both wages and prices. I believe it can be successfully demonstrated that these variations have worked to the great disadvantage of the laboring and middle-class groups who are borne down increasingly under very heavy economic burdens arising out of advancing living costs. That these conditions have resulted in many instances of hardship is indisputable.

I know that you have full statistical information at hand and for that reason will not allude to the abundant quantity of factual data which supports the contentions made by those of us who are urging readjustments of the wage-price situation.

I desire, however, to express the hope that you will find it possible in the near future to give careful consideration to this very important factor which is occasioning no inconsiderable degree of dissatisfaction and unrest among our laboring and white-collar workers.

It seems to me that the matter could be worked out scientifically by means available to you and other Government agencies concerned through the use of price index systems or such other instruments and methods as you may decide would be most efficacious in coping with this very grave situation.

If these methods were adopted and applied with appropriate timing and care, I do not believe that there would be any substantial or dangerous dislocation of our price-wage relationship such as might be considered inflationary. On the other hand, unless some definite action is taken now to provide some relief for the long suffering wage earners, this and related problems will be aggravated to the detriment of our war effort and post-war stability in industry and our social order.

With usual good wishes, I am,

Sincerely yours,

PHILIP J. PHILBIN.

Drafting Women

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 28, 1945

Mr. HOFFMAN. Mr. Speaker, Australia, South Africa, Canada, New Zealand, integral parts of the British Empire, which is fighting a battle for national existence, refused to draft men for service abroad.

This administration, in furtherance of its effort to remake America, as advocated by the new Secretary of Commerce, Henry Wallace, who would impose a burden upon every thrifty, industrious American to contribute to the support, not only of the unfortunate—which is a charitable task and duty we have always gladly assumed—but to enable the lazy, indolent, shiftless, in our population to live not only in comfort but, as compared with other people, in luxury, not only forced through Congress a bill to conscript American young men to fight for the preservation of the British Empire and the security of Russia, but it is now asking that nurses be drafted for military service, that women as well as men be drafted to work in industry and for private profit.

The administration's purpose and method are outlined in a letter dated February 19, placed upon the desk of the Members of Congress by Women Investors in America, Inc. A copy of that letter reads as follows:

WOMEN INVESTORS IN AMERICA, INC.,
Washington, D. C., February 19, 1945.

SENATE COMMITTEE MOVES TO DRAFT WOMEN

Do you know that the work-or-jail bill, namely the Kilgore-C. I. O.-P. A. C. sponsored bill now before the Senate Military Affairs Committee, if adopted, will place all women between the ages of 18 and 45 under control of Selective Service?

Do you know that the Kilgore bill will grant the Government power to shift men and women in these age groups—in fact entire families—from one locality to another?

This situation is a result of the President's request in his January 6 message to Congress in which he said:

"Pending action by the Congress on the broader aspects of national service, I recommend that the Congress immediately enact legislation which will be effective in using the services of the 4,000,000 men now classified as IV-F, in whatever capacity is best for the war effort."

Immediately following receipt of this message on Capitol Hill, Chairman A. J. MAY, (Democrat), Kentucky, of House Military Affairs Committee introduced H. R. 1119—called the work-or-fight bill. This bill not only would affect the 4,000,000 IV-F's named by the President, but the entire 18,000,000 men between the ages of 18 and 45.

The bill was referred to Chairman MAY's committee. Hearings opened January 10 and ended January 18.

There were 22 witnesses heard—8 Government officials, 8 labor representatives (6 from the C. I. O.), 2 Members of Congress, and 1 each representing the Socialist Party, United States Conference of Mayors, Agriculture, and Industry. Mr. F. C. Crawford, chairman of the National Association of Manufacturers—speaking for industry—weakened his testimony by admitting to the committee he had not read the bill.

Of these—the 8 Government officials and Mayor LaGuardia of New York representing the mayor's conference, favored the legislation—while the remaining 13 witnesses representing labor, industry, and agriculture opposed it.

TESTIMONY LIMITED

Many prominent individuals and nationally-known organizations asked for time to testify—but were refused. Some were informed they could submit statements for the printed record. They did—but their statements fail to appear in that record.

The House committee reported out a new bill, H. R. 1752, January 24. This was termed the work-or-jail bill because it carried penalties of 5 years in jail and/or a $10,000 fine. It also was called the slave labor bill.

This bill was passed—without amendments—in the House February 1 by the New Deal machine, with the help of 65 Republicans who voted for it—including House Minority Leader JOE MARTIN.

Hearings on work-or-jail legislation commenced before the Senate Military Affairs Committee February 6 and ended February 16. It was assumed these hearings would be on H. R. 1752, the bill which passed the House.

It was learned after these hearings closed that they had been held on S. 36, a bill introduced January 6 by Senators BAILEY, Democrat, of North Carolina, and BREWSTER, Re-

publican, of Maine, which was identical to H. R. 1119, the bill which the House committee had discarded in favor of H. R. 1752.

HUSH-HUSH POLICY ADOPTED

The Senate committee carried the House committee censorship a step further. While the press and public had been admitted to the House hearings, the Senate committee held closed hearings, with the press and public barred.

The committee open-hearings system is a vitally important part of our representative constitutional Government. Under it, the people have an opportunity to appear before committees, express their opinions and present facts bearing on important legislation.

When conducted as originally planned by the wise men who conceived our form of government, the open-hearing system enables committee members to obtain important facts on legislation under consideration. It also serves as an effective bar to censorship by preventing those favoring the proposed legislation from suppressing facts that might tend to change its original intent or even prevent its adoption.

Federal licensing of industry was defeated in 1938 by the weight of testimony presented by nongovernment witnesses against it in open hearings. Mandatory joint returns for husbands and wives has been defeated three times in succession in the same manner. Necessary changes in both management and operation of O. P. A. were forced only by the testimony of nongovernment witnesses in open hearings.

OPEN HEARING AND FREE SPEECH

Open hearings—with the free speech of witnesses plus the public questioning of both Government and nongovernment witnesses by committee members—creates news and thereby enables a free press to place both sides of a legislative issue before the public. Closed hearings permit suppression of important facts and prevent the press from telling the complete story to the public.

Further, the Senate committee decided to hear "only representatives of officially recognized organizations"—that is, those organizations named by War Manpower Commission Chairman McNutt to represent labor, industry, and agriculture on the W. M. C. advisory committee, which was created by Presidential Executive order.

These representatives of labor, industry, and agriculture, with few exceptions, told the committee there was no need for such legislation that the voluntary labor system of this country, had, could, and would produce all the labor needed for war production.

One exception was United States Chamber of Commerce President Eric Johnston, who objected to the "men only" features of the May and Bailey-Brewster bills and urged adoption of legislation that would "include everybody in the labor market, regardless of age or sex," in a statement he made to the press after leaving the committee's closed hearings.

Another exception was Clinton Golden of the C. I. O., who told the committee he was opposed to the May and Bailey-Brewster bills but favored the Kilgore bill. Prior to Mr. Golden's testimony few, if any, members of the Senate committee knew anything about the so-called Kilgore bill which was written by an influential member of the C. I. O.-P. A. C. group and introduced by Senator KILGORE, Democrat, West Virginia.

The Selective Service Act applies only to men. It does not yet apply, even by implication, to women.

WOMEN INCLUDED IN SELECTIVE SERVICE?

But the Kilgore bill, which is proposed as an amendment to the Selective Service Act, states that: "The Congress hereby declares the policy that every individual is obligated to serve the Nation in that capacity for which he or she is best qualified, and to continue in such capacity so long as his or her services are required."

If the Kilgore bill is adopted by Congress—the above language automatically becomes part of the Selective Service Act.

We all have a duty to serve our country in a war emergency. A duty is that which we should perform, but, an obligation is that which we are bound to perform.

Therefore, if this bill becomes law, women as well as men will be included in selective service and the Government will be empowered to tell every woman between the ages of 18 and 45 where and when she will work under penalty of 5 years in jail or a $10,000 fine.

If this is not the intent of the Kilgore bill, why are women included in its proposed congressional declaration of Selective Service Act policy?

DO GOVERNMENT OFFICIALS WANT TO DRAFT WOMEN FOR COMPULSORY LABOR?

All Government witnesses appearing before the House committee stated that they considered the work-or-jail legislation only a stopgap to a national-service law, which would give the Government power to compel all men and women to work.

J. A. Krug, War Production Board Chairman, told the committee he favored drafting women for war-plant work.

"IT DOES MEAN YOU"

Harry Hopkins, writing in a national magazine early in 1942, said:

"No American, anywhere, not in the war effort, should be allowed to decide for himself how much he will do or how much he will give. * * * Women who cannot work in factories and shops will perform such essential tasks as caring for children whose mothers are working in munitions plants. Workers will have to be billeted in homes and many a social leader will become a boarding-house keeper. * * *

"Doctors and dentists will go to communities where they are most needed. Some students will quit high school. I see no reason for wasting time on nonessentials such as Chaucer and Latin. A diploma can only be framed and hung on the wall. * * *

"It does mean you—for it isn't just talk—and it won't blow over."

Mrs. Roosevelt, at a recent White House press conference, said she favors a national service law which would include women, but didn't believe it could be adopted until a majority of the women favor it.

If the Kilgore bill becomes law, all women in war plants immediately are placed under Government control. It therefore would seem that they and their families would favor similar controls for other women.

If the nurse-draft bill, now before the House Military Affairs Committee, becomes law, nurses will be subject to military draft. It would seem they, also, and their families, would favor similar controls for other groups.

Would these two groups then supply that majority Mrs. Roosevelt said was necessary to permit adoption of an all-out draft of women?

Or—will the broad and clever language of the Kilgore-C. I. O.-P. A. C. bill provide the controls desired?

It may be said that, although the Kilgore bill states it is the obligation of women as well as men to serve the Nation, it does not compel them to work unless they wish to.

Actually, once this bill becomes law, no employer may hire anyone unless he or she has permission of the War Manpower Commission, without suffering severe penalties. Therefore, you either will work where you are told to work, or no one can hire you; and starvation will be your probable alternative.

IS A LABOR DRAFT NECESSARY?

There is no evidence in the House committee hearings—the only printed record now available—to support such a claim. Government witnesses stated 700,000 additional workers will be needed to meet increased war-production schedules and insisted this number only could be obtained by compulsory labor. They offered no factual evidence to support their claim that war-plant labor needs can only be met by compulsory, or slave labor, but insisted the legislation must be adopted at once.

If this claim cannot be supported by facts, does it not provide the enemy with an excellent propaganda weapon to bolster their people's waning morale? Does it not permit enemy propagandists to claim American labor is not in sympathy with this war and labor draft legislation is necessary to get the munitions needed to keep us in the war?

Representatives of industry, labor, and agriculture denied labor-draft legislation was necessary. They proved, with factual evidence, that the voluntary labor recruiting system has functioned satisfactorily to date. They also pointed to overloading of war-plant pay rolls—particularly on jobs controlled by the Navy Department—as proof that the problem was not one of labor shortage, but (1) efficient use of the present labor supply and (2) proper coordination of the various Government agencies whose duties are to provide manpower for both the armed services and war production.

War Manpower Commission officials—under committee questioning—stated the first big drop in war-plant employment came after the President issued his Executive order exempting men between 38 and 45 from the draft and the second major drop came last fall when official Washington was issuing statements that led the public to believe the European war was nearly finished.

Selective-service officials stated—under questioning—there are 7,000,000 men in the 38-45 age bracket and admitted they did not know what these men now are doing. They also admitted that—if the President's Executive order was withdrawn—they then could check these 7,000,000 and give all who are not on war-plant jobs a choice of seeking war employment or be drafted.

WILL COMPULSORY LABOR PRODUCE MORE THAN FREE, VOLUNTARY LABOR?

Testimony before the House committee proved it was the free, voluntary labor system of the United States that enabled us to supply the needed war equipment not only for our own troops, but also for those of Britain, Russia, China, France—in fact, for practically all the armed forces of the Allies; whereas the Russian Government, with its controlled labor system, could not even supply the needs of its own Army, despite the fact its population is much larger than ours.

This testimony also established that it took Britain 17 months to get its compulsory labor system to function and, under that system, it still requires three men there to produce as much as one man produces in this country under our voluntary labor system.

Personal freedom, individual initiative, and the right to seek employment and occupation in accordance with personal desires and qualifications have been our basic American tradition and directly responsible for our amazing and continued productivity.

Following the Civil War the principle of slavery adopted from the old country was completely abolished here, and it is since then that the greatest industrial growth of this country has taken place.

Wages and production have increased since the Civil War ended slave labor in this country.

Will not adoption of work-or-jail legislation in effect return us to the slave-labor principle?

HOW WILL DRAFTING WOMEN AFFECT AMERICAN HOMES?

The Kilgore and nurse draft proposals will permit drafting our American women for war-plant and military service, with far-

reaching effects upon the home life of our country. The Kilgore-C. I. O.-P. A. C. proposals also will permit the Government to shift entire families from one part of the country to another.

Hitler, prior to the start of this war, gained control of many European countries by shifting large groups of people in order to control elections.

The home is the very foundation and spiritual inspiration of our American economy.

If our women, under a general draft law, can be made to choose between jail or a war-plant job—what is the future of the American home and the care and education of our children?

Will Government nurseries and general Government supervision be the eventual result?

One of the basic requisites for a dictatorship government to be successful is to obtain control of the care and education of a country's children.

What easier way can be found to obtain such control than by compelling our women, under guise of war necessity, to leave their homes for either military or war-plant service?

If women are drafted—what next?

We now draft men for military and naval service.

The move already is well under way to draft women both for military and war-plant service. If this succeeds, there is but one more logical and final step.

The wealth of the Nation—including private capital, savings, industry, and farms—also must be drafted. Was this the real and final objective Harry Hopkins had in mind when he wrote:

"No American, anywhere, not in the war effort, should be allowed to decide for himself how much he will do or how much he will give."

And our returning wounded say the one great hope of every man overseas is—some day—to return to his own home in a free United States.

Time is short. Every effort is being made here to rush this legislation through before the women of the country know anything about it. Remember—"It does mean you—for it isn't just talk—and it won't blow over."

Therefore—you must act immediately. Write—or wire your Senators now—get other women to do likewise—and tell your local newspaper editors your views on this. Do we hear from you?

CATHRINE CURTIS,
National Director.

P. S.—February 20:

Another work-or-jail bill was presented the Senate committee today by Senators O'MAHONEY (Democrat), Wyoming, and BALL, Minnesota. We are informed this includes the Kilgore bill, features of the Bailey-Brewster bill, a proposed amendment by Senator TYDINGS on agriculture as well as proposals made by Senator TAFT and other Senators.

The committee now is considering this omnibus bill. However, do not be confused. It still carries the language that will place women under control of the Selective Service Act as does the language of the Kilgore-CIO-PAC bill.

Employment of Returning Veterans

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Friday, March 2 (legislative day of Monday, February 26), 1945

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD an article, written by Richard B. Cole and published in the Boston News Bureau, containing an interview with Mr. John J. Hagerty, the New England R. F. C. manager, dealing with the subject of the absorption of servicemen and women in revitalized industry.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RETURNING VETERANS POSE VITAL POST-WAR CHALLENGE AND OPPORTUNITY—NEW ENGLAND MUST LAY PLANS NOW TO ABSORB SERVICE MEN AND WOMEN IN REVITALIZED INDUSTRY, SAYS J. J. HAGERTY, NEW ENGLAND R. F. C. MANAGER—WITH DIVERSE INTERESTS ALL SHARING IN PROBLEM, PLANNING SHOULD BE DONE ON COMMUNITY BASIS

(By Richard B. Cole)

In the post-war era, New England faces both an arresting challenge and unparalleled opportunity, through the manner in which it receives back its returned war veterans into an industry geared to the exacting demands of the future, in the opinion of John J. Hagerty, New England manager of the Reconstruction Finance Corporation.

"But to meet the challenge and seize the opportunity, New England must coordinate its post-war thinking and planning, acting on the democratic principle of individual municipal responsibility," Mr. Hagerty declared in an exclusive interview with the Boston News Bureau. "Our cities and towns should organize committees, made up of leading bankers, industrialists, doctors, and other civic leaders, to study the problems of the returning veterans and to guard against their unemployment," he continued.

"Industry fits prominently into the picture, for it must be prepared both to absorb the returning workers and to put itself into such physical shape, as to machinery and equipment, that it can compete with other areas equally aggressive. Surplus capital goods and machinery now owned by the R. F. C. will help to make this possible."

CLOSE TO MILLION NEW ENGLAND VETERANS

Room must be made in industry and business for nearly a million New England veterans of this war, nearly a half-million in Massachusetts alone, declared Mr. Hagerty, as he outlined the dimensions of the post-war problem. The majority—around 70 percent—of the boys in the Army and Navy are 24 years or younger, and they are the cream of the country's youth.

The problem is more serious now than it was after the First World War, he declared, for men returning from that war were more mature, and there were not so many taken directly from high school and college, having no specialized training.

In the past, stated Mr. Hagerty, we have permitted our New England young men, after they have been educated here in the best colleges and universities in the world, to go elsewhere for employment, and that is a mistake.

Three things are imperative to correct such a situation in the future; the young men returning from the services must be given an opportunity to increase their knowledge through additional education, as is provided in the G. I. bill of rights; they must be given an opportunity to learn through industry, by in-plant training or other means; they must be put in positions where they can learn quickly, lest there be millions of unskilled men.

"We have the schools here in New England to do this job," Mr. Hagerty stated. "We have the money, much of which is in trust funds but can be put to work—may be made dynamic rather than static. We have the administrative brains. We have the market, for the most populous part of New England lies within a radius of 250 miles of New York, wherein is concentrated the greatest purchasing power in the world. We have the desire and the willingness to do the job, once the need is fully realized."

COORDINATED THINKING AND PLANNING

"What is lacking is coordinated thinking and planning. With our economy built on the township idea, individual community committees consisting of those who understand the veterans' problems and the possibilities of local employment should work out plans which will insure that the wheels of industry be kept turning.

"In order that our men may know how to handle veterans, we in the R. F. C. will all take courses in vocational training and guidance, and the same policy should be followed by responsible men in industry, in the banks, the unions, and fraternal societies, because the problems is one in which all of us share. The newspapers should be represented on the local committees to tell the story of what is being done and still remains to be done.

"It will be necessary to provide industrial education for college men who will perhaps prefer to go directly into industry rather than take that extra year which they will be allowed under the G. I. bill in order to complete their education. The veterans are entitled to a year, and the Government should meet the expense of training until the service men and women are trained sufficiently to be taken over by industry itself.

"Large companies should begin to think now about educational programs for these young men and women, working in cooperation with the Government. Industries will want leadership material and will be much concerned to obtain the right kind of people with proper training. Industry will be called upon to conduct its own schools, with the help of the Government, the unions, or any other source, permitting its employees to earn as they learn.

"Sound community projects should be developed in a spirit of civic responsibility. In Boston we should have one of the finest parking areas in the world, perhaps under Boston Common. It can be worked out. The idea is sound. The city of Boston can come to the R. F. C. for aid. Other sound, self-paying propositions can be worked out in other cities. But public works should be relied upon only after private enterprise and private initiative have sought to do the job."

THE R. F. C. AND BUSINESS

"Reconstruction Finance Corporation is in position to help communities and individual businesses meet their share of the future responsibility. We have the organization to help counsel and advise; we have machinery and equipment that is needed; we can help industry finance the acquisition of machinery if it requires aid.

"Over the past the New England R. F. C. office has made about 700 business loans, exclusive of disaster loans. We have saved over 700 companies, at least a half of which now are doing essential war work, and are vital parts of the New England economy.

"We now hold about $9,000,000 in property which has been declared surplus. In time Government-owned property running into the scores of millions in value will become surplus. On the basis of experience of the last war, this should bring about 50 cents on the dollar. The R. F. C. has sent 10,000 catalogs describing the surplus property to all commercial banks in New England, to all manufacturers compiled from lists sent in by chambers of commerce, the Associated Industries, the War Production Board.

"It is the province of the 17,000 industries making up our New England economy to select what they need from this surplus and get it in place for post-war. This should not be done at the expense of the war effort, and where necessary we will sell now for delivery later. We will enter into arrangements to

finance concerns that need financing, particularly the smaller ones. If they ask us to do so, we will make an analysis, in cooperation with the banks, of what is needed. In reality, the R. F. C. is just a public-service organization for banks and industries.

"During the war, industry has learned that it is absolutely essential to have the most modern machinery and equipment that money can buy. Our office is using the slogan 'Be wise—Modernize' on all its letters, because modernization is needed more in New England than in many other parts of the country."

HELPING THE VETERANS

"And what applies to helping business applies to helping the veterans. The R. F. C. is in the same position as the banks as regards loans under the G. I. bill, and also we will be the reference agency to see whether loans should be guaranteed by the Veterans' Administrator.

"Here in New England we have many things in our favor to help the returning boys and girls. We have an excellent climate; the finest schools in the world; we have beautiful places in which to live, and good transportation; and we have high sense of moral value, which is one of our greatest assets in a time of stress.

"But there is a negative side to the problem. If the veteran should get the idea he is being pushed around—and many felt that way after the other war—his family will get it and before long the majority of the citizens may think the veterans are getting nowhere. We might have these four horsemen riding the streets: disillusionment, such as follows all wars; desire for escape, resulting from so many people being hemmed in by the war; social disintegration, resulting from hasty marriages, broken homes, neglected children, illness, family losses; and economic change resulting from all these other trends, and affecting the whole Nation to greater or less degree.

"It is to forestall such factors of disunity that all of us must begin now to formulate our post-war plans, that they may be in readiness when needed."

Nation's Children Must Not Be Penalized

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. DOYLE. Mr. Speaker, yesterday, when I spoke extemporaneously during the debate in this distinguished House on whether or not certain services and important funds would be suddenly taken from the operations of the beneficent Lanham Act time was too limited.

Yes, Mr. Speaker and colleagues, next to winning the war with as little loss of life as possible, the most important asset this Nation has to conserve, protect, and encourage, is the childhood and youth of America. What about these children, hundreds of thousands of them all over the Nation, from homes in which both parents at this time are working in plants essential to winning the war? What about the hundreds of thousands of children of elementary school age? What about the lack of supervision and direction of these teen-age youngsters of our Nation, after school hours before the parents return home from work? What are these youngsters to do when you take away their sensible, constructive supervision, direction, and protection, made possible by the wise distribution over the Nation of this Lanham Act fund throughout the extension services in school departments, physical educational departments, municipal and school recreation departments?

The relatively few millions of dollars now asked for under this Lanham program and for which I emphatically ask the support of every Congressman on the floor of this House, goes most directly to the protection of this very childhood of our Nation. If you take away this fund by the proposal today, what substitute or arrangement do you offer to these teen-age youngsters? Since I know you have no substitute to offer, are you willing to assume the just blame and criticism for the reasonable assurance that too great a portion of these very children will grow up less hearty, less able, less independent, on account of your votes today?

Furthermore, there is not one scintilla of evidence before this House showing the need or any good reason to take away this fund, comparable with the manifest benefaction and security extended the millions of growing lads and lasses as a result of its further appropriation. Criticism, even though partially just, of administrative agencies, departments, or offices is no justification for discontinuing a necessary fund during this hellish war to give reasonable and necessary protection and security to our American youth. As a child is raised the first 14 or 15 years, he is very apt to continue to live.

I do not want to take the criticism, nor do I want any Member of this House to be criticized in the years to come, by the youth of our Nation, regardless of race, creed, or color, because our youths were deprived of reasonable opportunity to grow up under as favorable community conditions as it is possible to maintain—in spite of this hellish war. I would not care to have that sort of blame on my shoulders as a Member of this Congress.

I challenge you to the proposition that this Congress cannot, now, in good faith with these millions of American children—almost from the cradle to the Army and Navy—discontinue the services provided by this Lanham Act.

Since children come into the world without their consent, are being raised during years of global war under subnormal and abnormal community conditions, and are now under such tragic stress and strain, I say that nothing we can do, at any reasonable cost, is doing more than is our obligation. Yes, our bounden duty.

Already, as a result of the extent and duration of this global conflict, there is certain to be millions of American men and women coming out of the conflict who will always remain illiterate—educationally and recreationally—to too large an extent for the safety and welfare of our Nation. In time these returned veterans will become the parents of future generations, thus seemingly, we cannot now prevent it becoming a fact that some millions of normal boys and girls, who would otherwise have become graduates of schools, colleges, and other institutions of higher education, will never have that opportunity nor will they get that training. The ultimate result of this lack of opportunity, all without fault or lack of ambition on their own part, can be permanently tragic as relates to our national and international understanding, security, appreciation of education, art, homemaking, and other vital matters.

California has not only become the front door to the largest populations of the world on other shores of the Pacific, by reason of its geographical and strategic relationship thereto in matters of export, import, good will, transportation, and communication—whether eastern manufacturers and merchants want to admit it or not—the fact is, California, my home State, including the port of Long Beach, my home city, is daily almost instantly becoming the most critical State in the Union for operations of the Pacific war. No human selfishness or greed, or any individual or group, can stop this necessary development—the winning of the war establishes it as a fact.

Thousands of highly trained expert workers will necessarily still have to go to California to supply the daily increasing demands for such labor. They will necessarily center their families in already critically constituted areas and other critical areas yet to be established. God forbid that more will have to be established on the west coast or any coast. For every man going to California to help win the war, it will mean his wife and at least three children as an average family will also go to California. This shift in population as relates to their school attendance, changing of home and community surroundings and relationships, changing in economic and social conditions, with rising tension and strain about them, will mean a too rapid increase in delinquency of children in California and all over the Nation, unless Congress does its share in good faith and continues, for the duration at least, to stabilize home and community conditions by continuing such supplemental assistance as is provided by the Lanham amendment before us.

It is inescapable, Mr. Speaker and colleagues, that no amount of money will make up to these millions of children all over our Nation, if you take away from this present generation these services provided by this Lanham Act. The children of our Nation and of the world are not at fault insofar as this war is concerned—let us not penalize them and their posterity by being selfish and short-sighted. Let us make up to them what we have lacked in previous foresight in handling such national necessities for the conservation of child character and welfare. This will save money—it will conserve character—help prevent child delinquency, and therefore numerically reduce the number of crime cases. It will create happier home conditions and surroundings for workers winning the war. It will help continue sensible, sane schools, municipal housing, and similar child-welfare programs—all of which are

not less important in the morale sustaining throughout the war—than is any other program I know of as relates to civilians.

Federal Taxes and the Worker

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. WOODRUFF of Michigan. Mr. Speaker, there came to my office this morning one of the clearest, soundest, briefest discussions of economic law which has come to my notice.

This article is entitled "Federal Taxes and the Worker." It is taken from the Railroad Workers Journal and written by Robert B. Dresser. It is particularly important that every Member of this House have an opportunity not only to read this splendid document, but to have it where he can readily refer to it. For that reason, Mr. Speaker, I include this splendid article in the RECORD:

FEDERAL TAXES AND THE WORKER

(By Robert B. Dresser)

LABOR HAS A DECIDED INTEREST IN THE PROPOSED 25 PERCENT CEILING ON FEDERAL INCOME, INHERITANCE, AND GIFT TAXES

A movement to amend the Federal Constitution so as to limit the power of Congress in peacetime to impose taxes on incomes, inheritances, and gifts to a maximum rate of 25 percent has been under way since 1939. To date the legislatures of the following 14 States have endorsed the proposal: Wyoming, Rhode Island, Mississippi, Iowa, Maine, Massachusetts, Michigan, Indiana, Arkansas, Delaware, Pennsylvania, Illinois, Wisconsin, and Alabama.

The principal objectives sought to be accomplished by the amendment are: (1) To increase the national wealth and over the years the Federal revenue; (2) to save our free-enterprise system; and (3) to free the States from Federal domination.

In discussing this proposal it is necessary to bear in mind that since the defense program was started in the spring of 1940 our whole economy has been subject to the artificial stimulus of war. This stimulus removed, the forces operative in peacetime will again determine the course of our economy and the degree of our prosperity. It is, therefore, the conditions that prevailed prior to the starting of the defense program that are important here.

The issue raised by the proposed amendment is, of course, not a political one, nor will its beneficial effects be confined to capital. All groups will benefit—labor, the farmer, and the investor. It is high time that we awaken to the fact that each group has a selfish interest in the welfare of the others, and that if any group is not prosperous the others will not prosper. For example, let the steady flow of capital into industry be stopped, and business stagnation, reduced employment, and loss of market for both the factory and the farm will inevitably follow.

In normal times it requires on an average about $7,000 of capital for industry to provide a job for one person, capital needed to build and equip the plant and supply the working capital. The amount, of course, varies with the different industries; but this is the average of all. With an average annual addition to our labor force of about 600,000 in normal times, this means over $4,000,000,000 of new capital is needed each year merely to give jobs to the new applicants. Besides this there is of course a large amount needed to maintain and improve the existing plant and equipment.

AMERICAN WORKER WORLD'S GREATEST PRODUCER

The average American produces more and earns more than the citizen of any other nation, because he is assisted by a larger investment in plant, equipment and working capital. For example a Chinese coolie porter with his unaided muscles takes a number of hours to move a ton of goods a mile and gets but a few cents for doing it. Aided by $25,000 of transportation equipment and other investment, the amount invested in the railroad industry per employee, the American railroad worker moves a ton of freight a mile in several minutes for a charge made by the railroad of less than 1 cent and earns dollars where the coolie earns cents.

Through improved machinery and equipment American workers can now produce wealth enough to earn $1 per hour instead of the $1 per day of two generations ago.

It is these high wages that provide a market for the farmer's products at good prices. Likewise it is the good prices received by the farmer that make possible an adequate market for the products of the factory.

To provide the machinery and equipment that have so greatly improved the lot of the American worker, a steady supply of new capital is required. Excessive taxation prevents this by discouraging the investment of capital in industry. It is the so-called venture or risk capital that is most important—capital required by new and hazardous enterprises, such as the railroads, the automobile industry, the aircraft industry, and many others, which have provided jobs and good wages for millions of workers. The starting and development of such industries mean more jobs and higher wages. It is the only way of improving the worker's lot.

But such enterprises are risky. Many of them fail and the investor loses his investment. If high taxes take the great bulk of the profits where the enterprise is successful, the investor's position is one of "heads you win, tails I lose."

In such circumstances, who would be willing to risk his money?

LABOR OFFICIALS FEAR HIGH TAXATION

It is evidently this thought that prompted Matthew Woll, vice president of the American Federation of Labor, to say a few years ago:

"The real remedy for unemployment is the creation and maintenance of work opportunities for working men and women in private industry.

"How can this best be accomplished?

"There should be a complete revision of our tax laws. * * *

"There is abroad the general belief and conviction that the tax policy of the Government, coupled with its apparent attitude toward industry is preventing the normal expansion of American industry. It is the common belief that undue and unjust taxes are keeping billions of dollars of idle capital lying in the banks of the country because capital is afraid to take excursions into new enterprises or to assist in the expansion of old ones."

It is this thought that led the executive council of the American Federation of Labor to make the following statement at Chicago on August 15 of this year:

"The second major step must be the encouragement of capital investment and industrial expansion for peacetime production. The executive council believes that the Government should not only permit but stimulate opportunities to make a reasonable and fair profit for firms that are willing to increase production and employment. Furthermore, these business firms must be given assurances that they will not be taxed to death. In the long run, the best incentive for bigger and better business under our free-enterprise system is a chance to make a profit. No better way can be found to promote confidence and stimulate business activity."

The proposed constitutional amendment would give this assurance.

WHY CONSTITUTIONAL AMENDMENT IS NEEDED

But admitting all this, why, it may be asked, do we need a constitutional amendment? We need it for the simple reason that oftentimes in the past Congress has disregarded these fundamental principles and there can be no assurance that it will refrain from doing so in the future, unless it is restrained by the Constitution. This is the only effective way to safeguard the Nation against the destructive effects of excessive taxation.

The Constitution is filled with curbs on the power of Congress, which were placed there to protect the people's rights; such, for example, as freedom of religion, freedom of speech, freedom from unreasonable searches and seizures, and freedom from being deprived of life, liberty or property without due process of law. Excessive taxation would render these rights of little value. There is no curb more important to the people than one on the taxing power. Congress should no more have unlimited power over one's property than over his person; for, in the language of Chief Justice Marshall, "the power to tax involves the power to destroy."

HIGH FEDERAL TAXES WEAKEN STATES

A further effect of the Federal Government's high tax policy is to make the States dependent upon the Federal Government by draining the wealth of the people of the States into Washington and then doling part of it back to the States on conditions. If continued long enough, the inevitable result will be to deprive the States of all independence.

The proposed amendment would serve the double purpose of limiting the power of the Federal Government and at the same time restoring to the States the power to be financially independent and to free themselves from Federal domination.

AMENDMENT WOULD NOT ENDANGER FEDERAL FINANCES

A question frequently asked is whether the proposed limitation of 25 percent would prevent raising enough revenue to balance the post-war Budget. This, of course, is a most important question.

In the case of the income tax, which produces most of the revenue, there can be no doubt that within reasonable limits the lower rate will, over a period of time, produce the greater revenue; for there is a point of diminishing returns beyond which the revenue produced is less rather than more. Economists and many political leaders of both parties have long recognized this principle. President Wilson called attention to it in his message to Congress in 1919. In 1924 President Coolidge expressed the view that the point of diminishing returns was reached at 25 percent, if not sooner. This conclusion, he said, was based upon "the experience of the Treasury and the opinion of the best experts."

Two years later, in 1926, Congress passed a tax act reducing the maximum individual income tax rate from 40 percent to 25 percent, applicable to the year 1925 and succeeding years. In 1929 the rate was still further reduced to 24 percent. The individual incomes taxes reported for each of the 3 calendar years 1927, 1928, and 1929, with the lower rate, were greater than those reported for 1924, when the rate was 46 percent.

The explanation of his seeming paradox that the lower rate will produce the greater revenue is (1) that the lower rate leaves more

income in the hands of the taxpayers, which when invested and put to work produces more wealth, and (2) that the lower rate encourages the production of wealth. This increase in wealth, when invested, produces additional income, which in turn when invested produces still more income, and so on ad infinitum. By thus increasing the national income, which is the base on which the tax is levied, the revenue is increased.

The point may be illustrated by the following homely example: Let us conceive the national income as constituting a round pie. A Federal tax of 50 percent would take one-half of the pie, leaving the remaining half to be divided among the States, the municipalities, and the taxpayers. Now, suppose that the national income is doubled. We would have a pie twice the size of the first. A Federal tax of 25 percent would then produce exactly the same revenue as the 50-percent tax in the case first supposed, leaving 75 percent of a pie twice the size of the first to be divided among the States, the municipalities, and the taxpayers. If the size of the pie increases still further, a Federal rate of 25 percent would produce more revenue than the 50-percent rate in the first case. Obviously, it is to the advantage of everybody to increase the size of the pie, and that is exactly what the low tax rate does.

The principle involved is the same as that governing the operation of a successful business, namely that within certain limits the greatest profits come from charging a low rather than a high price for goods sold. The Ford Motor Co. is an outstanding example. Had Henry Ford charged $2,500 instead of less than $1,000 for each Ford car, he would have sold a much smaller number of cars and have made far less money for his company.

The high price lessens the ability and incentive to buy. The high tax rate lessens the ability and incentive to produce. The effect of high tax rates is to curtail saving and investment, lower production, reduce employment, lessen the national income, and thereby reduce the revenue from taxation.

As for the estate and gift taxes, the maximum theoretical loss from an adoption of the 25-percent limitation would be trivial. As an offset to this, the stimulus to the production of wealth provided by the lower income-, estate-, and gift-tax rates would increase the amount of property subject to the estate and gift taxes and hence the revenue from them.

SHALL WE HAVE FREE ENTERPRISE OR SOCIALISM?

Necessarily involved in this controversy as to taxes is the question of whether our system of free enterprise is to be replaced by national socialism. Under free enterprise the capital required to provide jobs is furnished by the individual, and ownership of the business is in him. Under socialism the capital is furnished by the government, and it becomes the owner.

Under socialism the management and control of an industry would be taken from the individual who with years of experience and demonstrated ability has made his way to the top, and would pass to the Government agent who owes his position, not to ability, but to political favor.

Can anyone doubt that this system would be more wasteful and less efficient, that it would produce less, and that it would lead to a lower standard of living for all?

Under this system all authority would be centered in Washington and citizens of the States and municipalities would be governed by a host of bureaucrats owing allegiance, not to the State or municipality, but to the Federal Government, and the present regimentation of the people would be continued and increased. Our experience of the last few years has clearly demonstrated that the best government is that provided by the people's own locally elected representatives and not by agents of the Federal Government. I am confident that if the people were given an opportunity to vote on this question their vote would be overwhelmingly against the change. Unfortunately, we have gone a long way toward accomplishing this change without many realizing what has happened.

A. F. OF L. DECRIES CONCENTRATION OF POWER IN WASHINGTON

The views of the American Federation of Labor on this subject are most forcefully expressed in a statement issued by a group of its leaders on February 4, 1940, from which I quote:

"One of the great drags upon industry during the past 7 years has been the burden of taxation that has been imposed upon big and little business. There are literally thousands of industrial and commercial concerns which have been forced into red figures by the taxes which have been imposed on flagging business.

"With money taxed or borrowed from the people the Federal Government has set up a multitude of public and semipublic corporations, which have gone into the States to weaken the authority and the financial soundness of the States.

"In many of these instances the Federal corporations and agencies have gone far beyond the intention of the authority which was granted to them by the Congress. But steadily and surely they have undermined the sharp line between State and Federal authority to increase the concentration of power in Washington.

"As labor and industry survey what has happened to labor and industry in those lands where all powers have been concentrated in the central authority, they fear and oppose the steps which thus far have been taken here, to enlarge the dominion of the Federal Government over the lives and fortunes of the American people.

"It is not a problem for labor alone, or industry and agriculture alone. It is a problem which must be solved by an awakened citizenship. It is a problem to be discussed at every fireside, to be dealt with by every publicist, to be prayerfully considered by those Americans who this year will be called upon to draft the platforms of both political parties.

"The hour has come for Americans to recognize the dangers that confront them, and to join in a united effort to halt the drift toward national insolvency and industrial collapse, and to extend opportunity for the Americans of today and tomorrow."

Agricultural Production in Utah

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, March 2 (legislative day of Monday, February 26), 1945

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a communication sent me by the director of the western division of the United States Department of Agriculture, Agricultural Adjustment Agency, under date of February 28, 1945, relating to food production and food production goals in Utah.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF AGRICULTURE,
AGRICULTURAL ADJUSTMENT AGENCY,
Washington, D. C., February 28, 1945.

Hon. ELBERT D. THOMAS,
United States Senate.

DEAR SENATOR THOMAS: Since our farmer-committeemen of the Agricultural Adjustment Agency are actively at work on a vigorous campaign aimed at reaching the high food production goals for 1945, I thought you might be interested at this time in a brief summary of the past year's production and the production goals adopted by Utah agricultural leaders for 1945. The Utah goals were established after careful consideration of both the national requirements and the State's capacity to produce.

You will note from the attached table that Utah farmers are again asked to carry through a huge production assignment. While the goals actually add up rather closely to about the same effort as your farmers performed so successfully in 1944, the job is more difficult due to the expanding complications that have been added to the production job by another year of war.

With the exception of the corn and sugar-beet acreages, the Utah crop goals are considerably above the averages for the 1937–41 period when production facilities were still available to your farmers in normal supply. The sugar-beet acreage is lower than the 5-year average but considerably above the 35,000 acres planted in 1944. I had an opportunity to discuss this acreage with farmers from your sugar-beet-producing counties and they were unanimously of the opinion that the goal would be extremely difficult to attain. The goal is being presented as a minimum in the vigorous campaign for acreage. The labor problem which makes the beet goal difficult is also responsible to a very large degree for the decline in sheep numbers which has been taking place since 1943.

This production effort will undoubtedly be the most difficult war job that your farmers have tackled to date due to the tight labor and transportation situations as well as shortages of other production facilities which must be overcome. However, present indications are that farmers will again plant to meet war needs and rely on their own ingenuity and maximum cooperation to pull them through production problems that would seem impossible if their production results were not so important. The farmer-committeemen of the A. A. A. will be working with farmers throughout the entire production period to assist in every way possible in meeting problems that threaten to curb production. I was very impressed at the State meeting of Utah's county A. A. A. committeemen by the determination of your farmers to attain their share of the war production job. I am confident that a real food production job will be done in Utah if courage, ingenuity, and extra effort can get the job done.

On the right hand side of the attached table, you have a comparison of Utah's 1944 production with average production in the 1937–41 period. It tells a story of an outstanding war production achievement. You will note the effect of the labor problem reflected in sugar beets and the number of sheep and lambs as compared with the pre-war period.

Obviously, this heavy production has cost a price in soil resources; so you will be interested to know that your farmers were able to accompany their heavy 1944 production with a record performance in soil and water conservation work. It might have been expected that in the face of the shortages of labor, equipment and materials, your farmers would reduce rather than increase their conservation work. The record amount of conservation practices which they carried out under the 1944 Agricultural Conservation Program indicates a real understanding and

appreciation of the importance to themselves and the Nation of conserving our soil and water resources. It is estimated that Utah farmers will receive almost $1,500,000 in payments as Government assistance under the A. A. A. program on their 1944 conservation work compared with $885,000 of assistance in 1943.

When the Utah farmer-committeemen of the A. A. A. have completed the important 1945 farm plan signup and accurate estimates can be made of the total of the farm goals that your farmers have voluntarily set for themselves, I will report to you regarding our success in getting the right crops planted in the right amounts. I will also relay to you the major production problems that exist at that time and the progress that is being made on our 1945 Agricultural Conservation Program.

Sincerely yours,

G. F. GEISSLER,
Director, Western Division.

Chiang Kai-shek and the Chinese Communists

EXTENSION OF REMARKS
OF

HON. CLARE BOOTHE LUCE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mrs. LUCE. Mr. Speaker, under leave to extend my remarks, I desire to include excerpts from an authoritative address on the China-American Entente, made by the Honorable Chen Chih-Mai, counselor of the Chinese Embassy, to the Overseas Press Club of America in New York City on February 14, 1945:

The subject on which you have asked me to speak is one of great importance to all of us. Much was said in the past about the future importance of the Pacific in world history.

For half a century Japan dominated the Pacific scene. Her initial successes in the game of power politics led her to dream of the complete domination of China and subsequently of all Asia as a preliminary to the conquest of the world.

China stood four square in the path of the fulfillment of Japan's ambitions. So China became Japan's first victim. China knew that she could not defeat Japan without outside assistance. She swallowed one Japanese insult after another to gain time after the rape of Manchuria in 1931. Even after 1937 the Chinese Government refrained from declaring war on Japan. Because if she had done so, the American Neutrality Act would have worked against her.

But China knew then, as she knows now, that there is one country in the world to whom she can look for support and aid. One country which is not imperialist and which shared with her the conviction that Japan must be defeated. That country is, of course, the United States.

It is to America's interest to see China emerge from this war a strong nation. For China is the only country in Asia which can be relied upon in the future to maintain the stability of the Far East in the interests of world security and peace.

It is no less to America's interest that China should shoulder a major burden in the forthcoming campaigns on the Asiatic mainland. Not only on account of the future stability of the Far East and its evolution toward Democracy, but also because it means saving American lives.

Thus both the present and future interests of China and the United States happen to coincide. This is the basis for a China-American Entente.

Nevertheless it often happens in world affairs that a perfectly obvious and reasonable relationship, based on mutual self-interest, is confronted with difficulties. We may have common interests which are of paramount importance. But we often do not approach a problem and its solution from the same angle, or see it in the same light. This sometimes leads the peoples of our two countries to misread and misinterpret facts which seem perfectly simple to the other side.

I think I may be permitted to remark that the Chinese generally seem to understand America better than Americans understand China. This is perhaps due to there being so many more Chinese who can speak and read the English language than Americans who know Chinese. Not only this; a great many Chinese in responsible positions, including government leaders and officials, were educated in America. If they do not share all the views of Americans—and you know better than I how many different views there can be in a given situation—they can claim to understand them.

These things add up to a great deal. They are among the factors which will bring about a better understanding between us. But now and then there are disturbing incidents and opinions which work the other way. What do you imagine are the feelings of a Chinese when he reads in an American newspaper that some Chinese, I quote, "would prefer to first fight the Russians, second the British, third the United States, least of all the Japs"? This was actually said by a certain widely read columnist in July 1944—and repeated by him 4 months later; said at a time when China had already been at war with Japan for 7½ years, and had repeatedly rejected Japanese peace offers designed to wean her away from the democracies.

However, these things are only ripples on the ocean, when you come to view them in relation to the over-all picture. After all, the Chinese people know that the United States and Great Britain are China's great allies in this war. They have no other feeling than the most profound respect and gratitude toward Americans. For instance, no single citizen of Chungking is unaware of the fact that thanks to General Chennault and his gallant fliers we are no longer bombed by the Japanese.

In our schools and colleges few care to study philosophy and literature, which used to monopolize all our learning. Most of our young men and women today have taken up the applied sciences. They dream of going to the United States, not because they yearn for material comforts or want to escape from the rigors of wartime life in China; but because they hope to learn from you how to construct roads and bridges and railways; build factories; cure the sick and wounded; in a word, bring China out of her age-old poverty to be prosperous and strong and healthy like the United States.

While in the natural sciences there are no national boundaries, in the fields of political, economic, and social affairs, one people usually finds it very difficult really to understand the problems of another.

A recent analysis of American opinion on China, undertaken by one of my colleagues, showed that one of the most common subjects of discussion is the question of the Chinese Communists. It is amazing to a

new arrival from China to see the problem presented here entirely out of proportion to its actual dimensions.

As presented by some writers here, the Communist question of China is important because it is believed that China's war effort would be vastly increased if the Kuomintang and the Communists were to compose their differences. Also, that a rapprochement between the two parties would constitute a step forward in the development of democracy in China.

Something can be said to support this line of argument. But in China open-minded persons do not see the situation in quite the same light.

As we see it, the Communist problem in China is a domestic issue which can and will be solved by political means. Recently, Generalissimo Chiang Kai-shek, in a press interview, announced that as long as he is the head of the Chinese Government there will be no civil war in China.

Secondly, the importance of the Chinese Communists is entirely overrated. For instance, they claim that they have 60,000,000 people under them. This figure is arrived at by adding up the population in the areas in which they operate. If such a method were used by the Kuomintang, the number of people under the Kuomintang would be 390,000,000. Of course, such calculations are preposterous.

Thirdly, as far as fighting is concerned, the government forces have been doing practically all the fighting. No Communist forces were operating in the battles of Shanghai and Nanking, of Taierchuang and Jsuchow, of Hankow, or in the four campaigns at Changsha and Changteh; or last year in Hengyang and Kweilin; not to mention the campaigns of the Stilwell Road in Burma. A number of American leaders in China—I wish I were at liberty to give you their names—have told us that the effect of Communist guerilla activities is very limited.

The point is that we regard our present-day problem as first of all military. And in military affairs, nothing is more essential than unity of command. The fact that there is a Communist question in China is essentially because they refuse to place their armed forces under the command of the Government.

It was Disraeli who once said that Britain does not love coalitions. Whether a country is democratic or not is not to be judged by the number of political parties represented in its Cabinet. Certainly we do not want to champion the cause of parties which are totalitarian in thought and action. The democratic process ceases to function the moment political parties seek to advance their political fortunes, not by political means, but by the maintenance of private armies, as in the case of the Nazis under the German Weimar Republic.

What I wish to point out is that the liberals and democrats of China do not support the Chinese Communists, precisely because the Communists are not liberals and democrats. We recognize the fact that the Communists are a group of hard-working people. They have managed to exist and expand themselves with very meager means. They are quite successful in improving from practically nothing. They have likewise effected some reforms in their own way.

But what the Chinese liberals and democrats do not like about the Communists is the fact that these things are accomplished at a tremendous cost in human lives and human freedom. Take for instance, the widely publicized redistribution of land effected by the Communists both in Kiangsi and northern Shensi. It was effected by wholesale "liquidation" of landowners with a tremendous amount of bloodshed. Even Chou En-Lai, the Communist leader, admitted to Mr. Carl Crow that the policy of confiscation of estates, to use his own words, "worked a hardship on a great many innocent people, created in others wrong ideas about the ownership of property."

The liberals are more in favor of the method adopted by the Government which is milder and slower, but in the long run more effective. The policy of the Government is based on the fact that the agrarian problem of China is primarily one of population congestion which results in poverty.

To relieve this population pressure, several things can and are being done. One is the industrialization of China, attracting the agrarian population into industry. Another is land reclamation by large-scale projects of irrigation and reforestation. This newly reclaimed land in hitherto sparsely populated areas, such as the northwest, will help to absorb the surplus agrarian population in the densely populated areas, such as the Yangtze Valley, and certain parts in the north.

Another measure is for the government banks to make loans to the peasants at low interest rates to purchase land and to free them from servitude to the usurers. For 1945 alone 800,000,000 Chinese dollars have been allocated for this purpose. I happen to be a student of the land problem of China, and I can say with a certain degree of assurance that these measures are destined to produce lasting results. To say that the complicated land problem of China, a problem or group of problems which have existed for thousands of years; to say that it can be solved by simply issuing a few government decrees and by chopping off a number of heads is at least an oversimplification.

By all standards, the Communist regime in China is not liberal and democratic, much less so than the Kuomintang and the Chinese Government. While Chungking has a Communist daily, and a Communist periodical, and all other parties in China have their own organs of opinion, including the outspokenly liberal paper Ta Kung Pao (The Impartial), for which I have frequently written during the past 12 years, Yenan, the center of Communist China, has nothing but Communist papers and magazines. The censorship in Chungking, strict as it is, is far more liberal than that of Yenan. People in Chungking enjoy a degree of freedom of expression which is not to be found in Yenan now under the movement of Chi Tuan Yih Shih Sheng Ho, "collective ideological life," which means that everybody must think alike—or else. The Chinese Communists are often referred to as Partisans. No term could be more appropriate, for they have consistently placed their party interests above the national interests.

The fact is that there are a large body of liberals and democrats in China. They are to be found inside and outside the Kuomintang and the government. Their opinions are articulate, and, as I pointed out awhile ago, they are unsympathetic to the Chinese Communists. And it is their consensus of opinion that China should be guided to develop into a liberal and democratic regime under a constitution adopted by the people. This constitution should provide for an adequate bill of rights and a machinery of government responsive to the will of the people. In his New Year message, Generalissimo Chiang Kai-shek announced that he will make a proposal to call for the election of a national people's congress in 1945 to adopt a constitution for China. This is going to be a momentous step forward in the fulfillment of democracy in China. I am sure that you will be interested to follow this line of development closely, for it is a democratic China, not a totalitarian one, which can be a useful partner in a China-America Entente.

Military Training

EXTENSION OF REMARKS

OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. ROBERTSON of North Dakota. Mr. Speaker, I am receiving numerous letters from mothers in the State of North Dakota protesting against their 18-year-old sons being rushed overseas and into combat duty without a year's training, contrary to their understanding of the policy of officials of the War Department.

Under unanimous consent, I include in the RECORD two letters written me on this important subject by mothers of 18-year-old sons who have been sent to the front after but a few weeks training, expressing their concern over methods adopted by the War Department:

BISMARCK, N. DAK., *February 19, 1945.*
Hon. CHARLES R. ROBERTSON,
House Office Building,
Washington, D. C.,

DEAR MR. ROBERTSON: I am writing you in regard to my son, Pvt. Francis John Smith, whose address is Casual Company 91, Platoon 1, A. P. O. No. 15801, care of Postmaster, San Francisco, Calif. His Army serial number is 37774623.

Johnny tried to enlist in the Navy in January 1944. He was turned down by Recruiters Henry Handtmann and R. T. Tole, of Bismarck, because of poor eyesight. He was 18 on June 12, 1944, and went to Fort Snelling, Minn., for a premedical examination in August. He was put into limited service but persuaded an examiner to put him into general service. He returned home until September 19, when he returned to Snelling. About 1 week later, he was sent to Camp Fannin, Tex., which is an infantry replacement camp. I was notified by the War Department that my son would be there for 17 weeks' training. As a matter of fact, he was there for only 15 weeks; was then ordered to Fort Ord, Calif., which is a staging area. He was allowed to come to Bismarck from Kansas City, Mo., arriving Friday noon, January 19. He would have had to leave here on Tuesday, the 23d, but, by phoning all over, I finally got a plane priority for him, and he stayed at home until Wednesday morning, the 24th.

Johnny arrived at Fort Ord on Saturday, January 27, 1945. On February 9, I sent him a telegram which was returned as he had left there "destination unknown." Yesterday I received the above A. P. O. number, which means he has been shipped out.

Mr. Robertson, what I would like to have you find out for me is: What has become of the year's training in the United States that has been promised to the mothers of America for their sons? My boy will not be 19 until the 12th of June 1945, and with approximately 15 weeks' Army training, he is being sent out into the South Pacific war theater as an infantry replacement. It is almost unbelievable. He had had no previous military training; was totally unfamiliar with the use of firearms. It doesn't make sense, and I would like to have you delve into this matter, not only for my sake but for the other mothers whose boys may be sent out in this same way with several million trained soldiers still in this country, according to report.

I trust you will be able to do something to correct this situation. I note with much

satisfaction that Senator TAFT is taking this up in the Senate. I will send him a copy of this letter, and perhaps you will get in touch with him and give him any personal information he may need in our case.

With kindest personal regards, I am,

Very sincerely yours,

RUTH M. SMITH.

BISMARCK, N. DAK., *February 27, 1945.*

Hon. CHARLES R. ROBERTSON,
House Office Building,
Washington, D. C.

DEAR MR. ROBERTSON: I am writing you in regard to my son, Pvt. Kenneth L. Bergo, 37774701, Casual Company 82, Platoon 3, A. P. O. No. 15801, care of Postmaster, San Francisco, Calif.

Kenneth was 18 the 8th of August 1944. Before he was 18 his father signed papers for him to enlist in the Navy. He was turned down by Recruiter Henry Handtmann, of Bismarck, a physical reason being of that nature that there was a possibility of him being rejected in the Army, too. When he was 18 he registered. He was sent to Fort Snelling and passed. He returned home until September 19, when he returned to Snelling from there he was sent to Camp Fannin, Tex., which is an infantry replacement camp. He was to have been trained there 17 weeks, but this was cut to 15 weeks. At the end of this training he was home for 4½ days. He was ordered to Fort Ord, Calif., after this leave. His orders stated he would be sent into combat duty overseas, I just didn't believe it, I couldn't or wouldn't believe our country would send these 18-year-old boys into combat duty overseas with only 15 weeks training, but it seems to be true. We have received Kenneth's A. P. O. number and think he has gone into the South Pacific war zone, as an infantry replacement. Weren't the mothers promised a year's training for their sons? Will you please find out for me what became of the year's training? I feel boys of 18 do not know how to take care of themselves in battles, besides I know of men 23 to 30 that have had or been trained from 1 to 2 years and are still in the United States. Why must these boys of 18 be killed? My son won't be 19 till the 8th of August 1945. I am very much concerned over this.

I noticed in the Bismarck paper that Senator Taft is taking this up in the Senate. I will write to him, too.

I trust that something can be done about this situation, which seems very unfair to these boys and their mothers. Please do what you can to help the cause.

Very sincerely yours,

VIVIAN BERGO.

Overseas Veteran Opposes Nurse Draft

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from a soldier overseas expressing his opposition to the drafting of nurses:

FEBRUARY 1, 1945.

DEAR MOTHER: Today I got four letters from Ruthy, and in every one of them she was all torn up about the nurses' draft. As you know, I am bitterly opposed to her being in the Army. My reasons may not be good or sufficient, but I have them. It is hard to fight her and the United States Government both, but I'm willing to try. When a man is in service and in a foreign country, it seems a monstrous thing to me that they could consider drafting his wife and destroying the integrity and freedom of his family, which he is fighting to preserve. I just can't believe it will be done. I certainly can't see the necessity for it. Until it is law, I can speak my piece. I want you to send me the name of our district Representative and two Senators from Ohio. At least I can write to them and register my protest. So please find out for me right away. And in the meantime would you forward this letter to our United States Representative? It may seem a tempest in a teapot to you, but it is vital to me. Until tomorrow,

Your loving son.

Our Fighting Men Must Have an Extension of the Life of Their National Service Life Insurance

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. McDONOUGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from a letter from Mr. C. J. McDonald, who is a prominent member of the Fleet Reserve Association, regarding the need to extend the life of national service life insurance policies held by our fighting men:

If the present law remains as it is it will mean that all the men who have this insurance will have to execute new allotments to cover the increased cost that will cover whatever form of conversion that they choose. For instance, I was just talking to a shipmate who was 44 years old when called back. He has $5,000 of this insurance, and it will have to be converted in September of this year if the law is not amended. Now if he has to convert it to an ordinary policy it will jump his cost to nearly $15 and in the case of a man who has the full $10,000 it will mean $30 per month instead of the $9.50. An amendment to the existing law will also protect many who in the process of going through all the red tape of converting and executing new allotments from losing the protection that they are carrying by virtue of delays and the many other things that could happen that would cause the lapsing of the policy. The men and the families would be fully protected by simply writing 10 years instead of the present 5.

Freemen Produce More Than Slaves

EXTENSION OF REMARKS

OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. HALLECK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the Farm Journal and Farmer's Wife for March 1945:

FREEMEN PRODUCE MORE THAN SLAVES

FEBRUARY 12, 1945.

Mr. GRAHAM PATTERSON,
Farm Journal and Farmer's Wife,
Philadelphia, Pa.

DEAR GRAHAM: On this the anniversary of the birth of Abraham Lincoln you asked me for my thoughts on the manpower draft. I have never tried to influence your editorial policy against your judgment and do not wish to do so now. You and your editorial staff have fought a magnificent battle for the freedoms of rural America, and I am very proud to be a stockholder in your publications.

All my life I have been a staunch Republican, and especially since the N. R. A. days have I done everything I could to promote the cause of a free people. I felt that this was best served through the Republican Party because I come from an abolitionist family with a deep and abiding faith in Abraham Lincoln and the things for which he stood. I have in my lifetime seen the productivity of our people in industry and agriculture grow to 3 times that of any other nation on earth and 10 to 20 times that of Asia, where the great masses of population in this world live. I am deeply convinced that this added productivity is simply the manifestation of the resourcefulness of a free people, which can continue to grow without limit if individual freedom is preserved.

The living standards of our people have fully kept pace with this increase of productivity, and even during the worst of the depression America was able to support its unemployed, the ill-clothed, the ill-housed, on a higher living standard than that enjoyed by skilled mechanics in the Old World.

This is the history of a free representative republic in a nutshell, and should not be lightly tampered with. We are in the midst of a great war, with 12,000,000 of our sons and brothers fighting for their country in all parts of the globe. The issues are deep and the tempers uncertain, and regardless of our magnificent victories in one spot or another it will necessarily be a great many years before complete peace can be restored on this earth. We must not resort to any expediency which sacrifices the principles of a free people under the illusion that it is only temporary. "They that can give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety." This is just as true today as it was when Benjamin Franklin wrote it many years ago.

The manpower draft bill, which has already passed the House of Representatives and is before the Senate, is in no sense a partisan measure. Its proponents say that it is necessary in order to improve the morale of the soldiers and, more significantly, they testify that it is more important after V-day in Europe than it is today. And so they want to have the power to enslave 18,000,000 of their fellow men, including the soldiers as they return, for an indefinite period which may last for a generation in the twilight zone between war and peace.

Of course, we are all tremendously worried by the obvious lack of interest in the war effort on the part of many people, and disturbed by their unwillingness to take war jobs, but should we not look into the cause of these things and cure them at the source rather than put despair in the hearts of men by selling them down the river into bondage? We must remember that it is the invisible chains that clank the loudest in the hearts and souls of men.

Today one can travel from one end of America to the other and hardly see a flag flying from any home. In the last war, to the contrary, there were few homes that did not respectfully raise their flag in the morning and take it down reverently at

night. This in turn was coupled with enthusiastic and patriotic cooperation in the conservation of wheat, gasless Sundays, meatless days, restrictions in the operation of saloons, and a hundred and one other helpful and cooperative activities. The oil industry and many others set up voluntary cooperative groups that did a magnificent job in supplying our war needs. So outstanding was this particular performance that Clemenceau remarked that we had floated to victory on the sea of oil. But in those days we were told the truth, the whole truth, and nothing but the truth, and more than 2,000,000 American soldiers were landed in France. True, they lacked training and in some cases arms, but one never heard of sagging morale.

What has made this difference? It seems to me that it is lack of candor and frankness to the people, the application of heat in the form of threats, intimidation and coercion, and sometimes downright falsehood regarding the progress of and conduct of the war, coupled with outrageously optimistic statements such as the pretense for over 3 years that the end of the war is just around the corner. This, no informed person believed, but the veil of secrecy is so thick that few men can penetrate it.

I am chairman of the Sun Shipbuilding & Dry Dock Co., which has, I think, generally been conceded to be America's most efficient shipyard, and has been so for many years. Nevertheless, within the last 15 months the men there, working as freemen in a close spirit of cooperation, have increased their productivity per man 50 percent. They are allowed incentive pay which has increased their earnings about 30 percent, and the cost of the ships to the Government is considerably reduced. Among the men working with tools we find over 7,000 men whose earnings in the aggregate average over $400 a month, and they are earning every penny of it. They are producing ships with fewer man-hours than ever before in the world's history.

In the oil industry we find the same thing. With a slight decrease in employment the oil industry has increased its output of products nearly 40 percent, and the quality of the products is tremendously improved to meet the exacting war demands. This is true not only of one oil company but the entire cross-section of the industry. Some places we find the C. I. O., some places the A. F. of L., and some places independent unions, but all with cooperative urge of men working together as free men for the common purpose.

Why then do we find the arguments for conscription of 18,000,000 men? America has not failed. It is absolutely futile for the Government to attempt to cover up its own shortcomings in leadership by piling threat upon threat, intimidation upon intimidation, and coercion upon coercion.

Freemen produce best, and we have a host of witnesses to this back through thousands of years. Four thousand years ago Homer wrote, "Whatever day makes man a slave takes half his worth away." But it wasn't until Abraham Lincoln came along that a whole Nation became free, with citizenship for all and involuntary servitude outlawed by the Constitution, we thought forever. It was Lincoln that first brought home that the chain which is fastened to the slave was also fastened to his master, and that all men had to be free before any man could be free. Civilization failed in the Old World because the "master races" wanted to be free themselves, and still maintain colonial empires which were in truth nothing but vassal states. Lincoln in his second inaugural address brought out that in giving freedom to the slave you assure freedom to the free. Are we then going to meanly lose the last best hope of earth?

The farmers and agricultural leaders of America have solidly taken their stand against this bill. Industry is unanimously opposed to it, because management knows that slave labor is not only worthless labor, but poisons everything it touches and undermines the productivity of freemen.

The heads of our great labor unions have taken a strong stand against the bill, although we have heard nothing from Mr. Browder and Mr. Hillman, who apparently sit chuckling in their tent because they know full well that such legislation will reduce American productivity to that of the Old World, cut our standards of living, and make us ripe for their Old World philosophies.

No; we must recognize that our war effort must be divided into two distinct parts. The art of production and the art of destruction are as far apart as the poles. Let every man, therefore, stick to his trade. Give us honest, truthful, and inspiring leadership on the home front, and American production will give to the armed forces everything they can conceivably use. The manpower-draft bill takes us back to the antebellum days, and it is just as true now as it was in Lincoln's time that this Nation cannot endure permanently half slave and half free. Let us hope and pray that our fathers did not die in vain at Antietam, in the Wilderness, and at Gettysburg. I would not like to be in the shoes of any Member of Congress who succeeded in voting his fellowmen into slavery for something which means nothing more or less than post-war controls of the bodies and souls of men.

Sincerely yours,

JOSEPH N. PEW, Jr.

Gentleman From Alaska

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am inserting in the Appendix of the RECORD a story by Capt. Richard L. Neuberger, United States Army, about the Delegate from Alaska, BOB BARTLETT. I was very much impressed with this well-written article by Captain Neuberger concerning the gentleman from Alaska, BOB BARTLETT, because it describes quite thoroughly Bob's background, gives a synopsis of his ideas, and indicates what he is capable of doing and will do, I am sure, in representing his great Territory.

Since succeeding our old and universally liked friend Tony Dimond, Bob has made his presence felt in Washington through his attendance at committee meetings, through his activities in behalf of anything in the interests of Alaska, and through his personality which already has endeared him to those of us who have come to know him. While I, along with the entire membership of the House, regretted Tony Dimond's leaving us, I feel certain that in BOB BARTLETT Alaska will have a worthy successor to Judge Dimond, and one who will continue to represent Alaska with dignity and honor. We of Montana are extremely pleased with the cooperation extended to us by the people of Alaska. I am very happy to assure BOB BARTLETT that we stand ready and willing to do everything we possibly can to further Alaska's admission as a State into the Union and do our very best to see that that huge and relatively unknown territory is developed as it should and must be.

Alaska not only has much in the way of internal development which will take place, but she also has a position of international economic and strategic importance. Gen. Billy Mitchell made no truer statement than when he said that he who controls Alaska has to assume, as a matter of course, a dominant position in world affairs. He was talking from the viewpoint of strategy and he had in mind the strategy of the air. With the air age upon us, with its expansion bound to increase tremendously, and with Alaska's location as a hub, it can readily be understood why it is important in so many different ways today, and why it will become more and more important in the days to come.

I wish to commend Captain Neuberger, our outstanding authority on Alaska and the Northwest, for writing a splendid article about a real Representative, and to Alaska I can say that its interests will be looked after capably and well all the time that BOB BARTLETT is here—and I hope it will be a long time—representing it.

The article from the February 26, 1945, issue of the Progressive follows:

GENTLEMAN FROM ALASKA

(By Richard L. Neuberger)

Alaska is now the goal of many men's hopes. It is the "promised land" of this war. What Oregon was to the veterans of the Civil War, what the Louisiana Purchase was to George Washington's soldiers—Alaska is to the fighting men of World War No. 2. President Roosevelt has called Alaska "the last frontier, a country for pioneers." Thousands of servicemen share his viewpoint.

At this moment in history, when Alaska is in the minds of millions of Americans, a typical Alaskan represents the Territory in the Capital of the Nation. His name is EDWARD L. BARTLETT, but from the tip of the Aleutians to the panhandle of southeastern Alaska he is known as "BOB." He is Alaska's Delegate in the Congress of the United States, the lone spokesman of a region more than twice the size of Texas.

"Alaska," said President Roosevelt, "is still the country of the pioneers, and in one sense every American is a descendant of pioneers."

This description fits BOB BARTLETT, New Deal Democrat, frontiersman's son and gold miner himself, who now is one of the few Members of the House of Representatives serving on both the Naval Affairs Committee and the Committee on Military Affairs.

ALASKA AS THE FORTY-NINTH STATE

Statehood for Alaska is BOB'S principal advocacy. He sees no reason why the vast domain in the North, a domain far larger than any State, should not be the forty-ninth star in the American flag. At a time when Alaska is closer to statehood than ever before, BARTLETT will press that claim in Congress. Already Senator BILL LANGER, of North Dakota, has put a statehood bill in the hopper. Other Senators and Representatives have pledged support. Much of this support comes from men who have visited Alaska with various congressional committees during the past few years. LANGER made such a visit.

"Go to Alaska once and you are sold on Alaska forever," says BOB BARTLETT. He should know. His own parents prove the statement.

His mother read about the Klondike gold rush in 1898 and traveled to Skagway and over the bleak Chilkoot Pass. In Fairbanks she met a big, broad-shouldered man named

Ed Bartlett, who was packing supplies into the wilderness for the frenzied gold seekers. His firm of Bartlett Brothers was the most noted packing enterprise in the North. The couple were married and on April 20, 1904, a son, EDWARD, Jr., was born.

As soon as he was old enough to read, EDWARD L. BARTLETT become known as "BOB." He assiduously sought for books about the North and read about the famous Arctic sea captain, Bob Bartlett. The captain, decided young EDWARD, was somehow related to the Fairbanks Bartletts. Why shouldn't he be? They were all Bartletts, weren't they, and didn't they all live in the Far North? So "BOB" BARTLETT he was called and "BOB" BARTLETT he has remained.

BOB grew up in Fairbanks, pioneer trading center in Alaska's Golden Heart. At the age of 15 he went with his father on a pioneering trip into the Circle Region. There were no roads and the elder Bartlett drove a team and wagon over the jolting ground to Chatanika. It took them 11 days to travel the 109 miles from Chatanika to Eagle Creek, a trip now made in 3 hours by car and 20 minutes by plane.

BOB left high school one semester to go with his father to the Kantihna mining district where ED BARTLETT was freighting ore for Tom Aitken. They snowshoed most of the way. It was a tough, hard trip and BOB remembers falling all over the big, webbed feet until he got used to them. Snowshoes require strong leg muscles and he was exhausted by the time camp was reached.

At camp BOB found that the main need of the moment was for a cook. With the optimism of the native Texan that he was, the elder Bartlett had set up a camp in the Alaskan wilderness without a cook. In obvious embarrassment Ed Bartlett called his young son aside and explained gingerly that perhaps he had learned something of value while helping his mother in the kitchen at Fairbanks.

"Think you can swing the job, son?" asked Ed Bartlett. "These men have to eat, you know."

BOB looked dubiously at the 10 husky packers hired by his father. He gulped and said, "I'll try, Dad."

The results were disastrous. BOB immediately learned that the one indispensable ingredient in the goodies which came from the Bartlett kitchen was, namely, Mrs. Bartlett. The first morning's hot cakes were in a highly liquid state, the coffee tasted slightly muddy, and the bacon was burned. The 10 husky packers demanded a genuine cook, or else.

Ed Bartlett mushed to Fairbanks for a new kitchen hand, and BOB went to the job he really wanted—driving a team.

TO CONGRESS AS A SECRETARY

BOB graduated from high school at Fairbanks and then attended the University of Alaska. He is the first graduate of Alaska's college—the farthest north university in the world—to sit in the Halls of Congress. In 1927 he went to work as a reporter for the Fairbanks News-Miner, after having gotten some preliminary experience there under the famous old Alaskan editor, W. F. (Wrong Foot) Thompson.

BOB was the main writer for the News-Miner until 1932. That year Alaska elected a new Delegate in Congress—a tall, lean lawyer from Valdez named Anthony J. (Tony) Dimond. He was destined to become the Territory's best known public servant and to serve longer in Congress than any other man in Alaskan history. When he went to Washington, Tony took BOB BARTLETT with him as his principal secretary.

For 4 years BOB continued in this capacity. He had a chance to study government and to become acquainted with the Federal departments handling Alaskan business. Then in 1936 he felt the call of the north country, luring him across a continent of space and time. He returned to Alaska with his family and moved from Fairbanks to Circle, operating a gold mine on Independence Creek. In the shadow of the Arctic Circle BOB's 2 children grew up. Doris Ann is now 11 and Susan is 4. His wife, Vide, is also a native Alaskan and, like her husband, a graduate of the University of Alaska.

In 1939 President Roosevelt appointed this far northern gold miner to be Secretary of Alaska, a position second only to that of Governor. As chairman of the Alaskan Unemployment Compensation Commission, BOB's work had come favorably to the President's attention. In the position of Secretary of Alaska, BOB became a close friend and follower of Gov. Ernest Greuning, who for more than 2 decades had been a prominent figure in American journalism and in the American progressive movement.

In 1944, after a dozen years in Congress, Tony Dimond retired from politics. President Roosevelt promptly nominated him to be a Federal judge in Alaska and the Senate confirmed the nomination unanimously. In his last election contests Tony Dimond had not even had opposition. Now the post of Delegate was thrown wide open. BOB BARTLETT filed for the Democrat nomination. A bitter race followed, with BARTLETT endorsed by both Tony Dimond and Gov. Ernest L. Gruening.

Alaskan Democrats nominated BARTLETT, and he went on to win the general election by a decisive majority. To him the most pleasing phase of the contest was the fact that his old gold-mining friends voted for him unanimously. He won every vote in Circle.

"I commend to you my successor," said Tony Dimond, as he took leave of the Committee on Territories. "His name is EDWARD L. BARTLETT, but everyone in Alaska calls him Bob. He is a man of integrity, honor, and ability. I leave Congress with regret and sorrow, but I know that my work here in the House of Representatives will be left in able hands."

BOB BARTLETT is an Alaskan in spirit and in deed. His main ambition is that Alaska should become a State while he is serving as Delegate in Congress, for he believes that the great Territory is more than ready for statehood. He often points out that Alaska has a far greater population than such States as Idaho, Nevada, Montana, and Oregon when they were added to the Union. "Alaska is vital to the defense of the United States," he said recently. "In the post-war world Alaska may be the last frontier. These facts alone justify statehood for Alaska."

BARTLETT believes strongly in local home rule. He thinks that greater local autonomy should be vested in Alaskan officials, with less authority being granted to the Federal departments and agencies in far-off Washington. "The T. V. A. is a conspicuous success," claims BARTLETT. "I want to see the same sort of local rule applied to Alaska."

A FRIEND OF THE INDIANS

BARTLETT is opposed to the recent plan to divide southeastern Alaska into huge Indian reservations. "This would hurt the Indians," he charges, "and would retard the development of Alaska for many years to come. The Indians should be compensated for their lands, but I do not want to see Alaska chopped into vast reservations. This would only erect a strong barrier of prejudice and hatred between native and white."

BOB BARTLETT bristles angrily whenever he sees a sign in an Alaskan restaurant or hotel declaring, "We do not cater to native trade." He says that people often forget that the Indians and Eskimos are the original owners of Alaska. "These people's ancestors saw the first white men land on Alaska's shores," he said not long ago. "When we discriminate against these people we are guilty of aggression and tyranny." Bob rejoiced last autumn when two Indians were elected to seats in the Alaska Territorial Legislature.

BOB BARTLETT will be 41 years of age in the spring. He is Alaska's youngest Delegate in Congress, as well as the first graduate of the University of Alaska ever to sit there. A few years ago, when Governor Gruening was in Washington on official business, Bob represented the Territory at the official dedication of the Alaska Military Highway. In the 29° below zero cold at Kluane Lake, he wielded the golden scissors with Ian A. Mackenzie, Canadian cabinet minister representing the Dominion Government. Bob's remarks at that time epitomize his philosophy and hopes for Alaska.

"We are seeing a new age in the North Country," he said. "The war has brought about sudden and rapid development of Alaska and the Canadian Arctic. If we are wise and farsighted, we can make these advances be of immeasurable benefits to the people of the North American continent for many generations to come. In the days of peace ahead, we of the North Country must help to extend and prolong the march of civilization. We have resources, space, and raw materials for many thousands of souls. We must see to it that these natural assets are used in the interest of all the people.

"A generous Creator has endowed this continent well. We must make a fair and just use of His gifts."

Eri Jabotinsky

EXTENSION OF REMARKS

OF

HON. ANDREW L. SOMERS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. SOMERS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

NEW YORK, *February 26, 1945.*

The Right Honorable the EARL OF HALIFAX, K. G.,

British Ambassador, Washington, D. C.

EXCELLENCY: A friend of mine has been arrested in Turkey and apparently whisked off to a British concentration camp.

My friend's name is Eri Jabotinsky. He is the son of the redoubtable Vladimir Jabotinsky who organized the Jewish legions that fought for England in 1917 and helped wrest Palestine from the Germans and the Turks.

Eri Jabotinsky is the second member of the Hebrew Liberation Committee who has been manhandled. He was preceded to the British concentration camp by another fine and redoubtable friend of mine—Arieh Ben-Eliezer, who is at the moment sizzling in the Anglo-Egyptian Sudan, together with hundreds of his fellow Palestinians.

I should like to know why my friend Eri has been whisked off to a British concentration camp, to be held incommunicado on some malarial sand pile over which the flag of Britain flies.

For my friend Eri is almost as redoubtable a man as his father. He has an excellent record of patient and valorous activities on behalf of the Jews of Europe. He has done as much as any one man to help save the remnants of the massacred millions.

It was my friend Eri who recently sent the news out of Turkey that certain officials of the British Government had persuaded the Turkish Government to refuse passage through that country to the refugee Hebrews from eastern Europe. These refugees were trying to stagger a last mile toward Palestine—where life and hope awaited them.

Eri did a great service to England—at least to that part of England which is fighting so valiantly for the sacred rights of man. I say, my friend Eri did a fine service for all good Britons by bringing this matter into the light. I am old enough to know that a nation, even so fine a nation as the English, does not always function with its best foot forward, especially in its colonies. Nevertheless, I find it hard to believe that the British Government may have arrested and rustled my friend Eri off to one of its concentration camps for calling England's attention to the fact that its servants in that part of the world were behaving in a cruel and un-English manner. There must be some other reason for Eri's troubles—and I am asking, as his friend, for information.

The Associated Press item recounting the episode reports that Eri has no complaint against the Turks who, he says, handled him with complete decency. The item also relates that Eri dispatched a letter of protest to the British Ambassador in Ankara. Unfortunately, the contents of this letter are not available, owing, no doubt, to the spryness of the British censor. But they are contents easy enough to imagine. And since this British news-throttler, mighty though he be, is not yet able to throttle my American pencil, I echo them here.

Said Eri, as he was being bundled off without trial or voice to the "unknown destination"—the euphonious English phrase for concentration camps—said Eri, "England betrays herself more than she does the Jews. England betrays herself and all her fine history when she starts playing Gestapo to the bedevilled Hebrews of Palestine, and clamping a gag on their outcries. The thousands of Hebrews who have been whisked out of sight without trial or voice to repine behind English barbed wire, are as much symbols of British moral collapse as they are of Jewish travail."

And in saying this my friend Eri is doing another high service for England. Most certainly it is the English who will profit most in the long run from Eri's efforts to scrub clean the English escutcheon and keep it from degenerating into a Gestapo blackjack.

But, to return to my friend Eri's exterminated letter to the British Minister at Ankara—I'm sure, also, that Eri had a lot to say in it about the necessity of moving the Hebrew survivors of eastern Europe into the only haven available to them—his own beloved Palestine. At the time of his arrest and deportation, Eri was very busy with a boat called the S. S. *Tari*, capacity 2,500 passengers. It was Eri's idea that he would save 2,500 Hebrews every week by shuttling them aboard this craft from Constanza to Palestine. The Rumanian and Bulgarian Governments, arm-weary with the massacre of Jews, had expressed their willingness to cooperate to the hilt in finding live Jews to rescue.

In this business with the boat, my friend Eri was operating as a special representative of the Emergency Committee to Save the Jewish People of Europe. I am also a member of this committee, as are thousands of other Americans.

In my bid for information, Excellency, I should like to know particularly whether my friend Eri ran into trouble (and a concentration camp) because of his work as a refugee saver. I understand, of course, that the British policy to date has been to refuse haven to the survivors of Treblinka, Majdanek, and Oswiecim. And I know, also, that not even the 3,000,000 Jewish corpses have been able to move the "tweedledum" boys presiding over the doors of Palestine. I have read considerable in the past about the antics of the notorious Colonial Office in helping turn back the desperate refugees from Europe—to die at sea—rather than be allowed to defile the shores of a British colonial port—et cetera, et cetera. I am, therefore, not naively excited about the absence of common decency and elementary humanitarianism from the annals of the British colonial policies. That these qualities do not exist in these particular sectors of the British soul has been abundantly illustrated in the past 10 years.

But certainly the absence of these qualities is neither a basic British characteristic nor basic British policy. And, certainly, Excellency, my friend Eri, struggling as much to restore English honor as to save Jewish lives, is not a fellow to be bundled off to a hidden sand dune.

As I say, I know that there is some sort of a bull-headed British determination to chalk up a bloody and depressing anti-Hebrew record for your Empire. But surely this determination is not as idiotic as it seems. Surely the British know as well as do I that whisking people off to concentration camps and stuffing gags in their mouths at the same time isn't cricket. It is for this reason that I appeal to you for information concerning my friend Eri Jabotinsky.

It would confuse me and many other admirers of England's long record as champion of humanity to believe that the English have taken to bedeviling fine Hebrew fellows like Eri Jabotinsky—pour la sport.

Awaiting more soothing explanation of my friend Eri's troubles, I beg to remain

Yours faithfully,

BEN HECHT,
Co-Chairman, American League for a Free Palestine.

The American War Correspondent

EXTENSION OF REMARKS

OF

HON. EARL C. MICHENER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. MICHENER. Mr. Speaker, war correspondents, notwithstanding the limitations placed upon them by censorship, are doing a splendid job in keeping our people informed as to the actual life and happenings on the battlefields all over the world. We are too apt to forget the hardships endured and the hazards faced by these correspondents.

Pursuant to the permission granted, I am including an editorial written by Mr. Carl Saunders, publisher of the Jackson (Mich.) Citizen Patriot, which is as follows:

SALUTE!

He was at Pearl Harbor when the sneaking Japs struck from a peaceful sky. He traveled with MacArthur to Australia and to a Jap prison camp with Wainwright. He struggled westward and northward from Port Moresby over steep mountains, through sweating jungles and across stormy seas. He was at Guadalcanal, and he lay in the steaming, fetid, vermin-invested fox holes of Rendova. He flew over Rabaul.

He stood staunch with Montgomery at El Alemein. At Malta he felt the sting of enemy bombs. He landed with the first wave in Morocco. He counted the disheartened, broken thousands of the Afrika Korps as they surrendered in Tunisia. He leap-frogged to Sicily, and he suffered at Anzio.

He watched men die at Kwajalein and bloody Tarawa.

He crossed the treacherous channel and splashed through cold surf to the mine-strewn, inhospitable Normandy beach. He saw Rommel's back broken at St. Lo, and he stood up to Von Rundstedt at Bastogne.

With MacArthur he struggled across Leyte as Yamashita's boasts echoed over the bodies of the Jap dead. He cheated the tricksters in the Lingayen Gulf, and he rode a jeep into Manila. He heard MacArthur's "I have returned," and there were tears in his eyes, too.

At Santo Tomas, Los Banos, and Cabanatuan he welcomed old friends and fellows of his craft, freed from famined durance.

He flies over Tokyo and over Berlin. He struggles with the British through burning Burma, and he watches hopefully as Chiang musters his legions.

He died, unarmed but facing forward, at the battle front in New Guinea, in Italy, in the Philippines, in Burma, in Belgium, in France, in Germany.

Yet he carries on. He is the eyes and the ears of the American home front. His only defense is a steel helmet. His only tools a typewriter and a camera.

We salute the American war correspondent, living and dead, who has written for the record journalism's proudest page. All men and women who have a part in chronicling contemporary history are proud to be of the same craft.

More About Farm Problems

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. LARCADE. Mr. Speaker, under authority to extend my remarks in the RECORD, I beg to submit copy of a letter which I have received from one of my constituents in Louisiana in regard to the problems of the farmer. The letter follows:

FEBRUARY 26, 1945.

Hon. HENRY D. LARCADE,
Member of Congress,
Washington, D. C.

MY DEAR MR. CONGRESSMAN: Referring again to yours of the 19th and particularly about the Pace bill introduced in the House on January 4 and given the number H. R. 754, I wish to call your attention to the following:

1. That according to the letter of Mr. Hill, Acting Administrator, of the War Food Administration, the offer of the Credit (Commodity) Corporation to purchase cotton on parity prices will expire on June 30, 1945.

This means Mr. Congressman that if something is not done to extend the offer of the War Food Administration of September 23, 1944, to purchase at full parity prices until June 30, 1945, the bill of your friend PACE will be of little avail to the cotton farmer.

Not only must the purchase plan be extended but someone must see to it that the plan is not changed so as to allow the purchase and loan value of cotton to be limited to 80 percent or less as some speculators propose.

I might also suggest that something should be done to see that the plan for help is not nullified as it was last year by freight embargo and inability to warehouse to such an extent that the War Food Administration won't be able to advise you to in turn advise your constituent "to hold his cotton until it can be properly stored, he can then sell it to the Commodity Credit Corporation should he so desire."

Do you see the barb in the plan that caught the cotton farmer hog tight?

The cotton producer in the first place is almost unable to use the plan but when

some of them are able to qualify they face inability to store or ship.

The fact that Marvin Jones and Anderson Clayton hail from Texas is entirely beside the question as it is Congress, and not Marvin Jones or Clayton, that passes and makes the laws.

This covers the cotton problem.

The cottonseed problem I covered in my letter to you of the 24th instant and in which I pointed out to you that the minimum or floor price fixed for the farmer of $56 resulted in the farmer only getting about an average of $32 to $35, or a little more than half of what he was to get and that the relief for the farmer should have been entitled "An aid to the middleman and dealers, processors and everybody except the producer and farmer."

In my letters to Senators ELLENDER and OVERTON and copies which were sent to you I pointed out the jokers in the so-called aid for sweetpotatoes, cabbage, cane, and Irish potatoes.

But for the benefit of your friend PACE I am now taking up at this time the dangers of the plans which are generally given out at this time of the year and intended to be rules to protect the producers but when the time comes ends up as a failure, a delusion and a snare. You remember my long letter to Senator OVERTON about cabbage.

Well, Mr. Congressman, here is another chapter in the shameful and disgraceful practice of subsidies to those who do not need it under the guise of help to the southern farmer. This pretended but fraudulent effort runs through the entire gauntlet of the alleged effort to give to the farmer a fair part of what the consumer pays for what he gets.

Pass it on to Mr. PACE and see what he has to say about it.

I am enclosing you two copies, one to your letter and one to the carbon copy I am making for Mr. PACE:

An Associated Press release dated Washington, February 25, announcing—The Government offered today to pay packers subsidies up to $23 per ton to divert 35,000 tons of surplus southern-grown cabbage in kraut.

Payment of the subsidy is necessary, officials said, to enable kraut packers to pay growers a promised minimum price of $15 per ton and transport it to northern packing plants, and pack it for sale at existing ceiling prices.

What a propaganda announcing is this?

The poor farmer is to be given the minimum promised him of only $15, but the packer is to be given a subsidy of $23 so that he might get the ceiling price.

The railroads, we are told, are now overburdened with freight, yet the same people who put an embargo on southern cotton shipments are willing to spend $23 a ton to get $15-a-ton cabbage to a northern packer so that the poor farmer can get the minimum promised to him.

The southern Congressmen who, having loaded the CONGRESSIONAL RECORD with verbal swats and kicks at the "krauts," could if they would, find here a field for their oratory.

Thirty-five thousand tons at $23 per ton, making $805,000 of the people's money, given to kraut packers so that the packers might sell at ceiling prices.

Of course the article did not say, nor are the Congressmen supposed to ask, what the ceiling price per ton is to the packer.

You know the farmer gets, or at least is promised, $15, the floor or minimum promised to him before he planted, but the packer is to get the ceiling.

And thus it goes on down the line insofar as the farmer is concerned.

Three-fourths of 1 cent a pound for the farmer who has to plow, harrow, hoe, and harvest, and haul to the market, while the packer gets a bonus of 1 9/20 cents per pound plus the ceiling.

What's the ceiling price? All the law permits.

I ask you, Mr. Congressman, to find out from the Government what the ceiling price is and compare it with what the farmer gets; put your hand on your heart and ask yourself if the Government is fair. I used the word "Government" just as it is used in the Associated Press release.

I ask you, Mr. Congressman, if it would not be better for the Government to give the $23 bonus to the farmer instead of to the packer?

What sense is there in paying a bonus of $23 on something that costs $15?

Do you know what the result will be, Mr. Congressman, of this plan?

The farmer gets the floor price of $15, but as the kraut is surplus the result is that if something should happen and the price went up so that the farmer could get more than the minimum the surplus is thrown on the market and thereby deprive the farmer of a chance to profit by the scarcety or high market condition.

To show you that it is the processor, dealer, and middleman and not the farmer that gets the thought, the labor and efforts of those in charge, I also enclose you in duplicate another Associated Press release of the same date as the one on kraut and which applies to Florida sugarcane.

You will note that the farmer in the case of sugarcane is to get substantial Government aid in the sum of 85 cents a ton. Imagine how conservative these Government agencies may become when the farmer gets something, 85 cents per ton means 4¼ mills, or say, $0.004¼ per pound. The packer gets for cabbage a bonus of $23 per ton of 2,000 pounds, but in cane the bonus to the farmer is 85 cents per ton.

Now don't run away and say yes but the farmer gets $15 a ton for his cabbage. No, siree, Mr. Congressman. That $15 is the minimum the farmer was promised to make the cabbage. The packer gets not the minimum price but the ceiling price plus a bonus of $23 per ton.

The 3,500 tons alone at $23 making the sum of $805,000 goes north as a bonus.

I ask you, Mr. Congressman, would it not be better to use this $805,000 in putting up a packing plant in the South and take off of the overburdened railroad the hauling of Southern cabbage kraut croup, if it be held unwise to give the farmer direct the bonus of $23 per ton and let the surplus be destroyed or fed to the hogs. I do not believe that the farmers would object to forego the $15 per ton and accept the $23.

Your friend, Mr. PACE, comes from Georgia, the home of Henry Grady, Benjamin H. Hill, Thomas E. Watson, and many another man who battled for the South, and whose names go down in history as men who not only had the vision but the courage of their convictions.

There is graven on the statue of Benjamin H. Hill in the city of Atlanta these words which should be in the hearts of every Southerner:

"Who saves his country, saves all things, and all things saved will bless him. Who lets his country die, lets all things die, and all things dying curse him."

I say to you, Mr. Congressman, in all seriousness that farming in America must be made to pay or else democracy and freedom in America will perish.

Those who make the food to feed the balance of the groups who make up the citizenship of the country, and those who make the cotton and the wool should be at least as well fed, well clothed, and housed as those whom they feed, clothe, and house.

I need not tell you that such is not the case.

I need not tell you that it was not always this way.

There was a day when the farming population had a say in the affairs of the Government. There was a day when they had spokesmen on the floor of Congress whose voices were heeded and whose statesmanship was equal to the valor of their soldiers on the battle front.

In that day and time the inscription carved on the front of the Union Station at Washington, D. C., had some meaning.

When you get out of your car at the Union Station you will, if you look heavenward, read these words:

"The farm—the best home of the family—main scurce of national wealth—foundation of civilized society."

When I read the offer of the Government as given out on February 25, 1945, to pay packers $23 a ton bonus so they could sell their product at ceiling prices if they would be kind enough to pay the farmer the $15 a ton the Government had promised the farmer as the minimum or floor price, I wondered if the architect of the Union Station had not made a mistake when he had that inscription placed where it could be seen only by the Congressman leaving Washington instead of at a place where the Congressmen going to Washington might be able to see it when he arrived at Washington.

The inscription teaches a truth that is as much a truth today as it was in the days of Thomas Jefferson and Andrew Jackson, and it should be occasionally read and pondered by every Congressman, whether he be from the South or the North.

Now, Mr. Congressman, I voted for you, for Senator OVERTON and for Senator ELLENDER, and I am personally friendly with all the other Louisiana Congressmen, but I would be unfair to myself, or to you, or to them, if I failed to say that I am at a loss to understand why the farmer has been treated as he has during late years.

I do not believe that any Congressman from Texas or Mississippi believes it to be right to pay more for Irish potatoes at Orange, Tex., than at Sulphur, La., or more for potatoes at Gulfport than at Hammond, nor do I believe that the Congressmen from the Western States or the East believe it to be right to pay packers $23 a ton for a per-ton bonus on cabbage that the farmer is forced to take $15 as the minimum promised him by the Government.

None of you believe this is right; none of you would stand for it if you had to legislate on it.

You become lost in a maze of directives, parity rules, and tables that neither make sense or do justice to the people whom these bureaus and alphabetical agencies are supposed to protect.

Right now, Mr. Congressman, is the time to see the new offers, subsidies, bonuses, rules, and regulations being issued for 1945, and certainly you can do no good if you sit tight and wait for the rules to be made and contracts signed and delivered.

As I have heretofore tried to indicate to you nearly every important directive or contract that is given out supposedly to help the farmer either has jokers or regulations that make it impossible for him to use it. For instance, floor of $56 for cotton seed, a fraud because it guaranteed to the processor a sale of the oil, meal, hulls, and other products at a price based on the processor paying the farmer $56 per ton for his cottonseed, but lo and behold, the joker required the farmer to haul to the mill 5 tons at one time when as a matter of fact a bale of cotton seldom has more than 1,200 pounds of seed and no wagon or truck any farmer has can hold enough cotton in the seed to make 5 tons.

Sweetpotatoes, eggs, the joker is the requirement of a number of cases beyond the ability of any one farmer to furnish.

And thus down the line.

Be it cotton, potatoes, eggs, wool, cottonseed, pecans or meat, hair or moss, the joker is there to see that the producer or farmer gets it in the neck.

The farmer is in the fix the old Negro was when he went to settle with the merchant for the advances of making the crop. He was explained the figures in the account and told just how and why there was nothing coming to him. The old darkey with his hat off, and bowed head, is quoted as saying, "It's all right, Boss, but it does seem strange that while an aught is an aught, and a figure is a figure, it is always all for the white man and none for the nigger."

It is indeed strange, Mr. Congressman, that every time it looks as if the farmer is going to make something, he runs either on an embargo, a quarantine, a ceiling price regulation, or some other man-made rule or order, that changes the whole affair in the middle of the game.

He is beaten before he starts because he suspicions that the cards in the game are marked.

It is the duty of Congress to come to his relief. Congress has the power as well as the duty and the remedy is either by making it a crime to violate the floor price regulation just as it is to violate the ceiling price regulation, or to give the subsidies direct to the farmer producer and not to continue the shameful practice of giving the subsidy to the processor or dealers.

As told you in the beginning I am sending a carbon copy of this letter as well as a duplicate of the Associated Press release for both you and Mr. PACE.

With best wishes for yourself and regards to Mr. PACE, I am,

Sincerely yours.

PACKERS OFFERED KRAUT SUBSIDIES

(The Associated Press)

WASHINGTON, February 25.—The Government offered today to pay packers subsidies up to $23 a ton to divert 35,000 tons of surplus southern-grown cabbage into kraut.

In announcing the subsidy, the War Food Administration said the production of winter cabbage was about 56 percent above average and considerably in excess of civilian requirements.

Payments of the subsidy is necessary, officials said, to enable kraut packers to pay growers a promised minimum price of $15 a ton, transport it to northern packing plants, and pack it for sale at existing ceiling prices.

Normally, winter-grown cabbage is not widely used in making kraut.

Resolution of the Michigan Legislature

EXTENSION OF REMARKS

OF

HON. FRED BRADLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. BRADLEY of Michigan. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution of the Legislature of the State of Michigan:

House Concurrent Resolution 11

Concurrent resolution memorializing the Congress of the United States to pass legislation for the creation of harbors of refuge on the Great Lakes as an integral part of Interstate Commerce

Whereas it has long been recognized that the absence of harbors of refuge on the Great Lakes has been a definite deterrent to Michigan's tourist and resort business; and

Whereas the United States War Department has spent a large amount of money and time making a survey of the Michigan shore line, as a result of which a river and harbor bill is now pending in Congress which includes proposed construction of 15 small boat harbors on Lake Superior and Lake Huron; and

Whereas two groups of harbors on Lake Superior have been proposed, a primary group to be constructed at Black River, Big Bay, Little Lake, and White Fish Point, and a secondary group consisting of harbors at Grand Traverse Bay, Lac La Belle, Eagle Harbor, and Isle Royale; and on Lake Huron harbors are recommended for Port Sanilac, Port Austin, Au Sable, Harrisville, Hammond Bay, and Point Lookout; and a harbor is also proposed on Beaver Island in Lake Michigan; and

Whereas the congressional proposal as presented is that part of the cost should be borne by the Federal Government and part by the State government, but, in view of the fact that the Federal Government in the past has absorbed the entire cost on such harbors on the Atlantic seaboard, the Atlantic seaboard policy should be written in the congressional proposal on the theory that such harbors are considered an integral part of interstate commerce: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That Congress is urgently requested to enact legislation for the creation of harbors of refuge on the Great Lakes as an integral part of interstate commerce, the cost to be borne by the Federal Government, in view of the policy of the Federal Government with respect to bearing the cost of similar harbors on the Atlantic seaboard; and, be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, to the President of the Senate, and the Speaker of the House of Representatives of Congress, and to the Michigan Members in the Senate and House of Representatives of Congress.

Adopted by the house of representatives January 30, 1945.

Adopted by the senate February 9, 1945.

NORMAN E. PHILLEO,
Clerk of the House of Representatives.

FRED I. CHASE,
Secretary of the Senate.

Legion Demands Army End Its O. K. on Reds

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. SHORT. Mr. Speaker, under leave heretofore granted to extend my remarks, I include the following article by Willard Edwards, which appeared in the Washington Times-Herald of March 2, 1945:

LEGION DEMANDS ARMY END ITS O. K. ON REDS

(By Willard Edwards)

The American Legion yesterday called upon the War Department to withdraw immediately its recent directive permitting Communists to attain officer rank and serve in positions involving military security.

National Commander Edward N. Scheiberling, acting under authority voted by the Legion's national defense committee, said the new directive must be rescinded "for the safety and security of America, now and in the future."

"Commissions in our armed services must be confined to those whose sole loyalty is to the United States of America," he declared.

CITES M'CLOY'S TESTIMONY

Scheiberling noted that Assistant Secretary of War McCloy, testifying before a House Military Affairs subcommittee investigating the directive, conceded that the new policy would theoretically admit to officer rank persons 49 percent loyal to Soviet Russia and only 51 percent loyal to the United States.

"Fifty-one percent loyalty is not enough when the security of our country is at stake," he said.

"The new policy for the armed forces states that no Communist, or person of other alien leaning, may be barred from officer rank unless his alien loyalty 'overrides' his loyalty to the United States. The lives of our sons, the vital military secrets of our armed forces must not be entrusted to men of divided loyalty."

The Army's policy opens the door for Communists to penetrate any and every office in the armed services, Scheiberling said. He continued:

"The Attorney General of the United States has held that the purpose of the Communist Party is the overthrow of the Government of the United States. Communism is an avowedly revolutionary movement. Every Communist, as a condition of membership in the party, swears supreme loyalty to the party and to the revolution.

"The American Legion is unalterably opposed to permitting any person to hold a commission in the armed forces of this nation whose loyalty is not solely to the Government of the United States."

SHOULD IT ASK LESS

"The Legion is cognizant of the fact that few members of the Communist Party today will openly confess their loyalty to communism.

"Our Government requires in the conduct of its civil affairs an oath from its employees to the effect that they are not members 'of any political party or organization that advocates the overthrow of the Government of the United States by force or violence.'

"Should it ask less from commissioned officers of its armed forces?

"Membership in or adherence to, any alien organization of subversive philosophy should be enough to disqualify a man from commissioned rank in our Army. We are dealing here, not with a matter of civil rights, but of military security. And far more rigorous tests should be applied in choosing men for positions of military trust.

"The honor of holding a commission in the armed forces of our country is a sacred privilege which should be earned only by total, unquestioned loyalty."

Fair Treatment and Understanding

EXTENSION OF REMARKS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. RILEY. Mr. Speaker, under leave to extend my remarks, I am submitting herewith a timely editorial from the State of Columbia, S. C., a daily newspaper having the largest circulation in

South Carolina of any paper published in that State:

AS WAS TO BE EXPECTED

At Sumter, Wednesday, Judge G. Duncan Bellinger directed a verdict of acquittal in the case of a young Negro charged with the slaying of a white woman, whose body was found in the woods near her home last October. There was not sufficient evidence, he declared, to connect the 17-year-old boy with the crime.

We know nothing of the details.

We do know, however, that Judge Bellinger is a just man who would act as he felt fair and right.

The point is that when the jurist became convinced there was no proof of the charges he proceeded promptly to give the defendant his freedom. And we believe every other judge on the South Carolina bench would have done likewise. No particular credit is claimed or due, since the Negro is just as much entitled to justice as the white man, but many critics of the South seem to look only for injustices, some of which are actual, some of which are manufactured; hence this comment.

If those who would make mountains out of every real or imagined injustice, where the Negro is involved, would take equal cognizance of attitudes such as evidenced by Judge Bellinger, and do less agitating, relations between the two races, as a whole, would be improved.

Of course, there are prejudices which burn every right thinking person, but these prejudices are not limited to any one side. All is not gold that glitters, so all is not injustice that is made to appear that way. There is too much of an inclination among the self-appointed regulators of the South to feel that in every case in which the Negroes and the whites are both concerned, the Negro is being punished solely because he is a Negro. When the Negro fails to get justice because he is a Negro, then something should be done about it, but each case must rest on its own bottom. When allegations of injustice are made that cannot be substantiated, the cause of good feeling between the races is damaged.

The State is proud of how well the Negroes and the whites get along together in South Carolina. A very necessary ingredient is fair treatment, especially in the courts. Judge Bellinger did no more than we would expect him to do, but nevertheless his directed verdict in the case of this young Negro, after he was convinced that there was no case against him, is worth citing as the kind of treatment that makes for the understanding that is so desired between the races.

Need for Great Supplies of Cheap Power Cited

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. KILBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a recent statement by the Honorable R. A. Newton, of Massena, N. Y., president of the Northern Federation of Chambers of Commerce:

MASSENA.—The need for great supplies of cheap hydroelectric power, such as would be made available by the St. Lawrence seaway and power project, and the current coal shortage were discussed today in a statement by Mayor R. A. Newton, of Massena.

His statement follows:

"The acute coal shortage which a large part of New York State is now experiencing has reached a very grave and serious condition. As a public official, I feel very deeply the gravity of the situation. I am beginning to get several calls every day from our citizens who are practically out of coal.

"I read recently that the Niagara Power Co. produced only 44 percent of the electric energy by water power. The balance of 56 percent is produced by steam power. The St. Lawrence plant at Massena was closed some time ago because of the lack of hydroelectric power. When the plant was closed hundreds of our people were shipped west to work at Vancouver as a result.

"Attention should be called here to the fact that it takes 10 to 12 kilowatt-hours of electricity to produce a pound of aluminum. With aluminum ingots selling at 15 cents a pound, the cost of electricity used in producing them is important. With hydroelectric energy selling at 2 mills, the cost for electricity for producing a pound of aluminum is approximately 2 cents. Steam-produced electricity costs much more. I assume about twice as much. That would make the cost roughly 4 cents a pound for electricity alone.

"The electric energy required to run this St. Lawrence plant was made from a steam-generated plant in New York City and transmitted to Massena.

"The tie-up on our railroads and the curtailment of the use of electricity requested by the officials of the Central New York Power Co. at this time, goes to show the great need of more hydrodeveloped electric energy in our State.

If the St. Lawrence seaway and power development was in operation, we would have plenty of power which in emergency like the present could be used for heating. It might be interesting to the people of northern New York to know that the great Niagara Power was sold to Jacob F. Schoellkopf, of Buffalo, in 1877 for $71,000. At that time, the jumbo generator had not been invented; also the problem of transmitting electric energy had not been solved.

You probably know what this power development did for Niagara Falls. I was in Niagara Falls in 1898 and at that time my recollection is that the population of that city was around 7,000 people. Today they claim 75,000 people and as a result of the electrical development, I have been told they have 49 different industries.

What the Niagara Falls development did for Buffalo and that area, the development of our St. Lawrence seaway would do for all of the northern New York and the whole northeastern area.

Since Washington has been so reluctant to get this great project underway, I wish at this time to commend our progressive Gov. Thomas E. Dewey, in recommending to the legislature that the State of New York, in conjunction with the Ontario and Canadian Governments proceed with the development, provided the Federal Government neglects to do so.

Fair Enough

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. SHORT. Mr. Speaker, under leave heretofore granted to extend my remarks, I include the following article by Westbrook Pegler which appeared in the Washington Times-Herald of March 2, 1945:

FAIR ENOUGH

(By Westbrook Pegler)

Here is a sample of the impudence that has developed into a fixed attitude toward the people since our press formed the habit of obedience to censorship. President Roosevelt's army of occupation at Montgomery Ward's in Chicago announced that a portion of the property had been turned back to its rightful owners, but when a colonel on that front was asked why, he replied: "We feel it is not necessary to comment on that."

In that case, the situation calls for initiative in reporting because this reticence might be a self-serving cover for incompetence or worse in the administration of this job by officers who were sent in to turn a trick for a political auxiliary of the Roosevelt party, namely, the C. I. O.

No military information of any possible interest, much less value, to the enemy can be involved here and foregoing events show that if these belted and buckled floorwalkers had any excuse to boast of work well done, their press agent would have cranked up his mimeograph and told the world about it.

They weren't bashful when they took over, so this sudden shyness naturally arouses suspicion, the more so now that the United States District Court has placed them in the position of trespassers.

By stealth, the Army has developed a domestic political propaganda service for use in such cases, employing for the ballyhoo exreporters who have been given fat commissions but haven't necessarily changed or abandoned their politics.

To assign to such a job a major or lieutenant colonel who belongs to the Newspaper Guild, also a union of the C. I. O. and heavily sprinkled with Communists and communism, at that, would be a piece of deceit that the newspapers should expose.

To the public and, indeed, to reporters on the job, the press agent in such a case would be just another Army officer in whose press releases they would not suspect political sympathy or motivation.

Actually, however, his first duty would be to give his commanding officer in the seized property a magnificent reputation as an organizer and administrator, failing which he would get a bad report, himself, and might have to wait 6 months extra for the right to wear chickens on his shoulders.

And, this new and peculiar service being strictly political and prounion, the lawful owners and management of the property obviously cannot hope for fair treatment. So, not only is their property seized if only some loafer provokes a mere threat of a strike but the owners, through their taxes, pay the salary of some unioneer in a major's uniform to disseminate propaganda injurious to their reputation.

The Regular Army kept Communists out of the commissioned ranks and there were only a few ideological politicians in the upper brackets who had found the way to promotion and pay in the Roosevelt social experiments before the war.

Now, however, the bars are down and, as always, the inveterate ideologist will gravitate toward jobs in which he can wield influence, the most inviting of which is publicity.

The incident of Elliott Roosevelt's dog was a similar piece of lofty arrogance. The Army, from Secretary Stimson down, conspired to smother a legitimate piece of news to which the whole people were entitled, through their press.

Their purpose was not to confuse the enemy but to shield individuals who had deliberately violated the law and rated an animal above the enlisted American soldier and sailor.

It is absurd to pretend that the facts of this story could not have been whipped out of the files within a few hours but, instead, Congress had to drag it out of a number of guilty individuals, word by word. Any reporter who had been able to get at the facts of that imposition would have been justified in writing them regardless of the censorship and, moreover, this secrecy invited cold examination of the purpose for which censorship was imposed on one hand and accepted on the other.

The Army was in politics last summer when a group of Roosevelt union politicians were sent to France to lie to the soldiers about the record of strikes and other wastes of manpower on the production front at home.

These people had no legitimate business aboard public transportation nor any excuse to clutter up the scene and impose on the time of officers abroad who should have had more important work to do. Theirs was a political campaign trip on behalf of the fourth term and the favoritism showed in the fact that no other group was invited to go along to refute their propaganda.

Now who issues the orders in such a case and what is the Army up to, anyway?

In the absence of any dispatches from France exposing this political fraud, intended to swing the soldier vote to Roosevelt, it is fair to assume either that the censorship precluded such writing or that these politicians were kept out of the way of the press.

In another case, the Democratic nominee, addressing the aristocracy of the Teamsters' Union last fall, dragged in a rumor that his dog, Fala, had been left behind in the Aleutians during his summer cruise and that a naval vessel had been sent back, at great expense to the public, to fetch him.

No such story had had general circulation and there is no reason to grant that it wasn't planted by one of his political agents so he could deny it.

However, inasmuch as he had raised the question of expenses, it would have done no harm, except to his political interests, to say how much it had cost the taxpayers to refit an important ship, before and after his voyage, for his special accommodation. But, any naval officer who had revealed that information then or who should do so now would simply wind up his career.

The Army is in dirty business doing the work of the C. I. O. in privately owned property and should have better use for its generals and colonels if they have ability suitable to their rank.

But, if this must be, then the press agents should be dropped from the organization table because we know they are only going to butter up the men they have to salute and that, my friends, is not press relations but ballyhoo and politics.

Censorship should apply only to military matters and the security of individuals who might be exposed to danger by reckless publicity.

It was not presented nor was it ever accepted by the press as a device to create a racket for Roosevelt's personal friends with a sideline of exclusive news, sold for a price, regarding events affecting the whole American Nation.

Young Men Badly Needed on the Farm Should Stay There

EXTENSION OF REMARKS

OF

HON. HADWEN C. FULLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. FULLER. Mr. Speaker, in recent weeks the question of the farm draft and its effect on our wartime food supply has been of paramount interest to the country and to the Congress. Recently I discussed this problem over radio station WFBL at Syracuse, N. Y., being interviewed on the subject by Bob Evans, of the Washington news staff of C. B. S.

With the permission of the House, I include in my remarks this radio interview, as follows:

ANNOUNCER. Each Friday night at this time, WFBL's special events department presents Your Congressman Speaks. Each week, Bob Evans, WFBL's Washington correspondent, will have as his guest, one of central New York's Congressmen. Here tonight, in the Washington studios of C. B. S., is Congressman HADWEN C. FULLER, of the Thirty-fifth Congressional District. Now, here is Bob Evans.

Mr. EVANS. One of the most controversial subjects in Washington is manpower. Work-or-fight legislation, work-or-jail legislation, whatever it may be called. It has more ramifications than there are rivers to be crossed before Berlin. However, some of the ramifications were set aside today when the Senate Military Affairs Committee wound up hearings on manpower and decided to discuss the bill among themselves next week. This is, discuss the bill and various proposed amendments and substitutes. Closely allied with manpower are the recent Executive Directives to Selective Service to cull more manpower from war industries and farms. Many Members of Congress feel that agriculture has taken all the draft it can stand. One of these is Mr. HADWEN C. FULLER, of the Thirty-fifth New York District. He is going to talk tonight about the draft of farm labor.

Representative FULLER. Yes, Bob, and I am going to say that I oppose any more unnecessary drafting of farm workers. I am going to give my reasons for this opposition, but you have a regular custom on this program, I understand, of giving the highlights of the week in Washington, before getting into other subjects—so, will you do that now and then we'll get on to the farm-labor draft.

Mr. EVANS. O. K., HAD, and here it is:

Of course, the big story in Washington this week, as it has been all over the world, is the release of decisions reached by President Roosevelt, Prime Minister Churchill, and Marshal Stalin at the Crimean Conference. Those decisions have been discussed at such length throughout the week, it would be too repetitious to go into them again here. What we await now is the return of Mr. Roosevelt, and the possibility that he will have more to say to the American people about the decisions after his arrival. Administration sources say that the resident is pleased over results and in a frame of mind to discuss them personally in direct radio talks. Just when he will return is still a secret for security reasons as is information about his present whereabouts. Meanwhile, other decisions have been reached here in Washington which cause newsmen to breathe a sigh of relief. For weeks we have been rehashing, rewriting work or jail legislation, the George bill and will Henry Wallace be Secretary of Commerce. To say nothing of the appointment of Aubrey Williams as Rural Electrification Administrator. The Williams appointment is still up in the air—latest developments on work or jail I mentioned a little earlier and now, it may be we can stop talking after this week about the George bill. The George bill passed the House this afternoon, it already had passed the Senate and now it goes to the President for his signature. Mr. Roosevelt already had indicated that he will sign the George bill. It is, of course, that piece of legislation that removes all of the Federal lending agencies from jurisdiction of the Secretary of Commerce. And now that it has passed both Houses, it looks as if the way may be clear for the Senate to give its okay to Mr. Wallace to hold down the greatly circumscribed post of Commerce Secretary. That okay may be forthcoming on March 1. And those are the Washington highlights this week.

Some weeks ago the administration here in Washington, under the importunities of the War and Navy Departments, ordered Selective Service to institute a new screening of already deferred men between 18 and 45 in order that mounting needs of manpower for the armed services might be met. Many men in Congress immediately became alarmed that the Nation's food supply, and of course, the supply of food for the armed forces, might suffer under a wholesale drafting of deferred farm labor. One of those Members of Congress was Mr. HADWEN C. FULLER. He has been in the forefront of the battle for weeks to see that necessary farm labor stays on the farm.

Representative FULLER. I have, Bob. Because we must have food to exist, both on the war fronts and on the home front. The Congress some time ago enacted the Tydings amendment, an amendment which was written to make sure that our farms could be kept in operation.

Mr. EVANS. You have the wording of portions of that amendment with you?

Representative FULLER. I have. The Tydings amendment defers necessary farm help in the following terms. It says "Every registrant found by a selective service local board to be necessary to, and regularly engaged in, an agricultural occupation or essential endeavor to the war effort, shall be deferred from training and service in the land and naval forces, so long as he remains so engaged and until such time as a satisfactory replacement can be obtained."

Mr. EVANS. The wording is clear enough.

Representative FULLER. Very clear. From this you may see that Congress intended that young men who were badly needed on the farm should stay there. For some time local boards and the administration here in Washington held the same view. But recently a drive started in the highest Government circles to bypass this amendment and to put into uniform boys whose presence on the farm is vital to the production of the food we eat. Director James Byrnes of the Office of War Mobilization launched the attack with a letter to General Hershey, head of the Selective Service, in which Mr. Byrnes said this, "I have reported these facts to the President. He has found that further deferment of all men now deferred in the 18-through-25 age group because of agricultural occupation is not as essential to the best of our war effort as is the urgent and more essential need of the Army and Navy for young men." Those are Mr. Byrnes' words.

Mr. EVANS. Mr. Byrnes, of course, referred specifically to young men, farm workers between 18 and 25.

Representative FULLER. Exactly; and as a former chairman of a local draft board in a farming district, I know just how much young men and middle-aged men and old men are needed on the farms. I know scores of specific cases in which young men, 18 to 25, are the sole means of a farm's support. But, in the over-all picture, so far as farm workers are concerned throughout the Nation, actually very few young men of military age have been deferred under the Tydings amendment. But Director Byrnes, in his letter to General Hershey, plainly pushed aside the Tydings amendment, which was a law of the land, and said it should no longer exist. General Hershey, who is a good soldier, took his orders from his superiors and got out a directive to local boards which had the effect of an order to them to forget the Tydings amendment. Many of these boards lost no time in calling in young farmers, and the Congress received hundreds of telegrams and letters from farm

workers stating they had been given a few days to get into uniform.

Mr. EVANS. Well, tell us of a specific case.

Representative FULLER. All right. Here is the case of one young farmer in the Midwest. I have his name and address in my office, but I'm not going to use it here for obvious reasons. He had a 320-acre farm which he was farming by himself. He had 37 head of cattle, 15 hogs, 150 chickens. As a result of the setting aside of the Tydings amendment he was given 10 days to dispose of all that and report for duty. There are hundreds of similar cases. Throughout New York State last summer we all saw farms being run by children and old people for the most part. But, in spite of this handicap and many other difficulties, the workers on the farms did their job in grand fashion. Farm production figures show that. And the relatively few young men of military age who were deferred under the Tydings amendment were most essential. Without them we could not have kept going.

Mr. EVANS. Yes. It seems to me that the average age of farmers in this country must be much greater than 18 to 25.

Representative FULLER. I am told that the average age of farm operators in New York State alone is 59 years. But the question is, Are the young men on the farms who have been deferred as farm workers, needed right where they are? Again, as a former draft board chairman in a farm district, I would say emphatically "Yes." But as a result of Director Byrnes' and General Hershey's orders, agriculture in this country has been thrown into confusion and turmoil. So we in Congress had to do something about it, and we did.

Mr. EVANS. And you did what?

Representative FULLER. An informal meeting of Congressmen was held. Then a second meeting at which General Hershey was a witness. Now General Hershey is a fluent and able speaker, but before the hearing was over, 250 Members of the House had made it plain to him that they felt he had overstepped; that he was threatening the wartime welfare of agriculture by his directive of January 3.

Mr. EVANS. Well, before this array of Congressmen, did General Hershey sidestep or back track, or what?

Representative FULLER. These Congressmen asked for and got a promise from General Hershey that he would issue another directive, this time making it clear to State directors of selective service and local boards, that he did not intend that the Tydings amendment would be modified by any of his actions or statements. General Hershey consented to this, and his later directive said this "The directive of January 3, 1945, did not change or modify in any manner the Tydings amendment." By this action the Members of the Congress from farm districts were able to remove the pressure on local boards from the top, and every local board could proceed in drafting boys, in the light of the Tydings amendment as was intended by law.

Mr. EVANS. Well, how is the situation working out?

Representative FULLER. In New York State some complaints are still being made, but I am informed that the situation generally is good. However, in the South and some sections of the Midwest, reports show that local boards are still drafting farmers badly needed on the farm. Congress is watching this picture closely and the informal group which got General Hershey to modify his directives, also has written to the Governors of several States, pointing out that food production also is their problem, and recommending they should take necessary action to protect this supply. Likewise, there is a proposal before the House to reaffirm the Tydings amendment, for the purpose of stressing its importance in the winning of the war.

Mr. EVANS. In addition, you are making further personal effort so far as your own constituents in Oswego and Oneida counties are concerned?

Representative FULLER. I am. I am writing to members of the boards of supervisors in my district asking that they provide me with specific information concerning the farm draft problems in their towns. If they will send me the proper information concerning their specific cases, I shall be very happy to take these up, all of them, with the proper authorities for further consideration and appeal. If the farm worker belongs definitely in II–C classification, I want to see that he stays there.

Mr. EVANS. Perhaps some of the farm workers in your district may be listening right now, HAD, so suppose you tell these farmers with draft problems just how to go about it.

Representative FULLER. They may write to me, Congressman HADWEN C. FULLER, at 140 House Office Building, right here in Washington, D. C. But, in closing Bob, I want to say that one wouldn't think it necessary to tell Washington administrators that our armed forces, our fighting allies and our people on the home front, must eat to carry on. In this case, however, some persons in high places here in Washington overlooked this elementary fact. We Members of Congress who are greatly interested in this problem do not intend that any administrator should forget the vital contribution of our farmers in this war effort, or the fact that without their splendid work we could do nothing against our enemies.

Mr. EVANS. Thank you, HAD FULLER.

In closing, I think this would be an appropriate time to set at rest at least a few of the rumors which have besieged us this week. Recurrent rumors that crop up frequently. Rumors that clothing is to be rationed, that coffee is to be rationed, and potatoes, too. The latest is potatoes. It is true that potatoes have been short for the past couple of weeks and may be for 2 or 3 more weeks, but so far as rationing is concerned, the War Food Administration says definitely, "No." No freeze on potatoes, no Government seizure. No nothing. Coffee is in again, too. But the Office of Price Administration tells me that there are approximately 9,000,000 bags of coffee either in the country or on the way by ship. That's a lot of coffee, enough to last for 5 months, and meanwhile more will be coming in right along. So make up your mind, no coffee rationing. And now the rumor on clothing rationing; it is a rumor and nothing more. For here, too, O. P. A. says it has no plans for any clothing rationing of any kind. At the moment O. P. A. is optimistic about its new spring pricing schedules, which it hopes to release within the next few days. These will include the recent order for low-priced clothing, particularly clothing for children. So that sets at rest three constantly recurring rumors. Sets them at rest until somebody starts them up again.

ANNOUNCER. You have heard a special broadcast, one in a series from the Nation's Capital. On this program Bob Evans, WFBL's Washington correspondent, interviewed Congressman HADWEN C. FULLER, of the Thirty-fifth Congressional District. Listen again next Friday evening when Bob Evans will bring you another of central New York's Congressmen.

Edwin Rogers speaking. This is CBS, the Columbia Broadcasting System.

St. Lawrence Waterway

EXTENSION OF REMARKS

OF

HON. ROBERT L. RODGERS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. RODGERS of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by both Houses of the Legislature of the State of Pennsylvania:

Whereas agitation for the passage of Federal legislation approving the completion of the St. Lawrence Waterway and Power Project has been revived in the Federal Congress; and

Whereas the General Assembly of Pennsylvania is vitally concerned in the effect that the completion of said project would have upon its citizens; and

Whereas the Commonwealth of Pennsylvania relies substantially for its economic stability and future prosperity on the preservation of its essential mining, manufacturing and transportation industries; and

Whereas the production of bituminous and anthracite coal, the manufacture of steel products and the transportation of freight by steam railroads constitute important segments of the industrial life and well-being of the commonwealth and its citizens; and

Whereas the development of 2,200,000 horsepower of hydroelectricity as contemplated by the St. Lawrence project would displace in excess of 5,000,000 tons of bituminous coal annually; and

Whereas the completion of the St. Lawrence Waterway would open existing markets for bituminous and anthracite coal mined in the Commonwealth, to ruinous competition from foreign coal mined by cheap labor and transported to Great Lakes ports of the United States and Canada in tramp foreign flag vessels at ballast rates; and

Whereas the importation of steel and other manufactured products similarly produced at low cost in foreign countries and sold in competition with Pennsylvania manufactured goods would injuriously affect manufacturing industry and employment in the Commonwealth; and

Whereas the diversion of freight tonnage to the proposed waterways from steam railroads serving the Commonwealth and the loss of traffic due to the diminution of coal tonnage would seriously and adversely affect the railroad industry; and

Whereas, as a result of the foregoing, thousands of citizens of Pennsylvania engaged in the mining and production of coal, the making and fabrication of steel and other products, and the transporting of freight would be deprived of their means of earning a livelihood at their chosen occupations; and

Whereas the development of the St. Lawrence project would have an injurious effect upon the economy of the country, with incidental benefit, if any, being confined to relatively few small areas and certain manufacturers; and

Whereas a large part of the enormous cost of this unwise and uneconomical project would fall upon the taxpayers of the Commonwealth of Pennsylvania: Now, therefore, be it

Resolved (if the house of representatives concurs), That the General Assembly of Pennsylvania hereby memorializes the Congress of the United States not to approve or authorize the construction of the proposed St. Lawrence waterway and power project; and be it further

Resolved, That a copy of this resolution be transmitted to the President of the United States, to the Secretary of the United States Senate, the Speaker of the House of Representatives, and to each Senator and Representative elected from the Commonwealth of Pennsylvania.

Drafting of Female Nurses

EXTENSION OF REMARKS
OF
HON. ANDREW J. MAY
OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. MAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PHILADELPHIA, PA., *February 24, 1945.*

DONALD C. SMELZER,
President, American
Hospital Association,
Chicago, Ill.

GENTLEMEN: President Roosevelt has drawn attention to the urgent need in the armed forces for trained nursing personnel, which had not been supplied through voluntary enlistment, and the President has called on Congress to pass appropriate legislation. The Military Affairs Committee of the House of Representatives has been conducting hearings at which you inform us officials of the Army and the Navy, the Director of United States Civilian Health, and representatives of the Red Cross, the War Manpower Commission, and the American Hospital Association have all testified that such legislation was necessary, not only to supply the armed forces, but to provide for the orderly distribution of nursing personnel for the armed forces and needs of national importance during the war.

Since nurses are predominantly females, it is obvious that the Selective Service Act of 1940, as amended (50 U. S. C. A., App. 301), requiring only males 18 to 65 to register and making only males 18 to 45 liable for training and service in the land or naval services, does not apply, excepting as to such males who may be qualified or trained as nurses.

You have asked us to advise the American Hospital Association whether an act of Congress to effectuate these purposes, which might affect only females as nurses, would be constitutional.

This is to advise that in our opinion such an act of Congress passed for these purposes should be held to be constitutional.

Congress, during war, has the power, in our opinion, if it deems it necessary for the conduct of the war, to draft and induct trained female nurses into the military services and also the power to draft and assign them to work of national importance under civilian direction.

It also seems clear that Congress could specifically include as works of national importance veterans' and other public and nonprofit hospitals and other community centers of medical or health service.

Further, in our opinion, the power of Congress to do this, if Congress deems it necessary for the conduct of the war, should be upheld irrespective of whether or not only female nurses, and not other females, would be affected by such legislation.

THE CONSTITUTIONAL WAR POWER OF CONGRESS

Study of the framing of the Constitution and the interpretation by the courts of the war powers conferred upon Congress by the Constitution leads to the definite conclusion that the power of Congress to legislate with respect to citizens during time of war, if Congress deems it necessary for the conduct of war, is plenary and absolute. This conclusion is substantiated by the unlimited war powers vested in Congress under the Constitution, by the fact that proposals by the States in framing the Constitution to restrict the Federal war powers were uniformly rejected, and by the principles enunciated in the decisions of our courts in interpreting the war powers.

The war powers granted unconditionally to Congress by the Constitution are power—

"To declare war",

"To raise and support armies, but no appropriation of money to that use shall be for a longer term than 2 years";

"To provide and maintain a Navy";

"To make rules for the government and regulation of the land and naval forces";

"To make all laws which shall be necessary and proper for carrying into execution the foregoing Powers,"—Article I, Section 8.

The Preamble to the Constitution also recites as among its purposes—

"To provide for the common defense,—"

The framers of the Constitution well knew the defects of the Articles of Confederation and the impotence of the central government in this respect and the fact they rejected the proposals of the States to limit the power of the Federal Government (except that "no appropriation of money to that use (the raising and support of armies) shall be for a term longer than 2 years"), is strong evidence the war powers of Congress as the central government were to be unfettered.

See Hamilton, Federalist, Nos. 22, 23; Virginia, 3 Elliot's Debates 659; North Carolina, 4 Elliot's Debates, 242, 244, 251, 252; Rhode Island, 1 Elliot's Debates, 336; American Bar Association Journal, volume 26, page 701, "Legal Basis for Conscription," Claude B. Mickelwait, major, United States Army, Office of Judge Advocate General.

In 1871 Justice Field in *Tarble's Case* (13 Wall, 397 (at p. 408)), stated:

"Now, among the powers assigned to the National Government is the power 'to raise and support armies' and the power 'to provide for the government and regulation of the land and naval forces.' The execution of these powers falls within the line of its duties; and its control over the subject is plenary and exclusive."

In the Selective Draft Law cases (245 U. S. 366), arising out of the Draft Act of 1917, and disposing of the contentions that the law was unconstitutional, Chief Justice White pointed out that the authority which Congress had to pass such legislation was embedded in the above-quoted provisions of the Constitution, and said (at p. 377):

"It is said the right to provide is not denied by calling for voluntary enlistments, but it does not and cannot include the power to exact enforced military duty by the citizen. This, however, but challenges the existence of all power for a governmental power which has no saction to it and which, therefore, can only be exercised provided the citizen consent to its exercise, is in no substantial sense a power."

And continuing (p. 378):

"It may not be doubted that the very conception of a just government and its duty to the citizen includes the reciprocal duty of the citizen to render military service in case of need, and the right to compel it" (Vattel, Law of Nations, Book III, ch. 1 and 2).

Speaking to the point that Congress had not fully exercised its powers and hence the erroneous belief that Congress may be limited in this field, Chief Justice White, at page 383, states:

"Because the power of Congress to raise armies was not required to be exerted to its full limit, but only as in the discretion of Congress it was deemed the public interest required, furnishes no ground for supposing that the complete power was lost by its partial exertion."

The plenary war power of Congress is also clearly expounded in Justice Sutherland's opinion in *U. S.* v. *Macintosh* (283 U. S. 605) in which the Supreme Court denied the petition for naturalization of an alien who declined to take the oath that he would bear arms.

In analyzing the war power, Justice Sutherland, at page 622, remarked:

"From its very nature, the war power, when necessity calls for its exercise, tolerates no qualifications or limitations, unless found in the Constitution or in applicable principles of international law. In the words of John Quincy Adams, 'This power is tremendous; it is strictly constitutional; but it breaks down every barrier so anxiously erected for the protection of liberty, property, and of life.' To the end that war may not result in defeat, freedom of speech may, by act of Congress, be curtailed or denied so that the morale of the people and the spirit of the Army may not be broken by seditious utterances; freedom of the press curtailed to preserve our military plans and movements from the knowledge of the enemy; deserters and spies put to death without indictment or trial by jury; ships and supplies requisitioned; property of alien enemies, theretofore under the protection of the Constitution, seized without process and converted to the public use without compensation and without due process of law in the ordinary sense of that term; prices of food and other necessities of life fixed or regulated; railways taken over and operated by the Government; and other drastic powers, wholly inadmissible in time of peace, exercised to meet the emergencies of war.

"These are but illustrations of the breadth of the power; * * *."

In considering as a whole the war powers of Congress under the Constitution, the preamble to the Constitution should also be noted, in that among the Constitution's express purposes is "to provide for the common defense, promote the general welfare and secure the blessings of liberty to ourselves and our posterity, * * *." While this helps to clarify the aims of Congress in the exercise of its powers, it is conceded, as Justice Harlan remarked in *Jacobson* v. *Mass.* (197 U. S. 11, p. 22) that the preamble itself is not basic for the passage of congressional legislation.

FEMALES AS WELL AS MALE CITIZENS SUBJECT TO COMPULSORY MILITARY SERVICE

Since the power of Congress is plenary and absolute over all citizens in the exercise of the war power, it follows that females also, as citizens, may in the discretion of Congress be called on to serve in wartime. While there is, obviously as yet, no case in point, it is clear in principle that Congress may call on them to serve. Justice Sutherland in *U. S.* v. *MacIntosh*, supra (at p. 622), states:

"In express terms Congress is empowered 'to declare war' which necessarily connotes the plenary power to wage war with all the force necessary to make it effective; and 'to raise * * * armies,' which necessarily

connotes the like power to say who shall serve in them and in what way."

And (at p. 623):

"Whether any citizen shall be exempt from serving in the armed forces of the Nation in time of war is dependent upon the will of Congress and not upon the scruples of the individual, except as Congress provides."

In *U. S.* v. *Schwimmer* (279 U. S. 644) a woman alien who refused in her petition for naturalization to aver that she would bear arms was denied the right to citizenship, and Justice Butler speaking (at p. 650) with reference to this, said:

"That it is the duty of citizens by force of arms to defend our Government against all enemies whenever necessity arises is a fundamental principle of the Constitution."

FEMALE NURSES ONLY MAY BE SUBJECT TO COMPULSORY MILITARY SERVICE

The fact that female nurses only as a class may be subject to the female draft cannot be held to violate any constitutional requirements.

Again, the plenary power of Congress under the war powers over any and all citizens or any segment of its citizens, is absolute. A recent case illustrative of the proposition that during war one class of citizens but no others may be subjected to regulation is *Hirabayashi* v. *U. S.* (320 U. S. 81). This involved the constitutionality of an Executive curfew order issued under act of Congress to be applied against persons of Japanese ancestry within a designated military area as a protective measure to meet the threat of sabotage and espionage. The curfew order was held not to discriminate unconstitutionally against citizens of Japanese ancestry, and, as Chief Justice Stone stated (at p. 100):

"The fifth amendment contains no equal protection clause and it restrains only such discriminatory legislation by Congress as amounts to a denial of due process."

It is to be noted, as Chief Justice Stone remarks (p. 100) that:

"Legislative classification or discrimination based on race alone has even been held to be a denial of equal protection" (*Yick Wo* v. *Hopkins* (118 U. S. 356)).

And yet, as Justice Stone went on to say:

"Because racial discriminations are in most circumstances irrelevant and therefore prohibited, it by no means follows that in dealing with the perils of war Congress and the Executive are wholly precluded from taking into account those facts and circumstances which are relevant to measures for our national defense and for the successful prosecution of the war and which may, in fact, place citizens of one ancestry in a different category from others."

Accordingly, if Congress should conclude that it is necessary for the successful prosecution of the war to draft from among female nurses only, as a class, Congress may do so.

Justice Murphy, in his concurring opinion, at page 109, also emphasizes this point:

"This (Congress' power to provide for the common defense and to wage war 'with all the force to make it effective') includes authority to exercise measures of control over persons and property which would not in all cases be permissible in normal times."

See also *Korematsu* v. *U. S.* (Sup. Ct. 22, October term, 1944, decided Dec. 18, 1944, 13 U. S. Law Week, 4062), which upheld the war power of Congress and the Executive to exclude at the time they did citizens of Japanese ancestry from the west coast area. Justice Black, in the majority opinion (4063, 13 U. S. Law Week), said:

"But hardships are part of war and war is an aggregation of hardships. All citizens alike, both in and out of uniform, feel the impact of war in greater or lesser measure. Citizenship has its responsibilities as well as its privileges and in time of war the burden is always heavier. Compulsory exclusion of large groups of citizens from their homes, except under circumstances of direst emergency and peril, is inconsistent with our basic governmental institutions. But when, under conditions of modern warfare, our shores are threatened by hostile forces, the power to protect must be commensurate with the threatened danger."

Likewise, if under conditions of modern warfare the successful prosecution of the war requires the services of a particular class of citizens, the power of Congress to require them to serve is unquestioned.

Further support for treating nurses as a separate class is found in the cases holding that a statute is not unconstitutional which places impositions on a certain class only, so long as the classification is reasonable and uniform standards of treatment are prescribed for those within that class. While the cases substantiating this principle relate chiefly to the construction of the fourteenth amendment requiring of the States the equal protection of the laws (see *Missouri ex rel. Hurwitz* v. *North et al* (271 U. S. 40); *Jacobson* v. *Mass* (197 U. S. 11); also *Middleton* v. *Texas Power and Light Co.* (249 U. S. 152)), they clearly sustain similar classification by the Federal Government, to which the requirements of the equal-protection clause do not apply. The cases also confirm that the mere fact that a law regulating or placing impositions upon certain classes might properly have included certain others does not condemn it under the equal-protection clause. As was said in *Chicago Dock Co.* v. *Fraley* (228 U. S. 680 (at p. 687)):

"The Constitution does not require that all State laws shall be perfect, nor that the entire field of proper legislation shall be covered by a single enactment."

It is quite clear that females, by reason of their training and qualifications to act as nurses, constitute a distinct class, and as such would justify classification, and legislation for good cause in the discretion of Congress affecting only such class would be justifiable classification.

Again, the main basis for such classification and any draft legislation with respect to female nurses is to be found in the plenary war power of Congress. As stated by Justice Sutherland (at p. 622) in *U. S.* v. *Macintosh*, supra:

"From its very nature, the war power, when necessity calls for its exercise, tolerates no qualifications or limitations unless found in the Constitution or in applicable principles of international law."

ASSIGNMENT OF DRAFTEES WITHOUT MILITARY INDUCTION TO WORK OF NATIONAL IMPORTANCE

The power of Congress to draft and assign female nurses to work of national importance under civilian control would also appear to be well founded. It is based on the absolute war powers of Congress as a war necessity. As Chief Justice Stone remarked in *Hirabayashi* v. *U. S.*, supra (at p. 93):

"The war power of the National Government is the 'power to wage war successfully.' See Charles Evans Hughes, War Powers Under the Constitution (42 A. B. A., Rep. 232, 238). It extends to every matter and activity so related to war as substantially to affect its conduct and progress. The power is not restricted to the winning of victories in the field and the repulse of enemy forces. It embraces every phase of the national defense including the protection of war materials and the members of the armed forces from injury and from the dangers which attend the rise, prosecution, and progress of war" (cases cited).

The power to require a citizen to work, contrary to general public conception, has, nevertheless, been recognized in the history of this country not only in war but in peacetime in certain fields affected by the public interest. See *Butler* v. *Perry* (240 U. S. 328), wherein the Court upheld a Florida statute requiring able-bodied male persons between 21 and 45 years to labor on the highways of a county. Justice Brown (at p. 333) remarked:

"It (the thirteenth amendment) introduced no novel doctrine with respect of services always treated as exceptional, and certainly was not intended to interdict enforcement of those duties which individuals owe to the state, such as services in the Army, militia, on the jury, etc. The great purpose in view was liberty under the protection of effective government, not the destruction of the latter by depriving it of essential powers" (cases cited).

See also *Robertson* v. *Baldwin* (165 U. S. 275), confirming the principle that the contract of a sailor has always been treated as an exceptional one and that his labor may be enforced, although it involves to a certain extent the surrender of his personal liberty.

There is also the duty of the able-bodied citizen to aid in suppressing crime, as to which Justice Cardozo in *Hamilton* v. *Regents* (293 U. S. 245) (footnote at p. 265), referred to the authorities assembled in *Babington* v. *Yellow Taxi Corp.* (250 N. Y. 14, 164 N. E. 726).

The only wartime case analagous as to the propriety of assigning nurses to work of national importance appears to be found in the Selective Training and Service Act of 1940 as amended, U. S. C. A., title 50, section 305 (g), in which provision is made for conscientious objectors either to be inducted into the land or naval forces under the act and assigned to noncombatant service, as defined by the President, or, if opposed to participation therein "* * * in lieu of such induction be assigned to work of national importance under civilian direction."

The right of Congress or its duly authorized representatives to impose such work has been repeatedly upheld. In the recent case of *Falbo* v. *U. S.* (320 U. S. 549), dealing with the criminal prosecution for failure of a registrant to report for assignment by his local draft board to work of national importance, he claiming that he was a minister and wrongly classified, the Supreme Court confirmed Congress' power on the basis of which the assignment to work was made, Justice Black stating (at p. 551):

"The Congress was faced with the urgent necessity of integrating all the Nation's people and forces for national defense * * *. If he (the registrant) has been classified a conscientious objector opposed to noncombatant military service, as was petitioner, he ultimately is ordered by the local board to report for work of national importance. In each case the registrant is under the same obligation to obey the order."

In *Heflin* v. *Sanford* (142 F. 2d, 788 (C. C. A. 5th)) the circuit court of appeals, per Sibley, C. J., in denying the registrant's contention that he was ordered to do something prohibited by the Constitution, and his refusal cannot be made a crime, stated (at p. 793):

"The answer to appellant's complaint lies in the broad principle that the thirteenth amendment has no application to a call for service made by one's government according to law to meet a public need, * * *. The service required here is 'work of national importance,' that is to say, it is of a public nature. * * * The present war is described by its authors as 'total war,' meaning that every means of destruction will be used, and men, women, and children alike killed. It means also that total effort may be necessary to resist it, men, women, and children all doing what they can. * * * There can be no doubt whatever that Congress has the constitutional power to require appellant, an able-bodied man, to serve in the Army or in lieu of such service to perform other work of national importance. The thirteenth amendment abolished slavery and involuntary servitude except as a punishment for crime, but was never intended to limit the war powers of government or its right to exact by law public service from all to meet the public need."

It cannot be argued that the principles underlying the decisions of the cases dealing with conscientious objectors rest on a separate basis, and that they are not applicable to the question at issue since the immunities and exemptions granted this class of registrants are solely at the discretion of Congress. Justice Sutherland in *United States* v. *Macintosh*, supra (at p. 623), pointed this out with respect to the 1917 Draft Act:

"That body (Congress), thus far has seen fit, by express enactment, to relieve from the obligation of armed service those persons who belong to the class known as conscientious objectors; and this policy is of such long standing that it is thought by some to be beyond the possibility of alteration. * * * Of course, there is no such principle of the Constitution fixed or otherwise. The conscientious objector is relieved from the obligation to bear arms in obedience to no constitutional provision, express or implied; but because and only because it has accorded with the policy of Congress thus to relieve him. * * * That body may grant or withhold the exemption as in its wisdom it sees fit; * * * No other conclusion is compatible with the well nigh limitless extent of the war powers as above illustrated which include by necessary implication the power, in the last extremity, to compel the armed service of any citizen in the land without regard to his objections or his views in respect of the justice or morality of the particular war or of war in general."

Since these prerogatives belong solely to Congress and it has seen fit in the case of conscientious objectors to prescribe that either they be drafted and inducted into the armed services for noncombatant duty, or if not compatible with their beliefs then assigned, without being inducted, to work of national importance under civilian control, it follows that Congress may also prescribe either for the drafting and inducting into the armed forces of any class of citizens such as female nurses, or assign them to work of national importance under civilian control, such as Veterans' and other public and nonprofit hospitals and other community centers of medical or health service.

Very truly yours,

MORGAN, LEWIS & BOCKIUS.

The Byrnes Curfew Order

REMARKS

OF

HON. BERKELEY L. BUNKER

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. BUNKER. Mr. Speaker, since I left the United States Senate 2 years ago I have watched with increasing alarm as some of our power-drunk administrative officials have paraphrased and applied line by line, paragraph by paragraph, and chapter by chapter many of the orders that have been promulgated by loathsome dictators against whom our American boys and girls are fighting on the war fronts of the world.

The latest innovation in the way of dictator decrees is the so-called Byrnes curfew order, which to me plainly violates the very thing that our Constitution guaranteed to our people in the way of liberty.

Parenthetically speaking, I am one of the 76,000,000 of our 80,000,000 adult Americans who consistently are in bed at midnight, according to the Gallup poll.

Nobody wants the war won quickly and decisively more than I do, but I intend to defend—in strict accordance with my oath of office—every sentence of the American Constitution, which is the greatest and most important document outside of the Bible. If this means that a few more people get their recreation after midnight rather than before midnight, and a few more kilowatts of power are consumed, so be it. That means infinitely less than scrapping another phrase or two of our beloved Constitution.

I for one am at a total loss to understand why the midnight closing order was postponed until February 26, 1945, until now when victory is in sight and when many of our factories have passed the peak of production demands.

I propose, with the help of my colleagues who intend to abide by the Constitution, to ascertain by this resolution and give the American people some answer—if any exists—other than it is another measure to win the war.

The operation of bowling alleys, restaurants, theaters, and other amusement places has nothing to do with Army and Navy manpower. The National Selective Service has gone its own austere way—even to the extent of ignoring such mandates of Congress as the Tydings amendment to exempt vitally needed farm labor.

Most of the employers and employees of the industry restricted by the Byrnes decree can make little other contribution to the war effort than to help maintain the morale of such people as war plant swing shifters who seek such services, and to pay the income taxes that the Government imposes upon them.

I have no quarrel with the Anti-Saloon League or kindred organizations. If the intent was to prohibit sales of liquor after midnight, that could easily have been done without broad interference with the guaranteed liberties to our people. If it is to save coal, as Byrnes is quoted by the press as saying, it is peculiar that it came after winter is virtually over.

We are at the crossroads in the long march of democracy. We cannot afford to let any administrative official establish precedents which could be invoked by less scrupulous officials in the years ahead possibly to help accomplish what the gangsters in other nations did in less than a score of years.

The American public is entitled to the facts behind such decrees as the Byrnes curfew order, and I cannot be satisfied with the mere mouthings of those in high places.

The Federal Prison System

REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. STEFAN. Mr. Speaker, because some functions of our society are performed so smoothly and so unostentatiously, we are inclinded to take them for granted, particularly in these days when so much of our time and energies are directed toward the immediate and pressing problem of winning the war. Our natural tendency, with less clamoring problems, is to go along on the comfortable assumption that so long as the wheel does not squeak it does not need oil. Any good mechanic knows that the real extravagance is not the investment in the oil can, but the break-down of the equipment. Our country cannot afford a less intelligent policy toward these smooth functioning units of our Government. Today I have in mind, particularly, the Federal Prison System.

It has been said that, with the exception of those who administer them and those who get into them, nobody knows anything about prisons. As a member of the Committee on Appropriations, however, it has been a part of my duty to know something about the program of our Federal Bureau of Prisons; and as a member of our democratic society it has been a privilege to add to that knowledge. I have been interested in this agency for a number of years, and in all my contacts with those who manage it I have been increasingly impressed with the compelling responsibility they face and the absorbing experiment in human values they are conducting.

In the past I have outlined the history and major functions of the Federal prison system, and it will not be necessary now to go into repetitious detail. Under the able direction of Attorney General Francis Biddle and Director James V. Bennett it pursues its humane and progressive program in spite of serious wartime handicaps, honestly seeking after the rebuilding of character and the resocializing of personality.

It is from this standpoint I wish to present its problems—not because of its enviable record for efficient organization in the 15 years since its inception, nor because it sets the standard for the world in the physical set-up of its institutions, but because of its notable contribution to the human assets of our society.

Federal prisons are not, as some have grimly joked, "country clubs" which cater to the whims and fancies of their members. Nor, on the other hand, are they cold-storage warehouses for stifling and congealing human aspirations and energies. They are dynamic organisms of our culture, striving with determination and intelligence to treat maladjustments of personality, to bring about a rebirth of right thinking, and to rehabilitate and reclothe with the attributes of honest, respectable citizenship.

This is not an easy program, nor is it always, of course, successful. If every man who committed a crime, or crimes, had the genuine desire to change his way of life, there would be little need for prisons. To create that desire is the staggering problem. I say little need for prisons because in addition to those who have grown cynical and sophisticated in crime, the mentally deficient, and those few who seem entirely to lack a sense of moral values, there are always some who must be restrained because they fail to grasp any fundamental relationship

between their acts and infraction of the law—the traditional bootleggers, for instance, who see no harm in turning their corn into moonshine. Take the case of Zebe, who had served a term for this offense and who, while in the institution, had received some vocational training in the tin shop. Some time after his release, the superintendent of the tin shop received from him the following letter:

DEAR WARDEN: I write to tell how much yer training has meant to me. When my revenoo case came up in Tennessee court they showed my still. The jedge and jury all looked it over most kerful and admitttted to a man that it war the finest piece of coppersmithin they had ever seen in these here parts, barring none. I jes wanted you all to know I owe it to yer sheet metal course.

Sincerely,

ZEBE.

Our Federal prisons have not now, of course, so many of this type of offender, but wartime statutes have filled them with a whole new crop. From 1942 to 1944 the number committted for wartime offenses and military courts-martial increased from 10.3 percent to 34.4 percent. A certain proportion of disloyal citizens, saboteurs, spies, and bundists make up a part of this group, together with those who have committed serious military offenses, but by far the largest percentage is composed of violators of the Selective Service Act. Among these last named are some who seem sincere and who, once they are convinced their assignment has no connection with the prosecution of the war, are willing to cooperate and take their places in the institutional life. A few present a problem unique in the history of prison administration in that their real identity is difficult to determine. They claim they are registered with Allah or some other leader, and that they cannot reveal any but their chosen names. These include such euphonious appellations as Radical Love, Unison Heart, Brother Daniel, Walking T. Jerusalem, Serious Ezekiel, Meekness Faith, David Guileless, and so on.

However, the element of humor, grim though it may be, is not always present. Often the inescapable factor of life and death is involved. The most difficult and baffling lot in the whole range of Selective Service Act violators is composed of the ultrapacifists, the extremist war resisters, the Ghandi-ites, the radicals, the fanatical vegetarians, and so on, the group that the editor of one of the institutional papers calls "drydocked intellectuals." The leader of one of these cliques, for instance, is a graduate of an ivy-league college, a captain of the track team, a fellow at Oxford, and an honor student with real leadership abilities. He seems determined, however, to become a martyr and to cause trouble for the Government whenever possible. At one time he felt that even death was worth while in upholding the right of a prisoner to carry on, without censorship, correspondence with outside parties. He held that it was fundamentally undemocratic to inspect the mail of a prisoner and in protest he and some of his friends went on a hunger strike for nearly 80 days. He steadfastly refused food for 27 days and then was tube-fed for 53 more days before he would voluntarily accept food.

Practically all of these extremist groups are believers in pressure techniques. Some are militant pacifists, some are Trotskyites, some believe in complete civil disobedience, some resort to every conceivable nonviolent coercive measure. They will not work, they will not comply with institutional rules, they foment trouble and seek always to embarrass and discredit those responsible for enforcing the law. We might ask whether it would be censurable to permit such persons to starve themselves to death, but Director Bennett, of the Federal Prison System, feels that one of the symbols of our democracy is belief in the essential dignity of every human being, no matter how deluded or misguided he may be, that we are required to do our utmost to save life, and, if possible, to redirect its energies in constructive channels. Like the physician, the prison administrator cannot deny the resources at his command to anyone, the obstructionist, the bigoted, or even the disloyal. Incidentally, one former prisoner who had claimed to be a conscientious objector has since his parole to the Army written in to say, "I could kick myself a million times for not going in the first place." So you see it is possible sometimes to bring about a change in attitude even among those who arrogate solely to themselves the power to determine whether we are fighting in a righteous cause.

Instances of this kind, which are not infrequent, are what leaven the burden and give those responsible for administering our prisons the faith and courage to go forward with their intrinsically progressive program. Director Bennett has the satisfaction of knowing that many men who leave the gates of a Federal prison will never return. And occasionally he experiences the thrill of following through to real success the career of one of his graduates. A man whom he calls Edward is a case in point.

It would seem that of all men who run afoul of the law and are committed to penal institutions, Edward had the least potentiality for improvement. As a young man he had become a drifter, a transient, had never held a job, and had lived by the shadiest means. He was eventually committed to a Federal penitentiary on a charge of violation of the White Slave Traffic Act. His offense was such as to lead the United States attorney to report, "There are no mitigating circumstances." In just about 2 years after completion of that sentence he was again in serious trouble—this time for concealing and selling narcotics. He had himself become an addict. This time his sentence was for 5 years; but during this time something began to happen to him. In the first place he was cured of his addiction. His interest in religion, long nonexistent, was reborn, and he found in the institutional psychologist not only one who was able to give him professional aid, but also a man who was interested in him as a man and who helped him to gain some insight into his unsavory career. A real change appeared to take place in his inner attitudes and perspectives. He was denied parole, but was later released with 480 days good time to his credit. A job had been procured for him in a city far removed from old associates. It was not the most desirable job in the world, and it was unequal to his capabilities, for he is a man of superior intelligence, but he worked hard and his employer, who knew his history, liked him and respected him. When the opportunity arose it was this employer who loaned him the money to start a small but legitimate merchandising business on the side. This enterprise proved so successful that eventually he was forced to give his entire time to it. The rest of the story sounds like a novel, but it is true. Edward's business grew so rapidly that it was necessary to hire four clerks in addition to his wife, who works in his store. He has made numerous investments and managed them all so well that he has consistently made money. But the important thing in this story is not so much his financial success as that he has achieved a moral triumph. Many people have tried to make trouble for him. His criminal record leaked out. Dealers in narcotics have tried to get him involved again. Federal narcotics agents have sent undercover men to discover whether he is still interested in the traffic, but he remains incorruptible, and all investigations have proved only that he works hard, long hours, and is conducting a legitimate, well-managed, profitable business. His parole adviser, incidentally a police lieutenant who might have every reason to be cynical, writes:

I am proud to call him my friend and I consider his case by far the greatest example of rehabilitation that has ever come to my attention in my 20 years of police experience.

Another encouraging case, although in an entirely different category, is that of Paul, a boy under 17 years of age, whose offense involved violation of the National Motor Vehicle Theft Act, armed robbery, and kidnapping. His institutional record was good, but he was denied parole and served his full term. Shortly after his release he was inducted into the Army Air Corps, earned his sergeant's chevrons, and became a gunner on a Flying Fortress. He has since completed 30 bombing missions in Europe, his unit has received a Presidential citation, and he himself the Flying Cross with five oakleaf clusters, and the Distinguished Flying Cross.

Even the traditional bootlegger can sometimes be turned to lawful pursuits. Because he was a member of an outlaw family and could not get a job, Noah had drifted into the illegal liquor traffic. So confirmed was the family in unlawful ways that at one time Noah's father alone constituted a special exhibit at a carnival celebration in a neighboring town. Admission was charged to enter the tent where the man sat on a platform in a comfortable chair, surrounded by some of his equipment for making moonshine whisky, and by the various weapons used by himself and his relatives in their conflicts with the law. It seemed inevitable that Noah would return to

the same occupation. But a job was secured for him, and although it was not a very lucrative one, he worked hard, seeming to feel that at least someone was really interested in him and wanted to help him. He wrote:

Thank you very much for your kind regards and wishes to me and family for better success and health. Thank God, someone cares. I am sure that the God of the universe will help me in the long run. I never give up hope.

He says now that he is very grateful for the consideration shown him and the confidence placed in him, that he is enjoying life more than at any time within his memory, and that he can sleep at night, being no longer fearful when anyone comes to his house because he knows that his conduct has been within the law and he will not be taken away from his family.

Although the problems are knotty and often discouraging, a great deal is being accomplished of which the Department of Justice and we as a country can be proud.

I have previously told you about the war work being done by Federal prisoners. They are still producing about $20,000,000 worth of goods annually, of which 95 percent is in war materials. There has been no diminution of the inmates' enthusiastic contributions to Red Cross blood banks or in their investments in War Bonds. And they have willingly lent themselves as guinea pigs to numerous scientific experiments designed to save the health and lives of our fighting men. We all know what a devastating disease malaria is, and we have been shocked by the fact that five times as many men have been sent back from the Pacific theater because of malaria as for all other battle casualties combined. It is a disease which we can certainly not afford from a military standpoint, quite apart from the untold human suffering involved, and yet for years scientists have been unsuccessful in finding a real cure. Some drugs have been helpful in alleviating its miseries, but no complete cures or preventive drugs had been discovered. When the National Research Council and the Office of Scientific Research and Development needed to make a clinical test of certain new drugs which seemed potentially effective, they found more eager volunteers than they could use at the United States Penitentiary at Atlanta, Ga., and with the approval of the Attorney General, Director Bennett, and Warden Joseph W. Sanford of Atlanta, they established behind prison walls what was to prove almost an ideal medical laboratory and hospital.

Here 114 of the many times greater number who have volunteered have been infected by the bite of the Anopheles mosquito. The prisoners call it "keeping a date with Ann." The efficacy of the different drugs, different methods of administering them, different post-infection controls, regular chemical blood tests—all are part of the project. Only those men in excellent physical condition are allowed to undertake this rigorous experiment, for—make no mistake about it—many of them become very ill. It is still too early to predict the final results, but it may very well be that through their sacrifice may be found the drug that will mean to millions release from a devastating disease, and perhaps—in effect—one component of the victory to come.

What part will our prisons play in the days to follow that victory? Will there be, as some predict, a resurgence of crime such as has occurred following other wars? Director Bennett does not believe this is inevitable, and he has convinced me that it need not be inevitable. We must plan wisely; we must display the resourcefulness and initiative in the prevention of crime that our Federal prisons exercise in its treatment; we must make sure that demobilization is intelligent and systematic; we must, above all, solve the basic problem of providing jobs, so that the real aims and purposes of the G. I. bill of rights may be realized. If we do these things—and again I say we must—we will go a long way toward preventing any widespread post-war crime wave. But even with success in attaining these objectives, we still must recognize that crime has never been, and will not be, entirely eradicated from the peacetime world, and that if our correction program is to play its part in organizing the kind of society we hope to have some of our out-moded procedures must be revamped and revitalized.

The correctional function of our Federal prisons is seriously handicapped by the fact that those responsible for planning and administering the treatment have nothing to say about the length of time required to accomplish the best results. Most prison officials can recall scores of prisoners who have adjusted well, who have made good use of the rehabilitative resources of the institution, and who, at the end of perhaps 2 or 3 years, have seemed fitted to return to the free community. But because their sentences must run for 6 or 10 or even 50 more years they retrogress, become "prisonized," and finally go out broken, dispirited, and embittered, probably to return to that or some other institution. It is difficult for us to put ourselves in the place of men who must spend years of their lives behind prison walls, but here is a letter to Director Bennett from one of them which may help us to do this:

Maybe you have asked yourself how can a man of even ordinary intelligence put up with this kind of life day in, day out, week after week, month after month, year after year. To put it more mildly still, what is this life of mine like? You might wonder whence do I draw sufficient courage to endure it. To begin with, these five words seem written in fire on the walls of my cell, "Nothing can be worth this." This—the kind of life I am leading.

No one knows what it is like to suffer from the intellectual atrophy, the pernicious mental scurvy that comes of long privations of all the things that make life real because even the analogy of thirst cannot possibly give you an inkling of what it is like to be tortured by the absence of everything that makes life worth living. A prisoner in prison cannot keep from being haunted by a vision of life as it used to be when it was real and lovely. At such times I pay with a sense of delicious overwhelming melancholy my tribute to life as it once was.

Not only should some steps be taken to insure that prisoners are released at the right time, but we should also do something about the disparity between sentences imposed for the same offense in different parts of the country. This is so great as to be ridiculous if it were not so tragic. For example, during the fiscal year 1944 the average sentence imposed upon Selective Service Act violators in Montana was less than 1 year; in my own State of Nebraska it was slightly less than 2 years; in New Jersey it was 3 years; in southern Ohio it was 4 years; and in South Dakota, 5 years.

There is no simple solution to these problems, of course, but the proposed Federal corrections bill, if enacted, would represent a step forward in fitting the sentence to the need of the individual offender, as well as in reducing the disparities between the sentences in different districts. This act would, you will remember, delay imposition of sentence in felony convictions for not more than 6 months after commitment to the institution. During that period the Federal board of correction would study the case, interview the offender, and recommend a sentence which the judge might, although he need not, impose. It is a proposal recommended to Congress by a distinguished group of judges, including the Chief Justice of the United States and the Attorney General, which should have our prompt attention.

Attorney General Biddle and his staff are giving a great deal of thought to this and other measures which will help solve some of the problems we must squarely face during the years of readjustment. The Attorney General and the great Department of Justice over which he presides have had to cope with many vexatious questions during the war, but they will have no less important or difficult situations to solve in the days ahead. He and his staff believe that out of the ferment of war and in the making of a sound peace may come opportunities for notable changes. In an era when many values deemed immutable have proved transitory, when faith in the inevitability of progress in many realms has been shaken, the advance of Federal law enforcement and the Federal prison program through the last decade should be a source of satisfaction and pride to all lovers of democracy.

The problems of our prisons and those who get into them cannot be ignored; they cannot be shrugged off; they are in our midst, and they are real. Let us then not fall below the standard suggested by the leader of one of our great allies, Mr. Winston Churchill, when he says:

The mood and temper of the public with regard to the treatment of crime and criminals is one of the most unfailing tests of the civilization of any country.

A calm, dispassionate recognition of the rights of the accused, and even of the convicted criminal against the state—a constant heart-searching by all charged with the duty of punishment—a desire and an eagerness to rehabilitate in the world of industry those who have paid their due in the hard coinage of punishment; tireless efforts toward the

discovery of curative and regenerative processes; unfailing faith that there is treasure, if you can only find it, in the heart of every man.

These are the symbols which in the treatment of crime and criminal mark and measure the stored up strength of a nation and are a sign and proof of the living virtue in it.

Communists in Our Armed Forces

REMARKS

OF

HON. JOHN E. RANKIN

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. RANKIN. Mr. Speaker, when Earl Browder, the leader of the Communist Party, came out on yesterday and boasted that "of course there are Communists holding commissions in the United States Army," it was enough to sound an alarm in every American home, and especially every home that has a son in our armed forces.

What could be more dangerous to our country's safety, or more detrimental to the morale of our fighting men, than to place in key positions individuals who are devoted to the destruction of everything we are fighting for.

Remember that Earl Browder was a Trotskyite Communist and was lined up with Trotsky in plotting the overthrow of this Government at a time when Trotsky was murdering Christians by the millions in Russia, and even later when Trotsky was plotting the murder of Stalin himself.

If Browder and his gang had succeeded in their subversive designs, we would not have had a ship or a shell with which to defend ourselves when Pearl Harbor was attacked. Thousands of our brave young men have already paid with their lives for the strikes in our defense plants which these un-American elements have inspired.

The people of this country are sick and tired of having Earl Browder and his communistic cohorts attempt to smear patriotic Americans by referring to them as "Nazis" or "Fascists" or "Bourbons" or "reactionaries," when their sons are dying by the thousands to defend this country against enemies from without while they are trying to protect it against enemies from within.

The Communists holding commissions in the Army to which Browder refers as a rule are not on the firing line. They are in key positions such as the intelligence service, or communications service, where they can secure the most valuable information touching our war efforts; or else they are engaged as instructors in indoctrination centers where they preach their un-American propaganda in broken English to their communistic cohorts and parlor pink sympathizers, or drum it into the ears of our servicemen who cannot help themselves.

These subversive elements must be driven from power. No wonder they want to get rid of the Committee on Un-American Activities. It is in their way.

As a member of that committee, I can assure Earl Browder now, and I can assure the American people, that we are not going to be intimidated from our course.

We are going to select the finest investigating staff this country affords.

We are going to turn the pitiless sunlight of merciless publicity on to these subversive elements and organizations that are now attempting to undermine this Government and destroy the American way of life.

We are going to expose their lying propaganda and their insidious work of subversive indoctrinations in these so-called centers, as well as their stooges in our great educational institutions, in the press, and on the radio.

We are going to do our best to save America for Americans.

It Is Up to Congress

REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. GATHINGS. Mr. Speaker, the newspaper headlines reveal that 13,500 workers in the Dodge plant in Detroit have been idle for 8 days. Other strikes in war production brings the total absentee strikers to 27,050. It is estimated that a total of 6,550 more vital war workers are idle because of a shortage of parts due to the walk-outs.

In the news also are demands by John L. Lewis' United Mine Workers for an increase of 10 and 15 cents an hour for second and third shift work; an increase in vacation pay from the present $50 to $100; pay for 6 holidays and for travel to and from the coal face; elimination of differentials within and between districts and many others. In addition Lewis demands that a 10-cent royalty on every ton of soft coal mined be paid by the operators to the United Mine Workers treasury. The union leader gave notice on February 26 to the Secretary of Labor "that a labor dispute exists between the United Mine Workers of America and the bituminous coal operators." This notice for a strike vote to be held within 30 days, as provided in the Smith-Connally Act, was made even though he had not sat down to discuss the negotiation of the contract with the operators and determine the chances of settling any disagreement between the parties.

There is no surprise in the minds of the American people that John L. Lewis is ever ready to call a strike to gain his objectives. We are aware of what these coal mine strikes have cost. The first wartime strike which he called was in the fall of 1941. His purpose was to win a closed shop in the steel mills' captive mines. This strike caused the loss of nearly 1,000,000 man-days of work. In 1943 strikes to break the Little Steel formula in behalf of coal miners cost 7,510,397 man days and 39,000,000 tons of coal to the war effort.

A shut-down in 1945 would mean a much more damaging condition than at any time before in the history of the Nation. Many factories, railroads, and utilities have only a few days' supply of coal at their disposal. As a result, it has become necessary that thermostats be kept at a maximum of 68 degrees, that display lighting be eliminated, that some railroad passenger service be discontinued. A coal strike now would postpone the day of victory for our armed forces. From past experience, there is little reason to believe that John L. Lewis will be moved by such considerations.

We are faced with the choice of capitulating to the far-reaching demands of Lewis or curbing his destructiveness. To yield to any great degree would cause an inflationary trend in all wages and prices.

Those to whom it has fallen their lot to mine coal during this war should make their arrangements to continue at the job even if they would be denied certain increases in wages which may or may not be justified. That would not be asking too much of them when millions of Americans on land, sea, and in the air carry the fight to the enemy without quibbling over wages or conditions under which they work.

It is up to Congress to provide the urgent legislation to meet this most critical situation. The manpower bill now being debated in the Senate should carry a provision that workers engaged in war-essential occupations be subjected to jail sentences or inducted immediately into the armed services should they strike for any reason, however valid, during the existence of the present world conflict. The occasion demands this drastic action.

Procurement and Assignment Service for Physicians, Dentists, and Veterinarians

EXTENSION OF REMARKS

OF

HON. CARL T. DURHAM

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. DURHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

NOTES ON THE PROCUREMENT AND ASSIGNMENT SERVICE

GENERAL

The Procurement and Assignment Service for Physicians, Dentists, and Veterinarians has been operating since before Pearl Harbor. Sanitary engineers and nurses were added about 18 months ago. The physicians and the dentists have been organized by county and State committees who have worked on a combined front of recruiting for the armed services from the group declared to be available for military service. The closest kind of relationship with the Selective Service System, the Army, and the Navy has been maintained, and in almost no instance has any member of these professions considered essential to the civilian economy been taken. On the other hand, the active recruitment

efforts of this network of local committees has resulted in every possible available doctor and dentist who was acceptable to the services being procured for them.

The original directing board of the Procurement and Assignment Service, whose appointment was approved by the President, consisted of four doctors and one dentist: Dr. Frank H. Lahey, chairman, the Lahey Clinic, Boston, Mass.; Dr. Harvey B. Stone, vice chairman, Johns Hopkins University, Baltimore, Md.; Dr. Harold S. Diehl, dean of medical sciences, University of Minnesota, Minneapolis, Minn.; Dr. James E. Paullin, professor of clinical medicine, Emory University, Atlanta, Ga.; Dr. C. Willard Camalier, past president of American Dental Association, Washington, D. C.

Dr. Abel Wolman, professor of sanitary engineering, the Johns Hopkins University, Baltimore, Md., was added to represent the sanitary engineers.

When nursing was added to the functions, two nurse members were added to the directing board: Miss Laura Grant, director of nursing service, New Haven Hospital, New Haven, Conn.; Miss Katharine Tucker, department of nursing education, University of Pennsylvania, Philadelphia, Pa.

NURSING DIVISION

The procurement and assignment service for nurses operates through 867 local and State committees. These committees are made up of the prominent members of the nursing profession in the various communities and, in addition, the committees have citizen or lay members, and sometimes local physicians and others. The nurse members are usually those who have taken a prominent part in organized community service, like the visiting nurse services, hospitals, schools of nursing, and so forth. Each field of nursing is represented—teaching, private duty, public health, and so forth. Committees often have on them some staff member of the local hospital group. On the whole they are very representative.

The State chairman for nurses is usually a nurse who has given a great deal of time to nursing activities, is influential both professionally and otherwise, and who has a position which permits her to devote a good deal of time to procurement and assignment service activities. All serve without compensation and work hard. Most of their tasks are accomplished by meeting together in the evening. A limited amount of paid clerical assistance is supplied to the larger committees by the War Manpower Commission. Four nurses on the Federal staff help with problem areas.

The determinations of what nurses are in essential positions and what nurses are available for military service are made by these local committees on the basis of standards and policies established by the national directing board of the procurement and assignment service. These standards and policies are worked out by national nursing advisory committees in the various fields of nursing.

The National Nursing Advisory Committee, in addition to the two members of the directing board, is made up of the following people: Miss Irene Murchison, Colorado State Board of Nurse Examiners, Denver, Colo.; Miss M. Annie Leitch, director of school of nursing, Butterworth Hospital, Grand Rapids, Mich.; Miss Lola Knoller, American Nurses Association, Milwaukee, Wis.; Mrs. Edward Walsh, American Red Cross, Clayton, Mo.; Dr. Claude W. Munger, director, St. Luke's Hospital, New York, N. Y.; Miss Alma C. Haupt, director, nursing service, Metropolitan Life Insurance Co., New York, N. Y.

These people all have a national reputation in their field and have devoted a great deal of their time to furthering the profession of nursing, and during wartime have worked continuously on joint projects with governmental agencies.

The National Nursing Council for War Service, Inc., which is made up of representatives of all the national nursing organizations, recommended and supports the Procurement and Assignment Service, and believes firmly that professional groups must have a controlling influence in the selection of the nurses for the military, and in determining what are the essential positions in the community.

During the past year, the committees of the Procurement and Assignment Service have made lists of all nurses under their jurisdiction; altogether about 240,000. It has classified these nurses according to the type of work they are doing and has accumulated a list of about 50,000 nurses immediately available for military service. It is estimated that about 32,000 of this number are unmarried. Of the total 50,000 nurses available, about 50 percent are private-duty nurses. Others come from hospitals, institutions, and so forth, that had a staff more numerous than the ceiling allowed.

Since the Army needs for nurses became acute last fall, the Procurement and Assignment Service has worked diligently to make the maximum number of nurses available, stressing the immediate availability of large numbers of private-duty nurses and of recent graduates. It has worked also to bring inactive nurses back into service, suggesting ways and means in which married nurses might help out in part-time positions and relieve some eligible for military service so they could join the Army. It is estimated that 15,000 nurses who were inactive have been brought back into essential nursing.

Since the War Department has said it will accept the applications of all volunteers, regardless of classification, the Procurement and Assignment Service has cooperated closely with the American Red Cross and with the Army Service Command headquarters to be of all possible assistance in safeguarding the nurses in the essential positions, especially in schools of nursing.

QUOTAS

The quotas were established by the staff in the central office of the Procurement and Assignment Service in cooperation with the United States Public Health Service statistical experts and are based on a formula giving due weight to the density of nurse population and its relationship to the total number of citizens to be served and also giving due weight to the number of nurses graduating in the period September 1, 1944, to April 30, 1945.

The existing quotas (see tables) have been worked out on the basis of the Army's ceiling of 50,000 nurses. New quotas on the basis of the Army's new ceiling of 60,000 are in the process of preparation.

Nurse quotas starting Jan. 1, 1945, by States, percentages of total quota

States in order of size of quota	Quota starting Jan. 1, 1945	Percent of total quota	Cumulative percent of total quota
Total	15,000	100.0	100.0
New York	1,896	12.6	12.6
Pennsylvania	1,676	11.2	23.8
Illinois	1,163	7.8	31.6

Nurses Selective Service

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

FEBRUARY 27, 1945.

The Honorable WALTER H. JUDD,
The House of Representatives,
Washington, D. C.

DEAR SIR: We, the undersigned group of graduate, registered nurses, temporarily residing in Washington, are seriously concerned with the present status of the Nurses' Selective Service Act of 1945, known as bill H. R. 2277, and solicit your consideration of the following facts which are representative of our group thinking. We present these facts as interested individuals and not as representatives of any professional group or agency.

As nurses, our first concern is the assurance that our men in military service receive adequate nursing care, and we have reluctantly come to the conclusion that a nurse draft is necessary if this is to be accomplished quickly. We believe, however, that there are certain objectionable features in bill H. R. 2277 as it now stands, which will adversely affect the care of civilians as well as result in inferior service to the sick and wounded in the armed forces. We appreciate the privilege of bringing these objectionable features, as we see them, to your attention.

1. THE COMPULSORY INDUCTION OF ALL CADET NURSES TO OTHER ELIGIBLE NURSES

When thousands of young women entered the Cadet Nurse Corps, they did so with the explicit promise of the United States Government that they could choose the type of essential nursing they would give for a specified length of time, following their training. In other words, they were told that they would not be required to enter military service. The induction of cadet nurses prior to the induction of other nurses constitutes a breach of faith on the part of the United States Government with the cadet nurses, their parents, those who helped recruit them, and the institutions that expanded their resources to teach them. The Bolton bill might be amended to make all future cadet nurses subject to military service, but retroactive action will not only break faith, but will undoubtedly cause serious disruption to the cadet nurse service in our civilian hospitals.

A high percentage of the nursing service in civilian hospitals is being done by student nurses. Any considerable number of resignations from the Cadet Corps, because of objections to a nurse draft, would constitute a serious hazard to the maintenace of adequate civilian nursing care. The future recruitment of other cadet students would also markedly curtailed.

We believe that the young nurse has much to contribute to the military service but the induction of all eligible cadet nurses prior to that of any other nurses as required by the bill, seems unwise. By a better distribution of nurses of all age groups between the civilian and military services, both will have the benefits of the experience and mature judgment of the older nurses.

2. THE ASSIGNMENT TO MILITARY SERVICE OF NURSES FROM SUBSTANDARD SCHOOLS

A nurse in military service must have had professional training that will permit her to give highly skilled nursing care to the sick and wounded, frequently under adverse working conditions with little or no medical supervision; be able to make vital decisions involving the safeguarding of human life; and to give training and supervision to military corpsmen. In order to carry the responsibilities of military service, the nurse should have had a wide variety of hospital experiences under close supervision, and a thorough technical education which cannot be given in very small hospitals with limited services, equipment, and teaching personnel. We believe that nurses from these substandard schools may be much more safely employed in civilian hospitals where more strict supervision can be maintained.

We believe that if this bill is passed as it now stands it will have a serious effect upon future nursing education. The giving of military rank and professional recognition to graduates of substandard schools will place them in positions of responsibility for which they are poorly prepared, and will stimulate the establishment of more substandard schools of nursing.

While there are a considerable number of substandard schools of nursing in the United States, the number of students in each school is so small that their graduates make up only about 3 percent of the total of each year's graduates. The small number of these graduates available for military service will not aid this program materially, but their assignment to positions of responsibility will jeopardize the future standards of nursing education.

We recognize that in your position you will have very important decisions to make during these momentous times. Our opinions, as herein expressed, are offered in a spirit of helpfulness to those who are guiding us through this critical period.

Very truly yours,

OLIVIA T. PETERSON,
Registered Nurse (Minneapolis, Hennepin County).
ELLEN L. AIRD,
Registered Nurse (Minneapolis, Hennepin County).
IDA MACDONALD,
Registered Nurse (Minneapolis, Hennepin County).
GERTRUDE BANFIELD,
Registered Nurse (Austin, Mower County).
ELSBETH H. VAUGHAN,
Registered Nurse (Duluth, St. Louis County).
ELLA GIMMESTAD,
Registered Nurse (Belview, Redwood County).
ESTHER GILBERTSON,
Registered Nurse (Glencoe, McLeod County).

From Yahweh to Yalta

EXTENSION OF REMARKS
OF
HON. DEWEY SHORT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following article by Milton Mayer, which appeared in the Progressive of March 5, 1945:

FROM YAHWEH TO YALTA

(By Milton Mayer)

"And what," said my eminent friend, the editor of a great magazine, "do you think of Yalta?"

"The same thing," I replied, "that I thought of Munich, with Churchill and Roosevelt and Stalin batting for Chamberlain, Daladier, and Hitler, respectively, and poor little Poland batting for poor little Czechoslovakia. And what," I went on, "do you think of Yalta?"

"I," said my eminent friend, "think it is hopeful."

"Why?" I said.

"Why?" he said.

"Yes; why?" I said.

"Well," he said, "well—well; damn it all, a man has got to believe in something."

"Ah, so he has," said I.

And within a week my friend who has got to believe in something, and has nothing to believe in but Yalta, had written an editorial declaring that Yalta was a hard-headed decision, a victory for realism, and a genuine step forward toward American participation in world affairs.

THE SHOCKING PART

My friend did not declare that Yalta was the new Magna Carta and the realization of the hopes and dreams of the common man. But this was because my friend's magazine is a reactionary, bloated with advertising and crazy with power. Yalta merely looked good, sound, and workable to my friend's reactionary magazine.

It took the liberals to discover that Yalta was, in very fact, the modern Bethlehem. Only instead of the three wise men coming to worship before the miracle of miracles, this time the wise men produced it.

No child of 5 or over should have been shocked by Yalta. The hypocrisy of mentioning the Atlantic Charter—more properly known, I would suppose, as the Bottom-of-the-Atlantic Charter—is nothing new in the last 3 years. True, the hypocrisy was a little more livid on this occasion, in view of the fact that Mr. Roosevelt had just announced that there was no such animal as the charter, and a little more brazen, in view of the fact that Yalta's sole solid achievement was the partition of Poland, and the charter's first clause alleges that none of the signatories seeks territorial aggrandizement.

But none of this—not after 3 years beginning with Darlan and ending with Bonomi—was shocking. What was shocking—or should have been—was the ecstasy with which the battered and bleeding liberals received the news of their grisly fate and the world's. Like one man, or rather like one slave, that section of the press represented by the Nation and PM, and of the radio represented by Raymond Gram Swing, burbled deliriously at the wisdom and charity of the "big three"—no longer the "big three" nations but the "big three" men.

READ AND WEEP

This, my friends, is unconditional surrender—unconditional surrender of freemen and free minds to the theory of the divinity of kings. This is the awful plight of people who have got to believe in something and have nothing to believe in. This is what the anti-Democrats from Hobbes, who called democracy a government of orators, to Hitler, who call it a government of politicians, meant when they poured out their scorn upon parliamentary institutions. This—this theory that one man, or two men or three men, could say, "I am the law," and make it stick—was the ground for the American Revolution.

This unconditional surrender to the divinity of kings comes hard to the liberals, but it comes. For 4 years now they have been earning their living on the flat of their backs and it's only a matter now of beginning each wayward week end with a cheer and winding up with a prayer. Thus, the New Republic, which begins its editorial on the Crimea Conference at Yalta with the statement that "we have moved a step closer to realization of Dumbarton Oaks," closes it as follows:

"All over the world, people are demanding peace, security, and freedom, and in that sense, time is on the side of the angels. It

remains for us to do our part by fighting, through every means at our command, for a decent peace and a decent world after the peace."

Just skip the middle of the editorial and feel wonderful with the editors of the New Republic. Or read it and weep. I quote five successive sentences from the peroration, or semiwind-up, and with no excisions:

"Are we any closer to permanent peace? Yes; a little, insofar as we have moved a step nearer to a new world organization. True, the plans for the future of Germany seem to carry within themselves the seeds of a third world war, for the reasons stated above. But we are no worse off in this respect after Yalta than we were before. The hopeful fact here is that plans are not permanent."

WHO ARE THESE BIG THREE?

Here we have the party line explicit for the doctrine that the kings can do no wrong: Yalta is a step toward permanent peace; but it is also a step toward the third world war; still, the kings have left us no worse off than we were before they assembled; or, if you insist that they have, remember that they may change their minds. We can always pray. But we cannot carp, because then we would be against Yalta and to be against God, after the second coming in the Crimea, is to be for the devil in Berlin.

Tempora, hell! Mores, my eye! If these "big three" men had been chosen for wisdom and virtue, if they were the finest flower of mankind, they would still be mere men, fallible and heavy laden with the fallen nature that fetters us all. But who are they, these Big Three? One is a dictator-tyrant, much like Adolf Hitler except for the size of his mustache and the religion of his victims; one an atavistic imperialist who uses the word "democracy," like Pericles before him, to describe an aristocracy at home based on a slave empire abroad; and one a chameleon politician, sentimental, good-natured, riding the New Deal, the War Deal, the Old Deal, depending on which one is winning, and without the redeeming feature of singleness of purpose that characterizes the other two.

A man, as my friend said, has got to believe in something.

Does he have to believe in this?

Needed Amendments to Nurses Draft Bill

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from the New York Times of March 3, 1945:

To the EDITOR OF THE NEW YORK TIMES:

The Nurses Selective Service Act should, no doubt, be put into effect immediately, because there should be no delay in providing skilled nursing care for the war wounded. It is equally important, however, that such legislation should be written in a form to bring about desirable results. The bill which the Times of February 20 reports as approved by the House Military Affairs Committee should be revised now to avoid future difficulty.

First, a compulsory registration of all nurses is imperative, since a major difficulty in the current nursing crisis is that no one actually knows how many nurses there are in the United States. It has been estimated that we have 400,000 graduates of accredited schools able to give at least part-time service if need be, and about 275,000 of these are now active in their profession, including approximatly 53,000 in military service. It will cost the Government very little more to register all of them. The bill as approved by the committee applies only to nurses between 20 and 45 who are unmarried.

A high proportion of nurses marry soon after graduation. They make excellent mothers, and exemptions should be granted to bona-fide homemakers. The military services do not now accept nurses with dependents under 14. It would, however, be a mistake to overlook those nurses without real home responsibilities who choose to find in marriage an excuse for not devoting their needed professional skills to helping win the war.

CIVILIAN NEEDS HEAVY

The situation in civilian hospitals is really desperate. The nursing staff of the visiting nurse service of New York is 30 percent below its pre-war figure, and most health agencies have a similar shortage of staff. A recent study of public health nursing resources in Greater New York—both health department and private nursing agency staff—revealed approximately 1 public health nurse to 9,000 population. Revised wartime standards for public health practice state, as a minimum, 1 public health nurse to 5,000 population.

Second, I am glad to see that nurses classified as essential by the Procurement and Assignment Service of the War Manpower Commission will not be inducted, and that nurses employed by the Veterans' Administration will be considered essential. As a member of the National Committee on Allocation of Medical Personnel of the Procurement and Assignment Service, I know the careful attention given to the criteria for classification of all nurses. Nearly 900 Procurement and Assignment Service committees all over the country have classified about 235,000 nurses during the past year and a half, and in so doing have secured the greatest body of information about nurses to be had anywhere. This information should be used.

Third, a serious feature of the committee-approved bill is that it seems to exempt all other nurses until all United States Cadet Nurse Corps graduates have been inducted. A high percentage of service should be expected of the cadets, who are educated at public expense, but the number of cadets now available will not begin to fill the immediate need and those already graduated have received Government funds only during their senior year. The corps was organized in July 1943. The immediate effect of such a regulation would be to slow up volunteering of noncadet eligible nurses, even those doing unessential work, who should have answered the call to military service long ago. Volunteering must continue while a draft law is being shaped and put into operation if our wounded are not to suffer for lack of nursing care.

PROPOSED RULE DISAPPROVED

But more important, the long-range effect of such a regulation will be to dry up the nursing service supply at the source. Cadet nurses were promised a choice between military service and essential work at home upon graduation. If the law is changed now many of those now in school may drop out. This must not happen. And think of the difficulty of recruiting students for new classes! It will be hard enough if nurses are the only women drafted, but if cadets are inevitably to be the first nurses taken, regardless of how many other nurses should be serving, the situation will be impossible.

Draft regulations can be so written as to place greater obligations upon cadets than upon other nurses without giving a blanket excuse from military service to all other nurses and without dragnetting the cadet graduate who should teach in a school of nursing or do other specialized work.

Fourth, the Committee on Military Affairs should think carefully before it lowers standards set up by the Army and Navy Nurse Corps by specifying that no nurse shall be disqualified because the school from which she received her training was affiliated with a hospital not having a specified number of beds or patients. Obviously, a nurse who has worked only in a very small hospital may never have seen types of injury and illness, including communicable diseases, that are prevalent in military hospitals. On first thought it is easy to say that an inexperienced nurse is better than no nurse, but it is more comprehensive than just having a person to attend the wounded. Both the Army and the Navy nurses teach and supervise the hospital corpsmen, and the skill and knowledge of these nurses has a far-reaching effect.

While there has been a great cry from nurses trained in schools that do not meet military standards, their numbers are not large. Only 90 of 1,300 schools in the country do not qualify, and since they are small, average only about 10 graduates each a year. Both Army and Navy have modified rules to admit nurses from these schools who have, subsequent to graduation, had adequate supplemental training in large hospitals.

Fifth, and finally, I hope the public will say that even a comprehensive draft of nurses will be inadequate without a national service act. It is not a question of discrimination. Nurses are proud that their skills are needed first. It is a question of use of those skills. Too many nurses are now washing dishes and scrubbing floors to keep civilian services in operation. Their entire time could be given to nursing duties if adequate auxiliary help could be secured.

There are a great many matters which might better be left to regulations than written into the text. I urge that the simplest sort of law be passed and then Selective Service and the War Manpower Commission work closely with nurses in setting up wise and fair regulations for carrying out the law. When over a third of all those of military age active in a profession have volunteered for military service—a remarkable record—we can trust that profession to guide a selective service procedure.

We cannot afford delay in getting nurses to the war wounded while we struggle with the inevitably tough job of passing a national service act for all women and men. But nurses want it clearly understood that they believe a draft of nurses alone is only piecemeal legislation and that the whole problem should be tackled as soon as possible.

MARIAN G. RANDALL,
Executive Director Visiting Nurse Service of New York.

NEW YORK, *February 28, 1945.*

The Draft of Nurses

EXTENSION OF REMARKS

OF

HON. DEWEY SHORT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. SHORT. Mr. Speaker, under leave to extend my remarks, I include the following editorial on the draft of nurses by Janet M. Geister, registered nurse, editor, the Trained Nurse and Hospital Review, February 1945:

As this is written, the bill for drafting nurses is still before the House Committee

on Military Affairs. As it is read, the die will probably have been cast. Nurses will either have the doubtful distinction of being the first special group in our country's history to be singled out for a draft—or we will be free to make the volunteer system of recruiting more completely successful.

The shock to the profession of the President's demand for a draft was profound. Coming after a long series of major adjustments, it hit hard. First, we foreswore the lessons we had bitterly learned, of producing more nurses than the public would use. We added thousands upon thousands of students over our normal strength. We severely cut the length of undergraduate courses, doing so only because of war exigency. We lowered entrance requirements to nursing schools, standards won by patience and long toil. We moved over to let the Government enter nursing education. State registration rules were relaxed to bring in large numbers of nurses, otherwise ineligible. And, though the move to recognize and encourage the practical nurses shook the profession from stem to stern, we took it.

And all the while, through the months of war, nurses everywhere were lengthening their strides and hours. The departure of almost 50,000 nurses for war added extra loads to those left behind. Pre-war we had no marked unemployment. Most nurses were busy. War put a very heavy extra load on the existing supply of nurses. The bulk of the cadet crop will not emerge until late this year.

Few realize what a stupendous lot of nursing there is to do, and that many of us counted as active cannot do active nursing. The war has given us at present 450,000 military patients, all extra over normal times. Too, the 75,000 beds in veterans' hospitals are filling up fast. Nearly one and one-quarter million civilian hospital beds are full all the time. Sixteen and one-half million people are now members of the Blue Cross Hospital plans which paid $75,000,000 to the hospitals for care in 1944. The demand for this care is increasing.

Nursing-school faculties, teaching two and three cadet classes yearly, besides nurses' aides and refresher courses, are already 37 percent short. Public-health nurses, a big factor in our freedom from epidemics, are caring for many thousands of sick in their homes. Industrial nurses are vital to industry where many over-age, inexperienced, and handicapped people must be preserved. We need a great deal of nursing.

Recruitment and war manpower committees have labored valiantly to get nurses, but a lot of things were in the way. The Army several times changed its ceiling. First it was 40,000, then 50,000, then, I believe, 40,000 again. Now it is 60,000. Nurses, like all others, believed that the European war was about over, and needs were tapering. Only in December did we feel the great weight of the casualty lists.

Many other factors slowed up enlistments. The obstacle course the applicant had to run in getting into the services distinctly cooled ardor. The failure to use men graduates at all, and Negro nurses only scantily, the while we heard that "men were dying for want of nursing," did so too. The inclusion of soldiers' "dependents" in military hospitals, especially large numbers of obstetrical patients, contributed not one jot to good morale. Many nurses were held by a sense of duty to their unglamorous tasks; some employers and physicians and many consumers of nursing held invisible strings beyond the control of nurses; and bad planning at the top played its part too.

Two prime factors, in my judgment, definitely slowed up enlistments. Strange as it may seem, I am far from alone in my belief that we have run out of easily available nurses. Regardless of the statistical estimates, I have long thought that we do not have nearly as many workable nurses as is generally believed. That is why I feel deeply that a draft of nurses that arbitrarily removes 10,000 and more from civilian work, without concurrent official control of the distribution of nursing, and without bringing in other women to aid in all areas, will solve one problem but create a half dozen more.

No one knows precisely how many usable nurses there are. President Roosevelt stated: "There are 280,000 practicing graduate nurses in our country." Those of us who are registered in two States believe we are being counted twice. The War Nursing Council, citing the Procurement and Assignment Committee of the War Manpower Commission as its authority, places the present civilian active nurse total at 223,000. We accepted the War Manpower Commission estimate of 42,000 A–1 nurses as available for service, and we sounded the drums to get them out. Yet a few days ago Basil O'Connor, director of the American Red Cross, told an audience that a revaluation of this group left but 15,000 as likely to meet military requirements. A mandatory count to reveal if and where there are large hidden pools of nurses seems an imperative predraft requisite.

The other factor in slowing enlistments was, in my opinion, the growing sterility of the approach. For 3 years the "urgent need" has been cried. In time any story grows old and words lose their meaning. But all of the burden of the call to the colors was placed on the nurse alone. None was placed on the prescriber, the conveyor, the consumer of nursing, whose pleas or coercions were often very real influences in nurses' decisions. Recently appeals have gone to others besides nurses. They have been very polite. But much of the thunder directed at nurses was accusatory in tone. "You are there, young lady," it implied, "and we will increase our clamor until we flush you out." In our very zeal to help we, instead of pressing the public to take more care of its own mildly sick and to relieve us more, have unwillingly told it that a lot of nurses were slackers.

The public airing of nursing's problems has done some good, but it has also left its evils. In a quarter-page "ad" in the New York Herald Tribune January 23, 1945, the Woman's Home Companion appeals to women to do more, and tells that "not long ago when the Army appealed to 27,000 civilian nurses not engaged in essential nursing only 227 signed up." A feature writer in a leading paper says: "A few months ago when the Army called on 27,000 nurses listed as not doing essential nursing, only 760 answers were received." One woman told me the situation was disgraceful; another called it a national scandal. Our very failure to challenge these statements gives them tacit approval.

Over and over we hear the story of the famous 27,000. I want very much to know what happened to the 26,240 who did not answer; why out of 760, only 30 percent (226) were signed up. It is inconceivable to me that 26,240 fine American girls could emerge from nurses' training completely impervious to any need but their own. Yet that is the implication. I cannot believe that nurses are divided into two camps—the patriotic ones who go voluntarily, and the unpatriotic ones who go only on the arm of a policeman. It is not as simple as that.

How can anyone who knows nurses believe that the cause of our wounded men is not close to every true nurse's heart? I am not speaking of the slackers but of the average nurse that you and I know. Many, many, like me, have a very deep personal concern. Regardless of statistics, regardless of the despair of weary recruiting officers, we, who have lived and worked with nurses, who have seen the miracles of love and labor wrought daily, year after year by simple, selfless, superb rank-and-filers, cannot believe that nurses in large degree have finally and flatly turned a deaf ear to a mercy call. If they have, then we have a strange, new phenomenon in nursing that should shake us to our very bones.

Nurses' resentment over the draft threat was not at the needs it reflected, but at the draft itself. They feel that the volunteer system has not had a fair chance until only recently when common sense was injected into the requirements and routines of entry. A nurse with a poor bite, or without a high-school diploma, who has done her fine day's work for years in our hospitals, might conceivably be trusted to look after our lads. Happily now, peremptory rejections and 3 months' delays are rarer. Nurses' pride in their profession has been deeply stirred by the draft threat. They feel that the real slackers can be reached without putting a proud profession under a shadow.

Many agree with me, that rationing must accompany any further large withdrawal of nurses from civilian work, or the results can be disastrous. Only the most skillful balancing of quotas, plus a rigid guard on what nursing is left, can reduce the perils. And while nurses cannot be made in 6 weeks or 6 months, helpers trained in techniques can—and other women must help. It is wholly unrealistic to draft nurses, but to leave the potential helpers to their own inclinations.

"Before we go further, we must go deeper," said a wise man. Let too many more instructors sign up and who will teach our replacements? The danger of schools closing for want of instructors is real. Let too many more public health and industrial nurses drop their present restraints and sign up—and we at home can worry over the epidemic that can bring wholesale havoc. Let too many more hospital and private nurses, weary of the incriminations, walk out willy nilly to the services, and mayhap when our own people are ill, we shall call it sheer luck to find the care they need.

An uncontrolled "market" can find nurses concentrated in the employ of those with the greatest power over nurses. Nurses, unorganized in self-protection, are especially vulnerable to controls. Long years of regimentation come to plague us now. It is easy to say that older women can replace all the young. That is only partially true. There are places where the 60-year-old can replace the 30-year-old, but not many. The greater the strain, the more important it is to have the better preparation and greater physical strength of the young.

A draft of nurses alone is a piecemeal approach. It is fraught with peril. To remove 20,000 more civilian nurses without legal rationing and the provision of a rich well of supplementary aid, would, in my opinion, take care of our lads, but leave their families in jeopardy.

Whichever way the die is cast, a draft or no draft, American nurses in the main will continue to put service to others above thought of self. Feeling among them at the moment is high, yet ingrained discipline and deeply rooted altruism are tempering their resentment. The stake is higher than professional pride. The usefulness of a great profession to our servicemen, to our fellow citizens, and to the coming generation of nurses is before the bar. Our record so far is one of great fidelity to our purposes. I believe profoundly that whatever new facts are revealed by a draft, or by other means, that record will remain untarnished.

Questions and Answers on Nursing in Wartime

EXTENSION OF REMARKS
OF

HON. WALTER G. ANDREWS
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statements:

THIRTY QUESTIONS AND ANSWERS ON NURSING IN WARTIME PREPARED IN COOPERATION WITH NATIONAL NURSING ORGANIZATIONS AND SERVICES BY THE NATIONAL NURSING COUNCIL FOR WAR SERVICE

I. ARMY AND NAVY NEEDS

1. How many nurses does the Army have now?

About 44,000.

How many nurses does the Army need by July 1945?

Sixteen thousand more, for a ceiling of 60,000, plus replacements.

2. How many nurses does the Navy have now?

About 9,165.

How many nurses does the Navy need by July 1945?

Two thousand three hundred and thirty-five more, for a total of 11,500.

3. What other types of nursing personnel, besides graduate nurses, are used by the armed forces?

Corps men (both Army and Navy), including WAC's and WAVES, nurses' aides, paid or volunteer (Army); civilian nurses, paid or volunteer (Army); senior cadet nurses, in Army and Navy hospitals in the United States. All work under supervision of Army or Navy nurses and doctors.

3. What do Army and Navy nurses do, besides bedside nursing?

They are also teachers, supervisors, administrators. They must function as officers in relation to those named above, and to their patients; therefore they hold commissioned rank as officers.

5. Who determines the professional and physical requirements?

The Army and the Navy, in the light of the responsibilities which the nurse must be prepared to take for herself and for others.

6. How long in relation to the war will the present military need continue?

Nursing service will have to continue being given for an indefinite period after the cessation of hostilities.

II. EXPANDING ARMY AND NAVY RESOURCES

7. Are Negro nurses being assigned to the armed forces?

The Army has assigned 330, stating that Negroes are accepted on the same basis as any other applicant. The Navy has assigned none as yet, but has stated readiness to accept any qualified applicant. Of the 8,000 Negro graduate nurses who are active in nursing, about 2,000 are believed potentially eligible for the Army or Navy.

8. Are men nurses being used by the Army?

Not as commissioned officers in the Army Nurse Corps. They have been subject to draft like other men, but are entitled to apply for officers' candidate schools the same as other soldiers and can be commissioned in the Medical Department. Of 8,169 men nurses (1940) possibly one-fourth are in the Army and Navy.

9. What about the schools not "approved"?

Out of approximately 1,300 State-accredited schools of nursing, about 90 have too limited clinical facilities, faculties, and instruction to prepare nurses adequately to meet requirements of the Army and Navy Nurse Corps. The Army and Navy believe such training should be supplemented by post-graduate work or by experience in a larger hospital under good supervision, to qualify graduates for the emergencies they must meet.

10. How can the graduates of schools not "approved" give service?

They can render essential service in civilian institutions; or, if sincerely interested in entering the Army or Navy Nurse Corps, they can obtain individual consideration of any supplementary education and experience. The numbers represented are estimated at 3 percent of the total number graduating.

11. Would raising the age limit or lowering the physical requirements materially strengthen the Army or Navy Nurse Corps?

In view of the responsibilities to be carried both in the United States and overseas, the Army and Navy Nurse Corps have repeatedly expressed belief that present standards must be maintained. It is pointed out that nurses rejected for reasons of age or physical condition, but eager to serve where they are needed, may apply either for (a) civilian status in an Army hospital or (b) an essential civilian nursing position, as in a Veterans' Administration hospital.

III. WHAT ARE GRADUATE, REGISTERED, STUDENT, CADET NURSES?

12. What is a graduate nurse?

One who has satisfactorily completed the basic professional program of study (usually 3 years) in a State-accredited school of nursing.

13. What is a registered nurse?

"R. N." or registered nurse is a graduate nurse who has met the legal qualifications to practice as a registered nurse in the State. The qualifications have been set to protect the public as well as the nurse

14. What is a student nurse?

Any person who is preparing for nursing in a State-accredited school of nursing. High-school graduation is a minimum educational requirement for entrance. There are now over 135,000 student nurses, giving an estimated 80 percent of the care to patients in the hospitals with which their schools are connected.

15. What is a cadet nurse?

A student nurse in any school participating in the United States Cadet Nurse Corps program established in the United States Public Health Service under the Bolton Act, July 1, 1943, who has joined the Corps and promised to engage in essential military or civilian nursing for the duration of the war, and is receiving a Federal scholarship under the act. The law as passed does not obligate the cadet to enter military service. Approximately 77 percent of the present undergraduate student body belong to the Cadet Nurse Corps, but the proportion is less among upper classmen than lower. About 10,500 cadet nurses have graduated thus far. They entered training before Bolton Act funds were available and transferred to the Cadet Corps at its inception or later, in the belief that they were free to choose either essential civilian or military nursing upon graduation.

16. What is a senior cadet?

After completing her basic program of study (24–30 months), but before she has had enough supervised practice to qualify for graduation, a cadet nurse may have 6 months' supervised practice in this country in either a Government hospital (Army, Navy, Veterans, U. S. Public Health Service, or Indian Service) or a civilian agency, which may be the hospital with which her school is associated. As a senior cadet, she is paid by the hospital employing her. Fully 10,000 senior cadets applied for Federal service up to January 1, 1945. More than 24,000 cadet nurses will become senior cadets between July 1, 1944, and June 30, 1945.

IV. HOW MANY NURSES?

17. How many graduate nurses are there?

Two hundred and seventy-four thousand four hundred and five is the number of active graduate nurses estimated January 1, 1945, including the 53,165 now serving with the armed forces. The number inactive but available in case of emergency is somewhat greater. The number of all graduate nurses, including those inactive, retired, and unavailable because of health or family responsibilities, is sometimes estimated as over 400,000.

18. What information is there about the total numbers of nurses, their age, location, marital status, and availability?

None that is entirely accurate, inclusive, and up to date.

A mandatory registration or census of all nurses at this time has been strongly recommended by national nursing organizations, as supplying information that is greatly needed. They believe it should include both married and unmarried nurses, and those aged at least up to 65.

(NOTE.—"Registration" is used here in the meaning of census or inventory; elsewhere it is used to refer to the State procedures under which a graduate nurse is registered to practice as a registered nurse.)

19. How many are expected to graduate during 1945?

Thirty-two thousand, five hundred and eighty-seven, of whom 20,842 are cadet nurses. A large proportion of the total will graduate in September.

20. How many nurses are eligible for military service?

About 60 percent of the active civilian nurses are estimated as potentially eligible, being under 45, and not having children under 14. Included are those who may be physically disqualified.

21. How many nurses are now serving with the armed forces?

About one out of five active nurses (53,165). When present Army and Navy ceilings are reached, with the assignment of 18,335 additional, the proportion will be about 1 out of 4.

V. BALANCING CIVILIAN—MILITARY NEEDS

22. Are there enough graduate nurses for both military and civilian needs?

Yes; provided civilian nursing is reduced to minimum standards by a selective withdrawal to the military, and nurses not in essential positions do essential nursing.

23. How can persons not professional nurses help to relieve the civilian nurse shortage?

As nurse's aides, practical nurses, attendants, orderlies, employed as either volunteers or paid staff in a wide variety of positions. Hospital personnel shortages are particularly acute.

24. What protection is there for the nursing services most essential to civilian health?

Criteria have been developed by the Procurement and Assignment Service of the War Manpower Commission for every field of nursing, as a means for determining whether a nurse should enter military service or whether she is essential in her present position, in order to maintain minimum essential civilian services. Using voluntary methods, 867 procurement and assignment committees of nurses, hospital, and medical authorities have since July 1, 1943, classified 235,000 nurses in one of the following:

I. Available for military service and potentially eligible;

II. Available for relocation into more essential positions;

III. Essential in present position for a limited time;

IV. Essential for unlimited duration; and

V. Not available for military or civilian duties.

Any nurse not in agreement with her classification may appeal it.

The natural nursing organizations have gone on record as urging the continuation and strengthening of procurement and assignment service procedures, as an orderly way of providing for military needs.

25. Is there a shortage of instructors in schools of nursing?

Yes; the shortage has increased greatly since the beginning of the war. Schools are now admitting 76 percent more students than in 1940. The condition is considered grave unless those remaining in essential positions can be retained.

26. What about nurses for Veterans' Administration hospitals?

A serious shortage exists. To the 4,150 nurses now employed must be added at least 3,000 by July 1. Veterans' nurses are in civilian service. They have been classed in IV, as essential for unlimited duration.

VI. VOLUNTARY RESPONSE

27. How many nurses have volunteered?

Red Cross records show a total, from Pearl Harbor to January 1, 1943, of 81,145 certified to the Army and Navy as meeting all professional requirements and indicating a definite date of availability. In addition, the Navy has handled several thousand applications direct. Without counting those rejected earlier, the record shows 30 percent of all active nurses have applied and been certified.

28. How do nurses join the armed forces?

(1) Procurement and Assignment Service committees classify nurses, notifying the Red Cross of those classified "available." In January 1945, they also began notifying the Army and Navy of those so classified.

(2) The Red Cross recruits those available. As the official recruiting agency for Army and Navy Nurse Corps it arranges publicity, rallies, personal interviews, etc.; checks credentials of nurses applying; certifies to Army and Navy those found professionally qualified. The Army and Navy have in recent months undertaken a more active program of procurement, publicity, etc., in cooperation with the Red Cross.

(3) The Army and Navy assign to duty, from those certified, nurses who are professionally qualified and who pass physical examinations.

29. What has the voluntary response been since the President's message January 6, 1945?

(1) Applications. Approximately 15,700 applications were filed with Red Cross recruitment committees, January 8 to February 24. Over one-third of these were filed in the first week; the number was diminished each successive week to approximately 800 in the last week.

(2) Certifications. During the same period 9,641 nurses have been professionally certified by the Red Cross to the military for appointment. The difference between the number of applications and the number certified may be explained by duplicate applications, nurses not yet registered, applicants who do not meet professional requirements, cases that need further study, or applications still to be completed.

(3) Assignments. Approximately 4,000 have been commissioned and ordered to active duty in the Army during January and February. The number of actual assignments does not reflect the volume of applications because of the applicants' stated date when available, failure to meet physical qualifications, or the time required to process applications.

30. What are the prospects for enough voluntary applications?

Increased publicity and promotion now in progress through the War Advertising Council, Office of War Information, Red Cross, Army, Navy, and nursing organizations, may produce more. On the other hand, favorable progress of the war in Europe may slow up response.

VII. WHAT NURSING ORGANIZATIONS BELIEVE

The position of the national nursing organizations on war-nursing needs may be summed up briefly:

(1) The care of wounded servicemen is the first responsibility of the nursing profession.

(2) Nurses' voluntary response has been outstanding, but not rapid enough to keep pace with mounting casualties or with the newly raised Army Nurse Corps ceiling of 60,000.

(3) Selective service for nurses is acceptable as the first step in selective service for all women, but this should be supplemented by a National Service Act applying to all men and women.

(4) Wth one-fourth of all active nurses in the armed forces, civilian nursing should operate on a carefully planned minimum, in which every nurse does essential nursing.

(5) Civilian health requires more assistance by men and women, paid or volunteer, at every level where they are competent to serve in health agencies and institutions.

(6) Efforts should be made to increase the number of students in the United States Cadet Nurse Corps as a present major source of nursing care for civilians and a reservoir of future care for the armed forces.

(7) Military nursing needs should be met on a selective basis—whether voluntary or under draft—so that nurses most difficult to replace in key civilian positions are among the last to be taken.

(8) Voluntary recruitment should be intensified and nurses who are eligible and available should enlist now, regardless of legislation, because the need is now.

Coordinated activities

War nursing activities are coordinated through the National Nursing Council for War Service, established in 1940 as the Nursing Council on National Defense.

Included in it are representatives of the American Nurses' Association; National League of Nursing Education; National Organization for Public Health Nursing; Association of Collegiate Schools of Nursing; National Association of Colored Graduate Nurses; American Red Cross Nursing Service; Council of Federal Nursing Services; International Council of Nurses; Division of Nurse Education, United States Public Health Service; Nursing Division, Procurement and Assignment Service, War Manpower Commission; Subcommittee on Nursing, Health and Medical Committee, Federal Security Agency; National Association of Practical Nurse Education; and American Hospital Association.

Wood Waste of Nation a Treasure in the Chemist's Post-war World

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. SIKES. Mr. Speaker, under leave to extend my remarks, I include an important article from Newsweek of February 12, 1945. It is entitled "Wood Waste of Nation a Treasure in the Chemist's Post-war World." The importance of our timber resources has never been fully realized in this land of prodigious resources. But the time is fast approaching when we must take an accounting lest the last of our great reserves be dissipated in the same manner that so much of our resources have gone.

The article follows:

WOOD WASTE OF NATION A TREASURE IN THE CHEMIST'S POST-WAR WORLD—SAWDUST HEAPS MAY FURNISH ALCOHOL, STOCK FOOD, MEDICINE, AND VITAL INDUSTRIAL PRODUCTS

We have never been a nation of fagot pickers.

The conviction that our natural resources were inexhaustible has shaped our economy. At once the wonder and the scandal of the world, our industrial practices have always been wasteful. We did not bother with inferior stuff. We took the best and went on. Wasn't there plenty more where that came from?

Today the signs are many that America's traditional plenty, while by no means worn out, is fraying about the edges. Unparalleled calls for war have gouged our mines, oil wells, and forests. Industry thinks of going in for fagot picking after all. But it will be fagot picking on the typically American grand scale. Thanks to advanced technology, the mounds of rubbish cast off by industry can become profitable raw materials.

Post-war horizons cites an outstanding example: The wealth latent in sawing refuse, long the No. 1 disposal problem in lumbering. Through the magic of chemistry, the Nation's sawdust heaps can sustain new industries, with products ranging from ethyl alcohol (identical with alcohol made from grain), motor fuels, and cattle feeds to plastics, dyes, drugs, and flavors.

German industrial economy has had to rely heavily on wood. It is doubtful if the Nazis could have made war without the explosives, motor fuels, textiles, foods, and synthetic-rubber components which their scientists developed from odds and ends of wood.

In the United States only about 32 percent of any stand of timber finds its way into finished lumber. The remainder goes to waste, either in the woods or at the mill. When cut, many trees turn out to be bad. They are left to rot along with stumps, tops, branches, and other debris. Every sawmill spews out its flanking dunes of slabs, tailings, shavings, and scraggy sawdust.

Some of this waste can be used. It goes for kindling and stove wood. It powers donkey engines and logging saws. In the Northwest, special sawdust furnaces heat homes and public buildings. There are other outlets for carefully graded types of wood scrap. But all present uses combined are only nibbles at an endless glut. Mills have to destroy their litter by mass, or smother under it. In the Douglas fir region of the west coast sawmill burners do away with 1,800,000 tons of it annually. In all, we throw away about 60,000,000 tons of wood each year in the woods and at the mill.

TIPS FROM THE NAZIS

Appalled by such waste, knowing we can no longer afford it, industry and government are studying wood-scrap conversion. The American Forest Products Industries, with member firms across the country, have employed two refugee German wood specialists, Erwin Schaefer and Carl Levy, who helped develop the pioneer wood-wastes chemical works at Tornesch, near Hamburg—since bombed with the aid of details supplied to the R. A. F. by Schaefer and Levy.

Dr. Heinrich Scholler devised the wood-wastes recovery process. Sawdust and macerated wood are treated by hydrolysis—that is, percolated in mild sulphuric-acid solution under high pressure and temperature—until the wood cellulose converts into sugar. Germany built nearly 30 Scholler plants. Japan has put an undetermined number into operation.

However effective technically the German process may be, before it is used here it must be reevaluated in terms of American economy. In Germany and Japan profit doesn't matter. Industries are tightly controlled by government cartels. The principal aim is to bridge shortages.

Our position is the exact reverse. Where German sawdust costs 20 marks a ton, in the Pacific Northwest it brings little or nothing. German labor draws 1 mark an hour. Our workers in the Northwest average $1.10 an hour. Transportation there is cheap. Here it is high. They can afford to hand-pick wood waste. We cannot.

American economy demands lowering of production costs. That means considerable mechanization for harvesting and processing scrap wood. This is the only way that wood-waste and products can meet competition. The solution lies in research.

EVANS PROPOSES

The most practical approach so far is the plan of Col. Edward S. Evans, president of Evans Products Co., Detroit, manufacturers of molded plywood, wood battery separators, and similar products, with plants in the Pacific West and Northwest. The Evans program looks forward to Nation-wide marshaling of all wood-use research—whether by private industry or Government—for American industrial needs.

The research would be under the supervision of the Forest Products Division of the United States Department of Agriculture. Its Madison, Wis., laboratories, staffed by some of the world's best wood specialists, would serve as a clearing house.

For field work Colonel Evans would split the country into five regions—Northwest, South, Northeast, Middle West, and the Appalachian area—each with its own wood-utilization unit. The units would comprise industrial and chemical engineers, paper experts, and technicians. They would study and analyze local problems, such as uses of plentiful trees and ways of solving transportation and equipment bottlenecks. They would test new methods and products under local conditions. They would work closely with college, State, and industrial research groups, furnishing information gathered all over the world. For private firms the units would help work out cost, engineering, and other data on new wood uses keyed to local conditions.

The Evans plan has been adopted tentatively by the Department of Agriculture. Already two experimental units have taken the field, one for the South with headquarters at New Orleans, the other serving the Northeast seaboard region from Philadelphia.

WOOD THE UNIVERSALROHSTUFF

With reason the Germans term wood "universalrohstuff" (universal raw material). Their scientists view trees not simply as bundles of unsawn planks but as living chemical laboratories, drawing from soil, water, air, and sunlight the carbon compounds that make up all matter of organic source—coal and the human body alike.

Carbon compounds in wood take the form of cellulose and lignin. Every ton of dry sawdust or chips put through the Scholler process yields approximately 1,000 pounds of wood sugar from the cellulose and 500 pounds of lignin residue, a brown powder with dramatic chemical promise. The proportion of yield holds good for nearly every American species of tree, even "weed trees" such as sycamore, heretofore almost useless commercially.

Wood sugar is an edible mixture of glucose (starch sirup, usually made from corn) and other sugars. In a year an acre of choice forest land can produce more sugar for industrial use than an acre of sugar beets. A ton of sawdust is good for nearly as much sugar as a ton of blackstrap molasses. Wood sugar is marketed in Europe for cooking and table. Combined with grain it makes excellent feed for cattle and poultry.

Alcohol distilled from wood sugar mash averages 50 gallons to 1,000 pounds. This is ethyl alcohol, 190 proof, not to be confused with methyl or "wood alcohol" of prohibition deadliness.

Normal, easily available waste accumulations around mills could produce at least 150,000,000 gallons of ethyl alcohol a year. Oregon alone could probably contribute some 50,000,000 gallons. If all waste in the woods and at the mills could be used, the amount could be multiplied by 20.

The first step toward commercial production of alcohol from wood was taken last spring when the Willamette Valley Wood Chemical Co. began a $2,247,000 hydrolysis plant near Eugene, Oreg. Through a simplification of the Scholler process, accomplished by Forest Service chemists, the plant is expected to turn out 4,100,000 gallons of industrial alcohol yearly, at a post-war wholesale price, before tax, of no more than 25 cents a gallon. At present, industrial alcohol made from blackstrap molasses sells at about 48 cents a gallon, while grain alcohol averages between 80 cents and $1.30 a gallon.

THREAT TO GASOLINE?

Potential cheapness of wood-ethyl warrants it a place in post-war industry. Grain as a source of industrial alcohol will probably be unable to compete with it. Even blackstrap will be hard-pressed unless ways to corners and prices can be found.

The gasoline industry, too, expects competition. The odds are that alcohol from wood scrap will bid for a share of the motor-fuel trade. But before alcohol can challenge gasoline as a fuel, its habit of absorbing moisture in storage must be overcome. Enthusiasts believe that it can be. They also say that attempts such as those made by grain-alcohol-producing States to force the mixing of alcohol and gasoline will not be necessary to support the embryo industry. Wood-ethyl should be able to compete briskly on its own merits. Germany has developed efficient motors that run on straight alcohol. Most racing cars have their gasoline "souped" with alcohol.

Bureau of Standards tests reveal that pure ethyl alcohol in blend with gasoline makes good fuel, no more harmful to engines than the usual mixtures. When straight gas is supplemented with 20 to 25 percent ethyl, the antiknock quality is improved. Performance equals that of high-test gasolines available before the war—though not the 100-plus octane fuel evolved for war aviation. Before these superfuels can be used, however, ordinary car engines must be redesigned.

The lowest price to distributors for straight gasoline currently swings between 6 and 7 cents a gallon, f. o. b. the California refineries. Wood chemists say that this price can be undercut, that wood-ethyl can be sold at the distillery for 4 cents or less a gallon—if lignin, the byproduct of hydrolysis, can be made for as little as 2 cents a pound.

THE PROMISE OF LIGNIN

Science has just begun exploring the potentialities of lignin. Although known to be made up of the same elements as coal and petroleum, it still awaits thorough analysis. But chemists believe that once they do hit upon the secret of how its hydrocarbon molecules link together, they can get from it, fairly simply, many coal-tar products, including aspirin, sleep-inducing drugs like sulfanol and veronal, the sulfa drugs, perfumes, resins, and bulk chemicals.

FUEL TO BURN

At present, however, there is practical use for lignin and its derivatives already known. From each ton of dry scrap wood processed by hydrolysis, 500 pounds of lignin remain. Its heat value is higher than that of wood. It burns with practically no smoke or ash. In briquettes, it helps fuel the hydrolysis process that produces it. The Willamette Valley alcohol plant will burn about 50 tons of lignin daily.

In European experiments, lignin briquettes have been found better than charcoal for gasogene—or wood gas—power units in motor vehicles. Pulverized lignin has been used successfully in the highly developed German Rupa dust motor. Chemists say, however, that any kind of stoking with lignin will eventually be considered wasteful because of the potential wealth locked in the material.

A TASTE—A PLASTIC

Treated with alkalis, lignin makes vanillin flavor, indistinguishable from the natural vanilla-bean extract. Add hydrogen and obtain phenol, cresol, methanol (the old wood alcohol), the higher alcohols, and heavy oils. From these derivatives come valuable plastics and drugs; even gasoline-type motor fuels are possible.

Lignin can also be used as humus. With nitrogen and phosphate, it makes a rich fertilizer.

Coal tar itself, once a vexatious problem for disposal, became the foundation of great industries when its carbon structure was charted. Of course, no one can predict the final tally for kindred lignin, but science is convinced it will be important. Meanwhile, it is the business of research to knock at doors, not sure what will open, but certain that something will.

EVERYTHING BUT THE LEAVES

Other prospects for further use of wood are:

Cork of the granulated type for gaskets and linoleum can be manufactured from the discarded bark of Douglas fir and other trees.

Tannin for processing leather can be extracted from the bark of hemlock and oak, perhaps freeing us from dependence on South American tannin monopolies.

Fabrics can be spun from shredded bark, especially of redwood trees; roofing felts and coarse sacking are examples.

Naval stores.—Tar, pitch, turpentine, and other resinous products derived from pine trees have new economic implications for the South. Better yields and improved techniques for making plastics and drugs may lift the standard of living in large areas.

Laminated flooring and lumber can now be made from cull timber. The Tennessee Valley Authority and the University of Georgia are operating a pilot plant designed to produce 1,000 board-feet hourly.

Synthetic plywoods are obtained by halting hydrolysis one step short of sugar. The resultant wood pulp can be bonded in laminated sheets that are extremely tough, and inexpensive.

Wood iron results from chemical impregnation, under pressure; in this process the lumber takes on the hardness of ebony or even metal, no matter how soft originally. The "Impreg" and "Compreg" woods developed by the Forest Products Laboratories at Madison, Wis., and several recently announced commercial adaptations have plastic qualities. Largely proof against fire, water, shrinkage, swelling, and insects, they are lighter and stronger than some steels. They machine easily. Military use and tests by private industry indicate that the post-war consumer can choose from a diversity of products made from transmuted wood.

PAUL BUNYANS OF STEEL

Most of these developments depend on wider use of equipment to harvest waste in the woods. Before branches, tops, and other logging debris can be hauled out economically, they must be concentrated—and logging firms are now designing "hoggers" (machines that chew and bale scrap) on caterpillar treads. They will process the scrap in

the forest much as a combine threshes and sacks grain. Mechanical chain sawing, a fairly standard practice in heavy timber operations, will probably be used more widely. In pulpwood areas, particularly the piney woods of the South, horizontal power saws operated from truck or tractor are already saving manpower and costs. They can salvage stumps and snags as efficiently as they cut timber. Giant shears to cut small trees at one snip are now being developed.

In the end, large-scale mechanization in the woods should bring more employment to more men than it displaces. Thousands of workers will find permanent jobs in the new industries.

Thus, through making the most of our wood wastes, we shall need to cut less timber to gain a greater volume of forest products than ever before. Coming generations of Americans can have more use from our forests—and more will remain for them to use.

Treaty-Making Powers

EXTENSION OF REMARKS

OF

HON. CARL HINSHAW

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 2, 1945

Mr. HINSHAW. Mr. Speaker, on February 7, 1944, I raised a question of the privilege of the House in connection with the subject matter of the Mexican water treaty. From then until now I have been studying the treaty-making powers under our Constitution and have learned that on numerous occasions over the years, beginning with the time of the Jay Treaty in 1796, the House has asserted its privilege and duty under the Constitution to consider certain matters contained in treaties and hence the treaties themselves as integral documents.

The inescapable conclusion from such a study is that the House should take a definite position on this vital matter.

Hence I have introduced House Resolution 156 as a declaration of policy and House Joint Resolution 112 as a legislative implementation of that policy. Following are those two resolutions:

House Resolution 156

Resolved, That, it being declared by the second section of the second article of the Constitution "that the President shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur," the House of Representatives do not claim any agency in making treaties; but that when a treaty by its terms stipulates any authority or regulation on any of the subjects submitted by the Constitution to the power of Congress, it must depend for its execution as to such stipulation on the law or laws to be passed by Congress and it is the constitutional right and duty of the House of Representatives in all such cases to deliberate on the expediency or inexpediency of carrying such treaty into effect, and to determine and act thereon as in their judgment may be most conducive to the public good.

House Joint Resolution 112

Joint resolution providing for the consideration of treaties by Congress in certain cases

Resolved, etc., That, it being declared by the eighth section of the first article of the Constitution, that the Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the powers granted to it and all other powers vested by the Constitution in the Government of the United States, or in any department or officer thereof—

Therefore, in the making of any treaty which by its terms stipulates any authority or regulation on any subject submitted by the Constitution to the power of Congress, the President shall transmit such treaty to the Congress, together with his recommendations; and he shall not transmit such treaty to the Senate for ratification until the Congress shall declare that the treaty is conducive to the public good, and that it has passed all laws necessary and proper for its execution.

Mr. Speaker, the Constitution of the United States grants certain powers and imposes certain duties upon the Congress. For at least 60 years the House of Representatives as a coordinate branch of the Congress has not asserted its right and duty to exercise these powers in connection with treaties. I believe it is about time that the House of Representatives resurrect its rights and exercise its powers and duties in this connection. House Resolution 156 is intended as a declaration of the constitutional rights and duties of the House of Representatives to deliberate and act upon any treaty which by its terms stipulates any authority or regulation on any of the subjects submitted to the power of the Congress by the Constitution.

This House Resolution 156 is almost identical with another resolution which was adopted by the House by more than two-thirds vote in 1871, and is similar to the first such resolution which was agreed to by the House in 1796, during the Administration of George Washington.

House Joint Resolution 112, if agreed to by both the House and Senate, and signed by the President, would accomplish almost the same end that is intended to be accomplished by those who propose that treaties shall be ratified by a majority vote in both the House and Senate. To all practical purposes, it would accomplish that end without an amendment to the Constitution, simply by Congress exercising its already existing constitutional power to make all laws which shall be necessary and proper for carrying into execution the powers granted to it, and all other powers vested by the Constitution in the Government or in any department or officer of the Government.

Under the terms of House Joint Resolution 112, the President, as an officer of the Government, would be required to transmit to the Congress (meaning both the House and Senate), any treaty which by its terms stipulated any authority or regulation on any subject submitted by the Constitution to the power of Congress, and would require that any such treaty should not be transmitted to the Senate for ratification until the treaty had been given congressional approval, and until the Congress had declared that it had passed all laws necessary and proper for its execution.

This would have a most salutary effect. The long standing custom has been for the Senate to consider itself the sole body concerned with treaties, and in that the House has acquiesed, since the time of the proposed treaty with the Kingdom of Hawaii in 1881.

If House Joint Resolution 112 should become law, then both the House and Senate would consider a treaty which involved subjects constitutionally submitted to the power of the Congress as a whole—deliberate upon the expediency or inexpediency of carrying the treaty into effect, and then if the treaty be deemed expedient, pass all laws necessary and proper for its execution—all this prior to its ratification. This, in my judgment is the proper course of action to insure against public dissatisfaction with such a treaty, and likewise to legally vest the powers to carry out such a treaty in the proper Government officers. After the processes of this resolution shall have been carried out by the Congress, as a whole, then its ratification by the Senate would be almost a pro forma affair. In my judgment no willful one-third would be able to stand up against the public pressure that would be brought against them, in the event that both bodies of Congress had already approved the measure by majority votes. The subsequent ratification by two-thirds of the Senate would merely serve as a final inspection and approval of the workmanship already accomplished.

Louisiana Produces More Muskrat Furs Than All of the Other States Combined, and More Than Canada and Alaska Together Produce

EXTENSION OF REMARKS

OF

HON. JAMES H. MORRISON

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. MORRISON. Mr. Speaker, in the March issue of Reader's Digest appears a story concerning the colorful and important muskrat-fur industry of Louisiana. I feel sure that this article will be of much educational interest to the Members of the House. The story is by Carolyn Ramsey, and is entitled "Louisiana's Fabulous Muskrat Marshland":

LOUISIANA'S FABULOUS MUSKRAT MARSHLAND

(By Carolyn Ramsey)

Alcée Broussard can make good wages right in Thibodaux, La., and live in comfort in his tidy little home. But, come autumn, Alcée gets restless. The marshes call. The love of outdoor life is strong in him—and so is the gambling fever. Enfin, one day in late November he tells the boss he is quitting, and the boss knows better than to try to dissuade him.

With 20,000 other Creoles, Cajuns, Isleños, Dalmatians, Sabines—the mixed folk of south Louisiana—Alcée is going to trap muskrats. For 9 months in the year the trappers are loggers, moss gatherers, fishermen, oystermen, and, nowadays, shipyard workers. Every winter they go camping in the marshes—they and their whole families in a great seasonal migration.

Alcée's outfit is typical: a houseboat—"campboat," he calls it—for himself; another for his married son; a half dozen skiffs; and two or three pirogues, those tricky little

canoes beautifully fashioned from a single log. The boats are piled high with stoves, mattresses, washtubs, pots, pans—all the gear of housekeeping. There are likely to be a crate of squawking hens, a hog in a pen; there may be room even for the family cow; and children, always children, waving to everyone they pass, gay with the thought of 3 month's camping far from the schoolroom.

The land into which a "putt-putt" tows the trappers is like no other in all America. It is a subtropical marsh, 400 miles long and 15 to 30 miles wide, fringing the Gulf from the mouth of the Mississippi to the Texas line. Over this watery, treeless wilderness grow luxuriant grasses, shoulder high, which in the winter turn to gold. There is no solid ground. A man can walk, stepping from clump to clump of the grass roots, but he must be wary or he will sink waist deep in muck.

This is muskrat paradise. Here the animals feast on their one food, the sweet roots of the grasses; here they multiply incredibly. From this one area trappers take more than 6,000,000 muskrat pelts a year—about as many as from all the rest of the States combined, and more than Canada and Alaska together produce. This narrow strip of quaking marsh supports the weight of the great American fur industry, for muskrat in its many guises is the staple, the bread and butter, of the fur trade.

The industry can count with reasonable certainty on a supply of pelts that will vary little from year to year, but the individual trapper has sharp ups and downs. Some years he doesn't take in the $350 he needs to pay for his supplies. Other years he makes a killing. Plenty of trappers earned $3,000 last season, some of them $5,000—big money to a Cajun. And he loves this gambling aspect.

The work is arduous. Alcée begins by firing the grass on the tract he has leased. It burns down to about 10 inches above the water line. That will make it easier to get around, and easier to find the traps. Next he makes a trainasse by dragging his pirogue several times over the route, breaking down the grass stubble and plowing the soft peat to create a water lane along which the pirogue will float and save him much weary walking. He learned that trick from the muskrat, whose little water paths, three inches wide, crisscross the marsh everywhere.

The 70-day season opens December 10. In the trapper's leased area are thousands of little trails which indicate feeding grounds. In a path where the water is just 6 inches deep he builds a little mound of mud, lays the trap on it, drops a little more mud on top as a camouflage, and marks the spot with a length of cane. No bait is needed. The tray is only two inches below the surface of the water, and when an adult muskrat comes along he cannot avoid being caught. A little one will swim right over the trap unscathed.

The daily routine of trap-tending starts before daybreak, when father and sons rise, gulp down their Louisiana-style coffee ("If she don' leave rings in the cup, she's no good"), don their hip boots, sling 'rat sacks over their shoulders, pick up the long poles to push the pirogue and "marsh sticks" to help them with the difficult walking, and set out.

In a good week the trapper may get 300 large top-grade pelts and 500 smaller ones; in a poor week about 75 "tops" and 150 poorer ones. The weather causes these striking fluctuations. Muskrats "run" best on cold nights, scurrying ceaselessly down their water trails, intent upon their search for food, their lovemaking, or upon repairing their houses.

The women of Alcée's family skin the 'rats and stretch the pelts on wire frames to dry. The fur buyer comes once a week. He divides the pelts into five grades, and pays an average price on the whole catch. The O. P. A. ceiling for a top-grade pelt was $1.44 last year. During the last war, the price was 25 cents. In 1927 it was $2.55, the record high.

The buyer works for the syndicate from which the trapper subleases his land. Five big syndicates control most of the marshes, leasing them from big landholders who bought up enormous tracts years ago at 10 to 20 cents an acre. The State itself owns large areas which it leases out, and some of the revenues go to the schools.

Agents of the syndicates make annual surveys and apportion the leaseholds so that each trapper should catch about 2,000 muskrats. Thee usual contract between syndicate and trapper calls for 35 percent of the catch as rental. The division is made not in pelts but in cash, after the company agent has bought the fur. This sharecropper system is bitterly resented, but it persists, though a few enterprising trappers are buying their own land, and some others have accumulated enough working capital to pay their rental in cash and sell their pelts in the open market.

And what about the little animal that is the cause of all this industry? To begin with, its name is half lie. The muskrat is not a rat at all, but it does secrete a powerful musk—as good as any of the expensive musks now imported by the perfume industry, recent experiments seem to prove. It is a sturdy creature, about 12 inches long, with a 10-inch tail which it uses as an oar and a rudder when swimming. It feeds at night. With its sharp teeth it cuts a grass root about 6 inches under water, then comes to the surface, holds the food in its little hands, washes it, and nibbles it daintily. The muskrat's beaverlike house, built of grass and mud, is an apartment building of ingenious design, with a central stair well and various rooms, of which the nursery is the largest. It rises 2 to 4 feet above the water line and is 4 to 10 feet in diameter at the base. Tunnels radiate like spokes of a wheel to underwater entrances.

In Louisiana, muskrats breed in any month of the year except August and September. Three times a year mama chases papa out of the house for 2 weeks, and produces a litter of three to seven "mice." The muskrat population may multiply sixfold in a single year, in spite of hungry mink, alligators, owls, hawks, snakes, garfish, and raccoons. Were it not for the trappers, the muskrats would soon outrun their food supply.

But neither preying beast nor man is the muskrat's worst enemy. In years of drought the marsh dries up, there is no good grass, many rats starve, and breeding almost stops. There is a short fur crop the following season.

Flood is as bad, drowning out the muskrat houses, covering the grass clumps until there is no place for the animal to rest. In the great flood of 1927, when water stood deep on the marshes for 108 days, conservation officials, trappers, and landowners built rafts, covered them with marsh grasses and set them afloat. Millions of muskrats climbed aboard these life rafts and rode out the flood.

There was a time when nobody would have cared what happened to the humble muskrat, but he has made Louisiana the leading fur-producing State of the Union, and Louisiana is grateful.

Experimental Forests for the South—A Plan for Development

EXTENSION OF REMARKS

OF

HON. ROBERT SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. SIKES. Mr. Speaker, Tuesday, March 6, a number of outstanding timber producers and foresters from the Southeast will appear before a subcommittee of the Committee on Appropriations in support of a plan of development for experimental forests for the South. I wish to call attention to their program and to emphasize its importance. I hope that it will be read by every Member of the House. The program is sponsored by the Forest Farmers Association Cooperative, and I include it in my remarks. It marks one of the most progressive forward steps yet undertaken in forest farming. It follows:

EXPERIMENTAL FORESTS FOR THE SOUTH—A PLAN FOR DEVELOPMENT

This plan for developing a Southwide system of experimental forests results from recommendations by the research committee of the Forest Farmers Association. Organized in 1942, this committee of forest landowners from all Southern States has, under the leadership of Julian McGowin, chairman, studied the need for research, experiments, tests, and development leading to better forest farming practices. The committee has recommended and the association directors have unanimously approved the plan here outlined for a system of local experimental forests to investigate methods of forest farming and timber growing for each of the several major forest conditions of the South. All interested in a better and more prosperous South through the building up of its greatest, yet most neglected, resource—its forests—are urged to review and support this plan.

WE MUST REBUILD

This country has until recently depended for its wood supplies mainly upon its virgin forests. In order, the forests of the Northeast, the Lake States, and finally the South, were cut over until the last virgin timber supply of the country in Washington and Oregon is now being harvested. Obviously this virgin timber is limited—must soon give out. The South's virgin forests were largely liquidated to supply much of the timber vital in World War No. 1. The South's second-growth stands are being cut heavily to support the Nation in another war. Despite neglect and abuse these second growth southern forests are now producing nearly one-half of our tremendous lumber requirements. They yield a third more lumber than the Pacific Northwest, and nearly one-half more than all the remaining regions combined. In addition, they are producing all the Nation's naval stores, one-half its pulpwood, and most of its poles, piling, ties, and cooperage.

How can the South, from which virgin timber has long since been cut, continue to lead the country in wood production? The answer lies in its soil, its climate, and the quality and growth rate of southern trees. Stretching from the Potomac to the Florida Everglades and the plains of Texas and Oklahoma there is a vast empire of nearly 200,000,000 acres of woodland ideally suited to forest farming. Because of warm climate, long growing season, deep soils, ample rainfall, level terrain, and many valuable tree species, this is unquestionably one of the best timber-growing regions in the world.

This country can always have ample timber from these forest lands—if they are managed wisely for timber products. Only a small portion is being so managed now. Other land is being cut hard—even ruthlessly to supply war needs. This cannot continue forever without deterioration of this great southern resource. Although these lands have produced a fair second crop with little care, much land did not recover after the first harvest and under present cutting more is annually going out of forest production. We must reverse this trend—we must rebuild!

FOREST FARMING THE ANSWER

The answer to the Nation's wood supply is forest farming—the raising of timber crops by southern people on their own land—the American way. A new type of farming, it has come about only in the last 10 to 15 years. Throughout the South its advantages are apparent to some, and forest farming pioneers are found in some numbers in all Southern States. Forest farming is so new that no one knows very much about it; yet, from what is known, southerners, a people of the land, are strongly attracted by it.

Misconceptions abound on forest farming. It is not a process of planting trees in rows, then sitting idly by for 25 years or more until the crop matures. It is often the taking over of neglected second-growth woodland—some open, some poorly stocked, and some well stocked to good young timber—and working that woodland for a livelihood, year in and year out, while the timber stock (capital) is being built up and the growth (interest) rate increased to produce the maximum possible annual income. In forest farming, good trees of all sizes must be kept on the land to fatten and provide a substantial, regular harvest of wood products.

Forest farming promises much to the South. The outlook for our main cash crop, cotton, is not bright. A national and world shortage of wood exists and a steady demand is assured. The South can grow trees faster than any other section of the world comparable in size. In wood the South has one of its most promising crops, with a steady dependable demand in prospect. Even now southern forests produce a yearly harvest of wood products estimated at $950,000,000 delivered at the mill and provide employment for some 500,000 woods and mill workers. Wood manufacture is our most important industry. Over 20 percent of the total created wealth of the South comes directly from our forests—"a wooden nickel in every quarter."

The South needs industries to employ its large population and to raise the standards of its working people. Through forest farming the South can greatly expand its production of such wood products as veneer, lumber, and paper. But industry based on wood need not stop with these. By recently developed processes, wood can be converted into many forms—alcohol for motor fuel, synthetic rubber, and many other uses, into the plastics looming so large in post-war industrial plans, into fibers to be spun into fabrics, and into sugar for food. With a dependable nonexhaustible supply of wood from forest farming, the South can plan confidently on an era of industrial growth.

RESEARCH SHOWS THE WAY

The Nation and the South need forest farming as a substitute for present thoughtless methods of timber cutting. But forest farming is new and difficult. We need to learn a lot before we can say we know how to farm timber. The ax and saw are the main tools. If used wisely they result in better production each year; if poorly used they result in ruin of the forest farm.

How can a man farm a crop which takes a generation to mature? The answer lies in cutting timber every year not only to provide income for the owner but also to put the forest in better condition by culture with the ax—removing the poorer trees while leaving and improving the best. This sounds simple, but many questions arise. How much to cut? This is important because overcutting leads finally to bankruptcy. How often to cut each tract? And what to remove? Which trees by species, sizes, and form? What spacing to work for on the trees left? When does a stand reach full maturity? And how should it be cut to get a good new stand?

We need to know how much we can expect to make in forest farming, how much we can invest in land and young timber and yet get a reasonable return. We need to know the costs and returns of thinning, pruning, stand improvement, and other methods of culture. We need to know the costs justified for protection, for roads, for other forest improvement.

How to protect the forest? First, from fire, the one big draw-back to forest farming, and from insects and disease. Also we must develop practical methods of growing timber of a size and form that will stand up best under hurricanes and ice storms.

How best to combine cattle and tree growing? Does it pay? What breeds and sizes? Do we need to feed to supplement the forest grasses? We need a crop to supply additional income while the forest builds up, and cattle and other stock are most promising.

How to handle the harvest? Timber is a large, heavy crop. Special equipment is needed. Should we plan on cutting all our own timber or leave part of the harvest to specialists? What equipment to buy?

Which is best, most efficient? Can equipment be adapted to efficiently split or cut scrub oak and upland hickory, making these forest weeds merchantable? Are new tools or those used elsewhere better than our present equipment? If so, we want the facts after careful study under our local types and conditions.

We need demonstrations of good forest farming, planned and executed by capable men on similar land and similar timber, places where we can go to see for ourselves the results, talk with the man who did the work, learn the cost and returns, and apply the results finally on our own lands.

We need, in short, small public forests similar to experimental farms managed under a plan of research, development, and experimentation in all parts of the South, one for each major soil and forest type. As forest problems pass over State lines, the Federal Government is the logical one to take the lead. The Forest Service has already established a few such forests with fine results, but we need more experimental forests and larger programs.

Two of the country's best experimental forests are located in the South at Crosset, Ark., and Olustee, Fla. Each has had a big part in improving and guiding forest farming over 10 or more million acres of similar forest land. At each the Government has a few extremely able men working earnestly for the betterment of southern forests. At either place the forest farmer can get advice on many of the questions mentioned above. Though these programs are still small and inadequate, the money wisely appropriated therefor by Congress has been well expended. These forests have amply demonstrated what such programs can accomplish for forest landowners.

MORE EXPERIMENTAL FORESTS NEEDED

We need more such experimental forests, one for each of the major forest types of the South. Such a system, adequate for present needs, is shown on the accompanying map. Developed from detailed plans of long standing, it takes into account not only the needs for soil and forest types but also the differences in markets which bear so importantly on forest farming.

This calls for the establishment of 20 research centers at carefully selected locations throughout the South.

The full experimental forest program cannot be put into effect immediately. We recommend, however, that Congress appropriate in 1945 sufficient funds to (1) expand reasearch at five experimental forests where small programs are under way; (2) start work at two existing experimental forests which have been closed for lack of funds; and (3) establish three new experimental forests.

RESEARCH CENTERS TO BE EXPANDED, ACTIVATED, OR ESTABLISHED DURING 1945

Now operating on limited basis:
Crossett forest, Crossett, Ark.
Olustee forest, Olustee, Fla.
Delta forest, Stoneville, Miss.
Hitchiti forest, Round Oak, Ga.
Bent Creek forest, Asheville, N. C.
Established, not operating:
Harrison forest, Saucier, Miss.
Santee forest, Witherbee, S. C.
New experimental forests:
Alabama, north central Alabama.
Texas, east Texas.
Virginia, southeastern Virginia.

ACTION BY CONGRESS NEEDED

It is recommended that Congress appropriate $420,000, the amount needed to carry a minimum program at each of the research centers included in the asscciation's research plan for 1945. This amount should be incorporated in the United States Department of Agriculture appropriation bill under the heading "Forest Service—Forest Management Research."

No land purchase is needed for this program. In most cases lands are already available. In others, necessary timberlands can be obtained by gift, lease, or by cooperative agreement with interested State or private agencies. The appropriation requested will be used to pay salaries and wages of technical foresters and other personnel, for operating expenses and to purchase supplies and equipment.

The cost is small—about one one-hundredth of 1 percent of present income from forest products and their utilization—and represents only 15 cents per $1,000 of investment in southern timberland—insignificant in comparison with the $13 per $1,000 of investment which American industry was spending annually for industrial research even prior to the war.

With these research centers fully developed, a big step will have been taken toward establishing forest farming in the South, building up the South's major resource and assuring the Nation's future wood supply.

These experimental forests will start paying dividends almost at once. The Crossett experimental forest, which has been managed only 7 years, has already helped to make southern Arkansas and northern Louisiana the outstanding timber-growing section of the country. Similarly, the Olustee experimental forest in the naval stores belt has helped every turpentine farmer in south Georgia and north Florida. Other research and demonstration forests can stimulate and develop the strong timber-growing interest now beginning to stir in all sections of the South.

The South's forests have suffered from the heavy demands for war supplies. They must be rebuilt. Now is the time to start the research and development which will show the way to substantial southern rural and industrial prosperity through forest farming.

Bretton Woods Agreements

EXTENSION OF REMARKS

OF

HON. BRENT SPENCE

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. SPENCE. Mr. Speaker, under leave to extend my remarks, I insert a letter from Mr. Ben Dubois, secretary of the Independent Bankers' Association,

and a report of that organization on the proposals of the Bretton Woods International Monetary and Financial Conference for the establishment of an international exchange stabilization fund and an international bank for recostruction and development:

INDEPENDENT BANKERS' ASSOCIATION,

Sauk Center, Minn., February 18, 1945.

SIRS: The executive council of the Independent Bankers' Association met in St. Louis on the 24th and 25th of February for the purpose of considering the Bretton Woods agreements. At the meeting the council on behalf of the association approved the attached report recommending the adoption of the Bretton Woods agreements and by resolution directed me to make this report available to the Congress of the United States.

As you know, the Independent Bankers' Association has a membership of over 2,000 country banks and extends into 40 States. While we can hardly claim to speak for Wall Street, we do believe we can speak for Main Street.

Copies of our report on the Bretton Woods agreements are being sent to each Member of Congress.

BEN DUBOIS, *Secretary.*

THE BRETTON WOODS AGREEMENTS REPORT OF THE INDEPENDENT BANKERS' ASSOCIATION

The Independent Bankers' Association, through its executive council makes the following report on the Bretton Woods agreements:

I. NEED FOR INTERNATIONAL ECONOMIC COOPERATION

The United Nations in cooperating to win this war have been compelled to marshal their total resources for unrestrained use in a war for survival. Victory will find the territories of many of our allies in a state of ruin; their industries destroyed, their manpower depleted, and their population sick and hungry. Even the more fortunate of our allies will find their whole economic structure must be reconverted from war to peace and that years of war have depleted their productive facilities to the point where new equipment and new machinery must be introduced at once if economic paralysis is to be avoided. The United States, in turn, will find itself needing new outlets for the tremendous productive capacity we have generated during this war.

We are deeply conscious of the fact that the end of this war will confront the whole world with monetary and financial problems of a magnitude never before known to man. These problems will be international in scope, knowing no national boundaries and transcending solution except in terms of international cooperation.

Common sense alone would dictate that when we are face to face with monetary, financial, and economic problems which are international in scope, we should seek their solution through international action. Common sense would also dictate that when we are confronted with an international economic disaster it is nonsense to quibble over details. Disasters must be met with action. We are called upon to address all of our efforts to getting the most out of the machinery now available. It would be the height of folly to start overhauling the fire engine on the way to the fire.

In devising effective machinery for dealing with international economic problems, we must measure its adequacy by the task to be done rather than by conformity to traditional design. We shall win this war because we were prepared to adapt our military strategy to meet the problem before us. Our invasion of France, our air power, our naval action in the Pacific are but a few examples of doing the impossible because we were compelled to. These lessons should be remembered in our consideration of programs for international economic cooperation. There is no precedent for the magnitude of the international monetary, financial and economic problems we are facing with victory. We cannot, therefore, lightly cast aside any carefully considerated proposal merely because some groups regard it as novel.

II. THE ROLE OF INTERNATIONAL ECONOMIC COOPERATION IN ACHIEVING LASTING PEACE

The President of the United States on February 12, 1945—the same day as the results of the Yalta Conference were announced—sent a special message to the Congress on the Bretton Woods agreements. In that message he stated:

"If we are to measure up to the task of peace with the same stature as we have measured up to the task of war, we must see that the institutions of peace rest firmly on the solid foundations of international political and economic cooperation. The cornerstone for international political cooperation is the Dumbarton Oaks proposal for a permanent United Nations. International political relations will be friendly and constructive, however, only if solutions are found to the difficult economic problems we face today. The cornerstone for international economic cooperation is the Bretton Woods proposal for an international monetary fund and an international bank for reconstruction and development."

The Independent Bankers' Association and its members have not always concurred with the views of President Roosevelt. At times we have bitterly opposed them. On this matter, however, there can be no dispute. We think he spoke for the Nation when he said that "we must see that the institutions of peace rest firmly on the solid foundations of international political and economic cooperation."

We see no hope for retaining the unity of the United Nations down through the years if the end of the war is the signal for each of us again to resume the attack in economic warfare. Just as you cannot steal your neighbor's bread from his hungry children and expect to retain his friendship, you cannot steal your allies' markets and expect the ally to be taken in by pious statements of friendship and cooperation.

We cannot permit the channels of world trade to be clogged with currency depreciation, discriminatory exchange controls, barter arrangements, and cutthroat competition and expect a world in economic chaos to cooperate in preserving the peace. We cannot isolate ourselves from the fact that our devastated and war-torn allies must be helped to get back on their economic feet or their collapse will shake the foundations of our own country. Neither can we ignore the pressing needs of some of our allies for economic development so that their people can have enough to eat and improve their standard of living.

These premises we hold to be obvious. On these premises we conclude that real international economic cooperation is as essential to lasting peace as Dumbarton Oaks and a world security organization.

III. THE BRETTON WOODS AGREEMENTS

Last July the delegates of 44 countries were represented at the United Nations Monetary and Financial Conference at Bretton Woods, N. H. At this conference they formulated concrete proposals for an international monetary fund and an international bank for reconstruction and development.

The international monetary fund is designed to achieve three objectives through international cooperation:

1. To stabilize the values of all currencies in terms of gold.

2. To progressively remove barriers against making payments across international boundaries.

3. To provide a revolving fund of foreign exchange for member countries to enable them in times of stress to maintain stable and unrestricted exchange relationships without resorting to cutthroat competition and economic warfare.

Each country contributes gold and local currency to a common pool in the fund. Total assets of the fund will be $8,800,000,000 of which the United States will subscribe $2,750,000,000.

The international bank for reconstruction and development will operate as follows:

1. It will encourage profitable international investment in productive enterprises. Loans in which the bank is interested will be only for the purpose of rebuilding industries, publice utilities, etc., in war-devastated countries, and developing natural resources, public utilities, and industries in underdeveloped countries.

2. The principal function of the bank will be to guarantee loans made by private lenders, such as banks and investment houses. In addition, where necessary, the bank will make some loans out of its own resources.

3. Each of the 44 United Nations will purchase shares of stock in the bank. Only a small part of the value of each share will be paid immediately, and by far the larger part will constitute a reserve to support guaranties made by the bank.

4. The liability of each member country is limited to the value of the shares of stock in the bank purchased by that country. Each member will share in the bank's risks in proportion to the stock it holds.

The subscribed capital to the bank will be $9,100,000,000, of which the United States will subscribe $3,175,000,000. Members will pay in only 10 percent of their subscription, in our case $318,000,000.

The operations of the fund and bank are technical and involved. This is inevitable because international monetary and financial matters are technical and complicated. But, as the above analysis shows, the principles involved are simple and can be intelligently evaluated by the ordinary man in the street. We believe these principles to be both sound and workable.

We also believe that the technical details of the fund and bank, representing as they do the product of the technical experts of 44 nations, are as sound and workable as it is possible to formulate in advance of an actual trial and tested experience. We are fortified in this conviction by the fact that more than 200 of the Nation's top economists in this field—including 16 past presidents of the American Economic Association—approve the fund and bank agreements in their present form. No doubt some technical problems may develop in actual operation just as so frequently occurs in other fields. However, we believe the intelligent way to go about the improvement of these technical details is to get the institutions going and observe their results. Both agreements provide methods of amendment, and if experience demonstrates the need for improvement we are confident that all will be as anxious as we to see the improvements made.

The Independent Bankers' Association has carefully weighed the arguments against the Bretton Woods proposal. We feel that the opponents of the proposals completely misconceive the nature of the objections they are raising if they do not recognize that the changes they propose will most likely torpedo the whole Bretton Woods program for international economic cooperation. We are of the opinion that the changes proposed will not be acceptable to other countries and we will end up with another era of economic warfare with all of its tragic consequences to world peace.

IV. CONCLUSION

The Independent Bankers' Association therefore:

1. Endorses both the international monetary fund and the international bank for reconstruction and development.

2. Urges the Congress of the United States to act favorably on the Bretton Woods legislation at the earliest possible date and without crippling reservations.

3. Calls upon America to insure the sound economic foundations for a lasting peace by carefully studying the operation of the fund and bank so that we can improve such institutions as tried experience shows the need.

Change Our Procedure for Treaty Ratification

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 1, 1945

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I am pleased to include an editorial written by Dr. Helen Dwight Reid, associate in international education of the American Association of University Women.

The editorial was printed in the winter 1945 Journal of American Association of University Women. Dr. Reid is a leading student of the Constitution. She testified in support of Congressman SUMNERS' resolution which is now pending before the Rules Committee. The editorial is succinct and persuasive:

REFORM OF OUR PROCEDURE FOR TREATY RATIFICATION

(By Helen Dwight Reid)

Modification of the constitutional rule requiring a two-thirds vote of the Senate for approval of treaty ratification was brought to the fore as a live issue by the unexpected act of the House Judiciary Committe in holding public hearings and pressing for a vote in the Seventy-eighth Congress this December. Whether the House action will exert sufficient pressure on the Senate to produce favorable consideration will depend largely on the interest manifested by the public. If it is strong and clear, the history of the Fulbright and Connally resolutions may well be repeated. The fact that State legislatures are meeting in nearly all of our States during the coming year would make possible prompt adoption of the constitutional amendment, provided it could be submitted to them early in 1945.

The question has been widely studied by the A. A. U. W.; many of our branches and some State divisions have already taken action urging such modification. A specific item proposed by the International Relations committee has been endorsed by the legislative committee and approved by the board for inclusion in the A. A. U. W. tentative legislative program that will be voted on by the 1945 convention. Immediate consideration in all our branches would facilitate our effective action, should the issue be raised early in the sessions of the new Congress.

The Senate never has functioned as the advisory executive council envisaged by the framers of the Constitution in 1787. The Senate itself refused to exercise that function when first consulted by President Washington in 1789, and no other President has renewed his attempt. Thus the Senate has lost any initiative or positive influence in the process of negotiation, and has become a merely negative participant, able to block final action on an international commitment, often by a small minority.

Some legislative check on executive action in this field is highly desirable and fully in accord with the American system of representative democracy, with its use of checks and balances to restrain unlimited power in any one branch of the Government. However, the present system puts the power to check, not in the hands of the legislative representatives of the country as a whole but in the hands of a small group in the Senate—perhaps representing the most sparsely populated States.

The requirement of a two-thirds majority for certain purposes always puts the power of obstruction in the hands of a small and determined minority. This is justifiable as a democratic process only when it is needed to safeguard the rights and interests of minorities. But due protection of minority rights, however essential a part of the true spirit of democracy, does not entitle a small group of men to control the destiny of a great nation by thwarting the will of the majority of its citizens through abuse of procedural prerogatives. Unless an international commitment is approved by a majority of the people's representatives, it should not be entered into by the United States, but an international agreement which does receive such approval should not be definitively prevented by the will of a few.

Under our Constitution, treaties are explicitly declared to be part of the supreme law of the land along with the Constitution itself and "laws passed in pursuance thereof." This legislative status is all the more reason for associating both Houses in the treaty-making process, and permitting them to act by the same majority which suffices for other legislative acts. Even under present conditions, it is possible for a bare majority in Congress to render a treaty ineffective nationally, either by passing conflicting legislation or by failing to pass appropriations or subsidiary legislation necessary to carry out its provisions. Such actions leave the treaty in existence as an international obligation, but as law of the land the treaty is overruled by the later expression of the sovereign will. While it is true that a treaty in its character of international obligation cannot be modified or repealed by the unilateral action of a single nation but only by mutual agreement in accordance with international law, this does not now safeguard it from infringement by contradictory legislation, and therefore constitutes no justification for requiring that treaties be approved originally by two-thirds of one House rather than by a majority of both.

Our Boundary Dispute Right Here at Home

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Don S. Warren, from the Washington Star of March 4, 1945:

OUR BOUNDARY DISPUTE RIGHT HERE AT HOME—WE ARE WORRIED OVER POLAND, BUT HOW ABOUT THE AIRPORT?

(By Don S. Warren)

If King Charles I had only known what could be done with such a simple phrase as "to the farther bank of said river," he might have been more specific and thereby saved 100 years of embarrassment to Congress for being unable to establish exactly the extent of its jurisdiction along this part of the Potomac.

King Charles used that phrase in 1632 to describe the western limits of the lands he was apportioning. It seemed good enough then, no doubt, for the region was "infested with ferocious Indians" and uninhabited by white men, but the phrase has been interpreted and explained away so much since then as to confound a lot of things.

Hence, we find the question of the limit of the exclusive power of Congress on the "farther bank" of the river, at the seat of the Federal Government, just as alive today as it was in 1791 when the District was created. The issue is up again in Congress, with no settlement yet in sight. While the United States owns much of "no man's land" across the river, neither Congress nor Virginia can say, "This is the line" and thereby positively assign jurisdiction.

It is no small issue. A lot of intelligent people have been working at it for a long time—including landowners, tax collectors, city planners, lawyers, the courts, arbitration and boundary commissions, the District Commissioners, the Virginia Legislature, Department of Justice, and Congress.

At first glance, it might seem that all that has to be done is for someone with a half decent regard for the rights involved and a true eye to draw a line showing where the Virginia border stops and the District begins. Not so. Just a few years ago, Congress spent a good bit of the taxpayers' money to have a commission do just that, but the experts could not find enough of the ancient markers to be sure of the line and gave up the ghost—suggesting that another commission be awarded the task. That suggestion, as well as some others as to where it thought the line ought to be drawn were laid aside.

There was quiet along the Potomac for a half century—in the period following the grant to the United States by Virginia of its portion of the original 10 miles square as a site for the National Capital. But in 1846 this portion was given back to Virginia. The Congress then sitting could not see that the area ever would be needed for governmental purposes. Again, the old issues were revived because Virginia at once began taxing properties lying between the old high-water mark and the waters of the river.

The problem was serious enough in earlier years to be carried several times to the Supreme Court and to bring about compacts between neighboring States. But it was multiplied in more recent years when the Federal Government developed the Mount Vernon Memorial Parkway, the Washington National Airport, the Pentagon Building, and other Government structures in or near that mysterious 1791 high-water mark. The parkway program brought a flock of land-title cases cleared only through Federal action to compromise claims, and jurisdiction in the airport area still is up in the air.

Is it a question of interest to none but a legal perfectionist? Hardly that, when police on duty near "no man's land" want to dive into the nearest air-raid shelter when a serious crime is committed, when the Justice Department confesses doubt as to whether a criminal case should be taken to the Virginia or the District courts, when coroners here and there debate for 36 hours which one should issue a death certificate for a person so unfortunate as to drop dead in the disputed zone.

Why, then, is it not settled? It must be remembered that Congress alone cannot settle the question. And neither can Virginia. Whatever is done must have the formal approval of both. Judging from the long trail of arguments, rulings, and judgments, it will take real statesmanship to negotiate and frame a pact that both will adopt. It has been tried several times in recent years. Friends of the District twice have blocked bills that would cede the airport to Virginia, and two proposals to declare the airport a part of the District have been stopped short by Virginia spokesmen in Congress.

Old reports show that Virginia has fared well in past boundary tests. And this recalls that phrase used by King Charles. Many years after he literally had lost his head, the phrase began to develop new meanings, all related to then current problems. Lawyers and arbitrators convinced themselves and others that "farther bank" didn't mean "high water mark" that so long had been accepted. Instead, it meant the Virginia shore of the Potomac and "shore" meant the area between high and low water marks. From such reasoning, arising over fishing rights disputes, it was but a short step to declare, as some authorities have, that the boundary was at the low-water mark. Such views were not unanimous and Government officials have been relying on later decisions by the Supreme Court which they say upholds the high-water mark.

Whether or not the bill recently reintroduced by Representative RANDOLPH, of West Virginia, proves the final answer, he is doing a service by again placing the question before Congress. And, in opposing this bill because it would cede the airport to Virginia, which he thinks is a mistake, Representative STEFAN, of Nebraska also is performing a service, especially since he has given extensive reasons why he opposes that plan. A frank joining of the issues in Congress and between spokesmen for Congress and Virginia might lead to something constructive.

As Mr. STEFAN told the House:

"How can we hope to engage in the settlement of vital boundary disputes between the great nations of the world when we are unable to settle one so simple as this between the National Government, Virginia, and the local municipality?"

The American Red Cross

EXTENSION OF REMARKS

OF

HON. CLARENCE E. HANCOCK

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. HANCOCK. Mr. Speaker, several weeks ago I spent a couple of hours at the Casualty Branch of the War Department to obtain first-hand information regarding the melancholy task of reporting the news of war casualties. I was deeply impressed with the care that is taken to make sure that the sad news passing through this agency is delievered promptly, accurately, and sympathetically. And I learned something of the close cooperation between our armed forces and the Red Cross, of the inestimable value of the services of the Red Cross to men in prison camps, at the front, in camp, in hospitals, in rest areas, to veterans, and to the families of all these men.

The annual appeal of the American Red Cross to the Nation for funds to carry on its world-wide operations with troops at the battle front and on the home front and to relieve human suffering everywhere has now begun. A few days ago I spent a morning at the national headquarters here in Washington and talked to a number of the splendid men and women who are doing the executive work of this greatest of all humanitarian organizations.

The goal this year was first announced as $180,000,000. It has been raised to $200,000,000, which seems like a huge amount of money even to a Member of Congress in these days when appropriations for billions are commonplace. But it is not a staggering sum when you consider the magnitude and the diversity of Red Cross activities. The character and standing of the men and women who administer the spending of Red Cross funds guarantee that they will be expended wisely and economically. Furthermore, the act of Congress incorporating the American National Red Cross, approved February 28, 1905, provides that the financial transactions of the national organization shall be audited in detail by the War Department and reported to Congress. The charter sets forth its purposes as follows:

To furnish volunteer aid to the sick and wounded of armies in time of war.

To perform all the duties devolved upon a national society by each nation which has acceded to the Treaty of Geneva.

To act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the people of the United States of America and their Army and Navy.

To continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the suffering caused by pestilence, famine, fire, floods, and other great national calamities, and to devise and carry on measures for preventing the same.

No organization was ever chartered with nobler aims.

There are over 3,000,000 trained volunteer workers in the volunteer special services corps alone who have qualified and are entitled to wear their distinctive uniforms. There are several hundred trained volunteer workers for every paid employee, and in addition there are millions of good people, mostly women, who volunteer for some particular work. It is impossible in this brief discussion to describe all their miscellaneous tasks, but the size of their job is shown by the fact that during the past fiscal year they knitted or made nearly 10,000,000 garments and almost a billion surgical dressings. The canteen corps served over 30,000,000 meals and the motor corps made over 2,000,000 calls.

The activities of the Red Cross with our boys and girls in uniform are the things which give it such a warm place in so many of our hearts. Our armed forces are engaged in global warfare and wherever our troops have gone, Red Cross workers are there to serve them. You will find them not only in the European theater but in Iceland, the Aleutians, the Fiji Islands, Guam, Saipan, India, Burma, China, and in every remote corner of the world where our men are fighting. On D-day, June 6, 1944, Red Cross field men accompanied assault troops on the beaches of Normandy. Many Red Cross men and women soon followed them to establish their facilities.

There were 727 overseas clubs operating on June 30, 1944. There are more now. There are on-post clubs located at camps overseas where there are games, books, writing paper, hot food, and the smiles of American girls. And maybe you do not think that last item is important. Ask any boy who is back from overseas service.

There are off-post clubs located in leave areas where exhausted soldiers and sailors can enjoy the comforts of home, relax and be entertained.

There are fleet clubs—homes in port for Navy men, and aero clubs established on air strips and at bases for men who are miles from the nearest village.

And then there are clubs on wheels which travel to men in isolated spots and bring them hot coffee and doughnuts, cigarettes and magazines, and the inspiration of seeing and meeting brave young American girls.

One thousand eight hundred and fifty-two men are engaged in this service overseas and 7,751 girls, as of January 31. The value of their work in lifting the morale of our men, relieving their anxiety, bringing news and good cheer, cannot be estimated or recompensed. These stout-hearted American girls are worth their weight in gold. I salute them.

The Red Cross, by special agreement with the Army and Navy, sends trained women to hospitals both here and abroad to relieve the worries of sick and wounded men, to create diversion for their lonely hours, to organize parties and games, movies and entertainment in the wards and the recreation rooms. Some of them go on hospital ships to comfort the wounded on their way home.

Life would be almost unendurable in an enemy prison camp without the relief afforded captured soldiers through the International Committee of Red Cross with headquarters in Switzerland. Our first news that a boy reported missing in action is a prisoner of war comes from the International Red Cross. When we contribute to the American Red Cross we also contribute to the International Committee.

It is through this agency that the food and clothing furnished by the Government and private relief organizations, and the medicine kits and emergency kits given by the American Red Cross reach the prisoners of war.

Every Red Cross chapter has home-service workers on duty day and night to help families in trouble because a father, son, or husband is in the service and to help servicemen who are worried about things back home. Sometimes a soldier's allotment check has not been received and his family is in distress. The Red Cross extends financial aid and sees that the allotment check comes through. Or a wife has not heard from her husband in a long time, or a family is desperate for news of a relative in occupied territory. Through its communication system between the home chapter and the men in the field, the Red Cross can often establish contact when other means fail. Often a man overseas is deeply worried because he has received news that his mother or wife is critically ill, or because he has not received word of the birth of an expected baby. The field worker contacts the local chapter and the anxious soldier receives a report through the Red Cross two-way communication system that reaches round the world. The number of ways in which home service helps soldiers, sailors, veterans, and their families is countless. You can get some idea of the extent of it when I tell you that during

the last 12 months 3,500,000 servicemen and families were assisted and 2,000,000 communications handled by home service.

Probably the greatest achievement of the medical profession in the present war is the successful use of blood plasma in saving the lives of desperately wounded men. The Red Cross has established and maintained all the blood-donor centers throughout the country and has obtained enough blood donors to meet the quotas set by the Army and Navy. The pints of blood donated by generous patriotic American men and women between March 1944 and March 1945 amounts to over 5,000,000 pints. We can only guess how many precious lives have been saved by the Red Cross service. The division surgeon at Tarawa reports:

> Six thousand units of plasma went ashore at Tarawa and 4,000 of them came back in the veins of wounded marines. At least half the seriously wounded owe their lives to plasma.

I will not take the time to tell the rest of the story as I learned it at Red Cross headquarters—about disaster relief, lifesaving, and its many other activities. But let me say a word about the Nurses' Aide Corps of the Volunteer Services.

Civilian hospitals are losing their registered nurses in mounting numbers to meet the needs of the Army and Navy. Civilians must also have expert care and there are not enough registered nurses to meet all the demands. The Volunteer Nurses' Aide program is designed to help the hard-pressed nurses at home and to release more for overseas duty. Under the efficient leadership of Mrs. Walter Lippmann, 167,786 students have been recruited and have completed the 80-hour course given in 7 weeks by graduate nurses authorized to each by the American Red Cross. When trained, these girls assist the overworked graduate nurses in civilian hospitals, in Army and veterans hospitals. Without them, many of our hospitals could not function.

Mrs. Lippmann showed me a letter she recently received from one of her young aides. The girl said:

> I was not content in finishing school. I felt lost at home. I wanted to help and the nurses' aide program offered me that opportunity. If the wives who have husbands in the service, if the single girls who are at home only knew how much they could help and the great satisfaction they would gain by coming into this type of work, I am sure we would then be able to relieve more nurses for vital overseas duty. It is hard to express in just words the feeling, interest, love, and excitement I have for my work.

Mrs. Lippmann asked me particularly to stress the need of volunteer aides, who can give much needed assistance in the busy hospitals hours, especially mornings.

The Red Cross has mobilized and organized the finest instincts of the human race and put them to work to alleviate suffering in war and in peace. Millions of our best boys and girls are in uniform and making the real sacrifices. Millions of others are gladly, cheerfully rendering volunteer service in many useful fields.

It is essential that we continue to buy War bonds to provide funds for the munitions and implements of war. Self-preservation requires that of us. But when we buy War bonds we give nothing. We are merely saving our money and investing it in the soundest security to be had anywhere.

In this campaign for the 1945 Red Cross war fund we are not being asked for charity. We are being given an opportunity to do our bit in the greatest conflict in history, ancient, modern, or medieval, to enlist on the side of morality, decency, religion, and the freedom for which men have struggled for centuries, and in the only practical way open to many of us, to bring aid and comfort to those gallant sons of ours who are bearing the full brunt of our battles.

Let us give our services and our money to the American Red Cross—all we can—freely, gladly, and gratefully.

Who Emasculated the League of Nations?

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. REED of New York. Mr. Speaker, it is with pleasure that, under leave to extend my remarks, I am permitted to include as a part thereof an article written by Hon. Irvine L. Lenroot, which appeared in the Washington Sunday Star on March 4, 1945:

THE OPPORTUNITY AT SAN FRANCISCO—FUTURE PEACE OF WORLD TO REST ON ADHERENCE TO PRINCIPLES OF JUSTICE

(By Irvine L. Lenroot)

I write this article as one who sincerely hopes that the United Nations Conference at San Francisco may agree upon a plan, patterned upon that of the Dumbarton Oaks Conference, that will be ratified by our Senate and all the participating nations and which will contribute in some degree, at least, to the maintenance of peace in the world.

It would be folly, however, not to fully understand and frankly acknowledge that world peace for many years depends primarily upon the powerful nations now allied in the prosecution of the war against Germany. If these nations shall in the future fulfill their obligations and establish the same codes of honor for themselves as is expected from individuals, and is demanded from small nations, then the United Nations organization to be formed at San Francisco will be a great step forward in establishing world peace.

Already orators and writers, who call themselves liberals, are proclaiming to our people daily and nightly that the Crimea Conference was a triumph for the democratic peoples of the earth and that Russia is entitled to great credit for the happy outcome. In this a grave disservice is being done to the American people, for the disillusionment which is sure to follow from such propaganda may result in creating millions of isolationists who will render impossible any proper participation of the United States in world affairs.

PEOPLE ENTITLED TO FACTS

If our country is to take the part that it should in preserving world peace, its people must make their decisions upon facts, facts which they are entitled to know, for a public sentiment built upon untruths is like a house built upon the sands.

To illustrate how facts are being misrepresented to the American people today: They are being constantly told—and millions believe it—that the covenant of the League of Nations for which President Wilson fought was defeated by his enemies in the Senate, and that if it had not been so defeated the Second World War might have been avoided.

The truth is that President Wilson himself was the cause of our failure to become a member of the League of Nations. Had it not been for his insistence that the Senate agree to article X of the covenant containing the promise that we would with our might and material resources preserve as against external aggression the boundaries of every nation member of the League as recognized by the Versailles Peace Conference the Senate would have ratified the treaty containing the covenant of the League of Nations by an overwhelming vote.

TOOK PART IN CONTEST

I speak from first-hand knowledge upon this point, for as a member of the Senate at that time I took a very active part in the contest over the ratification of the treaty as the CONGRESSIONAL RECORD will show. The day before President Wilson left Washington on his ill-fated western trip to seek public support for the League Covenant without reservations, he invited me to the White House to discuss the matter with him. Our discussion lasted nearly an hour, in which I pointed out to him that the only real obstacle to the ratification of the treaty was article X, and that if he would agree to a reservation relieving the United States from the obligation of that article, ratification would be certain and his speaking trip would become unnecessary. He replied that he would not agree to such a reservation, for, in his opinion, article X was the heart of the covenant and that without it the League would be of no value in maintaining the peace of the world.

In accordance with his request his supporters in the Senate voted against ratification with the Lodge reservation and thus defeated it. I would here observe that Lord Grey, then the English Ambassador, indicated in a letter published in the CONGRESSIONAL RECORD, that the Lodge reservations were acceptable to Great Britain.

CITES SHANTUNG ISSUE

The memories of most men are short and probably in the intervening 25 years few have remembered that if President Wilson had had his way we would have been in honor bound to fight on the side of Japan against China had China sought to recover Shantung, which the Versailles Treaty gave to Japan. Shangtung was restored to China in 1929 as a result of the Nine Power Treaty adopted at the Washington Conference. It will be again restored to China at the end of our war with Japan.

Some supporters of the Dumbarton Oaks plan state that it is a vindication of the idea of President Wilson. It is interesting to note, therefore, that the Dumbarton Oaks plan has nothing in it akin to article X of the League Covenant, and hence if President Wilson was right that article X was the heart of the League Covenant, then the Dumbarton Oaks plan has no heart. I did not agree with President Wilson then, and I think it very fortunate that the Dumbarton Oaks plan does not contain the obligation of article X.

The League of Nations was organized without the membership of the United States,

and every member, including Great Britain and France and later Russia assumed the obligations of article X.

At this time, when Great Britain, Russia, and the United States are fighting together against a common foe, it is regrettable that it is necessary to recall and point out the broken promises of Great Britain, Russia, and France in the past, not with the purpose to create ill-will against them, but to emphasize that, looking forward to a peace based upon justice, we cannot rely too much on our present allies.

In the prosecution of the war we are united with our allies and must remain so to the end until the military might of Germany is permanently destroyed. I am confident that this will be done, for the selfish ends of the United Nations require this. Beyond this we should cooperate with Russia and Great Britain to the fullest extent possible consistent with our American ideals of honor and justice, but our people are entitled to know, from the experience of the past, that too much trust must not be placed in some of the promises made at the Crimea Conference.

With these comments we come to a brief survey of how the promises of Great Britain and Russia have been kept since World War No. 1. In 1931 Japan invaded Manchuria, a wanton aggression, violating the promise of Japan in the League of Nations Covenant to respect and preserve the political independence and territorial integrity of China. This occurred under the Hoover administration and the United States vigorously protested against this aggression. Through our State Department we sought the cooperation of Great Britain to find means, short of war, to prevent it. While Great Britain was under a solemn obligation under article X to preserve the territorial integrity of China, also a member of the League of Nations, she not only failed to keep such promise but declined to cooperate with the United States in measures of any kind against Japan.

ETHIOPIAN CASE CITED

In 1934 both Italy and Ethiopia were members of the League of Nations. Nevertheless, Italy, without cause, attacked Ethiopia, and while the League condemned the aggression and invoked economic sanctions against Italy, no serious efforts were made to put them into effect. Neither Great Britain nor France, separately, did anything to fulfill their promises to protect the territorial integrity of Ethiopia.

Furthermore, there was never a time, prior to 1936, when Great Britain and France could not easily have prevented the rearmament of Germany. Not only was there no attempt to do so for several years prior to 1936 but the industries of France and Great Britain were permitted to sell to Germany vast quantities of war material. It is true that Winston Churchill protested the rearmament of Germany, but at that time his was a voice crying in the wilderness and had no effect.

There is no doubt that Great Britain and France welcomed the rearmament of Germany under the mistaken belief that Germany would make war upon Russia alone and thus prevent the spread of communism in Europe. This tragic mistake has cost millions of lives.

With respect to Russia's record:

In 1934 Russia joined the League of Nations and subscribed to its ogligations. Finland was also a member. In violation of her promise to preserve the territorial integrity of Finland, Russia made war upon her. Because of this act of aggression Russia was expelled from the League of Nations.

BALTIC STATES VIOLATED

Estonia, Latvia, and Lithuania were independent republics, created in 1918, and recognized as such by Russia, who also signed nonaggression pacts with each of them. They were occupied by Russia in 1940, and shortly afterward pretended plebiscites, under Russian auspices, were held in each of them, under which they were incorporated into the Soviet Union. With respect to these plebiscites, it should be stated that in Latvia only 11 percent of the population is Russian, in Estonia 20 percent, and in Lithuania 3 percent. In Latvia 55 percent of the population is Protestant and 24 percent Roman Catholic. In Estonia the population is 78 percent Lutheran and 19 percent Greek Orthodox. In Lithuania the percentage is 80 percent Roman Catholic, 10 percent Protestant, and 3 percent Greek Orthodox.

In the plebiscites referred to but one ballot was presented to the voters and there was no opportunity to vote otherwise.

In Latvia 97 percent of the votes were for the Communistic ticket, in Estonia 93 percent, and in Lithuania 99 percent.

PLEBISCITES NO TEST

Thus it is seen that these countries, overwhelmingly Roman Catholic and Protestant, and non-Russian, voted almost unanimously for communism. It is unthinkable that these plebiscites evidenced in any substantial degree the will of the people of these nations. The United States has not, at least prior to the Crimea Conference, recognized the incorporation of these countries into the Soviet Union, doubtless because the so-called plebiscites should not be given the slightest weight by any liberty-loving people.

I have thus detailed the situation in regard to these three small nations because it is very important in evaluating the promises of the Crimea Conference with respect to free elections in the "liberated" countries.

Coming now to consideration of the Crimea Conference, it is to be noted that the three republics I have discussed are not mentioned and that the partition of Poland is made absolute with the exception of a few miles of variation from the Curzon Line, which deprives Poland of one-third of its pre-war territory. In this connection it is interesting to note that a considerable part of the territory taken from Poland and given to Russia has no relation to the Curzon Line, viz: A part of former Galicia which did not belong to Russia but had belonged to Austria for more than 100 years prior to the First World War, at the conclusion of which it was granted to Poland by the Allies. In this territory there are extensive oil wells. Russia did not have the slightest claim upon it either ethnologically, politically, on religious grounds, or otherwise.

SILENT ON VIOLATIONS

The second paragraph of the Atlantic Charter provides that the parties thereto "desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned." In signing the declaration of the United Nations pledging the parties thereto not to make a separate peace with Germany, Russia expressly subscribed to the purposes and principles of the Atlantic Charter. Both President Roosevelt in his address to Congress and Prime Minister Churchill in his address to Parliament were silent upon the violation of the above provision of the Atlantic Charter in discussing the partition of Poland.

I do not criticize President Roosevelt or Prime Minister Churchill for making the agreements that they did at the Crimea Conference. They no doubt felt that violation of the Atlantic Charter was necessary to secure Stalin's full cooperation in the prosecution of the war and demilitarizing Germany afterward. Stalin might have said that the Russian armies had done their share and that America and Great Britain should finish the job. To represent the outcome of the Crimea Conference as a great diplomatic victory for the United States, however, is to misrepresent the facts. It was a great diplomatic victory for Stalin, and for no one else.

While better terms undoubtedly could have been obtained from Russia in 1942, when she was sorely in need of material help from us, criticism of our failure to do so will profit nothing now.

SHOULD CORRECT WRONG

At the San Francisco Conference we should endeavor to correct the wrong done to Poland and the smaller countries of Europe. Russia should there be reminded of the promise of the Atlantic Charter that no territorial changes should be made that do not accord with the freely expressed wishes of the people concerned. There every effort should be made to provide for an honest vote of the inhabitants of that part of Poland held by Russia upon the question of whether they desire to become a part of Russia or remain with Poland, and to secure an agreement with Russia and Poland to abide by the result.

With respect to submitting to the people of western Poland the question of the form, character, and personnel of their Government, I hope that the San Francisco Conference will endeavor to insure an honest election, which can be had if it is placed under the supervision of an international commission upon which neither Russia nor Poland shall be represented, but which will be composed of nationals of disinterested countries whose only concern shall be that the election be honestly conducted.

If the things I have mentioned should be provided for at San Francisco, and honestly carried out, the United Nations organization which will be created there can do much to prevent wars in the future. I hope that the experience of two world wars, and their awful cost, will convince those nations which have so frequently violated their obligations that in the future their promises must be kept if another world war is to be avoided.

HOPE FOR FREE CONSULTATIONS

At the very least we may hope that the organization to be formed at San Francisco will insure free consultation between all the nations upon all questions involving world peace and declarations with respect thereto which will tend to solidify the opinions of all peace-loving peoples and act as a deterrent to any nation contemplating aggressive war.

In my opinion one of the most important questions to be decided at San Francisco will be whether a nation charged with aggression shall be permitted to prevent any action against it by the United Nations organization without its consent. Of course, it is ridiculous to suppose that a nation guilty of aggression would consent to any act of punishment against itself. It is very doubtful if the smaller nations represented at San Francisco will agree to the plan insisted upon by Russia which would only prevent wars among small nations, leaving Russia, Great Britain, the United States, France, and China free to make war without any real hindrance by the United Nations organization.

However, even if this demand of Russia must be acceded to in order to secure her membership in the United Nations organization, this should not prevent our becoming a part of it, provided that we shall not be obliged to perpetuate the injustices found in the Crimea agreement. The United States member of the Security Council can be relied upon to prevent this.

FEW LEFT TO WAGE WAR

With Germany and Japan completely demilitarized for many generations to come, there will be no danger of another world war, so far as we can now foresee, unless it be from Russia. It is unthinkable that Great Britain and the United States will ever make

war upon each other. At the conclusion of this war, Russia and the United States will be the two most powerful nations in the world. Russia has resources in mines, forests, and lands beyond that of any other nation. There is no need for her to covet the territory of any other country, especially in the Western Hemisphere. If she should covet the territory of others, her purpose would be to bring communism to the entire world. It is possible, but not probable, that she may do this, but before we would be in danger she would have to prepare the ground for her ideology.

The liberty that the American people enjoy is as much unknown in Russia as it is in Germany. Russia has a benevolent dictatorship which improves the material well-being of its people but destroys their individual liberties. That the Russian people, as a whole, are satisfied with this dictatorship, is, I think, true, but should it be otherwise, the people of Russia will never gain their freedom so long as communism exists.

Too much credit cannot be given to the Russian people, especially the Ukrainians, for their magnificent stand against the Germans and the vigor and crushing power of their counteroffenses. This, however, should not blind us to the essential difference between communism and democracy.

RUSSIA HAS BEEN AIDED

We should freely acknowledge that in fighting for her own preservation Russia has fought for us as well, but we should also remember that, had it not been for the war materials which we have sent her, costing us many billions of dollars, Russia might have been defeated by Germany. Neither should we forget that in our war with Japan Russia has as great a stake in the outcome as have the United States and Great Britain and yet she remains neutral, giving us no help.

It is unfortunately true that we have some leaders who, while disavowing communism and giving lip service to democracy, are at heart communistic in their ideas or do not realize that their impractical proposals are preparing the ground for communistic growth. It is also true that abuses by organized wealth promote the growth of communism.

If the people of the United States will only take an active interest in preserving our democracy, which has made the United States the greatest and most prosperous nation on earth, there will be no danger of communism ever taking root here.

After the wars with Germany and Japan are won we shall see whether Russia will keep her promises in the matter of holding free elections in the liberated countries. If she should fail in these promises or fail to give evidence that they will be faithfully kept, then the United States should decline to give her any financial assistance for her economic rehabilitation until her promises are fulfilled.

If, however, Russia should thus fail, even so, we should cooperate with her upon matters of common concern although we may abhor her ideology and methods. During the time of the czars, oppressors though they were, we maintained diplomatic relations with them. The same is true of Hitler's Germany until shortly before she declared war upon us. If we could do those things in the years that have gone, we can remain friendly with communistic Russia so long as she does not threaten the American way of life that we know.

We all hope and pray that this is the last world war that this earth shall ever know. We hope that the measures agreed upon against Germany, and later, I hope, to be agreed upon against Japan, together with a United Nations agreement at San Francisco to which we shall be a party, will bring nearer the day when there, indeed, shall be "On earth peace, good will toward men."

Human Bomb

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a short account of a most unusual occurrence to Seaman Dewey Dupre, of Opelousas, La., my home town, as reported by my hometown newspaper, the Clarion-News of Opelousas, La., of date February 28, 1945:

DEWEY DUPRE, LOCAL YOUTH, "HUMAN BOMB"

After 47 days as a "human bomb," Dewey Dupre, 20-year-old son of Mr. and Mrs. Dewey Dupre, Sr., of route 2, Opelousas, is able to take a hard knock without blowing himself up. Dewey had a successful operation at the naval hospital in San Francisco, Calif., when a fused shell was removed from his body.

The Clarion-News, through the Associated Press, was the first to bring to his family the news that their son had successfully stood the dangerous and delicate operation. They had been notified by the War Department simply that their son was wounded. The Clarion-News and Herald received a wire from the Associated Press Wednesday afternoon, which read:

"Twelfth naval district headquarters at San Francisco disclosed today a successful operation had been performed at the naval hospital there to remove a fused 20-mm projectile from the body of Seaman Second Class Dewey Dupree, of Opelousas."

He was at his station as gun loader aboard a battleship at Lingayen Gulf, January 9, when an air attack came.

"The first thing I knew," Dupre said, "I was lying on deck with a compound fracture of my left leg and other injuries about my chest."

Dewey was moved to an advanced base and then to the hospital in San Francisco. Convalescing nicely, he told doctors he felt something inside of him low in his body. Surgeons, thinking they had missed a piece of shrapnel, ordered X-rays. Pictures disclosed the fused shell.

"Because the projectile was such a sensitive type and might explode on contact even with an operating instrument," the Navy said, "the situation remained full of danger."

Bomb-disposal experts as well as neutral men were consulted. In a tense atmosphere, Commander J. I. Hall, Medical Corps, United States Naval Reserve, operated successfully.

Returning Veterans Pose Vital Post-War Challenge and Opportunity

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks, I include therein a splendid article written by Richard B. Cole, of the Boston News Bureau, appearing in the February 20, 1945, issue of this fine financial publication, setting forth certain views of John J. Hagerty, of Boston, Mass., manager of the New England office of the Reconstruction Finance Corporation.

The opinions of Mr. Hagerty expressed in this article are worthy of deep consideration, not only in New England, but in other parts of the country. His constructive views are of a challenging nature.

I also include in my remarks an editorial in the same issue of this publication entitled "Ours the Choice."

The article and editorial follow:

RETURNING VETERANS POSE VITAL POST-WAR CHALLENGE AND OPPORTUNITY—NEW ENGLAND MUST LAY PLANS NOW TO ABSORB SERVICE MEN AND WOMEN IN REVITALIZED INDUSTRY, SAYS J. J. HAGERTY, NEW ENGLAND R. F. C. MANAGER—WITH DIVERSE INTERESTS ALL SHARING IN PROBLEM, PLANNING SHOULD BE DONE ON COMMUNITY BASIS

(By Richard B. Cole)

In the post-war era, New England faces both an arresting challenge and unparalleled opportunity, through the manner in which it receives back its returned war veterans into an industry geared to the exacting demands of the future, in the opinion of John J. Hagerty, New England manager of the Reconstruction Finance Corporation.

"But to meet the challenge and seize the opportunity, New England must coordinate its post-war thinking and planning, acting on the democratic principle of individual municipal responsibility," Mr. Hagerty declared in an exclusive interview with the Boston News Bureau. "Our cities and towns should organize committees, made up of leading bankers, industrialists, doctors, and other civic leaders, to study the problems of the returning veterans and to guard against their unemployment," he continued.

"Industry fits prominently into the picture, for it must be prepared both to absorb the returning workers and to put itself into such physical shape, as to machinery and equipment, that it can compete with other areas equally aggressive. Surplus capital goods and machinery now owned by the R. F. C. will help to make this possible."

CLOSE TO MILLION NEW ENGLAND VETERANS

Room must be made in industry and business for nearly a million New England veterans of this war, nearly a half million in Massachusetts alone, declared Mr. Hagerty, as he outlined the dimensions of the post-war problem. The majority—around 70 percent—of the boys in the Army and Navy are of 24 years or younger, and they are the cream of the country's youth.

The problem is more serious now than it was after the First World War, he declared, for men returning from that war were more mature, and there were not so many taken directly from high school and college, having no specialized training.

In the past, stated Mr. Hagerty, we have permitted our New England young men, after they have been educated here in the best colleges and universities in the world, to go elsewhere for employment, and that is a mistake.

Three things are imperative to correct such a situation in the future: The young men returning from the services must be given an opportunity to increase their knowledge through additional education, as is provided in the G. I. bill of rights; they must be given an opportunity to learn through industry, by in-plant training or other means; they must be put in positions

where they can learn quickly, lest there be millions of unskilled men.

"We have the schools here in New England to do this job," Mr. Hagerty stated. "We have the money, much of which is in trust funds but can be put to work—maybe made dynamic rather than static. We have the administrative brains. We have the market, for the most populous part of New England lies within a radius of 250 miles of New York, wherein is concentrated the greatest purchasing power in the world. We have the desire and the willingness to do the job, once the need is fully realized."

COORDINATED THINKING AND PLANNING

"What is lacking is coordinated thinking and planning. With our economy built on the township idea, individual community committees consisting of those who understand the veterans' problems and the possibilities of local employment should work out plans which will insure that the wheels of industry be kept turning.

"In order that our men may know how to handle veterans, we in the R. F. C. will all take courses in vocational training and guidance, and the same policy should be followed by responsible men in industry, in the banks, the unions and fraternal societies, because the problem is one in which all of us share. The newpapers should be represented on the local committees to tell the story of what is being done and still remains to be done.

"It will be necessary to provide industrial education for college men who will perhaps prefer to go directly into industry rather than take that extra year which they will be allowed under the G. I. bill in order to complete their education. The veterans are entitled to a year, and the Government should meet the expense of training until the service men—and women—are trained sufficiently to be taken over by industry itself.

"Large companies should begin to think now about educational programs for these young men and women, working in cooperation with the Government. Industries will want leadership material and will be much concerned to obtain the right kind of people with proper training. Industry will be called upon to conduct its own schools, with the help of the Government, the unions, or any other source, permitting its employees to earn as they learn.

"Sound community projects should be developed in a spirit of civic responsibility. In Boston we should have one of the finest parking areas in the world, perhaps under Boston Common. It can be worked out. The idea is sound. The city of Boston can come to the R. F. C. for aid. Other sound, self-paying propositions can be worked out in other cities. But public works should be relied upon only after private enterprise and private initiative have sought to do the job."

THE R. F. C. AND BUSINESS

"Reconstruction Finance Corporation is in position to help communities and individual businesses meet their share of the future responsibility. We have the organization to help counsel and advise, we have machinery and equipment that is needed, we can help industry finance the acquisition of machinery if it requires aid.

"Over the past the New England R. F. C. office has made about 700 business loans, exclusive of disaster loans. We have saved over 700 companies, at least a half of which now are doing essential war work, and are vital parts of the New England economy.

"We now hold about $9,000,000 in property which has been declared surplus. In true, Government-owned property running into the scores of millions in value will become surplus. On the basis of experience of the last war, this should bring about 50 cents on the dollar. The R. F. C. has sent 10,000 catalogs describing the surplus property to all commercial banks in New England, to all manufacturers compiled from lists sent in by chambers of commerce, the Associated Industries, the War Production Board.

"It is the province of the 17,000 industries making up our New England economy to select what they need from this surplus and get it in place for post-war. This should not be done at the expense of the war effort, and where necessary we will sell now for delivery later. We will enter into arrangements to finance concerns that need financing, particularly the smaller ones. If they ask us to do so, we will make an analysis, in cooperation with the banks, of what is needed. In reality, the R. F. C. is just a public-service organization for banks and industries.

"During the War, industry has learned that it is absolutely essential to have the most modern machinery and equipment that money can buy. Our office is using the slogan 'Be Wise—Modernize' on all its letters, because modernization is needed more in New England than in many other parts of the country."

HELPING THE VETERANS

"And what applies to helping business applies to helping the veterans. The R. F. C. is in the same position as the banks as regards loans under the G. I. bill, and also we will be the reference agency to see whether loans should be guaranteed by the Veterans' Administrator.

"Here in New England we have many things in our favor to help the returning boys and girls. We have an excellent climate; the finest schools in the world; we have beautiful places in which to live, and good transportation; and we have high sense of morale value, which is one of our greatest assets in a time of stress.

"But there is a negative side to the problem. If the veteran should get the idea he is being pushed around—and many felt that way after the other war—his family will get it and before long the majority of the citizens may think the veterans are getting nowhere. We might have these four horsemen riding the streets: disillusionment, such as follows all wars; desire for escape, resulting from so many people being hemmed in by the war; social disintegration, resulting from hasty marriages, broken homes, neglected children, illness, family losses; and economic change resulting from all these other trends, and affecting the whole Nation to greater or less degree."

"It is to forestall such factors of disunity that all of us must begin now to formulate our post-war plans, that they may be in readiness when needed."

[From the Boston News Bureau of February 20, 1945]

OURS THE CHOICE

Can we steer a sensible middle course between rampant optimism and just the same sort of pessimism? Also between an excess of governmental direction (by ever less remote control from Washington) and local independence and initiative, both political and industrial?

Such questions lurk over a near horizon in terms of the man, the machine, the dollar. Can we successfully harness in post-war teamplay the diverse forces they represent? Herein waits either a challenge or an opportunity, a test or a chance. The man, personified now by either G. I. Joe or war worker, represents the nearest, most personal phase—the human. Behind him (often also her) lurk other equations, including possibly idle men, war-created surplus goods, idle dollars now being saved too stingily or else too riotously spent.

An authoritative sidelight on the first of these latent problems is afforded in another column by the comments of the New England R. F. C. manager, John J. Hagerty, who stresses the need for truly regional as well as democratic thinking or planning on how best to link the futures of New England's industries and of its returning veterans, nearly a million in number. Hereabouts, in this first home of local self-government, is an unexampled chance to benefit both men and business, in terms of more jobs better done.

Hence the need he sees for collective self-study by all New England's communities through local committees of bankers, businessmen, professionalmen, and other civic leaders on how best to equip both industry and all potential workers. R. F. C. now controls much machinery and surplus goods which could well be so employed.

Training these young veterans for their new roles will be a bigger and a more exacting task than it was after the other great war, when the fewer returning were themselves more mature. New England, above all other sections, has the schools to retrain such youth—just as it had to give them their first schooling for making war. The G. I. bill of rights points out the path for such quick retraining, through a welding of book learning and practical job tuition.

Further, there is much idle capital hereabouts often timidly reposing in trust funds, which also could be put to work. Then there is also, as Mr. Hagerty cites, the existence nearby of perhaps the richest and most populous market in America. R. F. C. itself, besides selling machinery, equipment, etc., will through its own staff learn more about vocational training and guidance, etc., and trusts that businessmen, bankers, unions, fraternal societies, etc., will also join in such needed "adult education."

Here waits the potential industrial leadership of tomorrow. R. F. C., its regional manager declares, would here set a pattern for and give continuing guidance to the 17,000 industries in the New England economy, in utilizing both the human and the inanimate units available for building up post-war efficiency and prosperity here. Too often in the past New England-trained youth and hard-won New England dollars have migrated to other areas which later on became our competitors.

This country sorely needs a deal of decentralization of localization of many things which could be better handled much nearer to "grass roots." Daily, as the prospect of victory becomes surer, however vaguely so as to date or detail, that other needs increases of a firmer, more intelligent, better informed, treatment of the many and still to be answered questions as to what must be done for returning veterans and for post-war business.

Our pessimists conjure up many worries, beginning with those ten or a dozen million prospective veterans, then going on to our hundred billion of dormant savings, plus the other billions of potentially idle, Government-owned war plants (plus other outmoded factories.)

But, as the war itself proved, we shall not at least now need to worry about future raw materials. The single central task is our wisest future handling of the many ingredients lying so richly all about us in both human and material terms. All the needed ingredients for both success and prosperity are near to our hands. Have we the wit and wisdom to compound them rightly?

All that is really needed to mix those ingredients properly is some common sense, leavened by understanding and sympathy—all directed through organized, localized planning to the end of solving the problem of the returning veterans and the others who want to work. There is something inconsistent in worrying about too much buying power, or inflation, and overproduction;

for one ought to be able to balance out the other—if we use our heads. As is usually the case, the final result will probably be something in between the two extremes.

At Odds With the News Ends

EXTENSION OF REMARKS
OF
HON. WILLIAM LEMKE
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 27, 1945

Mr. LEMKE. Mr. Speaker, I give below an editorial by Fred Robel, editor of the Granville Herald, published at Granville, N. Dak. It shows just how far bureaucracy has run amuck.

I cannot imagine any home in McHenry County, N. Dak., without storm doors and storm windows. I know there are very few if any. For the benefit of the bureaucrat who sent this information out, may I state that the temperature in North Dakota occasionally drops down to 30 degrees below zero. The people there know how to take care of themselves, and they need no outside assistance or suggestions. Especially do they resent being libeled by some Washington pencil pusher.

This particular pencil-pushing bureaucrat talks about fuel oil that could be saved with storm windows and storm doors. There are just two things wrong with that suggestion. First, the storm windows and storm doors are there, and next, I doubt whether there is a single oil burner in all of McHenry County. This bureaucrat ought to know that North Dakota has 700,000,000,000 tons of lignite coal and that a great deal of that coal is right in McHenry County. As far as McHenry County is concerned this particular pencil pusher can keep all the oil.

Here is the editorial:

Somehow I seem to have developed a sort of chronic gripe and it seems impossible to get out of that rut—if that's what it is.

But things happen in this great land of the free and home of the brave that just make one want to "tear his hair"—and I don't have any hair; not so much, any more.

This week comes a communication for immediate release. It carries a Washington (D. C.) date line, but no date, and the first paragraph reads:

"A total of $134,735, or enough to purchase two War bonds for every family in the county could be saved in McHenry County, N. Dak., this winter through the single expedient of installing storm windows on all residential buildings as a means of conserving fuel."

Think of that, folks, and then ask yourself: "Are my storm windows on?"

But, read further:

"The figure represents the cost of coal, oil, and gas which could be saved in that county as determined by a formula announced here by the Chief of the Federal Housing Administration's Mechanical Engineering Division. * * * The formula, devised for one fuel-saving measure, the storm window, a homely example familiar to all, shows that, in effect, from McHenry County alone 2,086 more gallons of fuel oil and 12,233 extra tons of coal would flow into the war effort—instead of up the chimney—if this one measure were universally adopted."

Read some more:

"The mathematical formula devised for computing potential savings, takes into account the number of oil-heated and coal-heated single- and multiple-family dwellings in each county as reported by the United States Bureau of Census, the number of degree days in each community estimated by the Weather Bureau, and conservative estimates of average glass areas in various types of dwellings."

After that you won't need to wonder more why we have some two million—more or less—people employed in the various bureaus and agencies of one kind and another in Washington, D. C.

Of course, you might wonder why since the Bureau of the Census and the chief engineer of the Federal Housing Administration, have no more important task before them than figuring out whether or not a McHenry County citizen put on his storm windows last fall, to effect what sounds like an important saving in fuel—oil and coal—it might not be a part of the responsibility of some Washington, D. C., institution, bureau, or agency, to start on other sources, not of mere waste alone, but flagrant extravagance.

Talk to any serviceman who has been on overseas duty, especially those attached to the merchant marine service. They can tell you stories of the extravagant use of manpower, the extravagant waste of time, the extravagant waste of ship's space in transporting luxuries rather than essentials.

Talk to people engaged in war industry, particularly Government docks and shipyards, where extravagance—willful extravagance—is the rule, not exception, and it sets you to wondering why a smart guy like the Chief of the Federal Housing Administration doesn't really get down to devising a formula" for real saving, or, aren't you listening?

A Bill To Outlaw the Use of Peyote

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. CURTIS. Mr. Speaker, I wish to take this opportunity to call to the attention of the House a bill recently introduced by me, H. R. 2403. This bill would make the law in reference to marijuana applicable to peyote. In addition, it would prohibit the employees of the Bureau of Indian Affairs, or any Government agency, from encouraging or promoting the use of peyote by Indians.

Peyote is a plant having many characteristics like marijuana. H. R. 2403 defines peyote as follows:

The term "peyote" means all parts, including the seeds, of the plant Lophophora williamsii (Lem.) Coulter, and of the plant Lophorphora lewinni Thompson, whether growing or not; any alkaloid extracted from any such part; and any compound, manufacture, salt, derivative, mixture, or preparation of any such part of alkaloid.

The harmful effects of peyote have been disturbing to a great many physicians and many other citizens. This is especially true in those areas where Indians are living.

Back in April of 1940, the then Chief of the Food and Drug Administration wrote:

This Administration has at various times given consideration to the distribution of peyote. A number of years ago at the investigation of the Indian Bureau an effort was made to detain shipments of peyote at the Mexicon border and prevent entry into this country. More recently, also at the request of the Indian Bureau, we discontinued taking such action. This was partially due to the fact that we had never encountered peyote in any product intended for medicinal use and according to all of the information available, the product was used either by Indians in connection with religious ceremonies or by others for its apparent narcotic effect.

From a strictly humanitarian standpoint we will be interested in taking any steps possible to prevent the use of this product as a narcotic.

Notwithstanding the apparent attitude of some in the Bureau of Indian Affairs, the Indians themselves recognize the harm and danger arising from the use of peyote.

I wish to quote from an Associated Press article appearing in a number of papers on June 4, 1940:

GALLUP, N. Mex., June 4.—Stringent penalties were decreed by the Navajo tribal council today for use of the narcotic peyote weed, the Indian equivalent of the poppy and marijuana.

The council, in its annual session at the Window Rock Agency voted to impose penalties of 9 months in jail and a fine of $100 for introduction, sale or use of peyote on the reservation. The vote was 52 to 1.

Action followed an investigation by Howard Gorman, vice chairman of the council, who reported Indians used it in orgies under the guise of religious rites.

A resolution also was prepared for presentation to Congress asking Federal control of traffic in the weed. New Mexico statutes exist covering the drug, but enforcement has not been effective.

Mr. Speaker, the use of peyote should be outlawed. The bill, H. R. 2403, ought to be the law of the land.

Where Is East Texas?

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. BECKWORTH. Mr. Speaker, under unanimous consent, I wish to include in the RECORD an article entitled "Where Is East Texas?":

WHERE IS EAST TEXAS?

A visitor in our State recently asked: "Just where is east Texas?" It is a question that develops wide difference of opinion and has puzzled the historians and the map makers. If you fold the map of Texas and place the Sabine River on top of El Paso, the center crease will fall between Sweetwater and Abilene. Yet there are many prominent and stalwart Texans who would not agree that east Texas extends that far.

There are those who say that east Texas is bounded on the west by the Trinity River or the Brazos. Others say that east Texas is confined to the 36 timber counties of the

"piney woods," where tall pine trees lift aloft their green branches to the sky and strew quiet aisles with pine needles like cloistered carpeted temple courts, and whispering winds from an invisible choir. There are those who say that east Texas is the land of the blackeyed pea, the sweet potato, ribbon-cane sirup, and bounteous family style meals. Many think of east Texas as a realm of rolling red hills where the sumac and the sweetgum are redolent with rich color in the autumn and the redbud, the dogwood, and the azalea bedeck the landscape with grandeur in the spring. Some say east Texas is a land of hills, rills, thrills, and stills.

There was in east Texas of sleepy towns and backward agriculture, where it was "too easy to do tolerably well." That east Texas has awakened into a new land of opportunity where modern agriculture and humming industry have begun a new era of progress in developing the natural resources of this richly blessed region.

When the great east Texas oil field was discovered, the geologists told us that the oil sand had been deposited ages ago along the shoreline of an ancient sea and that most of east Texas was formed later as this land rose and the waters receded. Perhaps after God Almighty had finished the rest of the earth, He reached the heights of His handiwork when He made east Texas last.

East Texas is the cradle of Texas history and culture. Here first came the brave men and women of the Old South, hardy souls who dared to venture forth into the wilds of a new frontier. They brought their traditions, their customs, their religion, their love of liberty. They wrested an empire from a foreign tyrant and won the Southwest for Anglo-Saxon civilization. Here we find an atmosphere and a manner which combine the hospitality of the Old South with the daring of the West.

East Texas is bounded on the north by Red River and by hearts that respond to the call of freedom; on the west by a line drawn through Waco and by the daring spirit that reaches toward new worlds of science and invention; on the east by Louisiana which has blended some of its charm and romance across the Sabine. On the south it is bounded by the sacred soil of San Jacinto and its shores are caressed by the waves of the Gulf of Mexico where great ports send forth their galleons of commerce to the far places of the earth.

Here's to east Texas—a land of romantic past and challenging future.

HUBERT M. HARRISON.

EAST TEXAS, *March 1945.*

Star Mail Routes

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. GILLIE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial and letter to the editor of the Fort Wayne News-Sentinel:

AN UNFAIR SITUATION

Deserving of Congressional correction by passage of H. R. 4893 (a pending bill in the lower House) is an unjust economic situation of long standing in the United States Post Office Department.

Thousands of persons in all States receive their mail from what are known as star postal routes. These routes are operated by persons who enter bids to do so under 4-year contracts which for a large part are on a basis which prevents the successful bidders from making even a minimum wage under modern conditions.

The answer of some defenders of the system is that the bidders are not required to be bidders, which is true; but that defense neglects the matter of a Government's obligation to be something better than the operator of a business under a sweatshop philosophy.

One operator of a star route out of Fort Wayne is obliged to drive approximately 100 miles a day, for 6 days a week, devoting 6 hours daily to his work and receiving as compensation only a little more than $2,200 a year.

When his operating expenses (which include a bond fee, gasoline, oil, license, and depreciation on his truck) are deducted, it is obvious then the route operator is being victimized by an administration which regularly pretends great affection for the underpaid.

H. R. 4893 provides that star-route contractors be paid on a fair mileage basis and a fair hourly labor basis—approximately 7 cents for each mile driven, plus 75 cents an hour for time.

This bill is entitled to the support of every Member of Congress. A government such as ours certainly does not wish to be in the position of depriving the laborer of his proper hire.

RAPS STAR-ROUTE GOUGING

To the EDITOR OF THE NEWS-SENTINEL:

For several years I have wondered why the star routes have not been investigated, and I want to compliment the News-Sentinel for being wide awake and bringing this unfair situation before the people.

The News-Sentinel is the first Indiana paper that has been wide awake enough to cope with this situation, and they haven't made the situation deplorable enough.

These morning newspapers are the ones that really should investigate these star routes, because that is the way their papers get from town to town and there are some of these carriers that are sure irresponsible due to the fact that these star route contracts are a bonding and bidding racket.

Some of these carriers are losing money on their routes, and looks like the head officials of this administration wouldn't want such an unfair situation to continue when they stress on the problems of unfair and slave wages.

There have been only two minor changes made in the laws concerning these star routes since the stagecoach days, and I would say the Government is really slipping. One Government official made the statement at last year's hearings that even if they knew a contract was being let so the contractor was losing money he would be given the contract as long as he had adequate bond.

Now they have Senate investigations on elections, and they have dog investigations; why not have a Senate investigation on these star routes which about 12,000 families in the United States would benefit by?

A STAR ROUTE BOOSTER.

Lt. Col. John Thornton Walker

EXTENSION OF REMARKS

OF

HON. EVAN HOWELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. HOWELL. Mr. Speaker, central Illinois, as well as the entire Nation, mourns the death of Lt. Col. John Thornton Walker, air liaison officer of the Fifteenth Army Group, recently killed in a crash of an Army transport plane in Rome, Italy. Colonel Walker was Lt. Gen. Mark W. Clark's personal pilot over the fighting lines, and only recently received the Legion of Merit, having previously been awarded the Silver Star and the Air Medal, all three from the hands of General Clark personally.

A tribute to my friend, an outstanding hero of World War No. 2, is included herewith in the news report of his death as carried in the Illinois State Journal, his home town newspaper, together with an editorial eulogy from the same paper under date of Thursday, March 1, 1945:

LT. COL. THORNTON WALKER KILLED IN PLANE CRASH EN ROUTE HOME TO VISIT FAMILY

Lt. Col. John Thornton Walker, 32, formerly of the Illinois State Journal editorial staff and later publicity director for the State department of agriculture, was killed February 19 along with 9 others while en route home on leave when a transport plane crashed after taking off from an airfield near Rome, it was announced yesterday.

The plane fell from a height of 400 feet.

Colonel Walker, who resided at 614½ South Douglas Avenue, was air liason officer of the 15th Army group. Three of those killed, including Colonel Walker, were officers of Lt. Gen. Mark W. Clark's staff. Colonel Walker, who only last week received the Legion of Merit, frequently piloted Clark on inspection trips.

The other two were Lt. Col John Howard Faust, 32, assistant artillery officer of the 15th Army group, of Wyomissing, Pa., and Maj. Donald M. Kerr, transportation officer, of Portland, Oreg.

Maj. William N. Mallory, 42, intelligence officer of the tactical air force, was another American officer killed. He received the Legion of Merit December 1 for the famed "Operation Mallory" which resulted in the cutting of 22 of the 24 bridges crossing the Po in Lombardy.

Mallory, of Memphis, Tenn., was one of the all-time football greats at Yale where he was a star fullback in 1923. He was scheduled for release from the Army because of overage regulations.

BRITISH VICTIMS

Others killed in the crash were two British officers en route to Britain on leave, a British woman officer, the pilot, copilot, and a crew member, all British.

After he was graduated from Springfield High School in 1931, Colonel Walker started work on the Illinois State Journal as a cub reporter. He later became a general reporter and following that a statehouse legislative reporter. In August, 1938, he left the State Journal to accept a position with the State Rural Electrification Association and later became publicity director for the State department of agriculture.

He left Springfield in November 1940, as a second lieutenant with the One Hundred and Sixth Cavalry, formerly a unit of the Illinois National Guard. Prior to that he had gone through the various noncommissioned grades of the Illinois National Guard.

Colonel Walker was under training for 2 years at Camp Livingston, La., then was transferred to the Air Corps and attended school at Fort Sill, Okla., for 8 weeks. He was promoted from second to first lieutenant, and after being made a captain in April, 1942, was sent to North Africa the following October.

WINS PROMOTION

He became a major in April, 1943, before leaving Africa for the campaigns in Sicily and Italy. He was named lieutenant colonel in July, 1944.

Colonel Walker won distinction in Italy as a pilot of observation planes and other small-type ships. He became General Clark's personal pilot over the fighting lines, and his skill in handling his "puddle jumper" planes or "grasshoppers" and eluding German armored craft won wide notice.

He was credited with eluding five Nazi fighters on one occasion by maneuvering his slow ship among the trees. While flying alone, another time, he landed his light craft in a treetop when the chase became too hot.

Lt. Gen. Mark W. Clark presented Walker with the Silver Star for gallantry in action in March 1944, in a ceremony at Fifth Army headquarters in Italy. The award was presented for successfully completing an aerial mission at the Anzio beachhead despite a strafing attack by six German planes.

AWARDED AIR MEDAL

Colonel Walker was awarded the Air Medal by General Clark in November 1944, in a ceremony near the front lines in northern Italy for meritorious achievement while participating in aerial flight. Through nearly 4 years of service he escaped injury.

Walker was born August 24, 1912, 4 miles west of Rochester in Rochester Township. The family moved to Springfield when he was 8 years old and he was graduated from Lawrence School and Springfield High School. At the age of 11, he began working for the Illinois State Journal, starting as a carrier boy. He wrote the high-school sports news while attending high school.

INTERESTED IN AVIATION

While employed by the Journal he became interested in aviation and materialized that interest by taking flight instruction and received a private certificate of competency at Springfield Airport. He served as aviation editor of the State Journal for several years and on one occasion flew a Taylocraft plane to Chesterfield to gather material and take pictures of a plane crash in that area.

Colonel Walker was a member of the First Christian Church. At one time he served as president of the Springfield chapter of the National Aeronautical Association.

He was married in 1934, to Geraldine Hudson, of Washington, Ind., who survives, together with a 3-year-old daughter, Connie Ann.

Also surviving are his father, James H., 1105 West Washington Street, assistant chief of the Springfield fire department; a brother, Edward W. Walker, a flight officer in France; and a sister, Mrs. Anna Mae Ripley, who resides in Montana.

His mother died when he was a child.

LT. COL. J. T. WALKER

Again the staff of the Illinois State Journal has been affected by close-up contact with the stark tragedy of World War No. 2. It grieves today for the death of Lt. Col. John Thornton Walker, third of major casualties which have struck the paper's organization.

It is difficult to express the depth of sentiment the news of Colonel Walker's death produced in this office. It is cumulative of sadness caused by the loss of Ulysses S. Phelps and Byrl Critser. It touched particularly the editorial department, where Thornton Walker began his career as a newspaperman. Here he was regarded with affection and admiration.

The war has claimed no better young man than Thornton Walker. He was physically, mentally, and morally typical of good American citizenship. He was strong of body and mind, courageous and loyal. Prior to the war he had distinguished himself as an aviator. During his service as a reporter he was a student of aeronautics. Later he was a teacher, and he went into the service well equipped.

With pride this city has followed the career of Colonel Walker, and with the deepest sorrow the Journal today records the tragedy of his death. Associates of Colonel Walker have lost a good friend and the country has been deprived all too soon of a strong, intelligent, and devoted defender. The deprivation suffered by his family touches every person with relatives in the service.

Death came to Colonel Walker at the beginning of a respite from active flying, in which he had won honor for his skill as a pilot. He was on his way home for a well-earned leave, traveling with other officers by transport. He was not at the controls. Ironically, death came to him while he was a passenger.

Universal Military Training

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter signed by certain college professors:

DEAR PRESIDENT ROOSEVELT: All American citizens are united in a common determination that never again shall this country be found lacking in the military strength to insure its security. Educators in every State in the Union have declared themselves in favor of an adequate program of national defense. Incident to such a program is the proposal for compulsory military training.

We whose signatures are appended to this letter believe that this proposition should be thought through now while we are conscious of the reality of a world at war. We are better able at this moment to reach a wise decision on this important matter than we will be after the war is over, when again we shall be lulled by a false sense of security. The judgment of the majority is now more sound on this issue than it will be after peace is declared. We know too well the reactions which occur after a conflict is over; the general desire to forget it.

The adoption of a sound plan for universal military training now will enable the United States to speak with greater authority at the peace table in favor of an international organization to enforce peace.

The adoption now will reassure the other peace-loving nations of the world that the United States purposes to cooperate with them in outlawing war and will not again retreat into isolationism. We believe that it is more fitting in our form of government to insure national security through the proper system of universal military training than through the maintenance of a large standing army.

These are the only alternatives. We believe that the maintenance of a large standing army is contrary to the traditions of our people and opposed to the best interests of the Nation. The adoption of the proper plan of universal training now involves no perpetual commitment. If out of the coming discussions among the nations, an effective international plan to insure peace should emerge and the unrighteous ambitions of aggressor nations permanently blocked, the Congress would always have the authority to modify or abrogate the military training system.

For these reasons it is our firm belief that the proposal for a system of universal military training should be considered now; its advantages and disadvantages carefully weighed and appropriate action taken without subjecting the nations to those hazards which are involved in postponement and delay.

Sincerely,

Signed by: Stanley King, Amherst College; Edwin S. Burdell, Cooper Union; Ernest M. Hopkins, Dartmouth; Blake R. Van Leer, Georgia Tech; William Mather Lewis, Lafayette College; Karl T. Compton, Massachusetts Institute of Technology; Levering Tyson, Muhlenberg College; Robert L. Johnson, Temple University; Robert C. Clothier, Rutgers University; John J. Tigert, University of Florida; Thomas S. Gates, University of Pennsylvania; J. G. Bowman, University of Pittsburgh; Charles Seymour, Yale University; Franklyn B. Snyder, Northwestern University.

Bureaucracy Moves in Devious Ways Its Wonders To Perform

EXTENSION OF REMARKS

OF

HON. HAROLD H. EARTHMAN

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. EARTHMAN. Mr. Speaker, on last Tuesday morning, the 27th of February, I came before this House of Congress to report what I believe to be a condition that is un-American in principle and truly against the traditions laid down by the builders of democracy in government.

While it is not my intention to blast rationing, price ceilings, or any other sound governmental regulations in time of war, I do propose to take steps even to the point of being drastic in an effort to protest secret methods used to rule the people with an iron hand on the parts of some few who would use the agencies of government, with emergency as an excuse, to revamp and reshape the practices and policies laid down as yardsticks, to be made precedents with the hope of continuance even after the emergency terminates.

God forbid that any individuals be allowed to continue on the public pay roll who would use the generosity of the Government, supported by the people, to destroy the freedom of the people as individuals and to thwart the freedom of operation in business and industry.

Since taking a public stand and making a complaint of being refused the right as a Representative to attend an O. P. A. price-setting meeting, I have received an untold number of communications encouraging me to proceed further in calling the attention of Congress as well as the general public to the un-American attempts made by O. P. A., and it is my hope that the Smith committee will lose no time in calling the officials and responsible parties of O. P. A. before them to explain such secret and underhanded methods used against the American people.

Of these communications I have received letters from businessmen, farm-

ers, county judges, and other public officials as well as numerous individuals. I insert into the RECORD at this point an editorial taken from the Nashville Banner, Nashville, Tenn., which I think is very expressive, true, and timely:

BUREAUCRACY MOVES IN DEVIOUS WAYS ITS WONDERS TO PERFORM

In a policy study, price-ceiling study on strawberries—by the O. P. A. or any other Government agency—who would be more interested than a Congressman from a strawberry-growing State, or who would have greater "right" to sit in, either as observer or adviser, than a Congressman from a strawberry-growing State who is also a member of the House Agricultural Committee?

The question comes up with expulsion of Representative HAROLD H. EARTHMAN, of the Fifth Tennessee District, from the Washington conference of O. P. A. officials pondering the ceiling on strawberries. Along with Representatives JOHN JENNINGS, another Tennessean, and JAMES M. MORRISON, of Louisiana, he was denied the right to be present among those in the inner sanctum. His conclusion is that the O. P. A. hierarchy doesn't want its sacred premises defiled. Maybe he should have taken off his shoes as well as his hat, for was he not in the judgment of the bureaucrats assembled treading on holy ground?

Yes; it smacks of "gross, underhanded, secret methods," as "Doc" EARTHMAN subsequently told the House, and of "government without representation." But bureaucracy works that way, and tends in that direction.

Did the O. P. A. "experts" deciding the fate of the strawberry industry—its fate depends on the prices permitted—know more about strawberries than Representatives of the strawberry areas? Why should any O. P. A. session dealing with the public business be a closed, or secret, session? Why should the duly elected Representatives of the people be excluded from conferences shaping the future of any field of business, regardless of the identity of that business?

Bureaucracy moves in mysterious ways its wonders to perform. It comes into being as a servant, sometimes in the name of emergency, and before you know it the very creators thereof find it speaking to them in condescending tones, even denying them admission to its holy of holies.

The language it used is not that of strawberries, but of razzberries. In the domain of directives, rules, regimentation, and government-by-such, it submits to no poaching on its premises. It even kicks Congressmen out when they dare to even casually suggest an interest in its doings.

The strawberry incident is a case in point, merely symptomatic of the innumerable cases dotting bureaucracy's record, but brought to light with new emphasis because it was a Tennessee Congressman and a Tennessee industry involved in this treatment. It is inevitable because bureaucracy works that way. Its tones of condescension, its spirit, its whole general attitude, are in the pattern of its mosaic. Except when it comes up periodically for appropriations to continue, or perpetuate, itself, it regards itself as above the law and superior to constitutional authority. Portions of it have been told that their decisions and operations are not subject to court review!

So when bureaucracy, in any of its labyrinth of branches, flaunts its defy to Congressmen, one wonders not that Mr. and Mrs. John Public (the masses, and the governed) are treated somewhat as they are treated; are pushed around and told what they are to do and what they are not to do.

That the O. P. A. has a war job to do or that any other such agency has a war job to do in no wise justifies treatment suggestive of the very tyranny we are fighting a war to escape. In no way does it justify the cluttering-up of the American premises, in or out of Washington, with pipsqueak, two-by-four dictators, striving to pull the country in their chosen direction by the very teat they are tugging.

EARTHMAN AIDING STRAWBERRY GROWERS, GETS O P A "RAZZBERRY," BUT THE BATTLE HAS JUST BEGUN

(By Mary James Cottrell)

WASHINGTON, March 1.—Plans moved forward on Capitol Hill today to bring O. P. A. officials before at least two congressional committees to explain why they invited three Congressmen to leave a meeting where ceiling prices on fresh strawberries were under discussion and their refusal to continue discussions in the presence of Members of Congress.

Refused admittance to the advisory committee meeting held Tuesday were Congressmen HAROLD H. EARTHMAN and JOHN JENNINGS, JR., of Tennessee, and JAMES H. MORRISON, of Louisiana.

Declaring that "our soldiers are fighting all over the world to prevent this sort of secrecy in Government," EARTHMAN, member of the House Committee on Agriculture, today demanded an investigation of O. P. A. tactics and was assured that O. P. A. chieftains would be given ample opportunity to explain their stand before the Banking and Currency Committee and the Smith Committee to Investigate Executive Agencies.

Incensed by the incident, Chairman BRENT SPENCE, of the Banking and Currency Committee, which handles O. P. A. legislation, told EARTHMAN that his committee would investigate. JENNINGS, one of the trio invited to leave the meeting, is a member of the Smith committee and promised that the OPAsters would be given a thorough going-over by his committee.

Both EARTHMAN and JENNINGS denounced O. P. A.'s action from the floor of the House and their denunciation was shared by several Members from both sides of the aisle who had also locked horns with O. P. A. bureaucrats.

O. P. A. IN DITHER

According to EARTHMAN, the presence of the Congressmen at the meeting threw O. P. A. officials into a dither and they appeared very much wrought up. When EARTHMAN and MORRISON entered the conference room they were immediately asked to leave and told that it was not an open meeting. The solons insisted that they be permitted to listen to the discussion of ceiling prices on strawberries which are grown extensively in their districts. Thereupon the Congressmen were invited into the corridor and kept standing in the hall while lesser members of the O. P. A. staff scurried to find a higher authority to rule upon whether or not the Congressmen could enter.

While waiting, EARTHMAN and MORRISON were joined by Congressman JOHN JENNINGS, fiery east Tennessee Republican, who refused to tangle with O. P. A. and returned in disgust to Capitol Hill where he delivered a blast on the floor of the House, declaring "Brothers MORRISON, EARTHMAN, and myself got the 'razzberry.'"

"We were told that if we insisted on reentering the conference room the advisory committee would be forced to recess," said EARTHMAN.

"We did go back and they did recess the meeting. They started a round-table discussion, saying that while some of the people had traveled thousands of miles as members of the advisory committee, they could not proceed in an official meeting with the Congressmen, and that any recommendation that came out of the meeting could not be accepted as official," he added.

At this juncture, EARTHMAN said he told the group that he had come to represent his constituents and to see how they arrived at ceiling prices which set the price in Tennessee at $1.56 less per crate than other markets.

"Although I did not mind being an unwelcome visitor, I told them that rather than to jeopardize the official status of the meeting that I would retire and resort to other means."

"While I am not a big fish in Congress and do not have the power of seniority to gobble up anybody or any outfit, the O. P. A. can rest assured that so long as they employ such secret practices and policies, I am going to nibble them to death," he added.

"I don't like it and I am not ever going to like it. We have men all over the world fighting to prevent this kind of government. This is still the people's Government and such secrecy smacks of utter disregard for the people who support the Government."

JENNINGS, who is supporting EARTHMAN and MORRISON in their demands for an investigation, declared today that this "high-handed, pig-headed insolence" raises a number of questions, including the right of the people to assemble and petition the Government for a redress of grievance.

"Brothers MORRISON, EARTHMAN, and myself got the 'razzberry' from a few 'small potato' bureaucrats," said JENNINGS, "but I favor giving them the 'works.' It is in the power of this Congress to 'cut off their water.' The process of putting strait jackets on the free people of this country by a motley crew who could not be elected dog pelter back home must be stopped.

"We can and should reduce them to their proper size and when we do they will drop through a narrow crack into oblivion," JENNINGS added.

EARTHMAN declared today that he will not let up until a special investigation is made and the general public knows why and if they are going to continue secret meetings and secret tactics.

A Test of Leadership

EXTENSION OF REMARKS

OF

HON. HOMER A. RAMEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Christian Science Monitor:

A TEST OF LEADERSHIP

Senate confirmation of Henry A. Wallace as Secretary of Commerce does not by any means end the political war touched off by his appointment. Since Congress made sure by passing the George bill that Mr. Wallace will not also exercise power as head of the Reconstruction Finance Corporation, most of the fireworks had vanished from the confirmation contest. But a real struggle over basic policies continues. And some drastic political realinements may result before it is over.

On the final test in the Senate 10 Republicans, led by OWEN BREWSTER, GEORGE AIKEN, and LEVERETT SALTONSTALL, broke away from their party leadership and voted to approve Mr. Wallace. Apparently most of them did this, not because they considered him fitted for the post, but because they believed opposition would only help to build Mr. Wallace up as the outstanding exponent of full employment and appear to set them against it. Senator AIKEN declared that he favored the goal of 60,000,000 jobs, and Senator BREWSTER declared:

"If from hatred you show fear of this man, you are anointing him as the Messiah of a new day."

Others who can by no means be classed as radical have been questioning Republican leadership in Congress on this broad issue. In many respects it has appeared to be following too closely the tactics which have so handicapped recent Republican Presidential campaigns—opposing New Deal projects without themselves offering sounder methods of attaining popular goals.

There was solid ground for questioning the tactfulness of the President's choice for the Commerce post in view of the poor relations between Mr. Wallace and a large part of the business community. There was sound reason for Congress to separate the R. F. C. from the Commerce Department and set up safeguards over its power. But some of the opposition has appeared so hysterically inaccurate and unfair about Mr. Wallace's character and purposes as to defeat itself. And many were in the position of fighting the thing with which Mr. Wallace has identified himself—full employment.

In this struggle, as in many others of the last few years, many Republicans in Congress may find in the end that they have been led astray by simply following the anti-New Deal Democrats. Many of the latter from the South are unresponsive to great social and economic changes in the national scene. They are sure of their seats and do not have to bother. They may be able and patriotic Jeffersonians, but they are often out of touch with popular movements. And, finally, they are under no obligation to offer alternative programs.

It is not easy for those who must meet the political magic of the "60,000,000 jobs" slogan to find an alternative program which is both sound and attractive. But one of their first objectives should be to avoid a posture of opposing the purpose as well as the methods of Mr. Wallace. It may well prove that the young Republicans have so far in this struggle laid a better groundwork than their leaders for a politically effective as well as an economically sound program.

A Member of Congress Looks at Congress

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. AUCHINCLOSS. Mr. Speaker, on Sunday, March 4, the New York Times Magazine published an article by our highly respected and beloved colleague, Hon. CHARLES A. EATON, dean of the congressional delegation from New Jersey, entitled "A Member of Congress Looks at Congress."

Affectionately known to all of us as "Doc," Mr. EATON has drawn from his years of experience in the Congress and his comprehensive knowledge of human nature to write this article as to what the Congress should do to make it a more effective branch of the Government.

Much has been written on this matter, but I venture to suggest that nothing has been written which is more human in its approach to the subject and makes more sense.

It is to be hoped that the committee having this matter in charge will bear Mr. EATON's suggestions in mind because they are practical and constructive.

The article follows:

A MEMBER OF CONGRESS LOOKS AT CONGRESS

(By CHARLES A. EATON, Member of Congress from New Jersey)

The Times has asked me to discuss the question: What is the matter with Congress? My point of view is that of a Member now in his twenty-first consecutive year of service.

This question is a hardy perennial. Since the memory of man runneth not to the contrary, it has troubled our intellectual elite and it has been the basis of hectic and usually inconclusive argument in every cracker-box forum where genuine grass-roots public opinion is shaped.

I believe that intelligent criticism of Congress and of all other governmental agencies is absolutely necessary if free self-government is to survive. But, traditionally, Congress has been singled out as a special whipping boy by our free and more or less intelligent citizenship. Through the press, over the radio and in public and private speech an endless barrage of fault finding is directed, in part against the institution itself but primarily against its membership.

Some of the fault finding is pertinent and justified by the facts. Much of it is silly and pointless, born out of that mental and moral vacuum in which is conceived an endless spawn of alleged witticisms and imitation cynicisms, to the discredit of every phase of our national life, public and private.

I am not sure that I can correctly diagnose the cause or causes of this persistent pilloring of Congress. It probably began in the Revolutionary period when the Continental Congress faced new and difficult tasks under a nebulous authority and when at best its national policies had to be tentative and uncertain.

There are personal and social considerations which may explain in part why normal and even subnormal American citizens select Congress as their favorite whipping boy.

In our scheme of life, Government is supposed to be the servant and not the master of the people. Since in our private relationships the word "servant" and all that it connotes is largely taboo, folks doubtless get a measure of relief for their suppressed feelings by shoving their public servants around and by exploiting the inadequacies and futilities of those governmental agencies in which and by which they are served.

It must be kept in mind that Congress is always representative of actively warring political parties and, in these enlightened times, is further bedeviled by an army of predatory groups who think and act only in terms of their own selfish advantage. It is inevitable that each of these power- and profit-hungry parties and groups should have few kind words for Members of Congress who refuse, as many do, to jump when they crack the whip.

The primary function of Congress under the Constitution is to make laws. With varying degrees of intelligence and succes, it has performed this service for 150 years. In making laws, whether good, bad, or indifferent, Congress not only discharges its constitutional duty but also responds to the ever-changing demands of public opinion and needs.

Every normal American citizen at some time in his life comes to believe that there "ought to be a law" implementing his pet personal grievance or political theory. This is probably why in our wonderful democratic way of life two of our major industries are the making and breaking of laws. How, indeed, could the free and equal citizens of our free democracy live their free lives in a climate of free disagreement and protest if they were not, at their own free behest, completely and continuously enmeshed in a labyrinth of mutually contradictory laws?

There always has been and doubtless always will be a measure of chronic confusion and inefficiency in the daily doings of Congress, due to the incessant and inevitable clash among its Members of personal and political ideals, objectives, and ambitions; aggravated by the limitations and frailties common to human nature, whether in or out of Congress.

While the heaving of verbal brickbats at Congress is probably useful and necessary in the practice of free self-government, it must not be forgotten that the Members of Congress, in character, ability, and patriotism, are representative of the people who elect them. Regardless of party labels they constitute a true cross section out of the upper and middle strata of our national life.

It is reassuring to note that in the Seventy-ninth Congress, as in practically our entire history, there is a small group of Representatives in both Houses and both major parties who, measured by experience, character, and intellectual ability, can fairly be classified as statesmen.

In contrast to this distinguished group, there occasionally sifts into the membership a slight sedimentary deposit of congenital crackpots and misfits. These political accidents are, of course, a veritable godsend to the professional cynic and purveyor of wisecracks.

Between these two extremes the membership of both houses and both parties is representative of that great middle class which has created and developed America, and in whose keeping lies its future progress and security. These representative men and women give all they have of ability and patriotic devotion to their job. Their acknowledged mistakes and failures are of the mind rather than of the heart. Under the stress and confusion of these tragic times they are occasionally stampeded into unwise decisions, just as are their constituents back home. But whether right or wrong as to their political judgments, in personal integrity and faithfulness to duty they need fear comparison with no other group in the Nation.

In this year of our Lord 1945 the question why American citizens take macabre satisfaction in lampooning their representatives in Congress is of minor importance. What is of vital concern to the country, and indeed to the world, is the fact that the present organization of Congress is inadequate for the job it has to do. Two main developments have created this situation.

First is the enormous expansion of authority, organization, and cost in the executive branch, which makes it imperative, if our three-pronged form of government is to continue, that Congress equip itself adequately to discharge its constitutional duty of direction and control over the horde of new administration agencies which it has created and for the constitutional operation of which it is responsible.

In the second place, it is increasingly evident that Congress, as now organized, cannot promptly and efficiently deal with those complex conditions, political, social, economic, and military, created by our new and rapidly expanding relationships with the rest of the world.

We are faced today with a menacing challenge to the very fundamentals of our constitutional form of free self-government. The storm center of this challenge is Congress. And Congress must meet this challenge with courage, constructive wisdom, and moral force if our American people are to retain in full vigor and authority the principles and ideals of their way of life.

This challenge is not American-made. It is born out of a world-wide movement, gaining momentum every hour, everywhere, which seeks to submerge the individual in the state; to transfer the lawmaking authority from the

legislative to the executive branch of government; to substitute a spurious economic security for personal and political freedom and to make a government by men rather than by law the master rather than the servant of the people.

In the closing days of the Seventy-eighth Congress a concurrent resolution was passed setting up a joint committee on organization. This committee is to be composed of 12 members, 6 from each House equally divided between the two major parties. It will, of course, receive all necessary support from the present Congress, to which it will make a report of its findings.

Under the resolution this committee is "to make a full and complete study of the organization and operation of the Congress of the United States and shall recommend improvements in such organization and operation with a view toward strengthening the Congress, simplifying its operations, improving its relationships with other branches of the United States Government, and enabling it better to meet its responsibilities under the Constitution. This study shall include, but shall not be limited to, the organization and operation of each House of the Congress; the relationship between the two Houses; the relationships between the Congress and other branches of the Government; the employment and remuneration of personnel by the Members and the committees of the Congress; and the structure of, and the relationships between, the various standing, special, and select committees of the Congress."

Congress, under the Constitution as the supreme lawmaking body, is the keystone in the arch of our constitutional system of government. Apart from explicit provisions of the Constitution, all legal authority originates in this representative body. The committee system is the workshop of Congress and it is at this point that the most urgent need of reorganization appears.

The first and most vitally important function of congressional committees is to filter out the enormous mass of bills and resolutions offered in large part under pressure, both private and public. In the Seventy-seventh Congress, from January 3, 1941, to December 16, 1942, 2,924 bills were introduced in the Senate and 7,869 in the House, a total of 10,793. In addition, 541 joint resolutions were introduced. Out of this flood of 11,334 the Seventy-seventh Congress passed 1,018 House bills and 476 Senate bills. It requires slight imagination to visualize the chaos and failure in our legislative process if this entire mass of bills and resolutions had been dumped upon the two bodies without previous study and selection.

In the Sixty-first Congress a total of 44,363 bills and resolutions were introduced. This is a record. Over a period of 150 years a total of 726,933 bills and resolutions were introduced in both Houses, of which astronomical number less than 8½ percent became law.

At the present time there are 42 standing committees of the Senate and 47 of the House which operate as a dike to prevent a flood of unnecessary legislation from submerging every landmark of social, economic, and political progress in the country at large. It is agreed by all students of the subject that the committee system of both houses must be completely overhauled. This would mean a reduction of their number to 10 or 15 in each body and a consolidation of committees dealing with lesser but related subjects into these main committees.

In view of the tremendous growth of administrative agencies in the executive branch, many of them clothed with law-making and enforcing authority, it is self-evident that congressional committees dealing with these agencies must be properly equipped in the way of legal and other necessary expert help. In the new set-up each of our Congressional committees ought to have a well-paid and thoroughly equipped staff of career advisers. The reason for this is simple. At present congressional committees have to depend largely upon the testimony of the very executive agencies for which they are responsible in preparing legislation covering these agencies.

Since following the trend of the times, government has thrust itself into the lives of our citizens to an extent never before imagined, and usually to the hurt of the citizens, it is inevitable that these citizens come to their representatives in Congress for relief. This has so increased the work of the Members of Congress that it is now necessary for every Congressional office to be equipped with properly paid assistants, at least one of whom should devote his entire time to dealing with problems created by governmental interference with affairs of the individual citizen.

All this means added expense but the total cost of the Congress of the United States at present amounts to around $13,000,000 while the annual cost of the Office of Indian Affairs, a small subsidiary of the Interior Department, is $27,000,000. We spend $33,000 a year for the important work of drafting legislation, while in the solicitor's office of the Department of Agriculture alone some 600 employees cost our Government $1,600,000 a year.

In the reorganization of our committee system the seniority question must be faced. While occasionally this long-tested method of advancement in committee work has been subject to abuse or failure, there seems to be no workable substitute for it. If advancement in committee position by seniority service is abandoned and these places of leadership are open to election either by the committee members or by the Members of the Congress at large, time and energy will be frittered away in an endless series of political contests resulting in disunity, dissatisfaction and general weakening in the processes of lawmaking.

While we are undertaking, in the terms of mechanics, to streamline Congress, there are fundamental questions growing out of changes in our national life which must receive consideration. First among these questions is the anomalous situation which gives to 96 Members of Congress final responsibility and authority in our foreign policy and relationships, and leaves 435 Members of Congress, who are elected in exactly the same manner, with the limited responsibility of money legislation connected with our foreign policy.

In the beginning the Senate was supposed to be made up of ambassadors from the governments of the sovereign States to the Central Government at Washington, while the House was to be directly representative of the people. When it was decided by constitutional amendment that Senators were to be chosen in the primaries and elected on exactly the same basis as Members of the House, Senators became, in fact, Congressmen at Large. It is this situation which has created the agitation for the implementation of treaties by a majority vote of both Houses rather than by a two-thirds vote of the Senate.

One other fundamental question of congressional reorganization is receiving increasing attention both in and out of Congress; that is the extension of the term of House Members from 2 years to possibly 4 or 6.

These questions are no longer academic. They involve the successful function of our representative system of government, and we may expect increasing agitation for constitutional amendments, lengthening the terms of Members of the House of Representatives and placing constitutional limits upon the length of service for future Presidents.

Whatever necessary improvements may be made in the physical organization of Congress, they will not of themselves amount to much unless the people continue to elect as their representatives men and women of invincible faith in the principles of our constitutional republican form of government, and who have the knowledge, wisdom, and courage to lead our country in assuming its proper place of influence and responsibility among the nations of the world while at the same time safeguarding and strengthening every American ideal and institution here at home.

Poland

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following letter which expresses the views of many of my constituents on the Polish situation:

MARCH 1, 1945.

The Honorable AIME J. FORAND,
House of Representatives,
Washington, D. C.

SIR: Assembled at a conference, February 20, 1945, at the chancery of the Right Reverend Joseph Lesniak, bishop of the eastern diocese of the Polish National Catholic Church, 44 Prospect Street, Springfield, Mass.

We, the American clergy of Polish descent, do hereby condemn as unjust and contrary to the spirit of the Atlantic Charter, the decision regarding the new partition of Poland, reached at Yalta.

We are convinced that this action will not aid nor will it bring lasting peace to the world, for injustice perpetrated upon one nation is an injustice to all humanity.

We, therefore, appeal to you to use your power and influence in counteracting the ignoble plan to partition Poland anew, thus destroying her great contribution in the common struggle for victory and justice.

We most respectfully ask that the United States Government take immediate steps to aid the starving people of Poland and assist in the rehabilitation of Polish war victims.

We pray that God, who rules over the destinies of men and nations, may inspire and direct you to do everything in your power that justice may prevail in the final settlement of the Polish question.

Very truly yours,
RT. REV. JOSEPH LESNIAK, *President.*
Very Rev. J. STOLTYSIAK, *Secretary.*
Rev. F. MIKLASZESKI.

WOONSOCKET, R. I.

Congressional Curb on Bureaucratic Rule

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. SCRIVNER. Mr. Speaker, one of the first remarks I heard after taking my seat in this body was a complaint about the manner in which the governmental boards, bureaus, and agencies

were exceeding the grants of power delegated to them. The complaint is heard today, with ever-increasing frequency.

These bureaus, the creatures of the legislature, read into statutes authorizations and powers which the Congress never intended they should exercise. The only curb or control over them at this time available to the Congress is the long, slow process of enacting a law to rescind unauthorized rules and regulations—a process which might conceivably require a two-thirds vote in each the Senate and the House. The bureaus in some instances now have arrogated unto themselves more power than the Congress that created them.

To keep at least a few of them in check—to "ride herd" on them so that they would keep within the limits of the law—I recently offered an amendment to the labor-draft bill. The amendment was defeated.

Mr. Speaker, I have sent the following self-explanatory letter and draft of a proposed plan to bring about a congressional curb on administrative rules and regulations to my colleague the gentleman from Oklahoma [Mr. MONRONEY] so that his committee might study the suggestion in connection with others relating to the organization of the Congress.

Mr. Speaker, by the adoption of this plan and incorporating it as an amendment in future measures granting powers to executive agencies the Congress can regain and retain control over the bureaucracy which appears to be making rapid strides in displacing the Congress as the legislative branch of this Government—a constitutional representative republic.

Hon. A. S. MIKE MONRONEY,
Vice Chairman, Joint Committee on the Organization of Congress, House of Representatives, Washington, D. C.

DEAR MR. MONRONEY: In connection with our recent discussion of suggestions for improving the functions of the Congress, there is attached a draft outlining the plan mentioned to provide at least one means by which Congress can effectively curb and control the agencies and bureaus of its creation. I am convinced, as I hope your committee will be, that this plan, if adopted, will meet the situations that may arise, for which no adequate remedy seems now to be available.

This Nation of ours finds itself governed, not so much by laws enacted by the elected representatives of the people as by rules, regulations, and orders issued by men—men in myriad agencies, boards, and bureaus who have no responsibility to the electors of the Nation. This condition apparently has arisen because of expediency, indecision, haste, and possibly the lethargy of the Congress—a Congress which, if it has not abrogated much of its power, has in the past at least delegated too much of it to too many bureaus.

In fact, the output of our legislative mill is vastly exceeded by the volume of rules, regulations, orders, and decrees of numerous executive agencies; many of which, so the Supreme Court says, have the force and effect of laws—laws that Congress had neither voice in making nor knowledge of until after their promulgation.

Many of these regulations, we well know, are not in conformity with the spirit or the purpose of the statute which created the issuing agency. Almost daily our attention is called to some rule going far beyond, or narrowing, the scope of the enabling act. Some of these agencies have not only exceeded the power given or intended to be exercised, but have, upon too frequent occasions, made unusual or unexpected uses of the power brought into being and placed in their hands by the Congress.

This proposed procedure was offered as an amendment to the labor draft bill recently before the House, and further comments relating thereto may be found on page 740 of the CONGRESSIONAL RECORD of February 1, 1945; and on pages 7067–7070 of the RECORD of August 17, 1944, when a similar amendment was offered to the surplus property bill.

You will note that the gist of this idea is to refer proposed rules and regulations back to the committee which handled the original legislation, for that committee's approval or rejection. If each of these committees is provided with additional help most, if not all, of the objections raised against this amendment will be eliminated.

There is no pretense on my part that the language used in this draft is perfect. Undoubtedly your committee, with its rich background of experience, can and will improve the verbal construction and smooth the details of procedure so that a more perfect plan to accomplish the purpose intended will be developed.

Thanking you for your interest, patience, and courteous consideration, I am

Sincerely yours,

ERRETT P. SCRIVNER.

LEGISLATIVE CONTROL OF ADMINISTRATIVE REGULATIONS

Before any proposed regulation or order to be prescribed under this act by any governmental agency exercising powers granted herein or authority conferred hereunder, other than intraagency administrative rules or orders governing the conduct of its activities or interagency rules governing relations with other agencies of the Government, shall issue, a draft thereof shall be submitted to the President of the Senate for the Senate of the United States and to the Speaker of the House for the House of Representatives.

The draft of such proposed regulation or order shall be immediately assigned to the Committees on Military Affairs of the Senate and of the House of Representatives, respectively, for study to consider whether such rule or regulation is made in conformity with the spirit, letter, intent and purpose of this act, and that no unusual or unexpected use of powers herein granted is proposed. Such regulation or order may be effective upon approval by the Committee on Military Affairs of either the Senate or the House of Representatives, or a duly authorized subcommittee of either, or, unless previously disapproved, may go into effect not earlier than the fifteenth day following, but not including, the date of the receipt of the draft of such proposed regulation or order by the President of the Senate and the Speaker of the House of Representatives.

For the purposes of this act the Committees on Military Affairs of the Senate and of the House of Representatives, or any duly authorized subcommittee thereof, are authorized to sit and act during the sessions, recesses, and adjourned periods of the Congress.

The Tragedy of Yalta

EXTENSION OF REMARKS

OF

HON. THAD F. WASIELEWSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. WASIELEWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the United States News of March 2, 1945:

THE TRAGEDY OF YALTA

(By David Lawrence)

The defeat which America suffered at Yalta was more than a surrender to expediency by the President.

It was a defeat for American leadership at home, too—in Congress and in the press and on the radio.

Last week Americans were beginnng to rationalize the Polish boundary dispute. After all, some writers asked, wasn't this one-third of Poland taken by force originally from Russia many years ago, and wasn't the Curzon line the boundary that some of our own experts worked out more than a quarter of a century ago at the last peace conference, and didn't Russia lose out because she was weak in 1919 and had made a separate peace with Germany?

Also, even if the matter had been left to the decision of a tribunal at the end of this war, wouldn't Russia's claims have been recognized and the result the same?

Let's apply that method of rationalization to a simple proposition of justice as it relates to that occasional outburst of ours called lynching. Have we not heard it argued that the Negro was guilty and that if he had been tried by a court he would have been convicted and hanged anyhow? And aren't courts of justice too slow?

We had been told—and the young men who are fighting this war have been told—that this is a war to bring about a new reign of international law, a new order in the world, a system of justice.

But, instead, Poland has been lynched and most of the comments would indicate that American opinion in large part agrees the lynching was all right, and that the affair would have ended the same way anyway if it had been left to the peace conference. And besides, it is remarked with comfortable cynicism, what difference do a few square miles of Polish territory make to us if it makes Stalin happy? Little thought apparently is given to the fact that Poland is supposed to annex some German territory and create a new Alsace-Lorraine for World War No. 3.

It is our first major test. If we continue to appease and appease and play the game of expediency, we will find in the end that the price gets higher all the time. Didn't we rationalize as to Munich in 1938 that after all Hitler should have the Sudeten because there was a big German population in Czechoslovakia?

Let us examine the record before Yalta and see how the game of power politics works. The story goes back to Teheran. Here is the realistic chronology as it can be deduced from the files of the New York Times:

December 1943: Mr. Churchill at the Teheran Conference of the Big Three raises the question of the future of Poland. Stalin demands the Curzon line, Mr. Roosevelt is so informed. The world is told afterwards no agreements, secret pledges or partition of territory were consummated.

October 1944: Churchill and Eden go to Moscow and Stalin demands that the Polish question be settled before the peace conference is held. The American Ambassador is present at nearly all the talks.

December 15, 1944: Churchill tells the House of Commons he has decided to make an exception and not wait until the peace conference to settle the Polish question, and he reveals publicly that he has agreed with Stalin. He warns the Polish Government in exile to accept now or the price will be higher later on. Mr. Stalin must be appeased, he says in effect, and he betrays irritation that Mr. Roosevelt has not come through with his end of the appeasement.

December 16, 1944: President William Green of the American Federation of Labor

says he hopes America will say "No" to Churchill's plan to redraw Poland.

December 17, 1944: A New York Times dispatch from London says that Churchill made a secret deal at Teheran and Roosevelt was neutral, and adds:

"It is quite clear now that, in Teheran (December 1943), Mr. Churchill and Premier Stalin divided Europe into spheres of British and Russian influence. Stalin would not agree to coordinate the Red Army's operations with those of his western allies until he had definite assurance that Britain would support Russia's claim to Polish territory as far west as the Curzon line."

December 17, 1944: The Army and Navy Journal in Washington calls for an offensive through Poland by Russia, and Pravda denounces this publication as "a source for pro-Hitlerite propaganda," but many military men in Washington agree that Russia is stalling in order to force the hands of Churchill and Roosevelt.

December 18, 1944: The State Department issues a statement paving the way for the surrender to Stalin at Yalta. The statement says America has felt the Polish boundaries should be left to the peace conference at the end of the war but that if "a mutual agreement is reached by the United Nations directly concerned, this Government would have no objection to such an agreement." This is a tip-off that if Stalin can put across his puppet government through the Lublin committee, the United States can be counted on to approve the ultimate recognition of some sort of Lublin government, modified, of course, to make it appear national.

December 19, 1944: The Nazi offensive is costing tens of thousands of American casualties on the western front as Germany, knowing that Stalin has been stalling, takes advantage of the lull on the eastern front.

December 19, 1944: A wave of criticism of Churchill sweeps the United States. The New York Times refers to the Churchill proposal on Poland editorially:

"It must be admitted frankly that this is not the way border problems were to be settled, under the terms of the Atlantic Charter. This is not an idealistic settlement made in 'accord with the freely expressed wishes of the people concerned' * * *. We invite the attention of the Russian Government to the hazards of making decisions in a coalition war on the basis of unilateral action. This is isolationism. It engenders isolationism in others."

The Times says bluntly also that agreement on the Curzon Line is apparently to be the go ahead signal for a resumption of the battle in the east.

December 19, 1944: Teamwork by President Roosevelt, who backs up Churchill's "lapse of memory" statement. Churchill in his December 15 speech had said that "it must not be forgotten that words are inserted in the Atlantic Charter, 'No changes before the peace table, except changes mutually agreed.'" Mr. Churchill next day said he was mistaken and that the words he quoted were somewhere in one of Mr. Hull's speeches. Anyway, Mr. Roosevelt now helps out by saying to a press conference that the Atlantic Charter was just a bunch of scribbled notes anyway and not a formal, signed document.

December 21, 1944: Stalin sees his way out. Dispatches announce from London that Stalin is to install the Lublin Committee as the government of Poland.

January 12, 1945: Stalin apparently decides he is tired of waiting for the concurrence of Mr. Roosevelt and that, since he has Mr. Churchill's backing, the Russians can resume their offensive and take the matter of a provisional government in their own hands.

February 1945: Mr. Roosevelt agrees at Yalta to the dismemberment of the territory of an ally—Poland.

That's the main sketch of the tragedy, but in that December 15, 1944, speech of Mr. Churchill to the House of Commons, he said:

"The President is aware of everything that has passed and of what is in the minds of the Russians and British."

It looks as if Mr. Roosevelt must have known all the time that the Atlantic Charter pledge was being torn to pieces. He was maneuvering for a way out. The Yalta communique, in effect, said that what had been wrong as a unilateral action was now all right. It was a confirmation of lynch law in international affairs. High-sounding phrases about military coordination plus the summoning of the United Nations meeting at San Francisco were all counted as a smokescreen to becloud the fiasco at Yalta.

But some people have asked, "What would you have done about it—gone to war with Russia?" Alas, that's the familiar cry of those who lose courage and falter where principle is at stake.

No; we need not have gone to war with Russia, but sooner or later appeasement must end, and Yalta was the place to end it. Russia would have respected us for it and a mere deferment of the Polish question to the peace conference—or its adjudication even before that time by a special international commission at which all interests, including those of Poland, could be heard, and the United Nations could sit in judgment—would never have caused a break in the present alliance between Russia, Britain, and the United States. If this partnership is founded on any such frail basis, then, indeed, we are in for trouble ahead and we must appease and appease and appease.

After all, America's military might has not been such an insignificant contribution to Russia. Our tanks, our planes, our ammunition, and our resources have been at the disposal of Stalin. He needs them, and he cannot conquer Germany without us.

We simply have been outmaneuvered and outbluffed and we on this side of the Atlantic already have begun to sacrifice our ideals and principles down the long painful road of rationalized surrender.

There's a way to save our souls and that's at San Francisco, where machinery must be inserted definitely pledging to give American guaranties only if there is review of interim agreements. The people of the United States should be asked to back up only those settlements which are in accord with the principles and the formula set forth by the Atlantic Charter.

The Nurses' Draft

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

THE ABBOTT HOSPITAL AND
JANNEY CHILDREN'S HOSPITAL,
Minneapolis, February 27, 1945.

The Honorable WALTER H. JUDD,
House of Representatives,
Washington, D. C.

DEAR DR. JUDD: The May bill, if passed in its present form, would create a very serious problem for all the hospitals and civilians of the United States of America.

The hospitals recognize that nurses must be provided to care for the armed forces, and we have endeavored to cooperate to the limit of our ability by joining with the Federal Government in training as many nurses as possible through the Nurse Cadet Corps. When these young women were recruited, they were assured by the Surgeon General's office that they would not be obligated to join the armed forces. The proposed bill violates this promise and is unfair for it limits the conscription of women to nurses only. The nurses would have no objections if all women 18 years old or over were conscripted. Then we would be able to secure adequate nurse cadet students who would be available for the armed forces upon the completion of their course.

Immediately when this bill was proposed to draft nurses as privates, a large number of our graduate nurses were stampeded into signing up while they could still get commissions as second lieutenants. Since the publicity of this proposed bill all the hospitals have received very few applications for the Nurse Cadet Corps which creates a serious situation in the civilian hospitals. Unless we can secure cadet nurses, the potential supply for the armed forces will be seriously curtailed.

The proposed bill excludes married nurses. A large number of the cadet nurse students who have graduated are now married, and if they have no children, they should certainly be included if the draft bill is necessary.

If the draft bill is passed, consideration should be given to the States who have recruited a large percentage of their quotas of nurses. As you know, Minnesota has supplied a large number of both doctors and nurses to the armed forces. This State would be at a serious disadvantage if the recruitment of the number of nurses already supplied the armed forces from this area were not taken into consideration.

The nurses' procurement and assignment committee has done an outstanding piece of work in this State. They feel deeply offended that in the present recruitment the Red Cross was assigned the task of securing as many graduate nurses as possible without consulting the local nurses' procurement and assignment committee.

The Federal Government has spent considerable sums of money to recruit WAC's, WAVES, SPARS, and other women's groups, but very little organized effort has been made to recruit graduate nurses until just recently.

The nurses and hospitals wonder if the Army and Navy have used as much lay help as possible in caring for many of the duties performed by nurses.

The hospitals sincerely hope that if draft boards are to be established for considering deferments of nurses, qualified hospital people will be appointed to represent the interests of civilians requiring hospital care.

Yours sincerely,
ABBOTT HOSPITAL,
VICTOR M. ANDERSON, *Administrator.*

American Chapter Religious Emergency Council of the Chief Rabbi of Great Britain

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 19, 1945

Mr. CELLER. Mr. Speaker, at the annual meeting of the American Chapter, Religious Emergency Council of the Chief Rabbi of Great Britain, held at 55 Leonard Street, New York City, Mr. Moses

Schonfeld, the honorary secretary, reported on the past 5 years' activities of the Chapter and its parent body in Britain as follows:

He stated that the Religious Emergency Council is a recognized agency for religious and welfare activities for men of the Jewish faith in the Allied Armed Forces in Britain. It ministers also to the religious needs of refugees and bombed-out evacuees. It is registered under the British War Charities Act of 1940, as organized for the following purpose: "To provide religious facilities for observant Jews and Jewesses and to maintain and care for needy persons coming within the category of religious officers and their dependents." As a member of the standing conference of the Council of British Societies for Relief Abroad, the council is planning the religious reconstruction of liberated Jewish communities in Europe.

The American chapter was established in 1940, by a volunteer group of Americans, without any paid staff, to provide additional aid to the increased war activities of the British Chief Rabbi's Religious Emergency Council. The American Chapter raises its funds through the sale of books, publications, and through special drives. Among the books the chapter has published are the following:

First. The Mark of the Swastika, edited by Herman Appelman and Moses Schonfeld, containing extracts in English and Yiddish from the British War Blue Book, together with the white paper on the treatment of German nationals in Germany.

Second. Testament to Democracy, the last creative writing of the late Colonel the Right Honorable Lord Josiah C. Wedgwood. Containing a foreword by Prime Minister Winston Churchill; the work is a classic contribution to parliamentary procedures and a guide for those interested in the shape of the post-war world.

Third. Nutrition Problems in Relief and Rehabilitation, by Moses Schonfeld, prepared in connection with the Columbia University program of training in international administration.

Fourth. The Old and New World in Commoncause, by Col. Josiah C. Wedgwood, member of Parliament, expounding close Anglo-American relations.

The cost of producing all these documents was donated by Mr. Arthur I. LeVine, president of the chapter and president of Ad Press, Ltd., New York. The proceeds from the sale of these books have been allocated by the Chapter for the emergency work of the Chief Rabbi's Council.

For 5 years, 1938–44, the Chief Rabbi's Religious Emergency Council has been dealing, on behalf of the chief rabbi, with practical religious problems arising during the present emergency.

The Chief Rabbi's Religious Emergency Council includes the following departments: Rescue and Refugees' Maintenance; Jewish Soldiers' Religious Welfare Committee; Jewish Servicemen's Passover Service; Assistance of Needy Clergy and War Victims; Office for Jewish Rededication and Religious Propaganda; Religious Department for Jewish Refugees; Department for Post-War Religious Reconstruction; American Chapter of the Chief Rabbi's Religious Emergency Council, New York; Canadian Chapter of the Chief Rabbi's Religious Emergency Council (Toronto and Montreal); the council is associated with the United Jewish Relief Appeal and with the Jewish Committee for Relief Abroad; the council maintains the Passover activities of the Chief Rabbi's Kosher Canteen Committee; the council is a member of the Standing Conference of the Council of British Societies for Relief Abroad.

During the first 5 years of its existence, the Chief Rabbi's Religious Emergency Council has:

Brought over to England, placed and cared for 300 children. Brought out from Germany, Austria, Czechoslovakia, and so forth, 1,300 souls.

Participated in organizing the religious welfare of all Jewish refugee children in the country.

Obtained permits and enrolled in colleges in England over 200 students.

Arranged for the admission to Palestine of a number of rabbis and their families and many students.

Obtained the release from internment of over 1,000 persons.

Provided Passover needs to 20,000 Jewish men serving in H. M. and Allied forces.

Provided regular fortnightly parcels, totaling over 10,000, to hundreds of observant servicemen.

Assisted with regular grants, 150 needy rabbis and ministers in England, mainly those who have suffered as a result of war conditions.

Distributed 5,000 books and pamphlets on Jewish religious subjects among soldiers, evacuees, war workers, and refugees. Provided religious requisites, tephillin, prayer books, and so forth, to hundreds of children and adults, including Jewish soldiers.

Expended over $200,000 in direct relief.

Supported and supervised three yeshivah, six hostels, and five canteens.

Placed 400 individuals in suitable employment with facilities for Sabbath observance.

Assisted in the establishment of many Passover centers for evacuated Jewish children and for Jewish servicemen.

Arranged 25 broadcasts at home and overseas on Jewish religious subjects.

Maintained the National Council for Jewish Religious Education's activities and its educational publications.

Imported and distributed lulovim and esrogim for the requirements of all Jewish communities in the United Kingdom.

Supported the training and holiday camps of the Mizrachi and Agudah.

Supported youth activities of 25 clubs and societies.

Arranged for official provision of kosher food supplies for post-war Europe.

Collected 20,000 food packets for post-war relief.

Enrolled ministers for European relief work.

Organized the Mauritius rescue scheme by means of which hundreds of souls are being saved from Nazi murderers.

Expended over $400,000 on the above tasks.

In addition to the maintenance of the above activities, the council is now engaged on the collection of religious requisites—Sifrei Torah, tephillin, mezuzos, prayer books, Chumoshim, shechitah, and milah instruments, and so forth—for the reconstruction of Jewish Kehilla life in post-war Europe.

The council is taking a major part in reviving spiritual life in the liberated communities of Europe. It is a comprehensive plan for post-war religious reconstruction, has been submitted to U. N. R. R. A. and to the United Nations governmental authorities. The program covers Jewish civilian and military needs, particularly communal feeding, and the requests for foods prepared in accordance with dietary laws. To meet the needs of undernourished Jews in liberated countries the council has built up a stock of kosher canned foods.

Dr. Hertz, who is a recognized spiritual leader in the English speaking world, heads these activities, which encompass the rebuilding of schools and places of worship. His council has initiated the Synagogue Ambulance Plan, whereby several vehicles have been equipped for the use of Jewish army chaplains, in the Allied front lines, and also for liberated Jewish communities throughout Europe.

Large numbers of prominent scholars and rabbis, rescued from Europe are dependent on the council, and this year thousands of additional troops, fighting under all the flags of the United Nations, will receive spiritual and physical comforts.

Among the prominent sponsors of the various projects the American chapter has initiated are Miss Dorothy Thompson, Mrs. Mary Fels, Mrs. A. George de Mille, Miss Agnes de Mille, Secretary of the Interior the Honorable Harold L. Ickes, the Honorable Jan Masaryk, Vice Premier in the Czechoslovak Government, Sir Norman Angell, Pierre Van Paassen, Dr. Frank Kingdon, Rex Stout, Max Zaritsky, Dr. David De Sola Pool, Lady Wedgwood of Barlaston, Dr. Stephen S. Wise.

Soil Conservation

EXTENSION OF REMARKS

OF

HON. CARTER MANASCO

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. MANASCO. Mr. Speaker, during these trying times we are prone to overlook many groups and many helpful services that are contributing to the winning of the war.

Immediately after the conclusion of World War No. 1, the farmers of our country found themselves heavily in debt with dwindling prices for their commodities and dwindling markets. The unfortunate plight of the farmer until 1938 is too fresh in our minds to require any discussion.

In 1933 Congress and the administration initiated steps to relieve the deplorable condition of our farmers. The Agricultural Adjustment Act was passed in an effort to bring agriculture out of economic chaos and establish it on a sound basis. All agreed that the Agricultural Adjustment Act was stopgap legislation and could not accomplish everything desired. When the Supreme Court declared the Agricultural Adjustment Act unconstitutional, a great wave of pessimism swept throughout the agricultural areas. Fortunately, means were found to get around the decision of the Supreme Court. The soil-conservation program is the direct result of this adverse decision of the Supreme Court. To my way of thinking, the soil-conservation program has done more to put agriculture on a sound economic basis than all the other programs attempted by this or any other administration.

We Americans had not been conservation-minded. Until two or three decades ago, when land wore out, we could clear new land, but that day has passed, and through necessity we had to learn to rebuild worn-out soil. Until we learned this, farmers in large areas throughout the country were living in economic slavery. Many of them were not able to supply their own families with sufficient food to keep their health.

This war should convince anyone of the necessity of having a healthy agriculture. It has been truthfully said that no army can fight on an empty stomach; and thanks to the soil conservation program and the extra efforts of our farmers, our armed forces today are better fed than any of our allies. Our farmers have also made it possible to ship millions of tons of food and fiber to our allies. They have done this with 30 percent less labor than we had on the farm in 1930. They have done this without adequate equipment. We have recognized the production efforts of our factories by awarding Army and Navy E's. Without taking away any of the credit due to labor and management in our magnificent production record in munitions and matériel, it can be pointed out that our armament makers have been able to secure all the necessary machine tools and equipment to produce war matériel. They have been favored with the aid of every Government agency in obtaining labor. The farmers of our country today are producing 30 percent more food and fiber under great handicaps than were produced in 1930. They have done this without fanfare or publicity.

A large amount of credit for this enormous production under adverse circumstances should be given to the soil-building program. Without the increased yield per acre resulting from our soil-building program, we would not be able to ship 1 ton of food to our allies. We would not be able to supply the American workers with an adequate diet.

Some people look on the soil-conservation program as a raid on our Treasury by the farmers of this country. Those same people would raise the greatest howl if they failed to have food on their tables. Those same people are willing to tax themselves to build highways, inland waterways, and other public works, and I know that if they realize the benefits they are obtaining from the soil-building program, they would gladly support a program doubling the amount of payments that are now being made under the soil-conservation program.

It was a hard task to sell our farmers on this program, but they are now unanimous in their support.

I am including in my remarks an article that appeared in the Southern Democrat, of Oneonta, Ala., by Dr. J. S. Wittmeier, judge of probate of Blount County:

SOIL CONSERVATION—THE DISTRICT SOIL-CONSERVATION PROGRAM IN BLOUNT COUNTY

(By Dr. J. S. Wittmeier, judge of probate)

For many years as a business and professional man in Blount County, I have seen water dissolve the rich topsoil, starting sheet washing and finger erosion, making gullies, which carry the water off too rapidly, carrying away our good earth, causing floods, then droughts, resulting in poor, thin, barren, unhospitable land, which is reflected in the lives of both man and beast.

The waters that wash away the earth cream of Blount County, subtract customers from the stores of its merchants, reduce the amount of public revenue, and increase the cost of maintaining public roads and other utilities. It is being reflected in the lives of communities, which is shown by decadent churches and ill-kept graveyards.

If the living conditions of the farms of Blount County are to be improved, it will be because the land will support a better living. The main farm problem is the problem of land conservation, land improvement, and organizing a feed- and forage-production program. This problem can be met by intelligent farm planting and the carrying out of these plans.

It is obvious that the percentage of row crops must be minimized, and the acreage of kudzu, sericea, crotalaria, grasses, clovers, small grains, and lespedeza must be increased if the fertility of the soil is to be improved. It is certain that if the soils are to be improved, it will be done as the result of a planned program and considerable effort on the part of the farm operators. Every farmer should take advantage of existing agricultural agencies, set up for the purpose of land conservation and land improvement and work out a system of soil and crop management that not only will maintain but will increase the fertility of the soil.

Although it has only been a few years that we have had a planned soil-conservation program for the county, I can see definite improvement of farms, farmers, and communities, which have taken advantage of this program and have instituted practices for controlling erosion and establishing crops and methods for the improvement of their farms.

I have seen and talked with farmers in communities where the soil-conservation district program is being practiced and find that farming the conservation way pays. I know of land being reclaimed with kudzu and sericea. I know of other farmers who have practically doubled their yields of crops by following a systematic method of soil improvement by use of both summer and winter legumes and a well-established system of terraces. I have seen livestock grazing green fields of crimson clover, small grain, and other winter crops and making practical gains in beef, pork, and milk with very little additional feed. I know of farmers practicing strip cropping to a good advantage, thus saving and improving their soils. I have been on farms where no soil or water could leave the farm without first going over wide bands of sericea and other deep-rooted crops which silt out and save all the soil. These farmers, cooperating with the north central soil-conservation district, have proven that erosion can be controlled and soils can be improved, which will result in an improved living condition on the farms of Blount County.

Twenty-Million-Dollar Nylon Plant To Be Built by Du Pont

EXTENSION OF REMARKS

OF

HON. PHILIP A. TRAYNOR

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. TRAYNOR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newspaper article:

TWENTY-MILLION-DOLLAR NYLON UNIT TO BE BUILT BY DU PONT—TEXAS PLANT TO INCREASE PRODUCTION FOR MILITARY PURPOSES

The Du Pont Co. will begin construction immediately of a new nylon plant, to cost $20,000,000, near Orange, Tex., it was announced Saturday.

The company said Texas production of the ingredients of nylon, manufactured by an intricate chemical process, would begin in 12 months.

The plant will increase nylon production for military purposes at the request of the Government. The nylon salt produced will be converted into flake and yarn at Seaford and Martinsville, W. Va., where facilities will be increased to handle the added basic material.

The plant will be built on a 1,000-acre tract adjacent to the Sabine River in southeast Texas, about 3 miles south of Orange, and is to be designated as the Sabine River Works.

First New Dealer Born in Germany

EXTENSION OF REMARKS

OF

HON. WILLIAM R. THOM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 5, 1945

Mr. THOM. Mr. Speaker, under leave to extend my remarks, I am reprinting an Associated Press dispatch from Germany, as follows:

WITH THE THIRD ARMY IN GERMANY, March 2.—A frantic German and his wife sought the aid of the Third Army yesterday and the old rule against fraternizing with the enemy went by the boards.

In fact, Capts. Alfred Hartmann, Malone, N. Y., and Elwyn Akers, St. Louis, spent 4 hours with the couple and when it was over a 7½-pound boy had been ushered into the world to the accompaniment of heavy artillery fire.

The grateful parents named the baby Franklin Delano Ludwig.

Bretton Woods Puzzle

EXTENSION OF REMARKS
OF
HON. FREDERICK C. SMITH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. SMITH of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a letter which appeared in the New York Times, March 4, 1945, written by Mr. Robert Boothby, a Member of the House of Commons.

The contents of this letter indicate that there are responsible persons in the British Government who see the danger to their country in the adoption of the Bretton Woods agreement.

Mr. Boothby has given careful consideration to some very important implications that would be involved by the adoption of this international monetary proposal. He expresses what I have repeatedly said, that the sound thinking people in England who have examined this scheme must feel as many of us do in this country—that it is just as likely to damage them as it is us.

It is to be hoped that those people in the United States who are so enthusiastically promoting this scheme will give consideration to the sagacious thinking expressed in this letter:

BRETTON WOODS PUZZLE—BRITON SEEKS CLARIFICATION OF THE FINAL ACT OBSCURITIES

To the EDITOR OF THE NEW YORK TIMES:

It would clearly be improper for me, as a British Member of Parliament, to discuss the merits or demerits of the Bretton Woods agreement in this country while it is under consideration by Congress.

There are, however, certain major obscurities in the final act which ought to be cleared up, in the interests of all concerned, before any irrevocable decisions are taken on either side of the Atlantic.

First of all, does it, or does it not, mean that the participating countries must apply the principle of nondiscrimination to international trade? Lord Keynes has assured us, in a letter to the Times of London, that voluntary trade agreements for reciprocal transactions between two countries will be permissible. But his letter was instantly contradicted by an American correspondent, and the point—a vital one—has never been clarified.

Secondly, does it put an end to the sterling area? Again we have been assured that it does not. But the maintenance of a sterling area after the war must involve restrictions on the movement of capital outside the area, and free convertibility of currency within it. Would not this in fact constitute a "discriminatory currency arrangement," which, beyond a comparatively brief transitional period, is categorically prohibited in the final act?

ASSUMPTION QUESTIONED

Thirdly, it is widely assumed that the proposed fund will insure stability of exchange rates, apart from certain clearly defined exceptions. But is this assumption justified? Article IV 4 (a) states: "Each member undertakes to collaborate with the fund to promote exchange stability, to maintain orderly exchange arrangements with other members, and to avoid competitive exchange alterations."

Does this mean that each member undertakes to maintain its currency at the agreed par value with gold or United States dollars, and thereby with each other currency? If it does mean this, it would have been easy to say so, although it would then have been less easy to persuade the British public that the scheme does not involve a return to the gold standard.

If it does not mean this, there would appear to be no provision to maintain par values. Under article IV 4 (b), each country undertakes to outlaw dealings except at par rates in other members' currencies. But this provision is not universal.

The text continues: "A member whose monetary authorities, for the settlement of international transactions, in fact freely buy and sell gold within the limits prescribed by the fund * * * shall be deemed to be fulfilling this undertaking."

There would therefore be at least one important market, New York, in which currencies could be freely dealt in at rates which would be illegal in London and other centers. The situation thus produced would be utterly fantastic, and can surely not have been intended by the authors of the scheme. We really ought to know how they propose to deal with it.

FUND OR BANK—WHICH?

One final point. Article VIII (4) requires each member country to buy balances of its currency held by another member country (presumably at par) if these balances have arisen through current transactions, but not if they have arisen through capital transactions. Article VI permits, but does not enjoin, control of capital movements and definitely prohibits the use of the fund's resources to meet a capital outflow from a member country.

Suppose a country has, simultaneously, a capital outflow, and a deficit on income account. She is not allowed to use the fund to check the former. She is apparently obliged to use the fund up to the limit of her quota to prevent any depreciation of her currency caused by the latter, although, under article V (8), she may be subjected to penal charges for doing so. What, precisely, are her obligations in this situation? It is one that is not unlikely to arise.

To ask these questions is to ask no more than that we should have some idea of what we are doing before we commit ourselves finally to the fund as opposed to the bank, for which there seems to be general approval. Nothing could be more deleterious to the future of Anglo-American relations than that the two countries should sign an agreement, each thinking that it means something quite different. And, in its present form, the final act of Bretton Woods provides ample scope for such a misunderstanding.

ROBERT BOOTHBY.

NEW YORK, *March 2, 1945.*

The Bretton Woods Issue

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, February 23, 1945

Mr. GAMBLE. Mr. Speaker, under leave granted me on February 23 to insert several articles and editorials in the CONGRESSIONAL RECORD, I submit an editorial which appeared in the New York Herald Tribune titled "The Bretton Woods Issue":

THE BRETTON WOODS ISSUE

There is a disturbing accumulation of evidence that the administration is determined to employ the most ruthless strong-arm tactics to drive through Congress without alteration the so-called Bretton Woods program, on which hearings are scheduled to begin this week before the House Ways and Means Committee.

For some time past there have been reports that sponsors of this legislation have boasted that they had "greased the wheels" to slide the measure through. Events have shown that such reports were not without foundation. When the House was being reorganized in January, membership of the Banking and Currency Committee, according to George B. Bryant, Jr., Washington correspondent of the Wall Street Journal, in a recent dispatch in that newspaper, was selected with unusual care. The five Democratic vacancies on this committee—which will have much to say about continuing New Deal financial and economical controls, in addition to its international financial plans—were filled with Democrats of the New Deal school, and it was then expanded to include two more. This new committee, which the administration refers to as "streamlined," and Republicans as "stacked," had its trial test a month ago on the George bill, and for the first time in recent years the Democratic members voted as a unit in opposition to a Republican-sponsored measure. Next, when the Wagner-Spence bill, designed to give legislative effect to the Bretton Woods program, was introduced it was revealed that it proposed to finance the initial needs of the monetary fund from the so-called "gold profits" in the present stabilization fund. Critics of this procedure interpret it as a device for bypassing the Appropriations Committee.

But a more insidious weapon than any of these is the studied effort on the part of the administration to tie the issue of all-or-none acceptance of the Treasury program with the issue of isolation. The theme is constantly reiterated that, as Dean Acheson, of the State Department, put it before representatives of 104 national organizations invited to Washington for a pep talk by the Treasury on Wednesday, other nations "would be chilled toward Dumbarton Oaks" if the Bretton Woods "proposals for international cooperation in the financial field" are rejected.

It would be a grave error of Republican leadership to permit itself to be maneuvered into a false position before the public on this measure, for the issue of isolationism here is a synthetic one, created for purely political purposes. The $18,000,000,000 financial set-up, which is conveniently referred to as the Bretton Woods program, did not emanate with that conference, nor was it drawn up under any authorization from Congress. It was developed out of plans produced by Lord Keynes and associates on behalf of the British Treasury and Dr. Harry White and others acting for our Treasury and as presented at Bretton Woods represented a tentative agreement among unnamed technical experts of 30 nations. Discussions at Bretton Woods were confined rigidly to this joint statement of principles, and no attempt was made to explore other proposals. Largely because of this limitation on discussion, the delegates were not authorized to bind their respective governments. Lord Keynes himself made this unequivocally clear when he declared:

"We (the British delegation), in common with other delegations, reserve the opinion of our Government on the document as a whole and on every part of it. * * * We do not even recommend our Governments to adopt the result. We merely submit it for what it is worth to the attention of the legislators concerned."

In other words, the so-called Bretton Woods program was never intended as anything but a starting point for legislative action to achieve the objectives it seeks. It is a complete distortion of the facts to imply that any modification of that agreement could be construed as in any sense a repudiation of the achievements of Dumbarton Oaks.

Federal Debt Limitation

EXTENSION OF REMARKS
OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am inserting the history, or rather a brief review, of past legislation relating to Federal debt and the limitations placed upon it from time to time from 1917 to 1945:

FEDERAL DEBT LIMITATION—A REVIEW OF PAST LEGISLATION 1917 TO 1945

Prior to the enactment of the Second Liberty Loan Act of 1917 (40 Stat. 288), each issue of United States bonds, notes or other obligations carried its own authorized face value limitation. No provision was made for a combined, aggregate limitation covering all types of securities issued by the Government. In other words, there was no over-all ceiling on the borrowing authority of the Secretary of the Treasury or of any other Government agency.

With the advent of war in 1917, bringing with it a greater need for Federal funds, increased borrowings were inevitable and the consolidation of borrowing limitations into a single over-all amount became imperative. Accordingly, in the Second Liberty Loan Act, approved September 24, 1917, all prior specific limitations were lumped into a face value limitation for the several types of securities to be issued, as follows:

Bonds, under sec. 1, including bonds previously authorized	$7,538,945,460
Bonds authorized under the First Liberty Loan Act, issued or offered	2,000,000,000
1-year certificates under section 5, and 3½ percent 5-year certificates authorized under sec. 6 of the First Liberty Loan Act. Combined authorization for both	4,000,000,000
51-year War Savings certificates under sec. 6 of the Second Liberty Loan Act	2,000,000,000
Total borrowing authorization	15,538,945,460

From time to time Congress has modified the limitations established in the Second Liberty Loan Act. Seventeen such amendments have been made to date. The eighteenth is contained in the bill H. R. 2404 recently introduced and now pending before the Ways and Means Committee. Of the 17 amendments to date, 12 have raised the borrowing limits, 2 have lowered them, while 3 made no changes in the over-all limits, although they did affect certain types of securities. Five other acts have been passed with respect to Treasury borrowing, issuance of bonds of Government agencies or otherwise relating to borrowing authority, but none of these had any direct bearing on the limitations under the Second Liberty Loan Act.

Until the act of July 20, 1939, the distinction between long-term and short-term obligations was still maintained in setting the amounts that could be borrowed under the Second Liberty Loan Act despite the consolidation of limits for particular types of securities. Under the act of February 4, 1935, for example, an over-all limit of $25,000,000,000 was established with respect to bonds and a limit of $20,000,000,000 for certain certificates, bills, and other short-term obligations. Upon passage of the act of July 20, 1939, however, even this distinction was removed and $45,000,000,000 became the top limit on Treasury borrowing under the Second Liberty Loan Act and under section 6 of the First Liberty Loan Act.

The 1935 law accomplished probably the most important change in the original provisions of the Second Liberty Loan Act, by making the limitations applicable to amounts "outstanding at any one time" rather than to amounts issued. This permitted the Treasury Department to operate more freely within the maximum restrictions through its ability to reissue obligations without obtaining new authority. Under the Second Liberty Loan Act and succeeding amendments prior to 1935, this had not been possible, with the result that the existing authority conferred by that act and its amendments, as of 1935, had been worked down to $2,000,000,000. All amendments since 1935 have continued to permit this latitude.

From 1919 to 1940, a period of 21 years, the borrowing power of the Treasury Department remained fairly stable, ranging from $43,000,000,000 to $54,000,000,000, its peak during this time. Fluctuations were relatively minor and occurred at intervals of 2 or 3 years. Indeed for a period of 10 years, from 1921 to 1931, the over-all borrowing limit was not changed at all, but remained at $43,500,000,000. The accompanying table shows all changes in the outside limits of the Treasury Department's borrowing authority, beginning with the Second Liberty Loan Act and including the proposed changes under H. R. 2404.

Because of the crisis in Europe and the mounting need for funds at home Congress, in the Revenue Act of 1940, section 302, raised the limitation by $4,000,000,000 in authorizing additional Treasury bills under section 5, and notes under section 18 of the Second Liberty Loan Act, as amended. This was the first important increase since the act of March 3, 1931, when the limit was raised by $8,000,000,000 to a total of $51,500,000,000, and it was the first of a series of annual increases which, since 1940, have resulted in total increases amounting to $216,000,000,000, bringing the borrowing limit to its present level of $260,000,000,000. Increases since 1940 are as follows:

Public law	Increase	New limitation
Public Debt Act of 1941	$16,000,000,000	$65,000,000,000
Public Debt Act of 1942	60,000,000,000	125,000,000,000
Public Debt Act of 1943	85,000,000,000	210,000,000,000
Public Debt Act of 1944	50,000,000,000	260,000,000,000
H. R. 2404 (proposed limitation)	40,000,000,000	300,000,000,000

In the attached table it will be observed that only two reductions in the limitation have been made. The largest cut was effected under the act of February 4, 1935, when the limitation was reduced by $5,000,000,000, from $54,000,000,000 to $49,000,000,000. This was accomplished by the reduction of the previous authorized limit on certain bonds from $30,000,000,000 to $25,000,000,000. A reduction of $4,000,000,000 was effected under the act of May 26, 1938, through a consolidation of all borrowing limits on particular types of securities except bonds.

The demands of war obviously account for the tremendous growth of borrowing authority since 1940. In this connection the Secretary of the Treasury has pointed out in testimony before the House Appropriations Committee on January 15, 1945, that 54 percent of the cost of the war in each of the last 2 fiscal years has been financed through borrowing, with the remainder of the cost financed through revenue receipts.

An analysis of each of the 14 amendments to the Second Liberty Loan Act, which have resulted in changing the over-all limit originally fixed by that act, follows:

Second Liberty Loan Act

(Original authorization approved Sept. 24, 1917)

Section 1:	
Bonds, in addition to	$7,538,945,460
Bonds, previously authorized	2,000,000,000
	9,538,945,460
Section 5: 1-year certificates and 5-year certificates under sec. 6, First Liberty Loan Act; combined total for both	4,000,000,000
Section 6: 5-year War Savings certificates	2,000,000,000
Total authorized borrowing limit	15,538,945,460

Third Liberty Loan Act

(Approved Apr. 4, 1918)

Section 1:	
Bonds, in addition to	$12,000,000,000
Bonds, previously authorized	2,000,000,000
	14,000,000,000
Section 4: 1-year certificates under sec. 5, Second Liberty Loan Act and 5-year certificates under sec. 6, First Liberty Loan Act; combined total for both	8,000,000,000
Authority carried forward for 5-year War Savings certificates under sec. 6, Second Liberty Loan Act	2,000,000,000
Total authorized borrowing limit	24,000,000,000

Fourth Liberty Loan Act

(Approved July 9, 1918)

Section 1:	
Bonds, in addition to	$20,000,000,000
Bonds, previously authorized	2,000,000,000
	22,000,000,000
Authority carried forward for certificates under First and Second Liberty Loan Acts and War Savings certificates	10,000,000,000
Total authorized borrowing limit	32,000,000,000

Supplement to Second Liberty Loan Act

(Approved Sept. 24, 1918)

Section 2: 5-year War Savings Certificates under Sec 6, Second Liberty Loan Act	$4,000,000,000
Authority carried forward:	
Bonds, in addition to	20,000,000,000
Bonds, previously authorized	2,000,000,000
	22,000,000,000

Authority carried forward—Continued.	
Certificates under First and Second Liberty Loan Acts	$8,000,000,000
Total authorized borrowing limit	34,000,000,000

Victory Liberty Loan Act

(Approved Mar. 3, 1919)

Section 1: Notes under new sec. 18 (a), Second Liberty Loan Act	$7,000,000,000
Section 3: Certificates under First and Second Liberty Loan Acts	10,000,000,000
Authority carried forward: Bonds, in addition to	20,000,000,000
Bonds, previously authorized	2,000,000,000
	22,000,000,000
5-year War Savings Certificates under sec. 6, Second Liberty Loan Act	4,000,000,000
Total authorized borrowing limit	43,000,000,000

Act of Nov. 23, 1921

Section 1401: Notes under section 18 (a), Second Liberty Loan Act	$7,500,000,000
Authority carried forward: Bonds, in addition to	20,000,000,000
Bonds, previously authorized	2,000,000,000
	22,000,000,000
Certificates under First and Second Liberty Loan Acts	10,000,000,000
5-year War Savings Certificates under sec. 6, Second Liberty Loan Act	4,000,000,000
Total authorized borrowing limit	43,500,000,000

Act of Mar. 3, 1931

Section 1: Bonds, under sec. 1, Second Liberty Loan Act, in addition to	$28,000,000,000
Bonds, previously authorized	2,000,000,000
	30,000,000,000
Authority carried forward: Notes under sec. 18 (a), Second Liberty Loan Act	7,500,000,000
Certificates under First and Second Liberty Loan Acts	10,000,000,000
5-year War Savings Certificates under sec. 6, Second Liberty Loan Act	4,000,000,000
Total authorized borrowing limit	51,500,000,000

Gold Reserve Act of 1934

(Approved Jan. 30, 1934)

Section 14: Notes under sec. 18 (a), Second Liberty Loan Act	$10,000,000,000
Authority carried forward: Bonds, in addition to	28,000,000,000
Bonds, previously authorized	2,000,000,000
	40,000,000,000
Certificates under First and Second Liberty Loan Acts	10,000,000,000
Authority carried forward—Continued.	
5-year War Savings Certificates under sec. 6, Second Liberty Loan Act	$4,000,000,000
Total authorized borrowing limit	54,000,000,000

NOTE.—In addition to increasing the amount of the authorization for notes under section 18 (a) of the Second Liberty Loan Act, the Gold Reserve Act of 1934, in section 20 (c) authorized the Secretary of the Treasury to issue gold certificates in such form and in such denominations as he may determine, "against any gold held by the Treasurer of the United States, except the gold fund held as a reserve for any United States notes and Treasury notes of 1890. The amount of gold certificates issued and outstanding shall at no time exceed the value, at the legal standard, of the gold so held against gold certificates." This act also added two new sections, 19 and 20, to the Second Liberty Loan Act, authorizing issuance of securities for redemption or retirement purposes, and issuance of any obligations on a discount basis payable at maturity without interest.

Act of Feb. 4, 1935

Section 1: Bonds, including bonds previously authorized under First and Second Liberty Loan Acts and under new sec. 22. Consolidated revolving authority	$25,000,000,000
Section 2: Certificates previously authorized under sec. 6, First Liberty Loan Act, and under sec. 5, Second Liberty Loan Act. Notes previously authorized under sec. 18 (a), Second Liberty Loan Act. Consolidated revolving short-term authority	20,000,000,000
Authority carried forward: 5-year War Savings certificates authorized under sec. 6, Second Liberty Loan Act	4,000,000,000
Total authorized borrowing limit	49,000,000,000

Act of May 26, 1938

Section 2: Redraft of sec. 21, Second Liberty Loan Act, as amended, continuing previous revolving authority for all bonds and short-term indebtedness but limiting issuance of bonds to $30,000,000,000.	
Consolidated previous authority for 5-year War Savings certificates under sec. 6, Second Liberty Loan Act, with authority for certificates and notes under sec. 6, First Liberty Loan Act, sec. 5, Second Liberty Loan Act, and sec. 18 (a), Second Liberty Loan Act.	
New consolidated revolving authority, all bonds and short-term obligations, bonds limited to $30,000,000,000	$45,000,000,000
Total authorized borrowing limit	45,000,000,000

Act of July 20, 1939

Section 1: Repealed the $30,000,000,000 limitation on the issuance of bonds.	
Authority carried forward: Bonds, certificates, notes authorized under the amendments in the act of May 26, 1938	$45,000,000,000
Total authorized borrowing limit	45,000,000,000

Revenue Act of 1940

(Approved June 25, 1940)

Section 302: Created new paragraph under sec. 21 authorizing a special series of short-term obligations designated National Defense Series, limited to $4,000,000,000 to be issued under secs. 5 and 18 of Second Liberty Loan Act, and in addition to over-all consolidated limitation established under sec. 21 (a), Second Liberty Loan Act	$4,000,000,000
Authority carried forward: Bonds, certificates, notes authorized under the amendments in the act of May 26, 1938	45,000,000,000
Total authorized borrowing limit	49,000,000,000

Public Debt Act of 1941

(Approved Feb. 19, 1941)

Section 2: Consolidated under one over-all limitation the authorized limit for all obligations issued under the authority of the Second Liberty Loan Act. Expressly terminated certain specific authorizations for particular issues, including certificates under sec. 6, First Liberty Loan Act. New over-all limit	$65,000,000,000
Total authorized borrowing limit	65,000,000,000

Public Debt Act of 1942

(Approved Mar. 28, 1942)

Section 2: Increased the face amount of obligations issuable to $125,000,000,000	$125,000,000,000
Section 3: Made certain modifications in administrative authority with respect to Treasury financing	
Section 4: Authorized use of authority for issuance of redemption or retirement obligations	
Sections 5–6: Authorized Postal Savings cards and stamps and imposed tax liabilities on interest received from Federal obligations.	
Total authorized borrowing limit	125,000,000,000

Public Debt Act of 1943

(Approved without Presidential signature)

Section 2: Increased the face amount of obligations issuable to	$210,000,000,000
Section 3: Amended section 22, Second Liberty Loan Act with respect to payments in connection with redemptions and recoveries on account of lost redemption payments	
Total authorized borrowing limit	210,000,000,000

Public Debt Act of 1944

(Approved June 9, 1944)

Section 2: Increased the face amount of obligations issuable to	$260,000,000,000
Total authorized borrowing limit	260,000,000,000

Because of its broad provisions, the Second Liberty Loan Act, in its original form, provided a convenient vehicle for subsequent changes in the borrowing authority of the Secretary of the Treasury. It was the first statute of its kind permitting the Treasury to borrow funds for general public purposes. Thus it became a simple matter in later years to change the original dollar limitations by substituting a new figure. New sections were added without difficulty when it was felt desirable to extend its original scope. Accordingly the act as it stands today in its amended form is somewhat of a conglomeration of miscellaneous provisions dealing with Treasury borrowing operations.

Although the act sets a definite limit on the over-all amount of money that the Secretary of the Treasury may borrow and contains other provisions respecting the use of certain Federal securities in discharging tax liabilities, transactions in foreign-government securities, and the like, it does not limit or restrict capital financing by other Government agencies. Certain Government corporations, for example, with a combined borrowing authority of their own amounting to $33,700,000,000 are wholly free of the restrictions in the Second Liberty Loan Act, although, by an administrative requirement, they must consult the Secretary of the Treasury and in some cases obtain his consent before making commitments on loans.

Notwithstanding its defects, the Second Liberty Loan Act has achieved a venerable position. Amendments have become an annual event, and with each amendment the act assumes a more important role. Under its authority the Secretary of the Treasury may now borrow up to $260,000,000,000 instead of the fifteen-odd billion dollars authorized by its original provisions. The act does not now require apportionment of the over-all limit between long- and short-term obligations as it did originally, discount privileges have been extended in connection with the issuance of certain short-term obligations, Postal-savings bonds and stamps have been authorized, and in various ways the act has grown in stature through the years. It is now regarded as the basic statutory authority governing the Treasury's borrowing operations and with the growth of those operations has become one of the most important pieces of financial legislation ever enacted by the Congress.

Changes in debt limitation under amendments to Second Liberty Loan Act, 1918–45

[Amounts shown are in billions of dollars]

Statute	Approved	Maximum authorization	Increase (+) or decrease (−)
Second Liberty Loan Act	Sept. 24, 1917	15.5	.....
Third Liberty Loan Act	Apr. 4, 1918	24.0	+8.5
Fourth Liberty Loan Act	July 9, 1918	32.0	+8.0
Supplement to Second Liberty Loan Act	Sept. 24, 1918	34.0	+2.0
Victory Liberty Loan Act	Mar. 3, 1919	43.0	+9.0
Act of Nov. 23, 1921	Nov. 23, 1921	43.5	+.5
Act of Mar. 3, 1931	Mar. 3, 1931	51.5	+8.0
Gold Reserve Act of 1934	Jan. 30, 1934	54.0	+2.5
Act of Feb. 4, 1935	Feb. 4, 1935	[1] 49.0	[1] −5.0
Act of May 26, 1938	May 26, 1938	[2] 45.0	[2] −4.0
Revenue Act of 1940	June 25, 1940	49.0	+4.0

Footnotes at end of table.

Changes in debt limitation under amendments to Second Liberty Loan Act, 1918–45—Continued

[Amounts shown are in billions of dollars]

Statute	Approved	Maximum authorization	Increase (+) or decrease (−)
Public Debt Act of 1941	Feb. 19, 1941	65.0	+16.0
Public Debt Act of 1942	Mar. 28, 1942	125.0	+60.0
Public Debt Act of 1943 [3]	.....	210.0	+85.0
Public Debt Act of 1944	June 9, 1944	260.0	+50.0
Public Debt Act of 1945 (proposed)	.....	300.0	+40.0

[1] By basing the maximum authorization on amounts "outstanding" rather than upon amounts "issued," additional bond authority of $28,000,000,000 was created, in effect, by this act, since available bond-issuing authority of $30,000,000,000 had been reduced by that amount. However, the maximum authorization shown was actually less than the previous maximum authorization, as indicated.

[2] Limitation of $4,000,000,000 on War Savings certificates was consolidated with the over-all authority of $45,000,000,000 on long- and short-term paper.

[3] This act was presented to the President Mar. 30, 1943, but was not returned within the time prescribed by the Constitution and therefore became a law without Presidential signature.

Farm Census Unnecessary at This Time; a Duplication of Effort, a Waste of Manpower, Money, and Time

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. PLUMLEY. Mr. Speaker, some people took exception to my statement that there was no necessity for taking a farm census at this time; first, because of manpower shortage; second, because necessary and essential information was already at hand, or could be obtained, since those responsible for the conduct of the war, of necessity had to have such information, had obtained the same, or had sufficient sources from which to obtain vital and essential information, rather than to depend upon a census the result of which could not be made available for 6 months.

In support of my contention, under unanimous consent heretofore granted, I am including as an extension of my remarks an article from the Barre Times, of Barre, Vt., which speaks for itself:

MORE CATTLE ON FARMS IN NEW ENGLAND—SLIGHT INCREASE COMPARED TO YEAR AGO; LESS CHICKENS LAST YEAR—OTHER CLASSES OF LIVESTOCK DECLINE—TURKEY POPULATION JUMPS 14 PERCENT IN 1944; FEWER HORSES

The numbers of all cattle and calves on the farms of New England on January 1, 1945, increased slightly from a year ago, while numbers of most other classes of livestock declined during 1944 according to the annual livestock report released today by the New England crop reporting service. Chicken numbers, declined 6 percent during 1944, but the number of turkeys in New England increased 14 percent.

Livestock numbers in the United States declined rather sharply during 1944 after having increased steadily from 1938 to an all-time peak in 1944 for numbers at the beginning of the year. The decline in numbers was caused largely by the tight feed situation during the first half of the year and the generally less favorable relationship of livestock prices to feed prices. As a result of the decrease in livestock numbers and of the record production of feed grain in 1944, the feed situation at the beginning of 1945 is much more favorable for livestock producers than it was a year ago. The supply of feed grain per animal unit of livestock (including chickens) on January 1, 1945, was 27 percent larger than a year earlier, and slightly above January 1, 1943. It was the highest in over 20 years, and was 7 percent above the 1939–43 average. However, hay supplies per unit of livestock were 1 percent below last year and 5 percent below the 5-year average.

DROP IN HORSE POPULATION

The number of horses on New England farms totaled 125,000 head on January 1, 1945, compared with 128,000 head a year earlier. Horse and mule numbers in the United States continued to decline during 1944 and on January 1, 1945, were about 4 percent lower than a year ago. The numbers of both horse and mule colts under 1 year of age decreased sharply and the end of the long decline in work-stock numbers is not yet in sight.

Cattle and calves on New England farms totaled 1,232,000 head on January 1, 1945, in comparison with 1,225,000 head on January 1 a year ago, and 1,161,000 head 2 years ago. Numbers increased 2 percent in New Hampshire and Vermont during 1944, and remained unchanged in Maine and Rhode Island, but declined 1 percent in Massachusetts and Connecticut. The cattle inventory at 81,760,000 head in the United States on January 1, 1945, is slightly below a year ago, but remains the second largest on record and exceeds the World War No. 1 peak in 1918 by eight and one-half million head. While cows and heifers over 2 years old increased nearly three-quarters of a million head during 1944, calf numbers decreased about one and one-half million head.

The number of milk cows (cows and heifers 2 years old and over kept for milk) estimated at 817,000 head in New England on January 1, 1945, exceeds the inventory of a year ago by 2 percent, and 2 years ago by 6 percent. The net increase of 15,000 head during 1944 includes increases of 3,000 head in both Maine and New Hampshire, 9,000 head in Vermont, 1,000 head in Connecticut, no change in Rhode Island, and a decrease of 1,000 head in Massachusetts. Numbers of heifers 1 to 2 years of age kept for dairy replacements increased to 175,000 head on January 1, 1945, and exceeded the estimate of 159,000 head a year earlier by 10 percent. In contrast with cows and heifers, numbers of heifer calves being raised for dairy cows on January 1, 1945, declined to 162,000 head from 184,000 head a year ago with decreases in each New England State. The number of milk cows (cows and heifers 2 years old and over kept for milk) in the United States at 27,785,000 head is only slightly larger than the 27,656,000 head estimated a year ago.

LESS SHEEP AND LAMBS

Numbers of sheep and lambs declined in Maine, New Hampshire, Vermont, and Massachusetts during the past year and totaled 82,000 head for New England as a whole on January 1, 1945, in comparison with 92,000 head last year. Sheep numbers in the United States declined to 47,945,000 head at the close of 1944 for a drop of 3,824,000 head or 7.4 percent during the year. During 1944, hog numbers declined in each New England State except Massachusetts which showed an increase of 5,000 head. On January 1, 1945, the New England total of 272,000 hogs was 14 percent below the 1944 total of 315,000 head. For the United States, hog numbers dropped to 60,660,000 head on farms on January 1, 1945, from the all-time record number of 82,852,000 head a year ago.

In New England a decline of 6 percent in chicken numbers (not including broilers) during 1944 to a total of 16,631,000 birds on January 1, 1945, was shared by each of the New England States. For the United States, the 511,130,000 birds excluding commercial broilers on farms January 1, 1945, was 11 percent below last year and included decrease varying from 3 percent in Massachusetts to 24 percent in Colorado.

The Equal Rights Amendment

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, March 1 (legislative day of Monday, February 26), 1945

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address on the equal rights amendment delivered by Mrs. Emma Guffey Miller on February 10, 1945, at Boston, Mass., before the National Association of University Women. I have received from the Public Printer an estimate which indicates that the cost of printing the address will be $169.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The history of the movement of the equal-rights amendment parallels closely the fight for the suffrage amendment and, strange as it may seem, many of the arguments against the equal-rights amendment are almost identical to the antisuffrage arguments of more than a generation ago.

During the struggle for suffrage, one of the important groups among the suffrage organizations was the College Equal Suffrage League led by M. Carey Thomas, president of Bryn Mawr. I recall that many college graduates of that day were members of this league throughout the country. It, therefore, came as a shock to many of us, who had been members of this group, to learn that the American Association of University Women was opposing the equal-rights amendment which reads: "Equality of rights under the law cannot be denied or abridged by the United States or by any State on account of sex. Congress and the several States shall have power, within their respective jurisdictions, to enforce this article by appropriate legislation. This amendment shall take effect 3 years after the date of ratification."

Today I welcome the opportunity to speak to this group of university women in the hope that you, as individuals here, will help change the attitude of your association.

Let us examine the arguments brought forward by the opposition—the Consumers' League, the League of Women Voters, officials of the A. F. of L., and C. I. O., and some church groups. These seem to be the most active opponents at present of equality under the law. While I acknowledge that many of our opponents are sincere in their opposition, I cannot help but feel that much of the opposition is due to ignorance and prejudice. Yes—but most of it, I suspect, comes from fear on the part of the men—that women may supplant them in their jobs and so they join in the so-called protective argument.

At a hearing last October in the office of ex-Senator Gillette, a group of opponents stated their reasons against the amendment. The C. I. O. representative, Attorney Raphael of New York, said in no uncertain terms why the C. I. O. was opposed to the equal-rights amendment. He declared that in the post-war period women would be in keen competition with men and the question of the adoption of the amendment is, therefore, of very great seriousness.

I agree with the C. I. O. attorney that the post-war period is going to be serious for some men, because many women have been doing better work in jobs which men have long considered their rightful province.

For example, I was chairman of the advisory committee of the N. Y. A. in Pennsylvania and deeply interested in the work it was doing for young men and women. Some time prior to the war we began to turn our attention to defense projects, and in a short time discovered that a majority of the girls made better riveters and welders than the boys. I am told this was also found to be true in the Kaiser shipbuilding yards and other war plants.

Women are working in navy yards—there are 6,000 in the Brooklyn Navy Yard alone; they are in munition factories; in automobile plants; driving trucks and busses; acting as conductors on streetcars as well as switch operators, and filling hundreds of other jobs for which women were once considered unfit. Mr. J. F. Deasy, operational vice president of the Pennsylvania Railroad, states: "Women are now working in 85 classified occupations, ranging for instance, from locomotive cleaner to claim agent; from train director to nurse; from dining-car steward to steam-hammer operator. There are women passenger trainmen and yard freight brakemen, gang foremen, car inspectors, mechanics and helpers, crane operators, boiler washers, laborers, station agents and ushers, train announcers, signal-tower operators, switch tenders and coach cleaners, to name a few of the occupations being filled." Only a couple of weeks ago, the first woman window cleaner was pictured in New York City accoutered the same as a man and apparently doing just as good a job. No wonder the men are fearful.

We have so long been accustomed to hearing that women are unable to do night work because it was bad for their morals or they were unable to stand the strain that almost everyone took it for granted that this is true.

The director of health in Buffalo, after one of the heavy snowfalls of the winter, advised white-collar men not to shovel snow because they were not equal physically to the job but to leave this job to their wives who were accustomed to heavy work.

I know plenty of women who have always put a shovel or two of coal on the furnace throughout the day but now more women than ever are faced with the job of tending the furnace all the time, and a recent Washington newspaper gave lengthy instructions to women as to how to keep the home fires burning.

It would seem, therefore, that the working man, who is so much concerned about women not being physically equal to so many jobs, is not thinking of her future so much as he is of his own.

It has long been a custom to provide seats for women in stores and factories but in a Chicago Dodge plant, where B-29 Superfortress engines are produced, a group of men staged a walk-out last December against an order banning chairs at their machines. I think the men were justified. If they can do their work sitting down there is no reason why they should not have chairs, but, the labor leaders need not think they can continue to fool working women by opposing the amendment on the grounds that women are so much weaker or unequal to any jobs, except ones the men don't want.

At the hearing previously referred to, a woman member of the C. I. O., Miss Molly Maloney, for years engaged in the printing and binding trade, gave the women workers' side of the question, proving that no-night-work laws for women and laws limiting their hours of work made women lose their jobs and took away opportunity for advancement. Many highly skilled jobs were lost to women in the printing trades because a law was passed in New York State forbidding them to work after a certain hour, and thus they lost the chance for extra pay by not being permitted to work an extra hour or two on rush jobs. Miss Maloney was an experienced folding-machine operator receiving $46.50 a week, but through the efforts of some men labor leaders and well-intentioned nonworking women such as the League of Women Voters and Consumers' League, she was unable to continue in her well-paid position and was obliged to accept a lesser job just because she could not stay a little longer on the bindery machine to complete a rush order. In this case, as well as under so many so-called protective provisions, only the men benefited. Their hearts bleed for women working at night when the pay is better, but we do not hear any protestations regarding charwomen who nightly clean offices all over the land. Regarding the argument that women are not safe in the streets at night seems entirely outside the question as the safety of its citizens is up to the police powers of a city, and during the war when it is necessary for women to work at night in many places we no longer hear about the dangers of the dark.

Opponents declare that the amendment is absurd because "it is an abstract statement of general princsiple" and, therefore, does not belong in the Constitution. May I remind them again, and again, and again that the Constitution of our country deals in general principles, and if the amendment is a general principle as they declare then it does belong in the Constitution.

It is argued that no one can define rights. This seems absurd for everyone knows what the word "right" in the Bill of Rights means and everyone realizes what is meant by a "fundamental right." Certainly equal justice is a fundamental right and justice to be real should apply to all alike, regardless of sex.

It is also argued that no one can define equality, that such a word does not belong in the Constitution. You might as well say that no one can define "liberty" or "freedom," both of which words are in the Constitution. The Supreme Court made clear a few years ago what it considers equality in its decision regarding the famous Scottsboro case in Alabama. The court at that time decided that several Negroes on trial for rape had not had a fair trial because no Negroes were permitted on the jury panel and a retrial was granted. Negro men, therefore, throughout the country have since had a right to serve on juries but that right may still be denied to both Negro and white women although all women may be tried for all sorts of crimes by juries composed entirely of men.

During the last depression married women in some places in Massachusetts, as you know, were barred from employment in city departments and in the schools. Many Boston concerns and industrial organizations followed suit and bills were introduced in the legislature attempting by law to ban further employment of married women. Later, six competent married women employees of Somerville were dismissed after a city ordinance had been passed barring the employment of married women. These women, feeling that their right to work was just as inviolate as men's, took their case to the courts and in 1938 the Supreme Court declared this ordnance invalid, saying, "It deprives married women of their constitutional right to equal opportunity for selection for public employment on grounds having no substantial relation to public welfare."

This was certainly a great victory for the Somerville women, but this was only a sop to married women for the court pointed out that this ruling in no way interfered with the previous opinion which held that

married women might be barred as school teachers because "married women in some public employments may be considered less qualified than unmarried women." Far be it from a Pennsylvania woman unlearned in law to criticize the high court of Massachusetts, but this decision on the one hand seems to say—a married woman has a right to be employed as a clerk in a city because that is her constitutional privilege but on the other hand, a school committee may refuse to employ a married woman as a teacher because some married women may not be good teachers, implying, of course, that single women are better. It seems to me that both married and single women should have a constitutional right to work either as a city clerk or as a teacher. Such a decision by the Massachusetts Supreme Court puts a stigma on marriage and penalizes women for fulfilling their God-given destiny.

One of the objections to the amendment is the argument that if women were equal under the law it would menace family life and prevent the husband being the head of the family. We believe that the amendment would not conflict with such a church pronouncement any more than equality of rights for all men of whatever race or status deprives the secular or spiritual heads of their rightful sovereignty.

In States or countries where husband and wife have already been given equality of rights under family law there has been no conflict with the church's attitude or position regarding the head of the family. In a true Christian family life there is always an equality of sacrifice which naturally makes for equal rights, equal responsibility and equal love and joy, and which in no wise prevents or interferes with any parental headship. Further, we all know that there are many families where the mother becomes the economic and moral leader and this in no way interferes with religious practices.

The League of Women Voters is also much concerned about support laws, suggesting that under the amendment a wife might be obliged to support her husband. In happy marriages, and I still believe there are millions of them, the husband and wife do not concern themselves about obligatory support, but all of us know that there are many households where the woman is obliged, not through laws, to support her husband and family but because the husband is either inefficient, incapable, or indifferent to his family. Such cases never go to court. Further, under present conditions both men and women are aiding in the family income in order to give their children a better upbringing. After every war there are more women workers and more women left without male supporters, and I predict that when this war is over there will be many women both single and married who will prefer to work outside the home. Our civilization does depend on homemakers and home owners and the majority of women do, I believe, prefer to remain in the home and raise a family, but after the children are well toward maturity and ready for further educational opportunities, many women will then want to earn extra money in order to give the children better advantages than they have had themselves.

If in the post-war era we are to avoid the catastrophes which occurred after the last war, we will have to provide millions of new jobs in order to keep up our purchasing power and standard of living. Therefore, many of these jobs will have to be filled by women.

The fear that men will not take care of their families under this amendment becomes less and less because the courts are now deciding that women who work or who have incomes should share in the responsibility of child support. In a recent decision in Allegheny County, Pa., Judge Kenneth L. Harkins ruled that a woman who brought suit against her husband for support of herself and child should not make this demand upon the husband because she was making $140 a month in a war plant which was a sufficient amount for her own support and a share in that of the child's, so ruled that she should contribute half the amount needed for the support of their child.

Women doctors had a long, arduous struggle to gain admittance to medical schools and then to hospitals. Some people may have an old-fashioned prejudice against women doctors but it matters little to most mothers whether a woman doctor or a man doctor takes care of the wounds of their sons in service. However, at the beginning of the war, according to a ruling of the office of the Comptroller General based on Supreme Court decisions, the War Department stated that women doctors were not eligible for service in the Army because they are not persons under the Constitution of the United States. Hence, a special act of Congress was needed in order to permit women doctors to serve during the war. This act is in effect for only 6 months after the war. It could only be a temporary act because of the court's decisions that women are not persons. In other words, the age we are living in and which we consider so advanced, still bases justice on sex. We boast about the freedom in our own country and yet as more and more women become independent there is a growing movement to curtail their rights. I would like to remind you that the first move of the Nazi and Fascist Governments in their own countries was to remove what few rights the women had there in public and professional life and to return them to the kitchen for good. Note the result in Rome and Berlin.

Inequality of the sexes under the law has always been a practice in the United States. This arose from the old English common law which made a woman a chattel not far removed from the ox, and since the common law prevails, in the absence of statutory law to the contrary, many of these disabilities remain. Recently a man was brought before Judge G. Malcolm McDonald in Pittsburgh charged with being a common scold. The judge declared that "surely a man could be a 'common scold' just as certainly as a woman. Our own experience has been that men can be just as ornery as women." However, the indictment against this man had to be quashed for "the simple reason, except for the common law, we have no law on the subject" and the common law recognizes only women as scolds. (See Blackstone, etc.) Hence, many, many times judges are obliged to go against their better judgment in cases where nothing but the common law applies. Because of these sixteenth and seventeenth century ideas regarding women, we are still denied true justice.

Twenty-six States restrict occupational opportunities for women and limitations vary from State to State. A woman may be free to engage in a given type of employment in one State and restricted in another. In some States women may not work at night. In others night work is limited. Wisconsin forbids the employment of women in any capacity as employees of the State legislature. Discriminations against married women are common, and though some of these discriminations are temporarily set aside because of the war, they may be resumed at the end of the war. In 46 States the husband has the right to choose his wife's domicile. In 7 States the law distinguishes between the husband and wife regarding the general right to sue and be sued. In 5 States the wife has the management of her property but cannot dispose of her real property without the consent of her husband. The husband, on the other hand, can dispose of his property without his wife's consent. In Pennsylvania I cannot mortgage the family home without the consent of my husband, which I think is a wise law, but should he own a million dollars worth of real estate he could mortgage and lose it without my consent.

In some cases the wife's earnings belong to the husband. In New York a wife may spend her earnings made outside the home, but inside the home earnings, such as from keeping boarders, belong to the husband—even one who beats her. In California a wife's earnings become the property of the husband if there is no agreement to the contrary. In Nevada a married woman cannot establish a business without her husband's consent through application to the courts. In 6 States the father is the natural guardian of the child. The mother is the natural guardian only when the father is dead or unfit for guardian. In Florida and North Carolina if the parents separate the father has the prior right to the child, no difference what his status. In Georgia the father can be, or appoint, a guardian for a child not yet born and may exclude the mother as a guardian. In 16 States the father is entitled to the earnings of the child. I could go on ad infinitum with such examples as these.

Another favorite argument against the amendment is that former husbands would not pay alimony to their wives. Alimony has been a cause of contention for many, many years, so much so that 13 States have abandoned the idea, and no bad results have come about. Further, examine the court records and find out how difficult it is in numerous cases to collect alimony.

There are a thousand and one unjust and unfair discriminations against women on the statute books of the Nation, especially against married women. It is a curious thing that in every State a single woman, if she is of age, can handle her own property but let her subscribe to the marriage vows and she suddenly becomes incompetent. The adoption of the amendment would do more to improve the status of women than any measure since their enfranchisement.

People who wish to forestall the amendment keep saying workingwomen are not sufficiently organized to take this step. May I recall to your minds that workingmen were equal under the law with every other man before they were organized, a ditch digger was the equal of the banker under the law, and his strength lay in the fact that they were equal. The same should be true of women. Another favorite argument is that this amendment would overburden the courts in the various States. You will note that the amendment will not take effect for 3 years after the date of ratification. Now, while I am neither a lawyer nor a judge, there are many lawyers and judges who agree that this is ample time in which the States can remove the many discriminations which now exist against women. Our opponents say these discriminations should be removed State by State. May I remind them again, and again, and again that what one legislature may do another can undo and that the removal of one unjust law by one legislature can be reenacted into law by the next legislature. This has happened time after time in our Nation. We passed a much-needed Teachers' Tenure Act in Pennsylvania less than 10 years ago, one of whose provisions provided a woman could not be dismissed because she was married. However, no married teacher feels safe since, because in practically every session of the legislature someone wants to amend the act in such a way that it would discriminate against married women.

Last November the C. I. O. held its seventh constitutional convention in Chicago, and among the resolutions passed was one against the equal-rights amendment. Resolution No. 37 stated that the C. I. O. had always supported and worked for protective labor legislation for women, such as minimum wage and maximum hours, rest periods, laws prohibiting dangerous work or night work, or in places deemed unwholesome to the health or morals of women, apparently not taking into consideration that the women themselves might like to choose their times

and places of work. Then the resolution puts off the fatal day by stating "until the various States have enacted legislation to protect both men and women workers in interstate industries it is essential to maintain existing State laws for women," and, therefore, the C. I. O., because of "its great interest in the problems and working conditions of working women," calls upon its entire membership to defeat the equal-rights amendment and work for the following program: Equal pay for equal work, provision for collective bargaining, adequate housing and recreational facilities, education, etc. You will note that there is nothing said about any fundamental rights for women and equality under the law nor any plea for equal opportunity.

Miss Freida Miller, head of the Women's Bureau of the Department of Labor, is in perfect agreement with the C. I. O.'s opposition to the equal-rights amendment. She uses practically the same arguments as the men do, only much less reasonable. One of her arguments is that under the equal-rights amendment industrialists will not be compelled to hire women or people will not be compelled to consult women doctors, lawyers, etc. No one ever claimed such for the amendment, and this statement (New York Times, September 1, 1944) shows that Miss Miller has really never studied the amendment. What it might do for women by far outweighs anything she believes it would do against them. At a later date in September Miss Miller seemed to be much concerned about the division of wage scales and working conditions in the industries in which women have usually outnumbered men. She also states that there may be 2,000,000 more women workers in the labor market after the war than in 1941. Presuming there are 18,000,000 women workers now, Miss Miller "guesses" that at least 4,000,000 will retire, leaving at least 14,000,000 women "whose only choice will be to find work or go on relief." Miss Miller's solution is that the setting of minimum wage-and-hour standards for women different from men will take care of the majority of women workers, again leaving entirely out of consideration the idea of what women may prefer to do or what their services may be worth.

A contradictory statement came later when Miss Miller, at the Women's National Democratic Club, urged that women be given equal opportunity with men for obtaining jobs in the post-war period, and, at the same time, advocating a system of State control over service industries, in order to encourage women to return to their former type of employment. These statements are both contradictory and confused, and one cannot help but feel that Miss Miller, instead of working for the advancement of women, is actually working against it. In a nine-point program (Washington Post, December 7, 1944) Miss Miller again comes out with a statement for at least adequate minimum conditions in the traditional women-employee industries. Does Miss Miller think that women who have been serving during the war and who have been working at nontraditional industries are now, at her suggestion, going back into the old established ruts? While she advocates equal pay for equal work, at the same time she wants a minimum standard for women leaving men doing the same work, I suppose, to benefit by higher wages.

Fear has been expressed that mothers' pensions could not be paid if the amendment were in force. May I remind people who put forth this argument that so-called mothers' pensions, which after all are to be used for the children, are a type of special legislation the same as pensions for war veterans and laws to that effect could still be passed and administered.

The League of Women Voters seems to be much concerned about what would happen in cases of rape under the amendment. May I remind these nervous ladies that rape is a crime and punishment for such a heinous crime can always be meted out. Further, there are already 13 States which make rape a crime for both men and women. Some of our States have very low figures regarding the age of consent for girls which have certainly been taken advantage of throughout the years. It would, therefore, seem beneficial to all to make the age of consent, which is 21 for boys in most States and far less for girls, the same for both.

Fear is expressed that women would not be protected as mothers of the race if they went out of the home to help make a living. This reminds me of the old antisuffrage argument, "Woman's place is in the home." Certainly the majority of married women, especially those with little children, would prefer to remain at home if they were not faced with the economic necessity of either making or adding to the family income. More and more new inventions give women greater leisure and more and more do women go out of the home to work either from necessity or because they want to maintain a higher standard of living. This has been true since the invention of the weaving machine and after every war more women have had to become breadwinners. It is the workingwomen out of the home the opposition seems so concerned with. They want to tell these women when and how they shall work and what wages they shall receive. Minimum wages for women alone have not brought the panacea that was expected. For example, in Ohio a number of years ago minimum wages and hours were set for women workers in laundries. Then came the depression and men and boys underbid the women, worked longer hours, and thus the standard of living was lowered for all. The present Department of Labor says that after the war "night work for women must go" without taking into consideration any thought of what women workers may prefer and without any idea apparently that these provisions against night work are almost without exception put into the laws by men whose motive is to keep women from good jobs or from working overtime—and hence, receiving overtime pay.

It is generally agreed that we could not fight the war successfully unless women were in shipyards, munition factories, etc. and etc.,—and thus these so-called protective laws have been held in abeyance or winked at in the various States due to the necessity of the occasion. In Pennsylvania in 1943 a law was passed permitting the Secretary of Labor and Industry to allow women to be employed any 6 days up to 10 hours a day for 48 hours a week "directly or indirectly in furtherance of the war effort." This was to continue during the present state of war and 6 months thereafter. The C. I. O. legislative program for the present session in Pennsylvania wants this bill changed, evidently being very fearful about that clause "6 months thereafter." They want the law now to read that this provision shall end "when the war in Europe is declared ended by the President of the United States." It is very plain that the men labor leaders are going to try to prevent as far as possible the continuance of women in industry.

Mrs. Beatrice Simuncic is the first woman of the United States to become president of a steel company's union. She upset all traditions last June when she was elected president of the C. I. O. Local Union, No. 1156, of Pittsburgh. Last November, Mrs. Simuncic made this statement: "Women have every right to take their places along with men, regardless of whatever occupation or business, now and in the future. I have only to point out what women are doing today to prove this. We women do not take credit for winning the war, but you can't take it away from us—we are sure helping." She continues: "Other than soldiers' jobs, women have every right to take other men's jobs after the war. If they are capable, I don't see why they should give their positions up to men when victory is won. Women are doing a man's work now, and they will continue to do it—and women can marry and raise healthy families while working, too. That old theory that a woman's place is in the home no longer exists. Those days are gone forever." I trust Mrs. Simuncic is correct, but she better wake up to what certain C. I. O. men are doing to thwart all her desires and plans.

We who advocate the equal-rights amendment are not opposed to protective laws, provided they protect both men and women. The so-called protective and minimum-wage laws for women alone tend to lower incomes, for in time of depression men underbid women, and thus the standard of living is lowered for all. The National Wage and Hour Act takes care of this provision and certainly should allay the fears and the arguments that have been furnished in this regard against the amendment.

Mr. Maury Maverick, who has been the head of the Smaller War Plants Corporation during the war, forecast a bright future for women in small business if the country steps into full production after the war. He stated that "under a system for restricted production where you have raised the price of production by virtue of scarcity, women will have to stay home. That isn't going to work out. Women have learned too much to go back." He told of a case of a woman welder who was faced with a cut-back so she formed her own shop and hired 25 other women welders to work under her and evidently made a great success. Mr. Maverick's advice was that we should permit women to do something constructive and, therefore, advised them to get into small business, stating, "the basis of small business is the home. Little business people own their homes; their wives, daughters, and sisters working with them. Think of the small dress shops, grocery shops, cleaning establishments, etc., that are and can be run by women. And to women whose husbands come back from the war maladjusted or injured, small business will offer the best opportunity for being a help to their husbands." But, may I remind Mr. Maverick that without the equal rights amendment many women in many States will not be able to take advantage of this bright future. It is interesting to note that many small loans have been made through Mr. Maverick's organization to women in business. A woman in Massachusetts was loaned just $250 and another $280 to help them turn out brass polish for the Navy. A woman in Texas received a total loan of $600,000 in operating a canning factory employing 350 people. No loans made to women by the Smaller War Plants Corporation had gone into default up to the date of Mr. Maverick's statement which was last August.

It has taken us a long time to declare that wages should not be based on sex, but should be paid for the work done. The Fair Labor Standards Act has been declared constitutional by the Supreme Court, hence the arguments against the equal rights amendment as they apply to wages fall into the discard. Many people would have you believe that all working women oppose the amendment, but such is not the case, as the Industrial Women's League for Equality, with headquarters at 452 Park Place, Brooklyn, N. Y., is composed of women members of both the C. I. O. and the A. F. of L., who back the amendment to the limit because they realize that without equality under the law no woman's job is ever safe. Equality does not mean a lowering of standards and we are confident that the position not only of working women but of all women will be raised by this amendment.

During my political life as well as that of my family we have fought strenuously for the rights of labor, and will continue to do so

both for women and men, but I want to ask the opponents of the amendment why they do not consider the millions of other women who demand equality under the law—why they only talk of women in industry? It seems to me that all women are of equal importance to the advance of civilization; that we should not deny equality to all women because it is said it will harm just one group.

The Northwestern National Life Insurance Co. has made a survey in various plants regarding post-war jobs. Seventy percent of the women war workers expect or want to remain in peacetime jobs. Most war-working women agree that the returning veterans should have first choice and the wives and mothers probably agree that the husband and sons should have jobs, but women who have been earning incomes during the war will feel that there is no reason why they, too, should not have jobs if it is necessary to add to the family income.

You will recall that during the early part of the depression there was a great deal of agitation against "working wives," which was certainly grossly unfair. "To work or not should be a question of individual decision." Women have every right to resent the idea that it is their duty to work in times like the present, but that, unlike men, they should stay meekly at home when jobs are scarce.

The real issue presented by the equal rights amendment is this:

Are women really a part of our democratic government or shall they be forever kept in a class apart, denied the basic rights and freedoms men have always had under our Constitution?

Hon. Charles Evans Hughes, after he retired as an Associate Justice of the Supreme Court and before he became Chief Justice, wrote a book on the Court in which he said, "The Constitution is what the Court makes it." Thus, it is due to decisions of the Supreme Court over the past 150 years that women are denied equality under the law. The only sure and safe method, therefore, to give them equality is through the equal rights amendment.

In his inaugural address President Roosevelt said, "Our Constitution of 1787 was not a perfect instrument; it is not perfect yet." I do not know what the President had in mind regarding any improvement in the Constitution, but certainly its most glaring imperfection is the insecure position of women. While half our citizens are not equal under the law, we cannot claim that our Constitution even approaches perfection.

Some of our South American neighbors have given equal rights to their women and in China, Russia, and New Zealand women have full equality. We declare in the Dumbarton Oaks plan a desire to "promote everywhere respect for human rights and fundamental freedom." We stand before the world as the champion of freedom for all peoples. If we as a nation intend to be consistent, fair-minded, and just, then let us prove it by passing the equal rights amendment.

Night

EXTENSION OF REMARKS

OF

HON. HARLEY M. KILGORE

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6 (legislative day of Monday, February 26), 1945

Mr. KILGORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a short poem written in a hospital by a wounded soldier of the Seventh Army, Thirty-sixth Infantry Division, Pvt. (1st cl.) Albert T. Young. I knew him before he went into the Army. The poem deals with the terrors of night on the front, and I think it will strike a responsive chord in the heart of any soldier.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

NIGHT

Twelve hours of darkness,
Twelve hours of light;
But the ones we fear the most
Are those which pass in the night.

They take away your seeing,
They blind your very eyes;
Everything is hidden from view
Or distorted in shape and size.

We hate it—we fear it,
This thing they call the night;
It hides the cursed enemy
And protects him from our sight.

These twelve hours of darkness,
We loved them those years when
The world was at peace with God
And men were not killing men.

But now we are in a different year,
Death and danger walk the night.
O God! will this never end?
Will we never see the light?

—*Pvt. (1st cl.) Albert T. Young.*

FRANCE, *February 8, 1945.*

Value of the St. Lawrence Seaway to the City of Buffalo

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6 (legislative day of Monday, February 26), 1945

Mr. AIKEN. Mr. President, there is in the city of Buffalo, N. Y., a small group, a very powerful group, who make it their business to attempt to convince the people of Buffalo that the St. Lawrence seaway would just about completely ruin that city.

There appeared in the Buffalo News on February 26, 1945, an article by Hilton Hornaday, financial editor of the Buffalo Evening News, in which he reports an interview with Hugh Thompson, regional director of the C. I. O. of that section. If one will read this article he will learn that the St. Lawrence seaway, far from ruining the city of Buffalo, would virtually assure its future prosperity.

I ask unanimous consent to have the article by Mr. Hornaday printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEAWAY WOULD BE OF GREAT AID TO FRONTIER, SAYS C. I. O. LEADER

(By Hilton Hornaday)

Nothing would stand in the way of a great industrial advancement on the Niagara frontier if the St. Lawrence seaway project were to become a reality, Hugh Thompson, regional director of the C. I. O., said today.

Talk that the project would leave Buffalo "a desolute community" is nonsense, Mr. Thompson said.

"If the project goes through," he said, "I predict that within 50 years the Niagara frontier will have a population of between 3,000,000 and 5,000,000, and it would become the most outstanding industrial area in the entire United States. This, I say, is a prediction."

After studying the project for many months and reading Government reports and documents relating to the subject, Mr. Thompson said today that he has concluded that, from the standpoint of the welfare of the 150,000 Buffalo-area C. I. O. members working in more than 200 plants, the seaway should go through so that the area can benefit by cheap electric power and low water-transportation costs.

MAY LOSE STEEL INDUSTRY

He has so expressed himself in a letter to United States Senator JAMES M. MEAD, of Buffalo, in which he points out:

1. The steel industry, with 30,000 employees, is likely to drift away from Buffalo when supplies of Minnesota iron ore give out.

2. The St. Lawrence seaway would open a cheap, direct, all-water route for Swedish ores, assuring permanency for the steel industry in Buffalo.

"Whether the steel industry will be as firmly entrenched in Buffalo 5, 10, or 15 years from now is bound up with the question of whether there will be ample supplies of iron ore," Mr. Thompson wrote.

"It is well known that the Lake Superior ore or the high-grade ore from the Mesabi Range is almost depleted. Therefore high-grade ores will have to be brought in from foreign countries such as Chile, Brazil, or Sweden.

SWEDISH ORE MOST POPULAR

"The Swedish ore is the most popular at this time because of the short distance from Sweden to our Atlantic coast. However, the tremendous expense that would have to be borne by the steel companies in shipping this ore by railroad from the Atlantic seaboard to their plants on the Lakes would necessitate the companies moving closer to the Atlantic coast which actually means that the large steel industry would be lost to Buffalo—and I am not speaking of 50 or 100 years from now. I am speaking of something that is immediate.

"If you desire to get the real facts on this matter you will read a report (in 1941) of N. R. Danielian, director of the St. Lawrence Survey, and I quote:

"'In trying to appraise the effect of the proposed St. Lawrence development upon imports of iron ore from the long-term viewpoint, the question of depletion of the Lake Superior reserve becomes critical.

UNTOLD POSSIBLE RESERVES

"'The actual reserves will last under the present rate of extraction for over 20 years. Behind the actual reserves are untold possible reserves. The term "possible reserves" is used for ore that is not proven but the existence of which is indicated by formation and by the presence of low-grade ore that cannot be moved or used under present conditions and methods.

"'Nevertheless, from the viewpoint of so vast an industry representing such tremendous investments, and of such great importance to the national economic power and well-being, 20 years is but a brief period. * * *

"'In the face of such a prospect, by no means impossible, the St. Lawrence seaway stands as a form of insurance; through it the Great Lakes producers will be able to bring in the foreign ores for mixing with the domestic ores which will enable them to insure their investments in plant and transportation at their present locations.'

WAR HAS MADE A DIFFERENCE

"However, the war program has cut a large number of years from this 20 because three and four times (the 1937 rate of extraction of ore) has been extracted from the Mesabi Range during the war years.

"At the present time there are less than 5 years left in this range. Therefore, you can see how immediate this problem becomes for the Niagara frontier and its most important industry—steel."

A United States Department of Commerce publication has mentioned that the ore deposits on the Mesabi Range shows signs of depletion, Mr. Thompson said. He quoted an article in the January 6 issue of Foreign Commerce Weekly:

"'At a time when the great deposits of high-grade ores on the Mesabi Range in the United States show signs of being depleted, foreign ores are beginning to attract more and more attention from our steel manufacturers.'

"This proves conclusively how immediate and serious the St. Lawrence seaway and power project becomes for us on the Niagara frontier, for if we are to lose our steel industry with its more than 30,000 workers, we will also lose all of our related industries, and this will destroy Buffalo as a prosperous industrial area. These are the facts I believe you should consider carefully because the future of Buffalo hangs in the balance.

"MUST DEVELOP SEAWAY

"Col. William Kelly, representative of the Committee for Economic Development, has also made a survey in which he states that Buffalo's future is bright. However, I am sure he has not considered the devastation that would be wrought in Buffalo by the loss of our steel and related industries. To me the future of Buffalo and the Niagara frontier is bright, providing, however, we develop the St. Lawrence seaway and power project.

* * *

"It is my opinion that the greatest good that you can do for the Niagara frontier is to aline yourself on the side of progress and prosperity by pushing and fighting for the passage of legislation which is for the purpose of developing the St. Lawrence seaway and power project.

"The C. I. O. in the Niagara frontier has unanimously endorsed this program. The executive committee of the American Labor Party has also endorsed unanimously this program."

Growth of Bureaucracy

EXTENSION OF REMARKS

OF

HON. HARLAN J. BUSHFIELD

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6 (legislative day of Monday, February 26), 1945

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very outstanding editorial published in the Miles City Daily Star. The editorial was written by Mr. W. F. Flinn, general manager of that newspaper.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE CANCEROUS GROWTH OF BUREAUCRACY

We have set forth our thoughts on the subject of bureaucracy this Sunday morning in the hope that during the day you will have time to settle back in your easy chair and ponder the matter. After that we further hope you will write a Senator or Congressman—not necessarily those from Montana—and register your thoughts with them. Most Senators and Congressmen are trying to fight off the inroads of bureaucracy, but they can't stand up against its onslaughts if we, the people, don't give them our help.

Cancer gnaws at the vitals of the body. Bureaucracy gnaws at the vitals of liberty and democracy. Cancer has laid many an otherwise healthy body low. Bureaucracy has laid many a progressive nation in waste and desolation, both in ancient and modern times. Germany, Italy, Spain, France, Japan are all modern examples of bureaucracy at its worst. Russia, an example of bureaucracy that destroys human liberties, becomes intolerant of those who disagree with it, destroying them at home or abroad, either by violence or insidious propaganda.

The United States must be saved from the totalitarian bureaucracy that has been taking over, first, under the guise of rehabilitating a country in a man-made depression, and then under the later cloak of aiding the effort of a country plunged into universal war. The majority of Congress is trying to resist this bureaucracy, but a strident minority of selfish interests and totalitarians of foreign viewpoints, plus a bevy of American dreamers and crackpots, are making it extremely difficult for Congress to carry the battle to them, for you must remember each Member of the House of Representatives stands for election every 2 years. This strident minority threatens opposing Congressmen with annihilation all during their 2-year term and then makes an effort to defeat them for reelection through the mass manipulation of a minority voting group. Senators, who have 6-year terms, are given different treatment. Take the case of Senator MCCARRAN, of Nevada. This minority of selfish interests and entrenched bureaucrats made a determined effort to defeat him in last year's elections. Failing, they are now offering him the lure of appointment as a Federal judge—a lifetime job. Why? To get him out of their way for a more servile Senator whom they can bend to their will—much as they have bent Senator PEPPER, of Florida, Senator GUFFEY, of Pennsylvania—and as they will bend the freshman Senator from Washington, who owes his appointment to that strident minority.

We were regimented during the depression when Congress gave its rights and powers away to the bureaucrats. Farmers were told when to plant, what to plant, what to destroy, what to eat, what not to eat. Less than 2 years before we were plunged into war, farmers were commanded to destroy overplantings of wheat either by burning or plowing under. The bureaucrats did that. Today we could use that food, but now the bureaucrats regiment you and tell you what you shall eat, when you shall eat it, what you shall not eat; what time you will go to bed, what time you will get up; what temperature you will keep in your home, what time you will turn on the lights, what time you will turn them off, where you will travel, where you will not travel; where you will work, where you will not work; what union you may join, what union you may not join; what wages you may pay your employees, what wages you may not pay your employees; how, when, and where you can lose your money gambling; how, when, and where you can attend conventions or similar meetings; how much sugar, meat, canned vegetables, gasoline, and shoes you can have. They even tried to tell you when, where, and how you could buy gasoline for your car, and how and when to pay for it.

Now in order to carry on this gigantic regimentation a gigantic bureaucracy is required. So we have both—the gigantic bureaucracy and regimentation. It is fast approaching the state of totalitarianism that has already destroyed all the leading nations of the world, either in liberties and physical properties, or both with the exception of the United States and England. At the present moment we are far ahead of England in this matter of regimentation and totalitarianism. The majority of Congress is sincerely trying to extricate the country from the grip of this totalitarianism but they need your help—your letters and encouragement.

If you think we are exaggerating the danger existing from this bureaucracy in America, consider what goes on around you. A few years ago—before 1932—we had no Federal agencies in this small town except the post office. What have we today? The telephone directory has 10 departments listed under "United States Government" not counting the post office and in addition to that we know of a couple more that don't seem to have gotten a phone. There you have it in this small town alone—12 times as many arms of Federal bureaucracy as we had a few years ago. Imagine what that amounts to when spread over the Nation. In addition to that the town is flooded day after day with "special investigators," "special checkers," "special field agents," "special inspectors" of this and that, "special recruiters" for Army, Navy, Marine Corps, War Labor Board, and war industries; "special coordinators" and "special" everything in the dictionary of bureaucracy. Literally, they are falling over each other. That is bureaucracy at its worst.

The Army-Navy is the worse regimenter of human lives at the present moment, but they are followed closely by the O. P. A.; the W. P. B. and that fine old farce, the War Labor Board. Congress is trying hard to fight off the Army-Navy boys, who came forth with all their thunder for a work-or-fight law. The Mead committee (the old Truman investigating committee of the Senate) dropped in unexpectedly on the navy yards at Norfolk, Va. This yard was stuffed to the running boards with war help and was clamoring for 4,000 more. What do you suppose the committee found out just in that one cursory examination? They learned that the help on the job had so little to do that it was given over to making items for personal use, on the taxpayer's time. One of the Senators brought back to the halls of Congress a beautiful, inlaid, walnut checkerboard that one of these busy(?) war workers had turned out because he had nothing else to do. Furthermore, the committee found that the yard was overstaffed by 40 percent and didn't need the 4,000 extra workers that the Army-Navy wanted the work-or-fight bill by which to take people away from their home communities.

Then what happened? That bureaucracy called upon another bureaucracy, headed by Jimmie Byrnes, so-called "assistant President." Mr. Byrnes, issued his order closing the race tracks, thereby depriving States like Florida of millions of dollars of taxable revenue with which it has been maintaining many of its State agencies. Did he stop racing? Of course not. The race horses were shipped to Mexico and the betting and gambling goes merrily on in Mexico while the American taxpayer again foots the bill for bureaucracy.

The most recent move of the bureaucrats is Mr. Byrnes midnight curfew order, whereby all places of amusement must close at midnight. The evident purpose of that order is to force these operators and employees into war jobs—those jobs where they make fancy checkerboards on the taxpayers' time at the taxpayers' expense. But monopoly liquor States like Montana (and there are some 19 of them) depend on the sale of liquor for a great deal of their revenue. Montana's welfare and old-age assistance funds are augmented by that revenue. The general-tax funds of the State are enriched by some $1,500,000 annually. Now what's going to happen? Well, people are going to drink

and dance and sing in spite of Jimmie Byrnes and his bureaucrats, so we'll have speakeasies and joints operating without paying licenses and without supervision. But the bureaucrats say they'll close them up too. With what? Another horde of bureaucrats, of course.

A year or so ago Congress was inveigled by the Treasury Department into putting an additional tax of $3 per gallon on hard liquor. Then the alcohol unit of the Internal Revenue Bureau of the Treasury Department put on still another horde of bureaucrats to check the liquor vendors, to see that the Government got the tax. Now that horde has gotten down to the fine points of trying to figure out how much liquor should be taxed by the number of drinks sold by the emporium. That's just another sample of bureaucracy.

And then there is that fine racket that an unsuspecting Congress put over on an unwilling populace—the Federal auto use stamp tax. This is the racket where you beat it to the postoffice on July 1, buy a stamp for $5 and hotfoot it back to your car to plaster the stamp on before the snooping Internal Revenue agent hauls you before the bar of justice. This racket has even been extended to the point where agents, in order to keep themselves employed, invade public parking lots, filling station stands and public garages distributing their summons although the tax is supposed to be for the operation of a vehicle on a public highway. That is really bureaucracy in its penny-ante stages, and Congress let them get away with that one. If the Internal Revenue Bureau makes one thin dime out of the collection of that tax it is because the dime is plugged. But of course, it gives bureaucracy a further opportunity to regiment the folks.

All of the various schemes for T. V. A.'s, M. V. A.'s, and river authorities are nothing more or less than bureaucracy on the march. All of what they propose to do can be done or is being done by existing Federal agencies. But another layer on top of what we have, controlling something as vital to your welfare as electric current, would really regiment us all in the finest kind of bureaucratic dreams.

In all of the foregoing we have purposely avoided commenting on the O. P. A., the W. P. B., the selective service (which has been stripping the farms of essential workers in open defiance of congressional disapproval), the Wage and Hour Division of the War Labor Board (wait until you get a batch of them in your hair), and dozens of others of the more familiar type.

Now you just cannot sit back, fold your hands and say, "Well, we don't need to do anything about that. Just as soon as the war is over all these controls will disappear." That is the most dangerous kind of thinking. That is the kind of thinking that let a madman grow up in Europe to plunge the world into the second holocaust of a world war.

Did you ever hear of a bureaucrat quitting a soft chair (reports have it that a "swivel chair" shortage exists in Washington at the present time) to go out digging ditches? No, you didn't, and you never will. Bureaucrats will wreck a country, before they will give up their strangle hold on it, once they have perfected their controls.

At the present time we are being told by the bureaucrats of the O. P. A. that they must continue rationing for some period after the war, "in order to maintain regulated distribution of food and prevent inflation." What they mean by "some period after the war" is forever. The W. P. B. is saying that it must continue its controls after the war in order to maintain a balance of raw materials going to domestic users. What they mean is that they must have economic sanctions, so that when everything else fails, they can still continue control of such places as Montgomery Ward's—in which the court now says they are illegally operating. The bureaucrats don't think the court knows how to read law, so they simply go through the process of appealing the decision and say to Wards: "We'll enter into an agreement with you to sit here on our imagination, until the upper courts get through reading the law over and over and over, and you'll accept the agreement or we will wreck the place by applying economic sanctions." The W. P. A. is saying it must continue to tell the farmers what, when, and how to plant; what, when, and how to eat or not eat, after the war, so as to prevent surpluses, land speculation, inflation, and any other excuse they can think up. Remember, these are the same birds who burned our surplus wheat crops in 1940, who plowed the cotton under, and who killed pigs by the thousands to reduce surpluses of pork. That farce, the War Labor Board, wants Congress to give it a law with teeth in it. What for? So it can play off one group of union men against another group of union men; so that it can tell a man what union he may join and what union he may not join. When that power is complete, the unions of America will be destroyed as they were in Germany and Italy.

We urge you again to write your Senators and Congressmen, giving them moral support in their fight to regain the powers entrusted to them by the people and given away to bureaucrats by former rubber stamp representatives in Washington. If you want to know the names of Senators who will be glad to hear from you and who will ponder what you have to say, here are some of them: J. C. O'MAHONEY, Democrat from Wyoming; EDWIN C. JOHNSON, Democrat of Colorado; EUGENE D. MILLIKIN, Republican of Colorado; HARRY F. BYRD, Democrat of Virginia; HARLAN J. BUSHFIELD, Republican of South Dakota; WALTER F. GEORGE, Democrat of Georgia; ROBERT M. LA FOLLETTE, JR., former Progressive of Wisconsin; BURTON K. WHEELER, longtime leader of independent Democrats; ALEXANDER WILEY, Republican of Wisconsin; MILLARD E. TYDINGS, Democrat of Maryland. We can furnish you other names and also those of Congressmen, if wanted.

Remember what we stated at the outset of this article. Bureaucracy, like cancer, gnaws at the vitals—the vitals of democracy. It is being aided and abetted by a strange conglomeration of fellow travelers, crackpots, totalitarians, money lenders, and socialistic "pinks" living off inherited wealth. We particularly have in mind certain "foundations" and certain wealthy individuals living in Washington, Chicago, Boston, St. Louis, and even one who inherited his wealth from the resources of the State of Montana.

Congress is fighting them and their accumulated bureaucracy; fighting to preserve the American way of life. Congress is calling on you for your help.

Will you give it?

Government Control of Money and Credit: A British View of the Way to Full Employment

---

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. VOORHIS of California. Mr. Speaker, I am glad indeed to include with my remarks the following article which appeared in the London Times on Saturday, January 20, of this year, and which will be both self-explanatory and, I hope, challenging to Members as they consider the problem of full employment after the war:

A WAY TO FULL EMPLOYMENT—GOVERNMENT CONTROL OF MONEY AND CREDIT

"The Engineer and the Nation's Money" was the title of a lecture given by Mr. Antony Vickers at the Institution of Mechanical Engineers last night.

The basic function of the engineer, he said, had been and was to raise the standard of living by providing the machines and other devices which enabled man to multiply his ability to produce. Until we began to appreciate the influence of the machine on the volume of production we could not realize the effect on the value of money.

The orthodox statement that you could only get a pint out of a pint pot, when applied to production and economics, was wrong, and simply meant that it was not yet realized that you got a great deal more out of a machine than was put into its construction. Fundamentally our peacetime goal was to maintain the highest standard of living with the maximum freedom of the individual, and this could only be obtained with the largest output for the minimum effort—i. e., the most efficient use of field, factory, and mine. Clearly this goal could not be obtained when there were millions of unemployed and the means for producing all kinds of goods and services were left idle.

What were the basic reasons for the enforced restriction of production in practically every country in the world? Even the social insurance bill debated last session in Parliament was allowing for over 1,000,000 unemployed who would otherwise produce goods and services of perhaps £600,000,000 a year.

LACK OF PURCHASING POWER

The reason why, in the pre-war period, this appalling state of affairs existed in practically every country was, he suggested, given at the Hot Springs conference last year when it was agreed that: "There has never been enough purchasing power in the hands of the people to enable them to purchase all that has been produced." If they could determine why there was not sufficient purchasing power, which meant, of course, insufficient money in circulation, then they would be getting at the root of the whole problem.

Just as it was essential in business to increase the working capital before and not after expansion so this policy must be followed by the nation, which was largely an aggregate of businesses. The nation's working capital must be increased just before and not after expansion, otherwise there would be a fall in the price level and money would be forced out of circulation.

In time of war the nation insisted that the new money was obtained first and not after, and while there were certain things that were definitely wrong in our wartime finance, nevertheless the vital principle of securing the money before and not after was adhered to.

Immediately after the war in this country there would relatively be too much money in circulation and too few goods, but as men and women were demobilized and production turned over from war to peace so the amount of goods and services would increase and the price level would fall. That was just what happened after the last war, and during this period there would be more jobs than manpower to fill them.

THE STABLE PRICE LEVEL

The time, however, would come when the value of money would have increased, due to expanding production, to such an extent that unemployment was again about to begin. This, then, was the time, perhaps in 1950, when the nation's working capital must be increased by positively injecting new money

into circulation by work to the best advantage of the community.

Only by so doing could a stable price level be maintained. The main problem for Parliament would then be to decide through what channels this newly created debt-free money was to be injected. Never again let it be asked, "Where is the money to come from?" but "Have we the manpower and the materials?"

To achieve the object of full employment in this machine age it would be necessary either to have nationalization of industry and commerce or to put into practice what was so clearly stated by Mr. Mackenzie King, Prime Minister of Canada, when he said: "Until the control and issue of money and credit is restored to the government and recognized as its most conspicuous and sacred responsibility, all talk of the sovereignty of Parliament and of democracy is idle and futile."

This would mean having a central bank, but joint stock banks would continue their excellent service to industry as at present, subject only to their not being able to create further new money. The primary duty of the central bank would be to create just sufficient new money to maintain a stable price level with full employment. The success of democracy depended on enlightened public opinion. So long as that opinion was based on the shifting sands of orthodox fallacy so long would there be poverty, misery, unemployment, and war.

The Bretton Woods Monetary Proposals

EXTENSION OF REMARKS

OF

HON. CHARLES W. TOBEY

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6 (legislative day of Monday, February 26), 1945

Mr. TOBEY. Mr. President, last July there was held at Bretton Woods, N. H., a conference participated in by 44 nations, in an effort to arrive at agreements on monetary matters. I was privileged to be one of the United States delegation at the conference, and sat through the deliberations. I may say that I went to the conference rather skeptical of the attainment of the objectives of the conference, but came away convinced of the great value that would flow and the constructive benefits which would result from the agreements.

Legislation authorizing our acceptance of and participation in these agreements was introduced in the Senate by the senior Senator from New York [Mr. WAGNER] and myself, and is soon to be considered by the Congress.

Preliminary thereto, I ask unanimous consent that there be printed in the Appendix of the RECORD a memorandum issued by the National League of Women Voters entitled "The Bretton Woods Monetary Proposals."

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

THE BRETTON WOODS MONETARY PROPOSALS

NEED FOR INTERNATIONAL COOPERATION

Gradually the foundation stones are being laid on which to build a firm post-war structure. The immediate objective of an international conference may be the problem of food, oil, or currency exchange, but the ultimate goal of them all is maintenance of a just and durable peace.

Our only chance to keep this peace lies in giving the peoples of the world a sense of well-being and a certain amount of economic security, but they will never achieve these aims if nations can't trade freely with each other. Even the comparatively self-sufficient United States cannot get along without importing such things as coffee, silk, and metals. Cut off from imported products, all nations would have to readjust their living habits, change production practices, and use equipment inferior in quality or higher in price. World trade, therefore, is not only desirable; it is essential.

METHODS OF STIMULATING TRADE BETWEEN NATIONS

I. Agencies for international cooperation

Under the proposed United Nations organization there will be an Economic and Social Council. It is intended to act as a coordinator over the special-purpose agencies such as those set up in the aviation, food and agriculture, oil and monetary agreements. All these agencies are designed to reduce the economic causes of war and assist the exchange of goods and services among the nations of the world. They are important. No security council can prevent war by threatening to use force if the people are discontented, hungry, poor, and therefore desperate enough to fight.

The world is now so closely linked together by radio, telephone, and rapid transportation that what happens in one section of the world has repercussions all over. We need each other's products. Depression and unemployment in Brazil will mean decreased purchases of American automobiles and machine tools. This can result in less employment here and the beginning of a depression in this country. Because we are interdependent, it is necessary to have agencies dealing with problems on a world-wide scale.

II. Constructive domestic policies facilitating trade

While international agencies can determine certain rules of the game and establish an atmosphere favorable to unrestricted trade, they cannot accomplish their objectives unless nations are willing to adopt internal policies implementing these objectives.

Outside groups must be able to sell their goods to us in order to get cash to buy our goods. It is true that at periods we have lent them the money to buy our produce or they have shipped us their gold in payment, but these policies obviously cannot go on for very long. The only sound basis for permanent trading is an exchange of goods with one another.

One of the difficulties of the pre-war period was that many restrictions were imposed on those who wanted to trade with each other. High tariffs were put on goods. Currencies had different values depending on how they were used and who used them. There were bilateral arrangements so that if A sold to B, B could only use the money to buy from A. Barter agreements were used by Germany under which she would take your wheat only in exchange for her harmonicas. All of these regulations stifled trade and directed it into uneconomic channels.

For the sake of our own prosperity we must act against such restrictions in the future. In many of our industries the size of their foreign sales will mean the difference between prosperity and depression. Tobacco farmers, for example, rely on foreign consumers to buy more than half their product.

III. Post-war stability of exchange rates

When an American producer sells in France, for instance, he is interested in two things—in the number of francs which the Frenchman will pay and in the number of dollars which those francs are worth. Suppose the manufacturer starts to make automobiles for the French market at a time when 20 francs equal an American dollar. Six months or a year may elapse before the cars are ready for sale in France. At that time the currency may have depreciated so that 30 francs are now required to equal an American dollar. This puts the American businessman in a very difficult position. Before, in order to obtain a reasonable profit, the auto he produced had to sell for 10,000 francs. Now it must bring 15,000 francs in order to make possible the same profit. Under these circumstances fewer Frenchmen will be able to afford the automobiles and the American businessman will have lost a part of his market. Stability of foreign exchange rates, therefore, is a prerequisite to healthy trade.

In the post-war world conditions are bound to be upset. While war-torn countries are getting back on their feet again their currencies may be unsteady. To help them and to protect the businessmen who want to trade with them an international bank and a currency stabilization fund have been proposed.

THE BRETTON WOODS CONFERENCE

To determine what kind of world monetary arrangements would be needed after the war representatives of 44 nations held a 3 weeks' meeting at Bretton Woods, N. H., in July 1944.

A good deal of spade work had been done prior to the conference. A year before two plans for a stabilization fund had been published—the White plan by the United States and the Keynes plan by Great Britain. In the spring of 1944 a joint statement was made by the experts of 30 nations setting out the principles for an international monetary fund. Just before the Bretton Woods Conference a preliminary meeting was held in Atlantic City. All this preparation meant that careful consideration had been given to the problem.

The plans for a bank and a fund as drawn up are probably not the plans that any of the participating countries would have drawn up for itself. They are a compromise representing the conflicting interests of countries which are large and small, debtor and creditor, highly industrialized and undeveloped. It is a great credit to the delegates that they could find such a large area of common agreement.

Alternative plans may be proposed which also have merit. Since it is probably impossible for the 44 nations to meet together again to iron out their differences on a new basis, it would seem wiser to go forward with the present plans which are workable, rather than start all over again with another approach. The Bretton Woods proposals can go into effect as soon as they are signed by governments subscribing 65 percent of the capital to the bank of the fund. Most of the opposition has centered around the proposals of the fund rather than the bank.

THE INTERNATIONAL MONETARY FUND

I. Purpose

(a) To facilitate the expansion and balanced growth of international trade.

(b) To maintain orderly exchange arrangements among members.

(c) To eliminate foreign exchange restrictions.

(d) To provide temporary assistance to countries whose trade is temporarily out of balance. The fund is meant to provide a breathing space during which time a country can make any long-run fundamental adjustments which are necessary.

II. Obligations

In return for the assistance obtained from the fund, each member is obligated to avoid international cut-throat competition and to remove monetary restrictions on current trade.

III. Management

(a) A board of governors composed of a representative from each nation will meet at least once a year and more often if necessary.

(b) Twelve executive directors will conduct the general operations of the fund.

(c) A paid director and staff will manage the fund.

IV. Voting

Voting power is closely related to quotas. The United States, having the biggest quota, will receive 28 percent of the votes. The United States' vote is greater than that of all the members of the United Kingdom combined.

V. Quota payments

(a) The member nations will make payments equalling $8,800,000,000. The quota of each country was based on many things, including its foreign trade, national income, and future position in world economic affairs.

(b) Ten to 25 percent of this money will be paid in gold and the rest in currency.

(c) The United States' share is $2,750,000,000, with $687,500,000 payable in gold.

(d) The currency of all member nations will be defined in terms of gold or the dollar.

(e) The amount of its quota determines how much currency a country can buy from the fund.

VI. Operation

(a) Formerly, if a country like Great Britain bought more from the United States than she sold to us, she would either have to ship us gold, borrow from us, or sell some of her investments here to pay for the difference. Since the fund would be a pool of foreign currencies, Great Britain could go to the fund and buy dollars with pounds in order to pay for her purchases. These dollars must be returned to the fund as soon as possible.

(b) To prevent the fund's reserves from being exhausted too rapidly, a country in 1 year may buy other currencies from the fund only up to 25 percent of its quota, unless special circumstances arise.

(c) To discourage heavy buying, service charges payable in gold will be levied, increasing with the amount of the foreign currency obtained and the length of time it is held. To add to the strength of nations whose currency is being purchased from the fund, every country drawing on the fund loses one vote for every $400,000 it buys; the nation whose currency is used gets that vote instead. Because dollars will be in great demand, the chances are that the United States will increase its voting strength.

(d) Since most nations will want to buy dollars from the fund, they may become scarce. The fund can then ask the United States either to buy gold from the fund with dollars or lend some dollars to the fund. There is no obligation to do either of these things.

AMERICA'S INTEREST IN THE FUND

(a) As one of the world's greatest traders, we are vitally concerned with the maintenance of stable and orderly exchange rates and with consequent expansion and growth of international trade.

(b) In the early post-war years when nations are getting back on their feet again the United States will be the chief seller, and will therefore be extending most of the credit. Critics of the fund say we will be "putting money down a rat hole." These critics forget that if we don't put money in the fund we will be lending it to nations so they can buy our goods. In this process we take all the risk of default—in the fund we would only take a portion of the risk. At worst the amount we could lose in the fund is only equal to the cost of about 11 days of war. The price of taking a chance on future prosperity is small.

OBJECTIONS TO THE FUND

Objection. In England there are complaints that the fund ties up too closely with the gold standard, while in the United States there are complaints that the fund doesn't tie up closely enough with the gold standard.

Answer. The fund represents a compromise between two opposite points of view. Since neither side feels it went far enough in its direction it is probably a pretty good compromise.

Objection. Many fear the abuse of the fund by debtor countries. These countries might put up their inferior currencies to buy all the valuable money of the more stable nations.

Answer. There are many safeguards in the fund's proposals to prevent excessive buying and depreciation of currencies.

Objection—

1. Some bankers oppose the fund. Instead they sponsor a key-country approach. They say that because most of the world's trading is done in terms of the pound and the dollar, these currencies must be stabilized first. The smaller countries would then define their currencies in terms of the pound or the dollar.

2. This approach would probably involve a large loan or gift to Great Britain.

3. Proponents of the key-country idea feel that unless each nation achieves domestic stability, cooperation on an international level would not be successful.

4. They also feel that more liberal commercial policies must be established before the International Monetary Fund is set up.

Answer—

1. Stabilizing the pound and the dollar first and letting the other nations tag along is not a very democratic method. The smaller nations are denied a part in international monetary arrangements. Economic blocs grouped around the pound and the dollar wolud seem to be encouraged. These might develop the trade restrictions which the fund is trying to prevent.

2. It is doubtful if Great Britain would want to accept a large loan to stabilize her currency.

3. It is true that the fund will not be effective unless nations put their financial houses in order. However, it will be impossible for many war-ravaged countries to do this themselves. They will need the outside help which the fund will provide.

4. The supporters of the Bretton Woods proposals emphasize that liberal trade policies are also important. However, monetary agreements need not wait for tariff changes in the various countries or for necessary domestic reforms.

THE INTERNATIONAL BANK FOR RECONSTRUCTION AND DEVELOPMENT

I. Purpose

(a) To facilitate the long-term investment of capital for productive purposes to:

1. Restore economies disrupted by the war.

2. Reconvert to peacetime production.

3. Develop resources and industry in less-advanced countries.

(b) To promote the long-range balanced growth of international trade by encouraging foreign investments.

II. Organization

The organization of the bank is similar to that of the fund in regard to membership, management, voting powers, and quota payments. The bank would also have the same advantage of centralized information and consultation as the fund.

III. Capitalization

The capitalization of the bank is set at $10,000,000,000, but only $2,000,000,000 of this amount will be paid in when the bank starts to function. The full share of the United States is $3,175,000,000 but it is unlikely that we will be asked to pay more than 10-20 percent of this amount. The rest will only be called if there are a large number of defaults on loans guaranteed by the bank.

IV. Operation

The bank does not intend to lend more than 20 percent of its capital. Its main purpose will be to guarantee long-term loans made by private lenders through the regular banking and investment houses.

Safeguards

1. Total of loans and guaranties cannot go over $10,000,000,000 plus reserves and surplus.

2. Loans must be guaranteed by the country whose citizens are borrowing and approved by the management of the bank. Low rates of interest will aid repayment.

3. The service charges of 1-1½ percent levied for guaranteeing loans and for direct loans will help pay for any defaults by borrowing countries.

4. The bank will be responsible only for loans needed for imports for productive works such as dams, factories, and railroads. This requirement prevents the money being spent for a domestic W. P. A. and stimulates foreign trade.

AMERICA'S INTEREST IN THE BANK

1. Because we are the greatest creditor nation in the world, our investors would make most of the loans with or without the bank. If the bank comes into existence, it will be our investors who will get protection from the bank's international guaranty. Instead of carrying all the burden of risk, the United States would be sharing any loss which occurs with Great Britain, France, Russia, and the other countries.

2. In pre-war years our private foreign investments were insecure. According to Professor Comstock, of Mount Holyoke, "in 1931 the United States Department of Commerce figures that one class of foreign commitments alone, private commerce long-term investments abroad, increased by nearly $1,000,000,000 a year from 1922 to 1929. Naturally, since no pains at all were taken to make sure that the projects were sensible, much of this money was permanently lost to the American economy. By 1937 the ratio of defaults was 68 percent in South America and well above 50 percent in Central America, Europe, and the West Indies. Even the Bretton Woods figures are not as big as those we have already tossed off."

How the fund and the bank help create prosperity

China, for example, obtains currency from the fund.

With this money China buys United States goods.

United States manufacturers make more goods.

Workers have more jobs.

Workers buy more goods.

Private enterprise system stimulated.

United States buys more goods from China as well as other countries.

China pays back currency to fund.

China, for example, obtains loans from the Bank.

With this money China buys United States goods.

United States manufacturers make more goods.

Workers have more jobs.

Workers buy more goods.

Private enterprise system stimulated.

United States buys more goods from China as well as other countries.

China pays back loans to bank.

National Insurance Policies

REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

NATIONAL LIFE INSURANCE POLICIES FOR SERVICEMEN MUST BE EXTENDED FROM 5 TO 10 YEARS

Mr. McDONOUGH. Mr. Speaker, I am taking this time in order to call to the attention of the House a piece of very vital and important legislation that I believe is timely and should be enacted very shortly.

I introduced the bill, H. R. 2441, which has been referred to the World War Veterans' Committee to extend the life of the national insurance policies from 5 years to 10 years. I have received letters from a number of people who have indicated their interest in it. As a matter of fact I have one here from the mother of a boy overseas. His policy expires on the 28th of this month. If something is not done he is going to be without insurance. There are others in a similar situation.

H. R. 2441

A bill to extend the life of national service life insurance policies owned by members of the armed formes to 10 years, and for other purposes

Be it enacted, etc., That the second sentence of subsection (f) of section 601 of the National Service Life Insurance Act shall be amended by changing the period at the end thereof to a colon and adding the following provisos: "*Provided*, That all such policies shall be automatically extended for an additional 5 years without any increase of premium for all persons (as defined in this act) serving outside the continental limits of the United States: *Provided further*, That all such policies shall be extended at the option of all such persons (as defined by this act) serving within the continental limits of the United States without any increase of premium therefor and upon application within 90 days of written notice of the expiration of their policies: *And provided further*, That the increased actuarial cost resulting from these extensions shall be paid by the United States, and the Administrator is authorized and directed to transfer from time to time an amount equal to the amount of such differences in premium from the national service life insurance appropriation to the national service life insurance fund."

POSTAL POST NO. 1581,
VETERANS OF FOREIGN WARS
OF THE UNITED STATES,
Baltimore, Md.

HON. GORDON L. McDONOUGH
House Office Building,
Washington, D. C.

DEAR MR. MCDONOUGH: The United Press has reported that you have introduced a bill to extend for 5 years national service life insurance policies held by members of the armed forces.

Please send me a copy of this bill.

Have had inquiries, from men in the armed forces overseas, about an extension of the "term" plan. One of the letters was from a man now in the battle area. His insurance will expire this month, unless the time is extended.

Yours very truly,

CHAS. F. MOONEY,
Service Officer.

MARCH 5, 1945.

Congressman MCDONOUGH,
House of Representatives,
Washington, D. C.

DEAR SIR: In today's press I note you have introduced legislation to extend for 5 years insurance for servicemen overseas, etc.

Our son in the Navy in foreign service has a policy taken out 4 years ago. It is called "Five-year term policy with provision for exchange. Premiums payable for 5 years. Nonparticipating."

It has no war clause. Upon inquiry to the insurance company asking if policy may stand as it is for the duration, as other obligations, mortgages, taxes, debts, etc., for servicemen are handled, we are informed by the insurance company that they are sorry to have to say it, but the policy must be converted on or before 28th March this year, or we can carry the policy as is until end of 5-year term (28th March 1946) and then policy becomes null and void. Our son cannot be here to do anything about it. Your legislation seems to cover cases of this kind, and you are to be congratulated on your alertness. Insurance companies should not profit by absence of boys in service. That isn't my idea of patriotism.

If your legislation does not cover cases of this kind, please include it, as I dare say thousands and thousands of boys will lose their policies (to the gain of insurance companies) if something isn't done for their protection. When the insurance company was asked why they could not hold policies in abeyance, as other organizations are doing out of deference to servicemen, their answer was "This is a contract."

Mortgages are contracts, too, and taxes are laws, but are held in abeyance.

With sincere appreciation for your consideration.

Respectfully,

MRS. W. T. HUNTLEY,
Aberdeen, N. C., March 4, 1945.

Article to Appear in Encyclopedia Americana on Cartels

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 6, 1945

Mr. VOORHIS of California. Mr. Speaker, special permission has been given by the Encyclopedia Americana to the author of the article on cartels which is shortly to be printed in Encyclopedia Americana for its inclusion in the CONGRESSIONAL RECORD. The author, Mr. Howard W. Ambruster, of Westfield, N. J., has suggested to me that it be placed in the CONGRESSIONAL RECORD and since there is so much discussion of the problem of cartels and so much need for a clear understanding of just what that word means, I am asking consent to include with my remarks on three occasions portions of Mr. Ambruster's article. It is understood that this material cannot be reproduced except by special permission from the Encyclopedia Americana.

Cartel (Ger. Kartell) kärtĕl', in modern usage a restrictive alliance of competitive enterprises, is a word with several very different meanings all stemming from its Latin derivations chartula: A little paper or small writing; and chart, paper or papyrus, or a thin leaf. The early English meanings of cartel include the type of written agreement between belligerents for the exchange of prisoners of war; the vessel which conveyed the messenger bearing such an agreement; and a letter of defiance or challenge to single combat.

In French the word "cartel" has also been used to describe a clock, or a clock dial or case, and, in heraldry, a shield. Another meaning is the political cartel which phrase appears to have been used in Germany in 1837 to describe an alliance of three parties friendly to the government of the German Reichstag; and again in France in 1924 to designate, as the "Cartel des Gauches," the political group which won the French elections in that year. The Germans have also used the phrases "Custom Kartell" to describe treaties between two countries for mutual assistance by their customs authorities; "Trades Union Kartell" to designate agreements between different unions; and "Students Kartell" to define associations of students.

Much more important than its earlier definitions, the word "cartel," toward the end of the nineteenth century began to be used to describe the vast group of different kinds of agreements made between two or more industrial or commercial enterprises in the same field of business with the object of influencing competitive factors. In Germany where this meaning originated the word is "Kartell" and Dr. Robert Liefmann, one of the oldest and best known German authorities on this subject defined it in 1899 as "a free and voluntary coalition contracted by houses in the same line with a view to monopolize the market in common while preserving to their several enterprises a greater or less autonomy." Over 30 years later the same authority defined "cartels" as "voluntary agreements between, or associations of, independent enterprises of similar type to secure a monopoly of the market." Briefly, Dr. Liefmann has called cartels "associations with monopolistic aim."

Very similar to these definitions were those given to the Temporary National Economic Committee, T. N. E. C., in 1941, as based upon several foreign sources, by Prof. Clair Wilcox, of Swarthmore College, who enlarged upon the ultimate purpose of the cartel "of increasing the profits of its members by subjecting their competitive activities to some form of common control." The German Meyer's Lexikon, in its 1927 edition, stressed the monopolistic purpose of weakening or eliminating competitors of cartel members. Dr. Rudolf Callmann, another well-known authority who left Germany for the United States in the 1930's, gave to the T. N. E. C. what he stated to be his own opinion and also the definition of the essential features of the cartel which underlies the decisions of the German courts, as:

"A contractual association of legally independent entrepreneurs in the same or similar field of business, formed with the intent, effect, or potentiality of influencing the market by means of regulation of competition." A concise definition might be that cartel means regulated competition as opposed to free competition.

According to other students, "collective private monopoly" or "private collectivism" are brief definitions which distinguish the cartel, as a contractual agreement, from the trust or combination as single legal entities (see Trusts). Some German dictionaries define the cartel as a ring or syndicate. In this definition it would appear that the word "ring" is used in its meaning as a combination of persons for attaining control of the price of a commodity, rather than that formed for political or legislative purposes. The word "syndicate" in this sense applies to a central agency which handles all sales in a designated market and performs other functions for members of a cartel.

The unanimity of these definitions on the issue of monopolistic aims and increased profits is of significance for the reason that considerable confusion has been apparent at times in arguments advanced relative to the merits of the cartel which, without actually defining it, imply that the purpose of such associations is neither monopoly nor an approach to monopoly.

PROTOTYPES OF ECONOMIC CARTELS

The word cartel was used in economic literature to describe these associations many years before it was recognized by compilers of dictionaries in the United States. From examination of German encyclopedias and reference works of the last half of the nineteenth century it would appear that the first mention of the cartel as an industrial or commercial organization was in volume 9 of Meyer's Konversations Lexikon published in 1876 (Leipzig) in which the word Kartell by a literal translation was said to have the meaning "That parties who otherwise are competitors * * * make provision to protect their common interest against third parties." The first reference to it in Brockhaus' Konversations Lexikon was in the fourteenth edition (Leipzig 1895) and according to Liefmann the earliest public mention of the economic kartell in the German Reichstag was in 1879. Prof. Friedrick Kleinwachter, well known Austrian economist, in 1883 published what appears to be the first monograph on the subject Die Kartelle, and the German or English spelling of the word then began to appear in other reference works and the economic literature of the period.

However, the origin of associations of independent enterprises or entrepreneurs having monopoly or restraint of competition as their object, goes back at least to the middle ages. Some writers have implied that the ancient guilds resembled the modern cartels in their functions of monopoly and self-rule, and some similarity to the modern cartel organization has been found in historical descriptions of collective monopolies such as the salt and alum selling syndicates of 1301 and 1470, respectively; also in a price and regional arrangement between European copper-mining groups in 1546. Wolfgang Menzel's History of Germany (London 1853) in referring to the "privileges of corporations and guilds" of the twelfth century states that "every trade imposes its particular regulations upon itself, the customs of the craft were everywhere similar, and merely the political privileges of the corporation differed in different towns."

Associations of commercial enterprises and syndicates intended to restrain competition continued to appear during the centuries which followed. But, despite their purpose these associations, prior to the era of modern industry, do not come within the accepted definition of the modern cartel nor have they the same significance as concentrations of economic, social, and political power.

Authorities differ as to the first such organization. Several authorities refer to the century-old Salt Union started in 1828 by mines of various German states, and to cartels formed by several alum works in 1836, and by Nassau pig-iron producers in 1842. However, Liefmann appears to regard these associations as the result of special conditions and an indication of reaction which has prevailed in Germany against the general principle of free and open competition.

One explanation of the German cartel movement which has been given by authors of that country is that the national characteristic of Germans is to prefer being led. That explanation appears to go to the root of the cartel theory as opposed to the individualism of the Anglo-Saxon race.

OBJECTIVES OF THE CONTEMPORARY CARTEL

The purpose of members of the cartel by united effort or common action to influence conditions under which their product is marketed, may be carried out by any one of a great variety of methods. These may be said to belong in three general classifications: (1) Price fixing, or agreement on terms or conditions of sale, by which the net return per unit may be controlled—central selling agencies and profit-sharing pools being, in effect, price-fixing devices; (2) market allotment of various types by which each member agrees to sell only in certain territories or to certain groups or individual customers; (3) production restriction by allotment of fixed quotas to which each member agrees to limit output in a designated period or for a designated territory. Exclusive production under patent licenses may be found in this last type of cartel, although patent and trade-mark rights are frequently utilized both for price fixing and for territorial division of market, without restrictions as to quantities to be produced.

This grouping of cartels into only three general classes may appear to be an attempt at over simplification, but so much confusion exists in the exact significance of many varieties of these methods that the obscurity appears to increase whenever attempt is made to list more elaborate subdivisions or a greater number of classifications.

Other students of the cartel place in separate classes those which combine to exclude competitors from the field, this, of course, being a common purpose inherent in all such associations. Still another classification has been awarded by some writers to those who utilize the cartel mechanism for war preparations. However, this appears to be a basic or fundamental purpose to which the cartel, as such, is entirely incidental, even though due to its essential features of organization and private control, the cartel has demonstrated, in Germany, its tremendous value to the war aims of its leaders.

Each of these general classes of cartels has an almost endless variety of restrictions to which the members agree, but they all aim at the one common end of influence on, or restraint upon, or positive control of, competition in order to secure some degree of monopoly. For example, if production quotas on a certain product are reduced materially, the resulting scarcity of the product automatically results in a general increase in the price level although no actual agreement to fix prices exists. A similar result occurs when some of the cartel members agree to refrain from making any sales at all in certain markets or to customers who have been reserved to other members. These restraints are voluntary as to the members of the cartel, but it would appear that frequently other restraints are forced upon outside competitors.

A fundamental purpose of the members of the cartel always appears to be to decrease or remove what is termed the "capital risk" of private enterprise or corporate structure in a capitalistic economy. In this respect the aim might be said to be to remove the loss factor from what is sometimes called the profit-and-loss system, as distinguished from state socialism or public collectivism.

COMPARISON WITH TRADE ASSOCIATIONS

Trade associations, especially those of a national character, of which over 2,000 have been reported in the United States during the twentieth century, have much the same fundamental purposes as cartels. The final report of the T. N. E. C., in 1941, illustrated their similarity by pointing out that many such associations exchanged patent rights; established common cost accounting systems; price reporting plans; codes of business conduct; and, by other devices attempted to control prices, allocate markets, and curtail output. A trade association in the United States which has carried on such activities has usually proceeded on a basis of voluntary cooperation which may avoid any semblance of illegal conspiracy in restraint of trade.

NATIONAL AND INTERNATIONAL TYPES

A different sort of classification of importance is that of the national and the international or supercartel; the latter may constitute an agreement between two or more national cartels; or between a single national cartel or enterprise and independent enterprises in one or more other countries. In such supercartels if the government is a party to a national enterprise involved, as has been the case in Germany, the private enterprises which have joined it thus undertake obligations which cannot be enforced by national or international law and, in effect, the cartel agreement becomes a treaty made between one national government and the private enterprise of another nation.

International cartels usually do not attempt to fix prices directly but rely upon allotment of markets or quotas of production in order to affect market values. The use of the restrictive patent license is a device frequently employed by international cartels to accomplish aims which appear foreign to the legitimate monopoly of patented invention.

Cartels may be temporary arrangements or limited for a period of time or entered into as permanent agreements. Usually a period of time is stipulated at the end of which the cartel may disband, or be continued with new and changed restrictions, possibly with some change in membership.

VOLUNTARY CHARACTER, WITH SOME EXCEPTIONS

Frequently in periods of great depression cartels fall apart as a result of the burden of their own restrictions, or of outside causes. The typical cartel agreement among members is invariably a written document or a series of such papers. However, verbal cartels, sometimes called gentlemen's agreements, have been made at times, and these, because of benefits derived, or fear of retaliation, have appeared just as binding among the members as though the agreements were in writing. Gentlemen's agreements of a trade restrictive character are resorted to at times as devices which may enable the members to evade legal penalties more readily than would be the case if the understandings were in writing.

Cartels are inherently voluntary but on occasion, in Germany, England, and elsewhere such contractual arrangements have been made compulsory by government order. At times such restrictive arrangements might have been considered compulsory, in effect, even in the United States, as will be discussed later. It does not appear that compulsion comes within the accepted definitions of the cartel. Likewise it has been said that there are three kinds of cartel agreements: those wholly between private enterprises; those between some enterprises which are privately owned and some which are government owned or controlled; and those which are wholly between government controlled or owned enterprises. The first two kinds are undoubtedly cartels but this last group would not appear to be so in the accepted sense.

From the authoritative definitions it is a misnomer to call any such trade restrictions cartels when private enterprise is compelled by government to become party to them or when all of the enterprises entering them are government owned or controlled. Such devices then would appear to assume the status of regulated industries, as public utilities, or of economic planning by the state, or to be a definite approach to state collectivism, this regardless of whether the governments involved are totalitarian dictatorships or democratic in character.

DEVICES TO ELIMINATE COMPETITION

In considering the degree of spontaniety with which business enterprises may become cartel members it must be borne in mind that the inducement of higher or more certain profits may be less enticing to a more efficient concern in a certain industry but the

management of that same enterprise may feel it the part of wisdom to join in with less efficient members rather than to remain outside and suffer possible retaliation from the combined opposition of its members. In this respect the resentment of a cartel at outside competition at times finds expression in what is called "dumping" or vicious price cutting by cartel members which continues until the outsider is driven out of the field, or into the cartel.

Dumping has been resorted to at times by international cartels in order to destroy the internal industry of a nation, in which the cartel desires an exclusive market, or the national security of which the cartel leaders wish to injure. Other retaliatory devices which have been utilized at times by cartels include interfering with, or cutting off, the competitors' supply of raw materials; attacking his financial resources, intimidating his customers, the boycott, and other business harassments. Such competitive regulatory devices are usually illegal and are identical with those used at times for the same purpose by trusts, combines, and other types of monopoly. Occasionally, single enterprises attempt to remain independent with the hope of deriving benefit from higher market prices brought about by cartel restriction and without being subject to cartel discipline. On such as these retribution is usually ruthless.

DISCIPLINING OF MEMBERS

Inside the cartels discipline, as a rule, is maintained by systems of penalties and voluntary fines for departure from agreed-upon prices, markets, or production quotas. Confidential accountants examine the books of the members just as do the official bank examiners in the banks of the United States. The cartel usually has a governing body or committee which designates the procedure used to execute the common purpose of its members and sees to it that such provisions are carried out. International cartel agreements invariably require that the members arbitrate all grievances, and, in case of disputes not so adjusted, then the party which brings a court action must accept the disadvantage of doing so in the country of his adversary. Usually the cartel, whether domestic or international, is dominated by one, or at most a very few, of its more powerful members; the weaker concerns go along. The structure, or rules, of a cartel may be so loose as to put little restraint upon its members but usually the regulations are rigid, and discipline is firmly exacted, especially against the weaker members. The cartel membership may include only a limited proportion of the total output of an industry, or territory, included in its operations, or occasionally it may approximate 100 percent control. Usually it is considered advisable to include at least 75 percent of total production of the article involved in order to permit the cartel restrictions to influence competitive factors effectively.

Lincoln as Commander in Chief

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6 (legislative day of Monday, February 26), 1945

Mr. McKELLAR. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Lincoln as Commander in Chief," written by Mr. Walter P. Armstrong, of Memphis, Tenn., one of the leading lawyers of that city. The article appeared in the Saturday Review of Saturday, February 10, 1945. Mr. Armstrong is an able thinker and writer. He is a learned and gifted historian and is one of the most versatile men I know.

Mr. Armstrong treats this subject in an able way, and I commend the article to the careful reading of all Senators.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LINCOLN AS COMMANDER IN CHIEF

(By Walter P. Armstrong)

"The President shall be Commander in Chief of the Army and Navy of the United States." These 16 words confer a vast undefined power, the limits of which have never been fully explored.

In most of our wars the President has confined the exercise of this power to the selection of commanding officers and has not participated in the formulation of strategy because of the force of circumstances and the character of the Presidents rather than because of any narrow conception of the power of the Presidential office. This was true in the War of 1812, the Mexican War, and the Spanish-American War. A strong President, like Woodrow Wilson, would probably have been inclined at least to participate in decisions of strategy if occasion had been presented. However, the pattern of World War No. 1 was fully developed before we entered the conflict. During the brief time of our participation there was no need to consider a change.

But in the War between the States there existed circumstances which required a full exercise of the President's power as Commander in Chief. The war lasted for 4 years. For a considerable time its outcome was highly uncertain. In the beginning many of the Union commanders were incapable or unfortunate. Their plans frequently miscarried and changes in strategy had to be devised. Abraham Lincoln, a strong President, had no choice except to take part in the conduct of the war. Lincoln's first major problem was in regard to the forts in the South. Should they be surrendered or held? If held, should men and supplies be sent to relieve them? Lincoln sent a relief expedition to Fort Sumter in Charleston Harbor. Jefferson Davis ordered General Beauregard to open fire and the war began.

Even in the beginning Lincoln's use of his war power was not limited to strictly military measures. On April 20, 1861, he ordered United States marshals to seize in the principal telegraph offices in the Northern States the originals of all telegrams sent and copies of all received during the preceding 12 months. The following day he directed the Secretary of the Treasury, without congressional authorization, to advance $2,000,000 for the arming of ships. Shortly thereafter, again without action by Congress, he suspended the writ of habeas corpus and ignored the decision of the Chief Justice of the United States that his action was unconstitutional.

Lincoln, not uninfluenced by political considerations, soon felt it necessary to disregard his military advisers. Both General Scott, who headed the Army, and General McDowell, the field commander, advised against fighting the first battle of Manassas on the ground that more time was required for disciplining and drilling the troops. The public, however, clamored for action, the generals were overruled, and the battle was fought with a disastrous result. The night after the battle Lincoln prepared a detailed plan of strategy which was completed by an addition made 4 days later.

Not always was an attempt made to carry out the strategy devised by Lincoln. Sometimes he submitted to the advice of his generals. Occasionally they disregarded his wishes if not his direct orders. Early in the war he was exceedingly desirous that General Buell should capture Cumberland Gap through which his grandfather and grandmother had made their way westward. Buell more than once promised to take this course, but in the end turned his back on the gap and moved toward Nashville.

As the war developed Lincoln became more concerned with questions of strategy. He was greatly troubled by his inability to stir McClellan, who was in command of the army of the Potomac, into action. He read military treatises which he procured from the Library of Congress and held long conversations with officers on the art of war. In December 1861 he presented McClellan with an elaborate memorandum asking technical questions and making suggestions as to an advance. McClellan returned it with penciled replies to the questions and a note rejecting all the suggestions.

On January 27, 1862, Lincoln issued his General War Order No. 1, in which he fixed February 22 as "the day for a general movement of the land and naval forces of the United States against the insurgent forces." The army of the Potomac and others as well as certain naval forces were named as ordered to "be ready to move on that day." Four days later he supplemented this with "President's Special War Order No. 1," commanding the army of the Potomac, after providing for the defense of Washington, to move on February 22 to seize Manassas Junction. This was followed on February 3 by a note to McClellan insisting upon Lincoln's own plan for an attack on the Confederate Army near Washington rather than an expedition by water against Richmond. However plans, suggestions, and orders were alike ineffective to move McClellan or his army.

It was shortly after this that Lincoln told John Hay, one of his secretaries, of his impulse to take charge of the Army of the Potomac and see what he could do as a field commander. He did not yield to this impulse at this time or later, though on May 23, 1863, the Chicago Tribune urged him to take the field as actual commander. During the week of May 5, 1852, he did assume personal command of the operations that resulted in the capture of Norfolk. The President not only ordered the advance on Norfolk but personally selected the place where the attack was to begin and gave the order to fire. Moreover, he countermanded the orders of Maj. Gen. John E. Wood as to the disposal of some of his troops.

Perhaps encouraged by this success, when Stonewall Jackson made one of his forays into the Shenandoah Valley, Lincoln gave specific orders to Generals McDowell, Fremont, and Buell as to how they were to surround and capture Jackson and his army. Fremont disobeyed two of Lincoln's orders, resting his men one day when they were ordered to march and again taking a different route from the one selected by Lincoln. Even if the orders had been literally obeyed, the capture of Stonewall Jackson's army would not have been an entirely simple task. After this experience Lincoln did not again attempt to direct the field movements of several armies a long distance from the White House.

He did, however, continue to issue orders for attack. McClellan was not the only commander who by his Fabian policy provoked the President. Impatient with Meade, on October 16, 1863, he sent to that commander, through General Halleck, a curious letter which was in effect an order to attack Lee and which concluded: "The honor will be yours if it succeeds and the blame will be mine if it fails." The letter was widely publicized and administration newspapers hailed the President as a great strategist.

Lincoln himself laid no claim to military genius and frankly admitted that his inter-

ference with his commanders was partly the result of their dilatoriness and ineptitude, and partly caused by political pressure. That this is true is evinced by the fact that as capable commanders emerged Lincoln interfered less and less.

And as Lincoln became less inclined personally to direct the strategy of the various campaigns he became more insistent upon generals who not only could work out a plan of campaign but who would fight.

In the beginning hundreds of commissions were issued, many to high ranking officers, for political reasons—because they had powerful friends, could raise troops, or because it was desired to obtain their full support of the war. The criticism was made—not without justification—that favoritism had officered the Army with incompetents. Even when such men as Butler and McClellan had repeatedly demonstrated their incapacity there was long hesitation in removing them for fear of unfavorable political reaction.

After Donelson, Shiloh, and Vicksburg, Grant had Lincoln's complete confidence and his reply to voluble criticism of him was: "I can't spare this man—he fights." After Grant moved to Virginia there was little interference and, indeed, on no other basis could the President and his chief commander have worked together. Grant was determined to go his own way and, though he attempted to conceal his feeling, was not particularly pleased when Lincoln visited his headquarters.

Finding in Grant, Sherman, and Sheridan a triumvirate upon whom he could depend, Lincoln in the latter months of the war, while he keenly followed the movements of the armies, permitted his commanders freely to conduct their own campaigns. On one occasion he said to Stanton, who was insisting that Grant was exceeding his authority, "Now, Mr. Secretary, you know we have been trying to manage the Army for 3 years and you know we haven't done much with it. We sent over the mountains and brought Mr. Grant, as Mrs. Grant calls him, to manage it for us and now I guess we'd better let Mr. Grant have his own way."

Lincoln withheld from Grant only the decision of questions that were within the politico-military zone as when he instructed him to have no conference with Lee except for the surrender of Lee's army or upon some minor or purely military matter. All proposals for peace were to be passed on by Lincoln.

Lincoln had reason to believe that sentiment in the Army favored his reelection in 1864 and was not reluctant to have the advantage of this influence. No restriction was placed upon electioneering for the soldier vote. Leaves were freely granted to officers that they might participate in the campaign. Many of them spoke at public meetings in behalf of the Lincoln-Johnson ticket. Furloughs were given privates that their influence might be felt in their home districts. Men on detached service and convalescents in hospitals were sent home to help.

Indiana, being the only large State whose soldier citizens could not vote in the field, presented a special problem. It was felt that the loss of the State election in October would be a severe blow to the Republicans. In General Sherman's army were 29 regiments and 2 batteries of Hoosiers. Upon the insistence of Governor Morton of that State Lincoln wrote Sherman suggesting that, so far as he safely could, he permit the Indiana soldiers to return home to vote. Sherman, feeling that their absence would endanger his army, declined to order the soldiers home, and Lincoln refused to overrule him. However, a few Indiana regiments from posts in Tennessee and Kentucky returned home for the State election. In addition Lincoln ordered sent to their home State all Indiana soldiers either hospitalized or unfit for service. Moreover, he ordered home from Sherman's army 6 prominent Hoosier officers along with Major Generals Logan and Frank Blair to stump Indiana and nearby States. Logan later wrote Sherman that "When I left on leave after the Atlanta campaign to canvass for Mr. Lincoln, I did it at the special and private request of the President."

Lincoln justified this conduct, just as he justified his yielding to political pressure in granting pardons and cotton trading permits, on the ground that in seeking his own reelection and strengthening the political influence of his administration he was working not for personal ends but for the salvation of the Union.

The greatest exercise of Lincoln's power as Commander in Chief was in regard to subjects which he could not delegate to any general. There was no other basis for the governments which during the war were set up in the occupied southern States. Congressman Olin, of New York, had said in the House of Representatives that in occupied territory in wartime the President had the power to do what must be done and that necessity justified him. "Of that necessity," he added, "the President is alone the judge; as Commander in Chief of the Army." It was on this theory that Lincoln proceeded.

The Emancipation Proclamation was, of course, the culmination of Lincoln's exercise of his power as Commander in Chief. Only on this ground could it be valid and on this ground alone Lincoln defended it: "You dislike the Emancipation Proclamation. You say it is unconstitutional. I think differently. I think the Constitution intrusts the Commander in Chief with the law of war in time of war."

Some of Lincoln's acts as Commander in Chief may have been questionable, some unwise, and others of doubtful constitutionality, but in retrospect it seems clear that he was in each instance motivated not by any thought of personal aggrandizement but by his desire to save the Union, and that taken together they contributed greatly to that end.

Post-war Military Policy

EXTENSION OF REMARKS

OF

HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 6 (legislative day of Monday, February 26), 1945

Mr. AIKEN. Mr. President, this morning the senior Senator from South Dakota [Mr. GURNEY], in presenting resolutions from his State legislature concerning the National Guard, indicated that the future of the National Guard and the part it will play in our post-war military establishment are of increasing concern.

Probably the most thorough public discussion of this subject is found in an address which was delivered by the present junior Senator from Iowa [Mr. HICKENLOOPER], who was then Governor of his State, before the Governors' Conference last year at Hershey, Pa. I ask unanimous consent that this address of Governor HICKENLOOPER, now the junior Senator from Iowa, be printed in the Appendix of the RECORD.

I am informed by the Public Printer that it will cost $260 to print the address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The subject assigned to me for discussion is, to say the least, a comprehensive one. It involves consideration of our national origins, history, and experience as well as present and future aims and problems. It involves tradition and ideals and must consider the cold realism of experience as well as the certainty of the realism of the future.

In the time allotted it is manifestly impossible to dwell on details; even an attempt to discuss principles will be sketchy and inadequate.

One great realization, among others, is undoubtedly established in the public mind—the realization that our past policies, whatever they have been, have not been adequate to prevent our involvement, in one generation, in the two most destructive wars in history, and a growing conviction that something must be done.

In World War No. 1, we crusaded with high idealism and enthusiasm to make the world safe for democracy. With victory in that war and the supposed crushing of the central powers we sat back, secure in the belief that we had preserved freedom and the pursuit of happiness for a long, indefinite period. We mourned our dead, bound up the wounds of our disabled as best we could and solemnly and seriously said that, while the sacrifice was great, still, because the world was safe, the price was not too much. There was also a weariness with war and destruction and the anxiety to return to the comforts of peace.

Because we had suffered no invasion we still clung to the fallacy of security in our geographic isolation as a first line of defense and as a practical guarantee of safety. Not all of us followed these philosophies, but most of us did, and the unrealistic pacifist and the impractical idealist had a field day. True, many pacifists were realistic and many idealists were practical, but they were in the minority and the great lessons of World War No. 1, that should have been learned and heeded by our Nation were cast aside.

Then came World War No. 2—its rumblings had been more ominous, the gathering forces of opposition more definite, but when its fury struck, our Nation was incredulous. This was not the safety we and our allies had established in 1918; this was not the proof that our boys had not died in vain; this was not a justification of national and personal sacrifice; something was wrong; somehow, somewhere, the assurances and the beliefs had been false.

We were actually involved. Once more, in a single generation, life and treasure were being destroyed in war; our young men were being killed and wounded—the future genius of American enterprise, resources, and opportunity were being mortgaged beyond conception—yes, something was wrong.

But, we were in danger—our Navy had suffered disastrous defeat—the Philippines had been conquered, our western shores might be invaded. The Atlantic, even within sight of our own coast, was a happy hunting ground for enemy submarines. It couldn't be true, but it was. There was a temporary numbness of mind, a shock of unbelief, but it was very temporary. With true resourcefulness and responsibility of private initiative, we grimly set out to win. We are winning—we will win complete and crushing victory—and with that victory we must search out and expose the reasons why we had to sacrifice and destroy. In that search and exposure, however, the emotions of idealism, worthy as their objectives are, must not be permitted to obscure the practical and factual answers.

Even then the discovery of these reasons and the correction of our errors will not necessarily guarantee perpetual peace, but substantial correction of the mistakes, international as well as domestic, will give as great assurance of continued peace, as a failure of correction will assure a restless truce followed by far greater destruction and chaos.

The American people are thoughtful on this subject: Self-determination and self-responsibility teach them that there is a solution to evident mistake and there is an eagerness to find that solution and to correct the mistake.

It is true that our immediate and consuming purpose is victory in the war but if, with that victory and the tremendous effort and sacrifice it requires, we can develop a better approach to the problems of tomorrow, we will have added justification for the cost, beyond that of survival.

Our post-war military policy, if it is to serve our needs, must be governed by many factors. It must be sufficiently sound and substantial to meet our requirements and, if it be reasonably successful, it must be understood and supported by the American people. We must avoid a program of colossal cost.

But what are our needs? In the various answers to that question controversy begins.

In the first place, our people and our Nation seek peace. The very origins of our settlement and growth sprang from a desire for peace and the enjoyment of individual freedom, spiritual, social, and economic. Successive generations of Americans have fought wars to establish or to maintain our philosophy of government, and future generations may have to fight again, from time to time, for the same purpose. It is as short-sighted to say that there will be no more war as it is tragic and hopeless to assume that war is inevitable each generation.

Certainly, the great natural resources of our country and the genius of American enterprise cannot be devoted to the comforts and pursuits of peace and individual progress if they are to be dissipated and destroyed every 20 or 30 years in war.

It is apparent, therefore, that there should be two broad fields of action for us.

1. The establishment and maintenance of a peace that will contribute to and further our ideals and the objective of our system of individual opportunity and freedom, and

2. The realistic understanding that we can follow those ideals and approach those objectives only so long as we can protect them, by force if necessary, and a willingness to establish and maintain such organized force and the evidence of ability to quickly mobilize our potential force so that it can be brought to bear in defense of our Nation, either to prevent war or, if war is inevitable, to crush the enemy speedily.

As a peaceful nation, we have always made the military subservient to the civil authority and policy. Our great territorial expansion on this continent was economic in its origin and not military. The military followed the pioneer, who had opened up the frontier, rather than the settler moving into territory first acquired by military conquest.

The Federal Constitution makes the military subordinate to the civil authority. The President, a civilian, is made the Commander in Chief, not as a military strategist but in order to vest the supreme power over the armed forces in civil rather than military authority. The constitutions of our States recognize this same principle and subordinate the military to the civil control.

It must remain so if the Republic is to survive, for democracy cannot survive in the same land with military dominance. We must have organized military strength sufficient to assure our safety, but it must never be so organized as to dominate or control our civil policies. The military must serve the people rather than to be served by the people.

At any time we have vast potential power in this country. That has been demonstrated in this war and in World War No. 1. Because of our total unpreparedness prior to each war, it has taken superhuman effort and has called for unbelievable American genius to organize our strength and it has cost great and unnecessary loss of human as well as material treasure, but the power has been developed. We have won before, and we are winning now. Twice this power, once organized, has saved this world from autocratic domination.

But, unless we learn and profit from the bitter lessons, the next time our strength, or its timely development, might not be sufficient. This is not to say that there will inevitably be a next time in the near future, but it is to say that such policy, or lack of policy, as we have had in the past toward the realistic safety of our country and our institutions, if repeated, will inevitably contribute to inviting another world war of more terrible destructicon, at a too early date.

In fact, prior to World War No. 1, we never had a consistent military policy worthy of the name; at times there have been policies for short periods, but they have been nebulous, and at no time during peace have we been in any military condition to throw, with reasonable speed, any substantial portion of our potential force into the protection or defense of our country or its interests, with the exception of a relatively small but efficient Navy. Our land forces, such as we had, were no doubt efficient, but they trained on theory, and their equipment has always been on paper. Their power on the blueprint was great, but in the field it was negligible.

Our most consistent and ancient foreign policy has been the Monroe Doctrine. More recently we undertook the government and protection of the Philippines, carrying with it the defense of the Pacific. We have never had the organized strength alone (in peace) to defend the Monroe Doctrine against any reasonably strong and prepared enemy, and this is true in spite of the fact that there have been times when strong threats have been toward its violation and, on one occasion, in Mexico, it was openly violated by Napoleon III.

Our policy in the Pacific found us without sufficient strength to save the Philippines. The Aleutians were invaded and some islands occupied for a time.

The still unexplained, but nevertheless curious, circumstances surrounding the tragedy at Pearl Harbor left Hawaii open to possible capture and our west coast to threatened assault.

We have been victorious, eventually, in the past and will, of course, be victorious in this war, but at incalculable cost in life and resources. A reasonable, present military strength and a firm policy for its use in peacetime, to stop aggression and the apparent preparation therefor by the enemies of peace, might well have prevented this war and also World War No. 1.

Our very unpreparedness and our lack of a realistic military policy no doubt encouraged our enemies to strike, in reliance upon the hope that they could conquer before we could marshal our potential force in effective combat. They were almost right. They had assessed our policy correctly, but they misjudged the great ability of American genius and the potentials of individual initiative, in emergency.

Of course, past events and policy cannot be recalled and revised, but they can be of service in shaping our future attitude.

So much of our future policy depends upon the conditions of peace. Basically, we must protect our country and its interests. We must direct our policy toward the preservation of peace rather than toward the preparation for inevitable war under a theory that war is inevitable. We should point our program toward sufficient strength to help maintain order and meet our responsibilities, as contrasted to the building of a program designed for inevitable conflict.

There are those who say that strong military policies inevitably lead to war. This is not necessarily true. No doubt, strong military policies by opposing nations or groups of nations have led to war. But why permit such rivalries to grow. Strong military policies by nations sincerely and unitedly committed to policies of peace can be the guarantors of peace.

In the post-war period, if we can establish, among the nations of the world, and especially among our allies, honest, understandable and definite agreements to preserve peace, with equitable and mutual commitments to enforce such agreements, together with the maintenance of such efficient strength, by at least the stronger nations, to do the job, peace can be preserved indefinitely, and our military requirements will be diminished.

On the other hand, if there should be a failure of workable and unselfish cooperation for peace among the nations after present hostilities cease, then we will be thrown upon our own responsibility alone or upon the policy of individual military alliances for safety and our problems would be tremendous, indeed.

Regarding our past national program for defense, we had none of any merit or consequence until 1916 when the first national defense act was passed. Prior to that time, true, we had West Point and Annapolis, a small Navy, an insignificant Army and a feeling of security resulting from geographic isolation. We also had a frontier spirit of self-sufficiency that found oratorical, if not practical, expression in the high sounding words of one famous statesman who said, in effect, that if any one dared to attack us a million men would spring to arms over night. The million men could spring all right, and no doubt would, but there were not then, and have never been, in peacetime, the arms to which they could spring.

However, with some vision and realization that modern developments were shortening distances, the act of 1916 was passed, outlining a program for land forces consisting of the small Regular Army and a federally supervised National Guard. Some effort was made to coordinate this force and the Mexican border incident afforded a little training. We had no modern equipment, however, and 1917 saw us plunged into modern war without adequate officers or trained men, without equipment or the means for providing it. This emergency was met, to our cost.

In this discussion I am assuming that the evident success of our draft and selective service program, effectively used in two wars, will demand that it be continued as a basic policy for the raising of manpower in emergency. The system may be modified from time to time, based upon experience, but it has now proved its merit and its administration in this war has been generally admirable.

The Federal act of June 3, 1916, was the basis for the sound military policy established by the act of June 4, 1920, which provided for an Army of the United States to consist of:

1. The Regular Army.

2. The National Guard when in the active military service of the United States.

3. The Organized Reserves—including the Officers Reserve Corps and the Enlisted Reserve Corps.

Of the three components constituting the Army of the United States, the National Guard, and the Organized Reserves formed the civilian components with the National Guard, organized under the militia clauses of the Constitution, with the control thereof, by the States, unimpaired in time of peace. The other components, namely, the Regular Army and Organized Reserves were organized under the "army clause" of the Constitution and therefore wholly Federal at all times.

Under the terms of the act of June 15, 1933, there was added a fourth component,

namely, the National Guard of the United States as distinctive from the National Guard of the several States. This new component was a wholly Federal force. While the National Guard of the several States was nevertheless separate and distinct. The National Guard of the United States is wholly Federal while the National Guard of the several States is wholly State controlled, except when in the Federal service. When the National Guard of the United States is active, as it is now active in the military service of the United States, the National Guard of the several States is inactive. When the National Guard of the United States is released from active military service, at the conclusion of the war, it will become inactive and the National Guard of the several States will again be active, as it was during the period 1920–40.

By the terms of the National Defense Act the enlisted strength of the Regular Army was fixed at 280,000; the National Guard at 424,800—later modified to 210,531; and the Organized Reserves, unlimited. This policy was never supported or fully understood, by the people. As a result the strength of the Regular Army dwindled to 118,000; the National Guard never exceeded 200,000, and the Organized Reserves, save for the Officers Reserve Corps, was nonexistent.

Under this system the Regular Army was charged with the mission of garrisoning our insular possessions, certain other missions, and the training of the civilian components.

This policy is sound and is the most desirable and workable policy for our Nation yet proposed, but, in its operation, there were certain deficiencies.

First, the desire for peace caused a public reaction against military activity. Peace and disarmament became a watchword and we sank battleships—we disarmed—our Regular Military Establishment settled back to a life of honorable poverty, military courtesy, and a study of the promotion lists. Certain officers of the Regular Establishment, however, and notably General Mitchell, were far ahead of the thinking of their time in advocating the supremacy of air power, the strategic value of Alaska, and a unified department of national defense. General Mitchell was cashiered.

Nevertheless, the National Guard of the several States was to make great progress under this system as compared to its prior progress. Stimulated by the brilliant performance of National Guard divisions in World War I and by a knowledge that the Guard, officers and men, had established beyond question that they were equal or superior to any fighting men in the world, they maintained enthusiasm for their organizations and devoted their time and efforts, usually at sacrifice to themselves, to keep them intact. The Regular Army supervised and coordinated the training, although with some apathy at times, but on the whole the training was substantial and compared favorably with that of the Regular Army itself.

The States took pride in their units: Their officers studied hard, on their own time as a rule, and were proficient and reliable. They maintained a force in each State, under full State control, efficient, adequate, and available for all peacetime emergencies and this is vital to sovereign State government. They constituted a force, decentralized as to authority in peace, subject to civil control, but available to the Nation in war. When World War No. 2 came, the National Guard of the United States furnished a force of 300,000 trained officers and men for our first line of defense of the land forces.

Perhaps the word trained is not proper for while, as in the case of the Regular Army, they had some equipment and much theory, the material with which they were to fight was still in the blueprint stage when they were called to service.

Nevertheless, the National Guard constituted the major part of our land forces initially and the subsequent brilliance, efficiency, and heroism of their conduct in battle in all theaters again justified our faith in the Guard and the citizen soldier.

Unfortunately, there seems to have been, and still seems to be, a feeling on the part of the Regular Army toward the National Guard and the officers' reserve corps that is inclined to be noncooperative and at times contemptuous. Neither proven equality in action nor marked success in training seem to have dispelled this feeling. It was evident in World War No. 1, in the many instances of arbitrary action by the so-called "benzine boards," so far as dismissal of many capable emergency or Guard officers was concerned, and is evident in World War No. 2.

It has been evident in this war in the many instances where Guard, Reserve, or emergency officers of proven ability have been denied promotion or responsible command and Regular Army officers, often with much less experience, have been advanced: This is especially true where officers of field grades in command of battalions and regiments are concerned.

These references to the attitude of the Regular Army toward the civilian components are not made for the purpose of criticism alone, but to point out, candidly, a condition that must be corrected if the civilian components are to receive the most effective and efficient training in peace.

The collective ability of our regular establishment is high. The training for the command and staff is excellent and the ability of those officers selected for leadership, is in the main, being amply demonstrated. We must always look to our professional personnel for the training of our civilian components. But it is, nevertheless, true that, throughout the civilian population of the country, there are countless thousands, at all times, whose intelligence and ability to assimilate and efficiently utilize and apply military training is at an equally high level with the personnel of the professional forces and the effectiveness of the citizen-soldier is fully as great. It has always been, and, under our system should continue to be, this great reserve of civilian strength and ability upon which we must rely for our security.

In the post-war period our military policy will, of course, be substantially governed by the conditions of the peace and international attitudes. The most effective and hopeful results will flow from strong, honest, and equitable agreements among nations, having sufficient power to enforce them, sincerely organized for the maintenance of peace, able and determined to suppress aggression and, more especially, the preparation for aggression. However, we must, also consider the other extreme—the possibility of the failure of such agreements and the possibility, as a result, that we may be left entirely to our own resources for the security of our country.

The dimension of our post-war military and naval establishment will be determined by the manner in which this war is resolved: By the extent and degree of our foreign commitments; by the question of effective alliances; by the balance of power; by economic relationships and by many other factors which are bound to be involved. Our effectiveness in maintaining peace and precluding future involvements in war are wholly dependent upon the adoption of a sound foreign policy. It was the lack of a sound foreign policy which not only made us ineffective in preventing war but made it impossible for us to prepare for war when war became inevitable.

We will emerge from this war with over half of the naval power of the world. We must neither foolishly destroy this power nor maintain its full strength. But ample naval force, including vigorous reserve programs, should be efficiently maintained to protect our interests and commitments and to fully serve such outlying defenses as may be necessary, under future circumstances, for our national security. Any reduction in numbers of ships in active service should be accomplished by placing them in inactive reserve until they become outmoded rather than by destroying them. Their potential power would have a quieting influence upon future troublemakers.

There is also the vital question of internal policy in the organization of our defense forces, namely, complete Federal control of all of our armed forces or the retention of the National Guard of the several States in peace under State control, leaving the Regular Army and organized reserve forces under Federal jurisdiction. The Navy, manifestly, just as the Regular Army, must remain under Federal control, as an active component of our defense forces.

The most objectionable feature to complete Federal control of the National Guard is, that it would just about complete the nationalization of all phases of our system. In recent years we have been rushing with great speed toward nationalization of our economic and social fields. We have invaded, and often destroyed, substantial fields of sovereignty and responsibility of the States with a ruthlessness that is alarming. We have headed toward dominion in Washington and subjection in the States. To transfer the peacetime military establishment of the States to the complete and centralized control of the Federal Government would just about complete the job.

With economic, social, and military control in Washington, sectional rights and sovereignty would be basically gone and the States would become only supplicants to the Federal Government, and perpetuity in Federal office could be made convenient and easy for any individual or group, so minded, and once acquiring such power. We have only to look at the records of other nations where such concentration has occurred. Full self-government and its privileges and responsibilities cannot survive under our system with such centralization.

Our national security can be provided for efficiently, economically, and with enough elasticity to meet our needs and still retain sectional and State responsibility and with full benefit to our defense.

I know of no general pattern that is equal to our National Defense Act in effect between World Wars No. 1 and No. 2. Criticism of the program may well be directed at certain operational features, but it has the outline upon which we can build and it is elastic enough for our needs.

As referred to before, it provides for a Regular Army under Federal control. The Regular Army can be varied in size as our defense requirements, commitments, and policies develop. Its constant training and efficiency can and should be of the highest and it should be fully and modernly equipped at all times. It should never be permitted to relax into peacetime atrophy.

Its officers and men should be constantly zealous in the efficient training of the civilian components, as a vital part of their duty and responsibility and not as a routine detail. It must work vigorously with, and not with indifference or hostility to the civilian components.

The Regular Army and the Navy must have the practical and vigorous support of Congress and the public based upon an understanding and approval of policy and objective.

The National Guard under the peacetime control of the States must continue to be the backbone of our armed land forces. As in the case of the Regular Army, its numbers can be increased or diminished, dependent upon our requirements and responsibilities. The equipment of the National Guard should be modern, ample, and efficient and be supplied by the Federal Government.

Its training, vigorously supervised by the Regular Army, should be technically proficient and continuous and as extensive as

possible, consistent with the fact that the National Guard is not a professional full-time group but that its members earn their livelihood outside of the military profession. More extensive and varied tours of duty with the Regular Army should be made available to officers and key enlisted men of the civilian components, through periods of active service and through the medium of Army service schools.

The National Guard, on the other hand, must assume its full share of responsibility for cooperation with the Regular Army and for the continued proficiency of its forces and must receive the active support of the States.

The organized reserve should be continued, but it should be organized and maintained as provided by the National Defense Act and its training must be more extensive and consistent. After this war we will have a wealth of officers and men in all branches and in all appropriate grades and ranks returning to civil life. For a period they will constitute an adequate reserve. They will be professionally and technically trained and experienced. However the Organized Reserves should be so set up as to bring in new members to take the place of those who drop out in the future so that ample strength in this vital force can be maintained continuously. Ample training facilities should be provided and a reasonable degree of training required.

During the period 1920–40 the Officers' Reserve Corps received scant attention or support from the Congress and the people. As a result reserve officers were not afforded an opportunity to improve their professional fitness or materially increase their corps. The Organized Reserves during this period because of a complete lack of financial support by the Congress existed on paper only.

As in the case of the National Guard the Regular Army is responsible for the training of the Officers' Reserve Corps and the Organized Reserves and should discharge that responsibility in its entirety subject of course to receipt of adequate financial aid. Insofar as practicable they should be trained and maintained in the same manner as the National Guard and a policy of joint training of the several components of the Army should be adopted.

In the determination of matters of policy affecting organization, distribution, training, and personnel, the civilian components should have an equal voice with the Regular Army through the medium of joint general staff committee, as is in fact now provided by law.

We should establish officers' training schools more readily accessible to capable young men who, for various reasons, cannot attend West Point or Annapolis or the other colleges where officer training is now available. The officer training provided in all of our schools should be sufficient so that the graduates are capable of accepting appointments in the Regular Army or the National Guard or the Officer Reserve Corps and such training should be encouraged and promoted vigorously.

The retention of such a policy, which has long since been in effect in principle and practice, can best serve our needs. It can expand or contract, with future events and, if approved and consistently adhered to by the American people, it will serve our needs and preserve the principle of decentralization of military force and control into the hands of the Sovereign States in time of peace.

I have not discussed the cost of such a program. That will depend, of course, upon the determination of our future requirements. Nor have I discussed international policy that will substantially affect our responsibilities. So far as cost is concerned, I can only say that I believe the interest on the $300,000,000,000 spent in this single war would more than pay the cost of such a program, and, if it could save the human sacrifice which this war has entailed, it would bring untold benefit. Certainly, we must avoid any policy that would consume our substance with unwarranted cost.

The questions of international policy have not been answered nor indefinitely proposed by those who are in possession of the facts, and experience shows that we cannot rely too much on generalities in this field.

But that subject is beyond the scope of this discussion.
